17,549. (*Chairman.*) Have you not accepted now Mr. Naoroji's view, in which he said there was not the capital, whatever the reason may be; and, as we are dealing simply with fact, does not that modify your criticism on the English Government for borrowing in England?—Yes, for the reasons stated.

17,550. (*Sir James Peile.*) I think you are aware that the Government has, as far as practicable, adopted the principle that borrowing should be in India in rupees, while the gold value of the rupee is declining and not in sterling in England; has not that principle been frequently stated by the Government?—The principle may have been stated by the Government, but we are both borrowing in England and in India, and sometimes it is borrowed in England alone.

17,551. You gave us figures; I think you said as regards the public debt, the rupee borrowings have increased Rx. 11,000,000, while the sterling debt has risen from 69,000,000*l.* to 114,000,000*l.*?—Yes.

17,552. That you found fault with; you thought that that was an error?—What I have said is that the larger growth of the sterling loans adds to the charges of exchange.

17,553. You object to borrowing in England in sterling?—So far as it is possible to avoid borrowing in sterling.

17,554. Then you show there an increase of about 45,000,000*l.* between 1884–5 and 1894–5, from 69,000,000*l.* to 114,000,000*l.*; it is at page 30 of your notes?—Yes.

17,555. And you consider that these 45,000,000*l.* should not have been borrowed in England in sterling?—I did not mean to say that; I only pointed out the growth of the debt services, and said that the rupee borrowing was less and the sterling borrowing was more, and supported it by the statement of the Departmental Committee to the same effect.

17,556. But you pointed out that that was an error of policy, that sterling borrowing was more and rupee borrowing was less; you do not approve of the sterling borrowing, do you?—I do not approve of it so far; if it is impossible to borrow it in India, for the economic reasons already stated, of course you must borrow in England.

17,557. All you mean to say, then, is that you cannot help borrowing in England, you must do so; is that what you mean? Where you cannot help borrowing in England, then you must borrow in England and may unobjectionably borrow in England?—Where you cannot borrow in India, of course you must borrow in England.

17,558. Take this 45,000,000*l.* that you pointed out as the increase in sterling borrowing in 10 years, one very large item of it is in connection with the purchase of guaranteed lines, 21,000,000*l.*?—Yes.

17,559. Now, that necessarily was borrowed in sterling?—Yes.

17,560. Replacing sterling debt by sterling borrowing?—Yes.

17,561. With an advantage to the Government in the decrease of interest?—Yes.

17,562. You would not object to that borrowing in sterling, I presume?—Every borrowing that partly comes in such a way as to reduce the charges on the revenues of India is of course not to be deprecated.

17,563. You would approve of it. Then the second item is debt incurred by advances to railway companies in order to obviate direct borrowing by the companies at a higher rate. That again is to save interest. The amount of that is 7,504,000*l.*; that makes 28,000,000*l.* out of the 45,000,000*l.* Then there is a small item of debt incurred under Act of Parliament, 96,000*l.* Then there is the repayment of the 4 per cent. transfer loan, which is nominally a rupee loan, but, owing to the special rate for the payment of interest and for repayment of principal wholly in England, it was for all practical purposes a sterling loan; that is 1,301,000*l.* That makes nearly 30,000,000*l.* out of the 45,000,000*l.*, which you see was inevitably borrowed in sterling?—Yes.

17,564. To which, therefore, you would feel no objection?—Yes. Of course, so far as these borrowings did go partially to reduce the interest charges on the revenues of India in present circumstances, there was nothing to be objected to.

17,565. Then you would withdraw or modify your censure of the Government for having borrowed in sterling 45,000,000*l.*, while they only borrowed 11,000,000 in rupees?—I do not modify my statement; I only pointed out the growth of the one and the other. Of course, there are the causes of that growth; there nobody objects to the growth, and my point is mainly this, that so far as possible sterling loans may be avoided, as they increase the burden of exchange.

17,566. (*Chairman.*) Do you know at all what the current rate of interest in India is on the investments in which India invests generally?—The current rate of interest in India varies in various parts. In Bombay a large number of Bombay mill-owners are able to borrow in the open market, generally at an average rate of from 4 per cent. to 5 per cent. Of course, in the interior, where, perhaps, the capital may be less, lenders get a higher rate, ranging perhaps from 6 per cent. to 9 per cent.

17,567. Well, people who could command 4, 5, 8, or 9 per cent. would not be likely to lend to the Government at 3 per cent., would they?—No.

17,568. If, therefore, the Government would have to pay 4, 5, up to 8 or 9 per cent. for its loans in India, is it not cheaper to India that they should come over here and borrow at 3 per cent.?—As a matter of fact, the Government of India never borrowed at 9 per cent.; the highest rate at which the Government borrowed was 5½ per cent.; then it came down to 4½ per cent., and then to 4 per cent.

17,569. If you are going to rely upon the available capital of India for your loans, you will exhaust that gradually; and, if you are to confine yourself to India, you will have to pay the rates which Indians can get; if Indians can get 4, 5, up to 9 per cent., as you say, they would not lend to the Government at 3 per cent., would they?—Well, that would depend upon certain investors preferring Government loans, and investing at 3 per cent. or 4 per cent. only, and other people, of course, investing in other securities and trying to earn more; it will all depend upon the choice of the investor.

17,570. As a rule the Indians are not very great investors in the Government loans, are they?—No.

17,571. Therefore, in so far as India commands the better terms of this market, it is economical to India to borrow here, is it not? It must be more economical to pay 2¾ per cent. or 3 per cent. than to pay 4 per cent. or 5 per cent., must it not?—Yes, under present circumstances, if there were no exchange added on to increase the rate of interest, it would be well; but not with the increasing charge of exchange.

17,572. You think the increasing charge of exchange has raised the charge to India up to the full amount which would be charged by lenders in India?—If interest on sterling was charged at 3 per cent., and if there was not as much exchange as before, then, of course, the interest charge would not be heavy; but with the present exchange the interest charge increases a great deal.

17,573. You are aware that, as against the increased cost by the fall in exchange, on the other hand you have had the advantage of the English market, in being able to reduce the original rate at which the loans were borrowed?—Some of the loans have, no doubt, been reduced to 3½ per cent.

17,574. (*Mr. Naoroji.*) Why is it that India is not able to find the capital? What is the original cause of that? Is it not because of the large political drain which has taken place to this country?—Of course, that is at the root of the matter.

17,575. That is at the root of the matter, and, therefore, every evil consequence following from it must be traced back to that original evil?—Certainly.

17,576. Then you are also aware, I suppose, that there is a large amount of capital circulating in British India, which belongs to Native states?—Yes.

17,577. In Bombay alone you have a large number of firms employing nearly six or seven crores of rupees, which

entirely belong to merchants from Native states?—I know that there are Native states which do that sort of banking.

17,578. Not the States themselves?—No.

17,579. Subjects of Native states coming there and employing their capital there, like any other foreign capital, and carrying away the benefit of it?—Yes.

17,580. (*Chairman.*) I think the railway companies employ a large number of natives, do they not?—According to the return they do. As I have stated, at page 184, chapter XII. of the Railway Administration Report, is given a table of persons employed on railways. It is as follows:—

	No.
1. Europeans - -	4,692
2. East Indians -	6,698
3. Natives - -	270,047

Now, according to the Parliamentary Return of Salaries, dated 17th May 1892, there were in all 2,448 Europeans earning salaries of 1,000 rupees and upwards per annum. The total salaries came to Rx. 806,284. There were, however, only 895 Natives who earned salaries of Rs. 1,000 and upwards, and the total of these salaries amounted to Rx. 136,735. The salaries earned by Europeans in the employ of railway companies is another drain from the country.

17,581. Do those figures refer to railroads alone? Are the 2,448 Europeans, whom you mentioned as earning salaries of 1,000 rupees and upwards, employed upon railroads?—Yes, your lordship. The amount paid by Indian railway companies to European employés in India is shown in the Parliamentary Return, page 7; it shows the salaries of Europeans, total number 2,448; total salaries, Rx. 806,284.

17,582. (*Mr. Naoroji.*) Yes; out of the proceeds in any other country the people of the country get every expenditure that is disbursed on it. In the case of the railways in India, a large European body is employed, who take away, I think, something like Rx. 1,000,000 a year in salaries. This is a disadvantage to India, owing to the large employment of Europeans, instead of introducing as much as possible Indian agency in the management of them. Do you know that there was a return made formerly, I think at the instance of Sir David Wedderburn, I am not able to put my hand upon it, by which it would appear that there was nearly Rx. 1,000,000 of money given or spent on Europeans in salaries and in expenses here, as well as in expenses on the working bodies there, such as those of the directors here?—I am not aware of the return of which you speak.

17,583. (*Chairman.*) Are there any observations that you would wish to give us upon the subject of irrigation? Yes. It is satisfactory to notice that, on the whole, during the last 10 years, the major irrigation works which are constructed from general revenues for productive purposes are somewhat paying. There was an account on the wrong side up to 1888–9, but since that year there has been a fair amount to the credit of the net receipts. For the year 1894–5 the net receipts, after deducting interest on capital, amounted to Rx. 152,852. The minor works, which are still a net charge on the revenues, show an increase of Rx. 91,967 on an average compared with 1884–5. In that year the net charge was Rx. 610,173, but during the decade it averaged Rx. 702,140. At the end of the year 1894–5 (according to the statement of Mr. A. Becher, Officiating Accountant-General, Public Works Department, published in the "Gazette of India" on 17th October 1896), there were 46 projects, classed as major works, and 76 as minor. The capital outlay at the end of that year was:—

	Rx.
Major works - - -	31,731,986
Minor ,, - - -	4,849,733
or a grand total of -	36,581,719

There was a net profit, after paying interest on capital on major works, of Rx. 99,744. The percentage of net revenue of the year on the capital on major works was 4·08 per cent., and on minor works of 5·65 per cent.

17,584. Are there any works, or classes of works, which show losses?—It seems, however, that all irrigation works are not paying. Like the railways, many have incurred losses up to 1894–5. Taking them by provinces the broad results are as follows, after taking into account interest on capital outlay:—

	Gain + Loss — Rx.
Bengal - - - -	— 4,935,789
North-West Provinces and Oude	+ 1,366,411
Punjab - - -	+ 2,558,605
Madras - - -	+ 5,326,584
Bombay - - -	— 430,343

As far as Bombay is concerned, it may be stated that Sind made a net profit of Rx. 267,410, but all the works in Guzerat and the Deccan showed a loss amounting to Rx. 697,753.

17,585. (*Sir James Peile.*) Some of the works show a loss; but are not the works which show a loss, generally speaking, works which have been constructed in order to protect the country from famine?—Some of them may be, and some of them not.

17,586–7. But that is generally the case, is it not, that a work which does not succeed as a commercial work, is to protect the country from famine?—In the Deccan, of course, they are supposed to be protective—the Mulla and the Muta canals.

17,588. The Mulla and Muta canals are protective works, to protect that part of the country from famine, are they not?—I do not think they do; but, in spite of that——

17,589. That is not at all the question. The question was whether they were to protect the country, as far as they went, from famine?—They are considered as protective works, partly.

17,590. (*Chairman.*) Have you any views on the extension of irrigation? — Yes. After the evidence adduced before the Commission in respect of certain canals in the past, which had to be taken over from insolvent companies at prices which can only be considered most improvident and uncommercial, it would be idle to refer to such class of works, which have cost the taxpayers millions without any satisfactory return whatever. But I may be permitted to observe that in the present deteriorated condition of Indian agriculture, when there is not enough food grain produced per annum to fully suffice for the entire population, it is of greater importance to construct irrigation works than more railways. It should be remembered that even protective railways against famine, however largely constructed, would give no help to the people in famine stricken districts, whenever a serious famine of the intensity now prevailing may occur, if there were not an adequate surplus of grain to carry from one province to another. What is more essential is to stimulate the food supply. Irrigation, therefore, is of infinitely greater importance than railways. In some parts, undoubtedly, the big irrigation works have done mischief to the fertility of the soil and the health of the population. It is, however, not large costly works, which cannot pay even the interest on the borrowed capital from which they are constructed, that are wanted. My proposal is to dot those parts of the country which generally suffer from insufficient rain or drought, with numerous wells which may cost from 50 rupees to 500 or 1,000 rupees each, at the utmost. Madras boasts of many such wells, built anterior to the advent of British rule. If irrigation by wells, and other equally cheap modes, were put into practice, it would entirely change the surface of the soil in a few years, and at a considerably less cost.

17,591. We have had some evidence with regard to the taking over of canals from what you have described as insolvent companies?—Yes.

17,592. You say they cost the taxpayers millions without any satisfactory return whatever; do you know at all what the figures were that worked up to such a large total as that?—No.

17,593. You do not?—There is some statement, made in the evidence of one of the witnesses, giving an account of how the Orissa and all those other canals were taken up.

17,594. That is what I am alluding to. My recollection of the evidence is that the criticism, which is a perfectly fair one to bring forward from the critic's point of view, spoke of the loss; but I do not recollect that it amounted to millions taken from the taxpayer?—If I were to refer again to the witness's statement, I would be able to show exactly what the figures were.

17,595. Perhaps to avoid misconception on that point, if you find that they are millions, your statement will stand; if not, perhaps you would modify the statement?—Yes. I might state the exact figures.

Mr. Dinshaw Edulji Wacha.

8 April 1897.

17,596. I think that would be advisable?—Yes.*

17,597. (*Sir James Peile.*) Then there is another statement there which I must challenge: "In the present "deteriorated condition of Indian agriculture, when there "is not enough food grain produced per annum to fully "suffice for the entire population." What proof have you of that fact?—Well, there have been many statements made in the newspapers on the subject.

17,598. Statements in the newspapers?—I myself went into some calculation some time ago that, taking the famine report——

17,599. But one moment. You are not speaking of the famine report; you are speaking of an ordinary year, any ordinary year. "In the present deteriorated condition "of Indian agriculture, when there is not enough food "grain produced per annum to fully suffice for the entire "population"?—Yes. The Famine Commissioners' report did give the area under food grains in 1876–77, and I went into the figures on the basis of the Statistical Abstract, which contains the area now under cultivation, and, taking the difference between them and the differences of the crops per acre of all the food grains, I found that there were something like 29 lakhs of tons less produced to feed the population of the whole of India at present existing.

17,600. It was a paper calculation of that kind; and in spite of that the people continue to live?—It is well known, according to the official statements themselves, that people do live; but they are insufficiently fed, and many people go without one full meal a day.

17,601. Without one full meal a day?—Without one full meal a day.

17,602. (*Chairman.*) Your view is that the production of grain in India is barely sufficient for the population in an ordinary year?—Just so.

17,603. (*Sir James Peile.*) And in the present year, when an enormous area of India has not produced more than one-half its ordinary crop, has it been necessary to import grain from outside the Indian Empire to feed the people?—Certain provinces have a surplus which goes to other provinces to feed the people.

17,604. Oh, certainly; that is all within the empire?—But, of course, we can only know from the official statements later on how much food has been imported.

17,605. But you are aware that many provinces always have a surplus?—Not all the provinces, so far as I have been able to see them.

17,606. I said "many" provinces?—There are provinces where millet and other things do not suffice for the food of the people. For instance, in Bombay I found from the statistical returns that a good deal of millet generally comes partly from Rajputana, Hyderabad, and from native states and other places, in order to give the annual supply to Bombay for the whole military and civil population.

17,607. Exactly. Well, the Bombay people are growing cotton and wheat, and oil, I suppose, for export?—That may be so. We are speaking here of the food grains.

17,608. (*Chairman.*) But of course Bombay is an enormous city?—I am speaking of the Bombay Presidency, your lordship.

17,609. But you would expect in the Bombay Presidency, that in a city like Bombay, which ranks amongst the first cities of the world in population, there must be a large import of food, which the people themselves could not possibly grow?—I was giving only an instance, in answer to Sir James Peile, to show that some of the provinces would produce less and some more, and part of the surplus would go to feed another province. But this is only so far as my own examination of the food area goes.

17,610. From your own experience you think there are not sufficient food areas in India for the population; but that is an argument which might not be generally accepted, and upon which, you will admit, there is room for separate opinions?—There may be.

17,611. Now I take it from what you say, that your view would rather be in favour of extended irrigation works than of extended railways?—Comparatively.

17,612. Putting the two things together, and supposing that there is only a certain amount of money to be lent out in India, would you tell us how, as between railways and irrigation, you would divide the outlay? Of course I am not asking you to put down sums. I want to get your view as between the two classes of works. One criticism which you would make upon the Government of India is that it now pushes the railway system too quickly, is that the case?—That is the general opinion of all Indians, that we are rather going at too fast a pace with railways, and that we might do something more for irrigation.

17,613. Therefore, without stopping the expenditure on railroads, your policy would be to spread the expenditure on railroads over a longer number of years?—That is to say, to spend on railway construction a little less and on irrigation a little more; not that the railways should be entirely stopped.

17,614. Then here again comes in the question which we have been discussing, namely, the provision of money. Supposing, whether it is irrigation or railways, a considerable amount of money is required (and we are all agreed that these works, whether irrigation or railways, are desirable), are you entirely opposed to the borrowing of money in England? Or, within such limits as may be prudent, would you say, "I think these works are very "important, whether they are irrigation or whether they "are railways, and, if we cannot borrow the money in "India, we had better go on with them and borrow in "England"?—Well, that depends upon the view which the Government of India takes of the irrigation works it constructs from year to year.

17,615. But I want to get at your view, not the view of the Government of India. You have been saying here that you would extend the irrigation works, and I should gather from your evidence that you prefer the irrigation works, as being of greater utility to the natives than the railways?—Yes.

17,616. And I want to find out whether I correctly understand it to be the case that, in your opinion, that would involve a retardation of the railway works—I will not say a cessation of them: is that your view?—Well, it may partly retard, not wholly.

17,617. Yes; that is to say you would execute a given number of miles of railway in a longer number of years?—Yes.

17,618. That would be your view?—Yes.

17,619. And you would lay greater stress then upon irrigation?—Yes.

17,620. And then comes the question whether for railways or irrigation, within that amount and for those objects which you approve of, you would sooner that the Government borrowed in England than not borrow at all?—Under the present conditions?

17,621. Under the present conditions?—Yes.

17,622. Would you now give us your views as to the increase of expenditure in Civil Departments?—Coming now to what are called Civil Departments I may just summarise the growth of the charges under the various heads during the decade, compared with 1884–85:—

	Increase. Rx.
(1.) General administration	152,001
(2.) Law Courts	190,178
(3.) Jails	48,868
(4.) Police	817,353
(5.) Marine	116,913
(6.) Education	120,779
(7.) Ecclesiastical	640
(8.) Medical	85,498
(9.) Political	25,513
(10.) Scientific, &c.	22,018
Total	1,579,761

17,623. (*Sir James Peile.*) Would you tell me whether that total shows the increase of the average charge of the decade compared with the actual charge for 1894–95, or how is it?—Yes; the actual charge.

17,624. (*Chairman.*) So far you are not acting upon the principles, which you have advocated, of taking an average?—These are the increases averaged for the ten years.

17,624*a*. Over the ten years?—Over the ten years, yes.

17,625. (*Sir James Peile.*) The average for the decade?—Yes.

17,626. (*Chairman.*) Have you anything to say as to their necessity or their non-necessity?—In reference to all these charges justification has been given, but, as a non-official, I have no means to judge of the necessity or otherwise of the increases in the several departments. It may be that they were needed for greater efficiency. At

* The amount was about Rx 2,750,000. (*See* Q. 8998.)

the same time there are some matters on which criticism may be ventured. General administration is divided into two heads, that in India and in England. The Indian charge has increased by Rx. 63,711, and the English by Rx. 20,218.

17,627. (*Sir James Peile.*) Those two do not make up 152,000*l.*?—Yes; because I have not here added the exchange for the English charges. The Indian charges for the ten years are 63,711, and the English charges 20,218. If you add the exchange charges, Rx. 68,071, then the whole comes to 152,000.

17,628. (*Chairman.*) But the exchange would only apply to the English charge of 20,000*l.*?—Yes.

17,629. No; it would apply to the total?—Yes, it would apply to the total; the Indian charges' average growth is Rx. 63,711 purely; there is no exchange there. With the English charges the actual growth is Rx. 20,218.

17,630. But the increase of the exchange will be upon the total sum?—Yes.

17,631. I want to get what the total sum in England was?—The total sum of that will be 88,289 *minus* 68,071, = 20,218.

17,632. And, therefore, it would be the difference upon that 88,000?—The total Indian charge is 63,711 — the growth.

17,633. Well, that is not affected by exchange?—That is not affected by exchange.

17,634. And the English?—The English charge, the actual charge, adding Rx. 68,071, will come to Rx. 88,000.

17,635. What was the actual charge with exchange in 1884–85 of the English portion; have you got it there?—The actual charge.

17,636. With exchange?—Yes; in 1884–85 it was Rx. 292,016.

17,637. The English?—Yes.

17,638. (*Sir James Peile.*) Rupees?—Rx.

17,639. (*Chairman.*) Rx.234,930?—Rx.234,930 was the English charge actual, and the exchange was Rx.57,086 according to the Parliamentary return.

17,640. You said the English charge in 1884–85 was——?—Rx. 234,930.

17,641. That is including exchange?—No, excluding exchange, Rx. 234,930; and the total with exchange came to Rx. 292,016.

17,642. Now, will you give us your average for the ten years?—The average for the ten years——should I give the total including exchange?

17,643. Yes, please?—The average will be Rx. 380,305; that will make up the Rx. 88,000 to 89,000 which I have been speaking of.

17,644. That clears up the matter; would you go on?—Yes. In the Indian charge there is a very large growth; under the sub-head "Secretariat" almost all the provinces, as well as the Government of India, increased their charges. As a result, the cost, which was Rx. 338,031 in 1886–87, rose to Rx. 394,912 in 1893–94. As to Secretariat charges, I have to refer the Commission to the Minute of Sir C. Aitchison about the increase in the Financial Department (*see* Appendix 2, Vol. II., p. 35.)

17,645. Are there any other points under the head of administration upon which you would offer any criticism?—Yes, the tour charges of the Viceroy. The tour charges of the Viceroy need to be greatly curtailed. They work, besides, to the disadvantage of the taxpayer by residence for eight months at Simla. What was once a retreat for two or three months during the hottest part of the year is now virtually the seat of government for the major portion of the year. All India, European and Native, has condemned what is called the Simla exodus. All the heads of the departments under the Government follow suit, and thus a most mischievous practice has grown up of staying on the hills. Since writing this evidence I find, in the Bombay papers and other papers, that now there is an agitation against this Simla exodus—that the Viceroy and the Government should go there. Even at the present moment this exodus is criticised severely, specially while famine is raging in important parts of India. Sometimes important legislation of a far-reaching character, needing the presence of non-official members, is required. But, owing to the Government residing there, they are not summoned. A most glaring instance of this was found when the amended Currency Act was passed, on 26th June 1893. No non-official member save Sir James Mackay, who was favourable to the Amending Act, was present. The non-official native members had no opportunity to explain their views. This is a great political evil.

17,646. Do you not think it an advantage in a country like India that the Viceroy should see something of India?—Seeing something of India is different from staying on the hills for eight months of the year.

17,647. No, you would reduce the tour charges, as I understand?—The tour charges include Simla.

17,648. In the tour charges is included the charge of going to Simla; therefore your criticism does not apply to the tours undertaken by the Viceroy in visiting different parts of India?—Of course, if he visits different parts of the country for the people's good, there is nothing to be said; but this is more against staying in Simla.

17,649. (*Mr. Buchanan.*) Do you object to the tour charges of the Viceroy apart from the Simla migration?—No; not to those tour charges, where, of course, a Viceroy goes to see the different provinces.

17,650. (*Chairman.*) Well, is Indian opinion entirely united upon the subject of the residence of the Viceroy? Is there not some difference of opinion as to whether the Viceroy should be what I may call provincialised at Calcutta all the year?—Not so far as my knowledge goes; and I have read a great many newspapers, and the criticisms continually going on on the subject.

17,651. Indian opinion would prefer that the Viceroy should reside all the year in an extreme corner of India, in Calcutta?—Indian opinion says that the Viceroy might go, during the hottest part, to Simla, as Lord Lawrence used to do, for some months, but not for the whole year—eight months, I mean.

17,652. Is it not the fact that Simla is a more central position than Calcutta?—Simla is further away from the plains, where the people are, than Calcutta is.

17,653. Are there not more central portions of India than Calcutta?—I mean to say that in Calcutta—the capital of India—of course the Viceroy is more or less, you see, in contact with the people; but, of course, at Simla he is not.

(*Chairman.*) From a glance at the map of India, I should hardly have called Calcutta a central post of India.

17,654. (*Sir James Peile.*) Simla is in immediate touch with the Punjab, which is a most important province, and with the north-west frontier?—But you see that the viceregal party is more or less at Simla, therefore there is a great deal of frontier activity. There has been criticism in the papers; they say that Simla makes the mischief and causes war on the frontier; and that is the reason why so many frontier expeditions go forward.

17,655. Therefore you admit that Government is more in contact with an important part of the frontier at Simla than it would be at Calcutta? The Government is more immediately in contact with an important frontier and an important province at Simla than it would be if it were at Calcutta?—Nearer the frontier, no doubt. Simla is nearer the Punjab; but, certainly, it is not nearer to the different provinces of India, we say.

17,656. (*Chairman.*) Surely it is nearer?—It is nearer the Punjab.

17,657. (*Sir James Peile.*) It is nearer the North-west Provinces, is it not?—It may be.

17,658. Central Provinces?—Of course, as you go down southwards the distance will be greater. If you take Madras, which is at the greatest distance, and the Central Provinces, which are at a lesser distance—all the same the whole distance of the plain—you see, taking the whole of India together, Simla is far away.

17,659. I do not agree with you at all. If you look at the map you will see that that is not so; it is like the centre or the nave of the wheel; the Punjab, the North-west Provinces, and the Central Provinces, are on the spokes of the wheel. Then I would like to ask you another question; if you wanted an European to work efficiently and well and vigorously all round the year, would you put him down in Calcutta during the hot weather and the rains?—As a matter of fact, judges and barristers and European merchants all work in Calcutta in the hot weather and the rains.

17,660. I think, as a matter of fact, the European merchants generally leave Calcutta in the hot weather and rains; and certainly the High Court Judges, whenever they can, do so?—The High Court vacation in the Calcutta Court begins about August; that is about the end of the rains, and the session again begins in November or December.

Mr. Dinshaw Edulji Wacha.

8 April 1897.

17,661. The vacation begins?—In August—the middle of August—or in September.

17,662. Well, and the Judges generally go away, do they not?—At that time they go; but at that time the rains are almost gone.

17,653. Are you under the impression that the Government of India go up to Simla to play or to work?—What is said is this, that it would be far better for Government to remain nearer, say in Calcutta, than remain for eight months at Simla. That is the general complaint.

17,664. Are you aware that the greater part of the work of the Government of India, the hardest part of the work of the Government of India, is done at Simla?—That may be so; but still, as a Government, the whole staff of Government, if they were nearer the people, and, of course, tried to understand the views of the people, it would be far better; that is the complaint of the whole Indian population.

17,665. You have put the residence at Simla down at eight months, is that correct?—Well, they go there generally at the end of March and remain there till the end of October; that would be seven months, from seven to eight months.

17,666. (*Sir William Wedderburn.*) I think that the complaint is that the Government of India is not sufficiently in touch with the people?—Yes.

17,667. And the general belief is that going away to the hills for a large portion of the year increases the evil?—Yes.

17,668. And rather brings the Government of India strongly under the influence of the Punjab officials, who are more interested in frontier enterprise than in the domestic needs of the people; is that the nature of public opinion in India?—Yes.

17,669. (*Sir James Peile.*) What officials might those be?—Frontier officials.

17,670. You mean the military commanders?—Whoever they may be, both civil and military.

17,671. (*Mr. Naoroji.*) It entails also a very large expenditure, does it not, this removal of a large staff to Simla and back to Calcutta every year?—It entails expense.

17,672. It entails a large expenditure?—Yes.

17,673. And in Calcutta the Government would be a great deal more, as it were, amongst the people themselves than it is when aloft on the heights of Simla?—Yes.

17,674. (*Chairman.*) Have you any criticism to make on the Law and Justice budget?—Under Law and Justice all the sub-heads show a great increase. High Courts, &c., show an increase from Rx. 314,423 in 1886–87 to Rx. 347,195 in 1893–94. Law Officers' establishments have risen from Rx. 64,419 to Rx. 96,045. Civil and Sessions Courts from Rx. 63,955 to Rx. 68,199. Criminal Courts from Rx. 901,645 to Rx. 1,004,886. This branch of the administration could be more economically and efficiently managed were native agency still more extensively employed in substitution for European. Great complaints are made as to the efficiency of the police, and the reason is that the higher appointments are almost all reserved for Europeans. Therefore, there is little prospect for police subordinates, and the best class of men are unwilling to enlist in the force. With proper arrangements native officers of police should be obtainable, bearing the same high character for ability and integrity as the class which furnishes the subordinate judges. If almost all the district judges, civil and criminal, were trained native lawyers, a great saving could be effected, while judicial administration could be greatly improved. The Public Service Commission has borne ample testimony to the good work done by the native judiciary. In this connexion I may observe that there is now a consensus of opinion, not only among Indians, but among English lawyers of reputation and authority who have served in India, that the administration of criminal justice, which is at present not very satisfactory, should be improved by separating judicial from executive and magisterial functions. In Bombay the Honourable Mr. P. M. Mehta, a trained barrister of 29 years' standing, and most fully conversant with criminal justice, more than once brought his scheme of reform to the notice of the Legislative Council, but to no purpose. The scheme is not at all costly, though the question of heavy cost is brought forward as an excuse. I can produce some extracts from the proceedings of the Bombay Legislative Council to show what Mr. Mehta's scheme is.

17,675. Can you put it shortly?—Yes.

17,676. Then perhaps you would do so?—Extract from the speech of the Honourable Mr. Phirozshah M. Mehta, LL.D., at the Bombay Legislative Council, held on 27th July, 1893 (*vide* proceedings of the Council of the Governor of Bombay for making laws and regulations, Vol. XXXI.):—"The total cost of criminal courts is "Rs. 12,66,000. Out of this amount Rs. 10,19,662 are "brought from land revenue head, being half portion of "the salaries of assistant judges, mamlatdars, &c. What "I venture to suggest is that, instead of employing "assistant collectors and mamlatdars to do criminal work, "that work might be transferred to a body to whom "such work would be congenial and harmonious—I mean "the subordinate judges. I contend that it is discordant "work so far as revenue officers are concerned. If the "work were entrusted to a body to whom it would be more "appropriate, namely, the trained subordinate judges, "there would be a considerable saving effected in the "budget in the cost of revenue and criminal work. This "would hardly be the time to go into all the details of the "account, but I would illustrate my remarks by taking "one district, viz., Poona. There are eight talookas in "Poona, to look after which there are three assistant "collectors, three first grade, and one assistant collector "with no magisterial powers. Their salaries are Rs. 900, "Rs. 700, and Rs. 400 respectively. Then there are nine "mamlatdars having first-class powers on Rs. 200 each, total "Rs. 800; and five with second-class powers on salaries "between Rs. 200 and Rs. 150, total Rs. 850. The total "of all these mamlatdars is Rs. 1,650 per month. I have "some personal working of these courts. On the whole "the assistant collectors and mamlatdars certainly do not "devote anything like even two full hours per day to "criminal work; they are not able to do it. If all this "criminal work intermittently done by these men was "made over to subordinate judges, who are trained "officers and competent to deal with it, the cost of "criminal work would be reduced in this way. I would "abolish one of the three assistant collectors, *i.e.*, Rs. 700, "and cut down the mamlatdars by half, *i.e.*, Rs. 825, total "Rs. 1,525. Against this I would suggest the employ-"ment of three more subordinate judges for the district "on Rs. 300 a month each, viz., Rs. 900. This would "give a monthly saving of Rs. 625, or Rs. 7,500 a year. "This would not only secure economy, but increased "efficiency, for the work would be done by better trained "judicial officers. There would also be another advantage. "We know at present that assistant collectors have to call "the accused and witnesses in cases on their files to "follow them to their camps over long distances. This "is a very great hardship. . . . Then again the evils "of associating criminal and revenue work would be "mitigated."

17,677. Was that brought before the Legislative Council?—Yes; and the answer, given by Mr. Birdwood, a member of the Council, was that it was not practicable.

17,678. (*Sir James Peile.*) There was more than that given, was there not? Did not Mr. Nugent give a considerable number of reasons against it?—Yes, Mr. Nugent gave some answer too; but I think that that was in reference to the number of judges.

17,679. That they have got their own work to do already?—Yes.

17,680. (*Chairman.*) It has been admitted, has it not, that the separation of judicial and executive functions would be expensive?—That is the view of the Government.

17,681. That might be over-ruled, of course, by the necessity for the change; but you would admit that it would involve expense, I suppose, would you not?—Well, according to the scheme propounded, it is just possible that without any increase in expenditure the separation might be effected; that is the view of native lawyers so far as I have known them personally in my city.

17,682. (*Sir James Peile.*) What would you do with the office of Collector and Magistrate of the district; how would you provide for that?—Well, I am not a lawyer to answer that question; I am not in the position to answer it.

17,683. It is not a lawyer's question at all; it is an executive officer's question?—I have no official knowledge of the executive work, and, therefore, I am not in a position to say anything upon the subject.

17,684. I am afraid you have not thought the thing out?—I have only put forth what the native view is, and that of a trained lawyer like Mr. Mehta.

17,685. (*Chairman.*) You are relying in this instance upon the evidence given by a trained lawyer, Mr. Mehta, who, you consider, has a right to speak in the matter?—Yes.

17,686. His opinion is entitled to weight?—Yes.

17,687. (*Sir William Wedderburn.*) The change involves a transfer of duties rather than an increase of duties?—Yes.

17,688. And, therefore, it does not appear that any large additional expenditure will be necessary?—Yes.

17,689. (*Chairman.*) Mr. Mehta said that it would save money, did he not?—In his own speech he said that.

17,690. Is there any other remark upon this point that occurs to you?—There are also certain other economies proposed by the Finance Committee with regard to certain appointments in the High Court of Bombay. For instance, the placing of the Clerk to the Insolvents' Court on a fixed salary instead of allowing him fees which now come on an average to Rs. 3,000 a month, very nearly the pay of a High Court judge. The post can be easily filled by a competent native on Rs. 400 to 500. But in this case for ordinary routine work the incumbent is still permitted to draw fees equivalent to the pay of a judge who does hard brain work.

17,691. Now passing to the Education budget, have you any remarks to offer upon that?—As to education charges all I can say in this place is that the expenditure is very illiberal. There is a loud cry all over the Empire that the Government spends very little on the education of the masses, a very large proportion of whom are illiterate. The total expenditure under this head in 1884–5 was Rx.1,035,496 including local cesses. During the succeeding ten years it was on an average Rx. 1,156,275. The increase was Rx. 120,779.

17,692. (*Sir James Peile.*) Was that gross or net?—That includes the local cesses; I think it is net.

17,693. It is net?—Yes, but it includes local cesses. The increase was Rx. 120,779. The late Sir Alexander Grant, Director of Public Instruction in Bombay, observed that, if the Government gave only 2 per cent. of its gross revenue per annum for purposes of education, it would achieve a great progress in matters of education. As a matter of fact, it spends only 1 per cent., and that for all kinds of education, while a very large portion of the population is ignorant of the very alphabet.

17,694. That is gross revenue, is it not; you have taken the gross revenue, have you not?—Yes.

17,695. You have compared the net expenditure with the gross revenue?—I am giving the opinion of Sir Alexander Grant on the subject.

(*Chairman.*) I think Mr. Wacha is passing on to a somewhat different point. He first of all points out what the expenditure was, and then he proceeds to bring out what a European officer thinks should be the expenditure.

(*Sir James Peile.*) Quite so; but he is showing what percentage the net expenditure is upon the gross revenue.

(*Chairman.*) I see what you mean. Quoting Sir Alexander Grant, Mr. Wacha says, as a matter of fact, that Bombay spends only 1 per cent., he thinks.

17,696. (*Sir James Peile.*) The total charge for education, as compared with the gross revenue, is more than 1½ per cent.; that is what I want to bring out?—If it is 1½ per cent. Millions are thrown away on bootless frontier expeditions and fireworks, for which monies are always forthcoming, but not for the education of the masses. Great Britain spends 8 millions sterling per year on 36 millions of the population. But for the 220 millions of British India, the Indian Government spends very little indeed. Every rupee spent on education will eventually serve to drive out ignorance and superstition from the country, and bring the masses into closer attachment with British rule. In short, the more India is educated, the greater the strength and security of the British Indian Empire. I beg to point out to the Commission that the Indian Government now derives a revenue from the drink traffic of over 5½ million Rx. from the masses. It comes to four annas per head of the population, roundly speaking, while it spends only a little less than an anna on education.

17,697. Say 1½ anna, will you not?—Well, it does not come to that.

17,698. (*Chairman.*) I should like to understand somewhat more what the proposition of Sir Alexander Grant was. He wanted to give up 2 per cent. of the gross revenue for the purposes of education?—Yes.

17,699. Do you know what that 2 per cent. of the gross revenue would amount to?—Of course if you take the budget at 95 millions, as it was last time, it would come to 1,900,000.

17,700. (*Sir William Wedderburn.*) I think these observations of Sir Alexander Grant were made more than 30 years ago?—In 1865.

(*Sir James Peile.*) It was merely an *obiter dictum.*

17,701. (*Mr. Naoroji.*) But, whatever weight you attach to his opinion, it would represent at the present time, you would maintain, an expenditure of something like 2 millions a year?—Yes.

17,702. (*Sir James Peile.*) And the net expenditure in the last ten years was 1,156,000?—Yes.

(*Chairman.*) You draw a distinction between net and gross.

(*Sir James Peile.*) Certainly; net is after deducting fees and receipts of all kinds.

17,703. (*Chairman.*) And it does not appear really what Sir Alexander Grant meant by 2 per cent. of the gross revenue, that is, whether he meant it to include fees; it is rather a vague statement on his part, is it not?—Generally speaking, he said 2 per cent. might be spent on education, especially elementary; that was his point.

17,704. And I suppose you would mean that that should be a Government contribution out of the revenue, apart from fees and incidental sources of revenue?—Yes.

17,705. Have you anything to say upon the miscellaneous civil charges?—Miscellaneous civil charges also show a great growth under the following sub-heads compared with 1884–85:—

	Increase.
	Rx.
Territorial and political pensions - -	−113,197
Furlough allowances - - -	41,047
Superannuation and pensions - -	716,120
Stationery and printing - - -	18,271

Superannuations and pensions. This, too, is a growing charge. The pensions in India increased Rx. 15,465 on an average of the 10 years over the figures of 1884–85. In England they increased Rx. 251,708, exclusive of exchange, which increased by Rx. 454,605.* The total net charges increased Rx. 716,120. The fact again demonstrates the costly character of the foreign agency and the heavy drain of the country's wealth every way disadvantageous to India from the moral and material point of view.

17,706. Have you anything to say on the famine relief grant?—Famine relief and insurance. As far as protective railway expenditure goes, there has been, on an average, Rx. 558,849 less incurred per year than was the case in 1884–5, when Rx. 946,457 was expended. On protective irrigation, too, Rx. 169,010 have been annually less expended. A prolonged and unpleasant controversy has raged round this grant, and the Indian public, despite all official explanations, have maintained that the fund has been tampered with in spite of solemn assurance. But, apart from the controversy, it is a fact that for three consecutive years, owing to increased military activity in Upper Burmah and elsewhere, the amount expended was very low—

	Rx.
1886–87 - - - -	309,020
1887–88 - - - - -	91,408
1888–89 - - - -	78,336

In 1889–90 and 1890–1, Rx. 600,000 were expended. In 1891–2 the sum applied was Rx. 1,268,319. In the following two years it was Rx. 1,116,103 and Rx. 1,117,801 respectively, while in 1894–5 it was again reduced to 610,235. I do not agree with the contention put forward on behalf of the Government that it is only when a surplus is available that the grant could be given. For, as a matter of fact, there have been grants when there were deficits also. In 1884–5 there was a deficit of 386,446, yet the grant was maintained in the accounts at 1,548,357. In 1892–3 there was a deficit of 832,412, and yet there was a grant of 1,116,103. In 1893–4 there was a deficit of 1,546,998, and yet Rx. 1,117,801 were made available. These stern facts entirely disprove the plea put forth that the grant could only be made when there is a surplus. The Indian public has never understood it in that sense. The sense in which it has been understood is this, that it was to form an ordinary item of expenditure, for which a tax was specially provided. Even supposing, for argument's sake, that the understanding was inaccurate (which I

* The figures for India and England given above allow credit to the Indian charges for certain receipts collected in India (such as subscriptions to medical, military, and civil funds), which are levied with the object of meeting charges incurred in England. Also, in the interval between 1884–85 and 1893–94, certain funds have been taken over, with the result that charges formerly incurred in India (in the shape of donations to the funds) are now paid in England (in the shape of direct payment of pensions). Allowing for these, the net charges have increased by Rx. 116,000 for Indian pensions, and by Rx. 146,000 or English pensions, apart from exchange.

Mr. Dinshaw Edulji Wacha.

8 April 1897.

deny), sound finance alone demands that this item should be considered as an ordinary recurring expenditure, at any rate till such time that the necessity for it exists. There can be a surplus only in the true sense of the term when all normal expenditure is provided for in the budget. The partial suspension of the famine fund in the past cannot therefore be excused. Far better to declare at once that the grant will be available whenever it suits the Government rather than apologise for its partial suspension in the absurd way that it has been done in the past. Lastly, it is impossible to understand on what principle Indian Midland and Bengal Nagpur Railways are considered to be protective railways, so that the interest due on their capital should be paid out of the Famine Fund. Both are commercial railways, and it is surprising that the interest charge should not be carried to the railways proper constructed out of borrowed capital.

17,707. Does not your evidence assume certain points which are not all granted by the Government? As I understand it, the contention of the Government has been that a certain provision should be made against famine. It was not an undertaking that for all time a fixed amount of revenue should be put apart for that purpose, but that, according to the discretion of the Government, certain sums should be put aside; and, when according to their view a sufficient amount of work has been done to meet the purpose of famine insurance, then it was open to them to reduce the amount; and in consequence of that they have deliberately reduced the amount, because they do not think that more is necessary. If that is the Government case, would you maintain that, when the responsible Government thought that enough has been done, and that a smaller sum would suffice for the future, the Government was nevertheless bound to spend money, which it did not think necessary, on a famine insurance fund? Is not that what your evidence comes to?—It appears, judging from the condition of the present famine, that this Rx. 1,500,000 should be maintained.

17,708. Now the Government are putting away or putting aside one million, are they not?—They have not always put aside regularly the Rx. 1,500,000, as I have already pointed out here.

17,709. As I understand your argument, it is that, whatever the state of Indian finance, there has been some implied bargain between the Government and the Indian public that 1½ millions should be set aside for famine insurance every year; and that there has been some kind of breach of faith, if the Government has not put aside that 1½ millions?—That is the general view.

17,710. But I do not think that there can be any breach of faith in that case, if the Government think that it has done enough in this particular case and that a million will do; why should it burden the Indian taxpayer with a larger sum than on its own deliberate conclusion it thinks necessary?—Because, when the Indian famine fund was established, there was a special tax established, and that tax continues. If the Government think, as a responsible Government, that less money ought to be spent, then, of course, the tax ought to be modified or entirely remitted.

17,711. When was the tax imposed?—It originated in the licence tax, imposed in 1876–7.

17,712. I think I gathered from some evidence you gave that in the interval a very large remission of taxation has taken place?—Yes; in the salt and import duties in 1882.

17,713. First of all?—Yes.

17,714. And since that, again, there has been an increase of taxation?—Yes; the licence tax was converted into the income tax in 1886–7.

17,715. Therefore have not the conditions been somewhat altered? It is very difficult to say now, considering the necessities of Indian finance, that the licence duty remains in the same position as it did originally?—Well, of course, in a matter of this kind there are differences of opinion; the Government holds one opinion and the people of India, on the basis of what occurred in 1876–7, hold another opinion.

17,716. I am not in the least demurring to your statement in its main features. I think it very right and fair that you should put this before us. I only want to bring out distinctly what the difference between your view and that of the Government is; and also I want to ascertain the ground of this apparent idea of a breach of faith in the matter, because, as I understand it, you think that, though the Indian Government, rightly or wrongly, think that sufficient has been done, they are still bound to place upon the Indian taxpayer a charge which they do not think necessary?—The Indian taxpayers consider that this is a charge which might be rightly put against the revenues. Of course, as the Government object is to limit, as far as possible, the horrors of famines to come; therefore, so long as the necessity exists that this fund should be continued, the Government ought to continue it; for that purpose the Indian people are willing to bear this special taxation, as it were.

17,717. Then your opinion would be—of course, it is a perfectly fair opinion to hold—that the famine fund is not large enough, and that, that being the case, the Government ought to impose a charge upon the Indian people larger than that which it thinks necessary?—We do not say that Government should charge to the revenue account a larger sum than what it annually does; the complaint is that the 1½ millions are not regularly charged, and that, whenever the exigency arises, it suspends the famine fund, or only partially charges it to the revenue; that is the complaint.

17,718. But the Government do not think that 1½ millions are necessary; and, that being the case, would you think that a Government ought to impose a charge upon the people which it does not think necessary?—Well, that is the Government point of view.

17,719. But then I want to bring out the difference of the view which you are expressing from that of the Government?—Yes. The people consider that, bearing in mind that famines recur now and again, and that the country is still not sufficiently protected; therefore it would be far better that the famine fund should be a charge on the revenue from year to year, as it is now, unless it is proved that the necessity has entirely gone by and that it might be entirely left out of the revenue charge.

17,720. You differ from the Government in thinking that sufficient precaution has not been taken, and that, therefore, the Government ought not to reduce this sum by Rx. 500,000; and for that purpose you would increase the expenditure; but I must add you have been telling us that the expenditure of India is extravagant?—This is an expenditure for a popular purpose; the people themselves are prepared to bear it to protect themselves from famine. There are kinds of expenditure—on education, as I have said—that the people would like to see greater: savings could be made on other expenditure; the people would be very glad if more expenditure on education and famine purposes might be made available.

17,721. (*Mr. Naoroji.*) Is it not the case that the increase of taxation that was made on the ground of this famine relief fund is continually raised, and yet it is not applied to the particular purpose for which it was commenced to be raised; is it not the case that there is an additional revenue raised, that the revenue that was originally intended for this particular purpose is continued to be raised but not applied for the purpose to which it should be applied?—That is the view which the Indian public take.

17,722. (*Sir James Peile.*) What is the taxation which was raised expressly to provide the famine relief grant?—At first it was a licence tax, which was commuted into an income tax in 1886–7.

17,723. Taxation is always imposed by legislation, is it not?—Yes.

17,724. Is there anything said in the legislation of the licence tax to the effect that that tax belongs to the famine relief grant and to no other purpose?—Well, at the time the legislation took place on the subject, this was the declaration, that for the purpose of famine a licence tax will be imposed.

17,725. Do you know whether there were any other Acts passed at that time for raising money in connection with famine?—There may have been.

17,726. Do you know that there was one in the North-West Provinces for raising local rates, and another in the Punjab in the year 1878?—I have no knowledge.

17,727. And do you know what the preamble of those Acts said?—I know nothing about them.

17,728. It was to this effect: Whereas, in order to defray the expenditure incurred and to be incurred for the relief and prevention of famine, it is necessary to make a permanent increase in the annual revenue, and it is accordingly expedient to provide in the territories administered by the Lieutenant-Governor in the North-West Provinces for the levy on land of rates, in addition to those applied now to local purposes, and so on. You see the object of the Act there is to raise rates so as to amplify the annual revenue, to make a permanent increase in the annual revenue, on account of the expenditure devolving on the Government in connection with famine relief, so that the

purpose is, you see, to strengthen the revenue; the proceeds of the tax are not put aside entirely for famine relief, but simply devoted to strengthening the general revenue?—That may be the Act of the North-West Provinces.

17,729. Now, are you aware that at that time the Famine Commission recommended the construction of a certain number of railways, in order to prevent suffering from famine—what are called protective railways?—Yes, the Famine Commission recommended them.

17,730. And are you aware that all those railways have now been constructed?—Well, I do not know what was the list provided by Government, and what they have done since.

17,731. But perhaps you will take it from me what they have done; I think one is not finished yet, but they are all either constructed or under construction?—Yes.

17,732. Well, in that case you do not require to keep up the fund, or rather the provision of surplus revenue, which was largely applied to the construction of these railways?—But if, as you say, some of these protective railways for famine are not constructed it is very necessary to keep up the fund.

17,733. I said that they were, I think, all, except one, finished and working?—Yes.

17,734. If that has been done, and if the money is all spent upon them which was required to make them, is it necessary to keep up that provision of a surplus revenue which was made in order to construct those railways?—But here again, I repeat, the fund is for the purposes of famine; not only protective railways should be constructed but there should be irrigation works also.

17,735. Well, but that also has been done out of the same fund?—Then it is only a question of difference of opinion between the Government on the one side and the Indians on the other side, who still think that there is room for constructing other works of famine, and, therefore, a need for maintaining the fund.

17,736. You are aware that in 15 years 17½ millions have been provided and appropriated as famine relief grant?—Yes.

17,737. And the Government of India have now, after carefully considering the question, come to the decision that 1 million instead of 1½ million is sufficient to be provided for that purpose?—Yes.

17,738. (*Sir William Wedderburn.*) At the time that these special taxes were imposed, did not Sir John Strachey say that they were to be used as a famine fund, which was to be a sacred trust, to be spent on this particular object and none other?—Yes.

17,739. And, when a remonstrance was made to Lord Lytton by a deputation that the people were not satisfied that this money would be so applied, did not Lord Lytton rebuke them severely for doubting the promise of Government that this tax should be applied to famine relief and famine prevention and to nothing else?—So I read in the speech of Lord Lytton. Yes.

17,740. And on that account the people consider that an agreement, as suggested by the chairman, was made between the Government and the people with regard to the application of these taxes?—So it has been understood by the Indian people.

17,741. (*Mr. Naoroji.*) Do you know that there was a departmental committee, I think, upon the question, of which Lord George Hamilton was the chairman, and that they agreed upon a report to the effect (I speak from memory) that this fund should be so treated that it should be applicable only to purposes of preventing famine or famine relief; are you aware of any such report?—I have no recollection myself of it.

17,742. (*Chairman.*) What are your views on the exchange compensation allowance?—There is absolutely no reason for the Indian Government to impose, on the one hand, a further burden on the taxpayers, and, on the other, simultaneously give more to those who were already in the enjoyment of very liberal salaries, salaries which have no parallel in any part of the civilised world. That there was no legal obligation to allow this compensation has been fully admitted by the Government of India, and specially at the expense of the taxpayers, as if the latter did not suffer also from the burden of exchange, and as if they did not contribute to help the State to cover the loss arising from it. But objectionable as it is, there is no validity even in the reason assigned, namely, that civil and military officers have felt it a great hardship to remit monies home for maintenance and education of their families in England. In the first place, the Government is not bound to take this plea into consideration. Secondly, the patent economic fact of the increased purchasing power of gold seems to have been totally ignored. If the officers have less sovereigns to remit for the equivalent in rupees, their families are able to buy more of all domestic goods. It will be seen from the table in the Presidency Association's memorial of 16th March, 1894, put in by me, that the prices of almost all articles of domestic consumption and wearing apparel have greatly fallen since 1884. And my inquiry since my arrival in London would seem to inform me that house rent even in so dear a place like London has fallen. In the teeth of these facts it was a gross act of injustice to the Indian taxpayer to impose fresh burdens on him for the sake of the services. Nothing has created greater dissatisfaction than this measure, so arbitrary and worthy only of Oriental despotism, regardless of the poverty-stricken condition of the people rather than that of a just Government as the Government of India purports to be. But for this there would have been no necessity to re-impose the import duty on merchandise, and the sooner this financial injustice is removed the better.

17,743. Looking at the evidence you have given us on the increase of expenditure generally, may I ask you whether you have arrived at any conclusions on the strength of the facts so stated, which you would like to place before us?—From the foregoing examination of the progress of expenditure it will be evident to the Commission:

(1.) That the financial embarrassments which prevailed during the decade owe their origin principally to the enormous growth of military expenditure, which has led to the imposition of additional taxation, which now amounts, including the customs duties on cotton goods, to nearly 6 crores.

(2.) That the growth in civil expenditure is also very considerable. But so far as this is concerned there is not much cause of complaint save in one respect, namely, that the costly foreign agency absorbs a large portion of the revenue which could be considerably saved if there was more extensive employment of Indians in the higher grades of the administration. It may be observed that adequate civil expenditure of a productive character is much to be desired. I mean such as gives the taxpayers a fair *quid pro quo*, such as education for the masses, more efficient administration of justice, greater village and town sanitation, and all other works of public utility which contribute to the expansion of provincial resources and prosperity of the people.

(3.) That the burden of exchange might easily have been borne, without resort to fresh and enhanced taxation, had the military expenditure been on the basis of 1884–5.

(4.) That a similar growth, if allowed to go unchecked in future, is liable to plunge the Government into fresh embarrassments, leading to further taxation, which is neither desirable in the interests of good and stable government, nor in the interests of the people, among whom there prevails sullen discontent, inasmuch as their capacity to bear further burdens has been greatly crippled. The Secretary of State writes imperative despatches for strict economy, and for exercising utmost care in public expenditure, for the danger of increasing the burdens of taxation has to be borne in mind. (*Vide* Despatch 12th April, 1888, Vol. II., Appendix, p. 141; Despatch of 3rd November, 1892, Vol. II., Appendix, page 154.)

These warnings seem to fall on deaf ears, and Secretaries of State do not enforce what they enjoin, and the despatches only remain pious intentions. At any rate the Commission must have noticed how in spite of them expenditure has grown apace. Since 1892 taxation to the extent of about 3 crores has been added, while the military activity beyond the frontiers was even greater in consequence of the acquisition of Gilgit, which ultimately led to the occupation of Chitral at a cost of 1½ crore and with a permanent annual charge of 25 lakhs! The State Secretary himself is a silent or originating party to this kind of expenditure, so that it may be truly observed that the despatches are practically of no effect, and that both the Secretary of State and the Government of India must be held equally responsible for that expenditure.

It is a well-known fact that India has no true surplus to speak of. It lives at the best from hand to mouth, and is oftener than not in a condition of embarrassment from which it relieves itself only by windfalls or borrowing or by enhanced taxation which every time that it is imposed diminishes the capacity of the taxpayer, whose income does not exceed Rs. 27 per annum.

Mr. Dinshaw Edulji Wacha.

8 April 1897.

From 1849–50 to 1894–5 there has been a net deficit of 37·62 million Rx. In other words, during the 46 years' Indian finances have exhibited an annual deficit of 800,000 Rx. on an average. The most essential fact seems to have been invariably lost sight of, that India is made a poor country by the "bleeding" it has been subjected to, and can, therefore, have but a poor revenue. That a system of administration, however well-meaning, which takes no cognisance of this essential fact but goes on adopting a western system of Government, a system of an alien Government in which the people have no voice and which is besides known to be costly, must in the long run end in financial disaster, however long it may be coming in. I go further and say it is a system unnatural and foredoomed to failure. Under the circumstances Indians cannot but view with the gravest apprehension any further increase of expenditure.

17,744. I think among your conclusions you speak of additional taxation, which amounts to nearly 6 crores, and in another place you speak of 3 crores, I think, as having been added?—Yes, I will explain that. In my comparisons I have taken the years as far as 1894–5; up till then the increase of taxation was that much, 3 crores; but since then we have added on the import duty on cotton goods, which has increased the amount to about 5½ crores; I think I have said 6 crores, which may not be exactly correct; it may be a little less.

17,745. You say that there were 3 crores to be added up to 1894?—I think 1½ or 2 crores has been added since by the import duty on cotton goods.

17,746. You said 6 crores, which for our purposes are 6 millions?—I think the official figure is 5 crores odd.

17,747. Mr. Jacob's evidence, or the official evidence, has given 5½ crores, has it not?—I think so.

17,748. But may I ask, is that quite a fair method of statement, because, taking the years just before that time, was not 3 crores of taxation remitted?—Yes, that was in 1882.

17,749. But is it quite a fair method of statement, when when you are making a survey of this kind, to choose the years in which there has been an increase of taxation, and to omit all mention of the years in which there has been a diminution, because now you are making a general survey?—But you will see from my first statement that in 1884 there was what you call a balancing of revenue and expenditure, after the remission of 3 crores of taxation; I have said that in the beginning of my evidence, as your lordship will see; and, so far, I have fairly admitted that there was this remission of taxation.

17,750. You speak afterwards of the Indian taxpayer being crippled by increase of taxation to an extent that he can hardly bear?—Yes.

17,751. When you are giving a general survey of what has taken place do you not think it would be fair all the way round to mention the decrease of taxation, which took place, observe, just before the commencement of the period which you have chosen for your survey?—As I have said in my evidence, I have chosen that period, because we considered that that was a fair standard year after the remission of the taxation; and as to the remission of taxation, I have already clearly stated in my evidence that there was that remission of taxation.

17,752. Quite so; I do not for a moment say that you have not stated very fairly that there was a remission, but when you come to that general conclusion do you not think, first of all, that you put the increase of taxation at all events somewhat too high?—We may modify that part of the evidence, in order to be exact.

17,753. And you omit all reference to the fact that just before there had been a very considerable diminution of taxation. I think it would be fairer to bear that in mind, when you are making a general survey; anybody reading this would be, I think, left under the impression that 6 crores had been added to taxation?—Say 5 crores.

17,754. When you are making a general survey I think it is only fair to bear in mind that 3 crores had been taken off just before, and that in fact, as far as the charge on the Indian taxpayer is enhanced, for the purpose of a general survey it is an enhancement of 2½ crores?—Your Lordship will see that I am giving my conclusions on the growth of expenditure during the decade, and therefore I have taken the actual taxation imposed in the decade.

17,755. Yes?—Of course, that is what I have to say; I am reviewing the 10 years; if I were making a general review of the whole period, say from 1875 to 1895, certainly I should have specially mentioned it.

17,756. (*Sir James Peile.*) You told us yesterday that the main disturbing factor was military expenditure. You are reviewing the financial position for 10 years before 1894–5?—Yes.

17,757. You said the main disturbing factor was military expenditure, but for the growth of which the revenue could have fairly borne the increasing burden of expenditure without any of the taxation imposed, and you gave us a table at page 31 of your evidence showing the average annual growth of the Indian military expenditure from 1886–7 to 1894–5 under the head of effective services in India and England?—Yes.

17,758. Exclusive of exchange?—Yes.

17,759. That seemed to come out at an average sum of about Rx. 400,000 per annum?—Yes.

17,760. So that for the nine years that would come to about Rx. 3,600,000, would it not?—Yes.

17,761. Do you take that to be the increase for nine years of the military expenditure?—This table, Sir James Peile, was made by me with reference to what fell from Sir Henry Brackenbury, namely, that military charges have not increased greatly since 1885–6; and I put this table only of the effective services, not of the non-effective services, military and other works, to show that, although that statement is made, still, if you take the different heads, you will see that there is a steady growth, and I go on to explain it. You will please see under the different heads army garrison staff has increased so much, there have been fluctuations in commissariat, there have been fluctuations in so and so. This table is more to illustrate my argument in reference to what General Brackenbury has said, that expenditure has not grown in the Military Department since 1886.

17,762. You wished to show that it had grown?—Yes.

17,763. And you bring out the nine years' growth at Rx. 3,600,000?—Yes.

17,764. And you say that, if that had not taken place, the revenue would have been able to bear exchange and all other things without extra taxation?—Yes, I have pointed that out very clearly in my first part where I say that if you take the total net expenditure at Rx. 545,000,000 and deduct the total increase for Army charges which, after making all allowances, come to Rx. 37,000,000 for the 10 years.

17,765. Now you take them at Rx. 37,000,000?—Yes.

17,766. But I think it was Rx. 3,600,000?—The actual average growth was Rx. 3,900,000 for the whole 10 years.

17,767. No, I take it for the nine years which you gave us, Rx. 3,600,000?—I beg your pardon, I took those years because the Finance and Revenue Accounts for 1894–5 were not with me at the time (they were just issued) and I wished to illustrate that there was increase of military expenditure since 1886, notwithstanding what General Brackenbury has said. The entire military expenditure, exclusive of exchange, as I have put in the table, is Rx. 37,000,000 for the 10 years, and I have pointed out that, if the net expenditure was so much, and if the net additional military expenditure was so much, there would have remained Rx. 508,309,522 as net expenditure for the 10 years; and similarly if the new taxation which in 10 years came, including the Suspension of the Famine Grant and Provincial Balances, to Rx. 29,000,000, was deducted from revenue, then there would have arisen a net surplus of Rx. 8,000,000 within the 10 years.

17,768. Do you know what the total charge for exchange was in that year; what was the total charge for exchange in the 10 years?—The total charge for exchange?

17,769. I mean the increased charge, you know?—The increased charge, yes.

17,770. That is, what was the increase over what the exchange was in 1884–5, in the 10 years?—The average growth compared with 1884 for the 10 years I make out at Rx. 4,327,000.

17,771. Rx. 4,000,000?—Yes.

17,772. Well, we calculate it at Rx. 43,276,000?—Yes; it comes to the same thing.

17,773. The same thing. Well, suppose that exchange charge had not accrued at all, suppose the rupee had stood at what it was in 1884–5 and that Rx. 43,000,000 had not fallen upon the Government as a charge at all; in that case they might have spent Rx. 33,000,000 more upon the military charges without extra taxation?—That is problematical.

17,774. It is obvious?—I only take the facts as they are.

17,775. No, pardon me; allow me for a moment: What you said was that if that military expenditure had been avoided—but for the growth of it—the revenue could have fairly borne the increasing burden of exchange without any increased taxation at all?—That increasing burden of exchange; that is to say, I take into consideration the increasing burden, but if at the same time there had been no additional military expenditure then there would have been this surplus and no taxation.

17,776. Which was the larger, the increase of military expenditure or the increase of exchange?—Well, I have said the principal disturbing factor is the military charges.

17,777. Which was the larger?—Of course, if you take the military and civil services together——

17,778. No, no, which was the larger, the military expenditure or the exchange?—Well, this exchange also includes exchange compensation allowance.

17,779. Which was the larger; you have given the figures?—Well, the facts are there.

17,780. One was Rx. 33,000,000; that was the increase in military expenditure, was it not?—Rx. 37,000,000.

17,781. We make it Rx. 33,000,000?—I say Rx. 37,000,000.

17,782. And the increase of exchange was Rx. 43,000,000?—Yes.

17,783. Obviously, the exchange was the larger, was it not?—Yes, but it includes exchange on all additional military expenditure.

17,784. And if that had not occurred the increase of military expenditure would have fallen within the revenue?—I have shown exactly how the thing stands; expenditure, say, military charges, so much. But for the extra charge, the whole burden of exchange would have been borne, therefore it necessarily follows that the increased charges for exchange could have been borne, you see, without increased taxation, if military expenditure had not increased since 1885.

17,785. You gave us an Appendix showing asserted wide discrepancies between the Revised Estimates and the Accounts?— Yes, a table.*

17,786. A table?—Yes.

17,787. You say the difference in 1894–5 is exceeding Rx. 3,000,000; how do you make that out?—In the revenue side or the expenditure side?

17,788. The revenue side?—Yes.

17,789. The Budget Estimate in 1894–5 was Rx. 92,000,000?—Yes.

17,790. Revised?—The Budget was Rx. 92,000,000 and the Revised is Rx. 94,000,000.

17,791. The Revised is Rx. 92,000,000 here in your table?—You speak of 1895 or 1894?

17,792. 1894–5?—In 1894–5 the Budget was Rx. 91,000,000.

17,793. These are not the figures in your table. You are giving the expenditure; it is the revenue I was on?—Oh, I beg your pardon, for 1893–4 the Budget is Rx. 90,000,000.

17,794. 1894–5 is what I am asking you about?—That is Rx. 92,000,000, and the Revised is Rx. 92,154,000.

17,795. Is not that a mistake? The correct Revised Estimate is Rx. 95,154,000?—I have not the financial statement with me here.

17,796. I think you have made a mistake?—If you show me the financial statement—there is a copy here—I can see it again.

17,797. (*Chairman.*) In your table you say that the Revised Estimate was Rx. 92,154,000?—Yes.

17,798. It appears, I think, you have made a slip there?—Yes.

17,799. As Sir James Peile points out, the Revised was Rx. 95,000,000. It makes a difference; it so far tells against your argument?—The actual accounts do so.

17,800. (*Sir James Peile.*) The accounts exceed Rx. 33,329 instead of over Rx. 3,000,000. In the plus and minus column for Accounts compared with Revised you ought to have *plus* Rx. 33,329 instead of Rx. 3,033,329; you are wrong by Rx. 3,000,000?—That is, if you take the correct figure, you point out a mistake in saying Rx. 33,329.

* *See* Appendix No. 76.

17,801. That requires modification; it largely exaggerates the difference?—It is only inadvertence. I did not intend, your Lordship—far from it—to exaggerate anything in my case.

17,802. (*Chairman.*) I think, if I might suggest to you, Mr. Wacha, you should look at your table again, and if you find this to be the case, which I have no doubt it is, you might modify it?—With the greatest pleasure.

17,803. And, perhaps, you would look through your evidence. Those figures happened to be before you at the moment, which lent great force to your statement of the difference between the Revised Estimate and the Account which followed it so shortly afterwards, and I think, when that misapprehension is removed, you will see that the tendency has been a diminution of that difference?—I shall be very glad to accept your suggestion.

17,804. You say that India has no true surplus to speak of. India does not hold any exceptional position in that respect, does it? The only surplus any country has is the balance of income after expenditure has been defrayed?—Yes.

17,805. Do you think India shows very badly in that respect, as compared with other countries?—I am speaking only of India. I cannot speak of the other countries, because I have not examined into their revenue or expenditure at all; but what I say is this, that this is a statement made by Sir John Strachey that India has got no true surplus, that is, for a rainy day.

17,806. Well, I will put it to you. I think most of us, looking at the course of Indian income and expenditure, would say that, on the whole, the surpluses realised have been satisfactory, and I do not quite understand what you mean when you say that India is relieved from embarrassment only by windfalls. The Indian Government follows very strictly a very old and sound rule of finance. It estimates its expenditure high and its revenue moderately; and I think you yourself rather point in that direction, both in your remarks about the rate at which the rupee is valued and the tendency of the Government to make use of the surplus that it has acquired by making a low estimate of expenditure?—Yes.

17,807. The mere financial position of India over a good many years, in respect of the difference between income and expenditure, has been that of a well managed State?—That is a conclusion which the Commission may draw for itself; it is not for me to say.

17,808. Then, again, I would note in passing that you speak as if it were an established fact that the income of the taxpayer does not represent 27 rupees a year. Really we can hardly pass that as if it were an accepted fact?—It has not been contradicted yet, though several challenges have been made.

17,809. Sir David Barbour himself has somewhat qualified, I think, the authority of the calculation?—Then the best thing would be for the Government to produce its own figures. Mr. Naoroji has often challenged them, and they do not produce what they think is the annual income.

(*Sir James Peile.*) Nobody can possibly say.

17,810. (*Chairman.*) Nobody can possibly say?—I do not know that.

17,811–2. Really, have you ever gone into it? It is impossible to find out such a fact. Lord Cromer himself rather deprecates the use of it; Sir David Barbour has, I think, deprecated the use that has been made of it. I think I am justified in going so far as that. If you are going to rely upon any such statistics as these, they ought to be very much more carefully examined. Reliance upon such an imaginary fact as that rather tends to weaken evidence than to strengthen it?—If it was imaginary, Sir Evelyn Baring would not have used those figures himself.

17,813. Well, it is as near as possible imaginary, that is what it comes to?—That is a mere matter of opinion again.

17,814. Have you taken any means to satisfy yourself that the 27 rupees is right, or do you quote it because Sir David Barbour calculated it?—I take it because it is the official figure.

17,815. Oh no; not the official figure?—Well, when a Finance Member says as much as that in his despatch.

(*Sir Donald Stewart.*) Well, but he qualified it at the time.

(*Chairman.*) He qualified it.

(*Mr. Naoroji.*) He qualified it. Major Baring distinctly stated that for all purposes it was accurate, but he would

Mr. Dinshaw Edulji Wacha.

8 April 1897.

not vouch for the complete accuracy of the figure, but he thinks that is a powerful argument for the poverty of India. His words can be quoted; I have quoted them repeatedly.

17,816. (*Chairman.*) One other remark, you bring forward the net deficit of Rx. 37,620,000 as the deficit from 1849–50 to 1894–5. That, of course, is a very large deficit, and you bring it out at Rx. 800,000 a year. I put it to you on the other side, that the Revolution, as you may call it, of the Mutiny cost India Rx. 46,000,000. Putting aside the expenditure inevitable from such a revolution as the Mutiny was, you will see that, so far from there having been an increase of debt, there really has been over the remainder of the period a surplus?—I am only speaking of the actual condition of facts. Whether India spent it for the Mutiny or the Afghan War, or whatever it may be, here are the facts as given in the Statistical Abstract.

17,817. You are drawing a general view of the financial state of India?—Yes.

17,818. With reference to that, there was in that period a very extraordinary disturbance, the Mutiny; and I point out to you that that led to very great expenditure; putting that aside for a moment, in the rest of the time, in spite of the Afghan War, in spite of all the disturbance of Indian finance, some of which you have called attention to, there remains the fact that there has been a surplus over the whole period, so that, in fact, instead of being represented by an annual deficit of Rx. 800,000, the general result has been a surplus?—That is your opinion.

17,819. Well, what are your practical suggestions?—The practical suggestions I make are these:

(1.) That the military expenditure must be materially reduced, and

(2.) The costly foreign agency must be gradually substituted by an economical native agency, and a fair share of the expenditure must be borne by the United Kingdom for interest common to both countries. I need not go into the great moral and material drain of this alien agency, which the country has been witnessing for years past.

Mr. Naoroji has exhaustively demonstrated it to the Commission, and I have nothing new to add.

17,820. Well, now, perhaps we will pass to apportionment?—Yes.

17,821. I would ask what are your views as to apportionment?—After the mass of evidence recorded by the Commission on the subject of the apportionment of charges between England and India, there remains very little to be said.

First.—As to what are called home charges, namely, those which were inquired into by the India Office Departmental Committee, all high authorities such as Lords Northbrook, Ripon, Cromer, and Lansdowne, have expressed their opinion that the appointment cannot be merely on the basis of an arithmetical calculation, but that having regard to the capacity of India and the fact of its being almost voiceless in the matter, the apportionment should be on the grounds of justice and equity, for which India has clamoured for years but hitherto in vain.

Second.—That in reference to all charges which are incurred for the common interests both of England and India, it is just and expedient that England should bear at least half of those paid for the European agency, military and civil, employed in England and India.

Third.—That all charges incurred from the time of the second Afghanistan war on the North-West frontier of India should be equally divided. Though my Association and the Congress are of opinion that all these frontier wars and expeditions were unjustifiable and a needless waste of expenditure, for all practical purposes a compromise in this matter may be agreed to by an equal division of the expenses hitherto incurred. As to Upper Burmah the entire cost of the military expedition and the subsequent cost of administration should be wholly refunded by England to India, and the province separated from India and made into a Crown colony, as was suggested by the Congress. The occupation was made out at the suggestion of English merchants in Rangoon and Mandalay. Indians never demanded the annexation, and it is unfair to India that for the promotion of the interests of English capitalists and extension of British empire any charges be paid out of the revenues of India.

Fourth.—The charges for the occupation of Aden and its subsequent administration should be fairly divided between England and India and between all the British colonies in the East. And as to the embassy at Teheran, the charges should be wholly borne by England, as no Indian interests are concerned.

Fifth.—That India should not be called upon to pay any charges ordinary or extraordinary whatever in reference to all service which India may be called upon to render to England, unless India was directly interested, and that in such case the charges should be also equally borne by India and England.

Sixth.—That Indian affairs must be kept within the natural boundaries of India, and she should not be dragged into matters outside those boundaries and made to pay their cost.

Seventh.—That if India is to be treated as partner, which she is not in any sense at present, she should share all the benefits accruing from that partnership.

And generally I agree with what Mr. Naoroji has already stated in his evidence and statement on the subject before the Commission.

17,822. Have you any further suggestion to make with reference to financial machinery of control?—Yes, I would suggest that some suitable Indian representatives should be appointed to seats in the India Council. It will be remembered that in the original scheme for the India Council Mr. Disraeli had proposed that seats should be preserved for members elected by a special Indian constituency. India has vastly progressed since that scheme was suggested, and it is high time some steps were taken in the matter. I think in the various elected members of the Provincial and Imperial Legislative Councils will be found ready made such an Indian constituency. It could elect from its own body such members as would in its opinion be best qualified to sit on the Indian Council, and represent all Indian matters, especially financial, from the Indian point of view.

17,823. Of course you are speaking of the Indian Council at home?—Yes.

The witness withdrew.

(Adjourned till Monday next at 12.30 p.m.)

At the India Office, S.W.

FORTY-THIRD DAY.

Monday, 12th April, 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING.)

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. GOPAL KRISHNA GOKHALE called in and examined.

Mr. G. K. Gokhale.

12 April 1897.

17,824. (*Chairman.*) The Commission is very glad to have this opportunity of obtaining your opinion on questions connected with the administration of the Government in India. Would you tell us the subjects to which you have devoted your attention, and the employment which you have held in India?—I am honorary secretary of the Deccan Sabha, an Association established in Poona for promoting under British rule the political interests of the Indian people. For seven years I was honorary secretary of the Poona Sarvajanik Sabha, another political association in Poona of a similar character, and honorary editor of its quarterly journal, a magazine dealing principally with questions of Indian finance and Indian administration. I am, besides, a member of the Council of the Bombay Presidency Association, on whose behalf my friend Mr. Wacha has given evidence before this Commission. For four years I was one of the secretaries of the Bombay Provincial Conference. I was also a secretary of the 11th Indian National Congress that met in Poona in 1895. I was for four years one of the editors of the Sudharak or Reformer, an Anglo-Marathi weekly of Poona. Lastly, I belong to a body of men in Poona who have pledged 20 years of their life to the work of education, and am Professor of History and Political Economy in Fergusson College.

17,825. How would you like to divide your evidence?—In accordance with the plan adopted by the Commission, I will divide my evidence into three portions, the Machinery of Control, the Progress of Expenditure, and the Apportionment of charges between England and India.

17,826. Then, we will take, first of all, the machinery of control, and, perhaps, you would give us your views upon that subject?—The question of the machinery of constitutional control is, in my opinion, a question of the highest importance. I may state at the outset that the position of India, so far as the administration and management of her expenditure is concerned, is somewhat exceptional. In the United Kingdom and the Colonies, public expenditure is administered under the control of the taxpayers, and, therefore, presumably solely in the interests of the taxpayers. In India, however, other interests are often deemed to be quite of equal importance, and sometimes indeed they are allowed to take precedence of the interests of the Indian people. Thus we have, first of all, the standing claims of the interests of British supremacy, entailing a vast amount of expenditure, the benefit of which goes to others than the taxpayers of the country. The large European Army maintained on a war footing in times of peace, the practical monopoly of nearly all the higher offices in the Civil Services by Europeans, and the entire monopoly of such offices in the Native Army illustrate what I mean. I do not deny that this supremacy in itself has been a great advantage to India, but what I mean is that the price that is exacted for this advantage is beyond all proportion too high. We next have the interests of the extension of British dominion in the East. Large sums have been from time to time spent in the past for this purpose out of the Indian Exchequer—in many instances in spite of the protests of the Indian Government—and if things continue as at present, this misapplication of India's money is not likely to stop. All expenditure incurred in connexion with the Afghan and Burmese wars, the extension of the Northern and North-Western frontiers, and the utilisation of Indian troops for Imperial purposes is expenditure of this description. Then there are the interests of the European Civil and Military Services in India. The extravagant privileges conceded to Staff Corps officers in 1866 have, it is now admitted on all hands, imposed, and improperly imposed, a heavy charge on the Indian revenues. The reorganisation of the Public Works Department in 1885 may be cited as another illustration. The Finance Committee of 1886, appointed by Lord Dufferin's Government, consisting of men like Sir Charles Elliott, late Lieutenant-Governor of Bengal, Mr. Justice Cunningham, Sir W. W. Hunter, Mr. (now Sir James) Westland, Mr. Justice Ranade, and others, thus expressed themselves on this subject: "The reorganisation of the (Public Works) "Department was undertaken in consequence of an agita- "tion on the part of the European Civil Engineers em- "ployed in it, which was conducted in a manner likely in "our opinion to have a bad effect on discipline and "therefore deserving of the disapproval of Government. "It seems to us to have violated the orders of Govern- "ment on the subject of combinations by its servants. "Such an agitation would not have been permitted in any "other department and should not again be allowed. "The object of the reorganisation was to improve the "position of the officers of the department generally, "and in particular to remove the block of promotion, "which had arisen from the excessive number of recruits "obtained from Cooper's Hill College in the earlier years "of that institution. During the continuance of the "discussion which we have summarised, great attention "was given to the grievances of the officers of the depart- "ment, but a careful consideration of the whole subject "leads us to doubt whether the measures sanctioned were "altogether suitable, either in kind or in respect of the "classes to which they were applied. They mostly con- "sisted of increments of pay to the Executives of the third "and fourth grade, and to the Assistant Engineers of the "first and second grades, none of which classes of officers "were at the time, so far as we understand the case, in "particular need of special assistance, and of the grant of "greatly improved pensions to all officers of both classes, "and they were made perpetual in their application." The concession made in 1890 to uncovenanted civil servants, whose pensions were fixed in rupees, that these pensions would be converted into sterling at the rate of 1*s.* 9*d.* to the rupee, and the grant of exchange compensation allowance to all non-domiciled European and Eurasian employés of Government indiscriminately are more recent instances. Lastly the interests of British commerce and of British commercial and moneyed classes often prevail over the interests of the Indian taxpayers. I might have mentioned the abolition of import duties during the administrations of Lord Lytton and Lord Ripon, as also the tariff legislation of last year as instances. But they do not come under expenditure and may therefore possibly be regarded as irrelevant.

Mr. G. K. Gokhale.

12 April 1897.

But the wasteful nature of many railway contracts, the extraordinary help given to the Orissa Company, the Madras Irrigation Company, and such other bodies of English investors, the vigour with which the construction of railways is being pusbed on, programme following programme almost in breathless succession, in spite of the protest of the Finance Member that the finances of the country now needed a respite in that direction, the conquest and annexation of Burmah, practically at the bidding of a powerful English trading company ; these are instances which are not open to the same objection. This frequent subordination of the interests of the Indian taxpayers to these other interests makes it all the more imperative that the machinery of constitutional control should provide adequate safeguards for a just and economical administration of the Indian expenditure, and yet, I fear, nowhere are the safeguards more illusory than in our case.

17,827. You say there that other interests are often allowed to take precedence of the interests of the Indian people. May it not be said, on the other side, that the measures which you name are not taken in the interest of a class, but that they are undertaken in the interest of good government in India?—It all depends on what is meant by good government; our view is that these concessions are more in the interests of particular classes than of the Indian people.

17,828. I want to bring before you what would be the counter-statement, namely that the Indian Government, which is responsible for good government in India, has considered a number of these measures to be necessary for good government in India, and therefore this *per contra* argument should be borne in mind, should it not?—Oh, I know that, but it may also be remembered that responsible officers of Government itself after a time condemn many of the steps taken previously; for instance, the members of the Finance Committee condemned what the Government had done only five or six years before; the Government themselves have admitted that in the matter of the Staff Corps officers they made a great mistake. Then there is another thing also that no one expects the Government to openly acknowledge, namely, that these measures are intended in the interests of the services; nobody ever could expect that. Of course, whenever they are adopted, they are adopted, ostensibly in the interests of good government; but the Indian people cannot help feeling that they are really adopted in the interests of certain classes. I am putting forward, of course, the view of the Indian people; I know that there is that view on the other side, which Government puts forward occasionally.

17,829. (*Sir Andrew Scoble.*) You do not profess to speak on behalf of the whole of the Indian people, do you?—Well, I profess to speak on behalf of the Deccan Sabha in the first instance; but, judging from the resolutions of the Congress, and the petitions which several other political bodies have from time to time addressed to the Government on the subject, I claim the views of the Congress party are the same.

17,830. (*Chairman.*) You speak of the large expenditure which has been laid out in the interests of the extension of British dominion in the East. On the other side, would not the Indian Government say that, according to the best of their knowledge and experience, that expenditure was necessary for the maintenance of peace and good government in India?—Yes; but in several cases the expenditure was forced upon India in spite of the protests of the Indian Government. The Afghan War of 1879, for instance, was ordered practically by Lord Beaconsfield from home. Lord Northbrook resigned previously rather than send a Consul to Cabul. In the same manner the first Afghan War was forced by the Board of Control on the Indian Government against the wishes of the Indian Government.

17,831. The point I wish to bring to your attention is this, namely, that in stating what you consider to be the opinion of the Indian people you state quite fairly one side of the question. On the other side, we ought to bear in mind that the Government which was responsible did think those measures were necessary in the interests of good government?—Of course, I do not dispute that.

17,832. And, therefore, there is something to be said upon the other side; without holding that that is a complete answer, I bring before you the fact that there are two sides to the question?—Yes.

17,833. I think you notice in one or two passages of your statement, a number of what appear to you to be errors on the part of the Indian Government. You speak of the wasteful nature of railway contracts; the extraordinary help given to certain irrigation companies, the grants made by way of compensation allowance, and so forth. Well, I believe in each of those cases the Indian Government have arguments which it would oppose to your view that these were all cases of wasteful expenditure; but even granting for the moment that they were so, is it not the case that all Governments make mistakes; and supposing that India was entirely free from British domination, do you not think that they would be liable to and would commit mistakes of the same kind?—I do not question the motives of the Indian Government; I do not even say that no other Government ever commits mistakes in that way. All I say is that, if there had been better control, those mistakes would have been possibly minimised, if not absolutely avoided; my point is that.

17,834. Then, next, would you give us your views on the machinery as it exists at present?—The spending authorities in the matter of Indian expenditure are the Provincial Governments, the Government of India, and the Secretary of State in Council (to which we must also add the Secretary of State in the Secret Department).

17,835. Would you explain what you mean by the Secretary of State in the Secret Department?—The Secretary of State in the Secret Department might send out orders to the Government of India without the knowledge of his Council, and these orders might ultimately entail very large expenditure; therefore, practically, he orders that expenditure, and I look upon him in that sense as a spending person.

17,836. (*Sir Donald Stewart.*) Can you give any examples of that?—Yes; this Afghan war, for instance; the orders in connexion with the Afghan war were sent direct by the Secretary of State to the Government of India.

17,837. Any more recent ones?—I believe that it is relevant, but I am not quite sure, because the point is not in connexion with expenditure—but I believe tariff legislation and things of that kind have been ordered from here.

17,838. But you refer to expenditure?—Yes, I refer to expenditure. Well, it is so difficult to say, because the proceedings of the Council are not available to us; but, as we know from the constitution of the Council that the Secretary of State can send out orders, I am pointing out a defect in the constitution.

17,839. When you speak of the Afghan war are you referring to the 1879 Afghan war?—The 1879 Afghan war; the first Afghan war was also ordered by the Board of Control, as far as I understand.

17,840. (*Sir Andrew Scoble.*) When you speak of the Secretary of State in the Secret Department, do you mean to assert that there is any Secret Department in the Indian Office, or that the Secretary of State, when he acts in the way that you describe, is acting as the mouthpiece and organ of the British Government?—Yes, that is what I mean, without the knowledge and sanction of his Council.

17,841. And of the British Government?—Of course with the knowledge of the British Government, but without the knowledge of the Council.

17,842. (*Sir Donald Stewart.*) But that is not quite correct?—I amopen to correction; but this is the opinion that I have formed after reading what literature has been available to me on the subject.

17,843. (*Mr. Courtney.*) Is it without the knowledge of the Council, or without the assent and concurrence of the Council?—Without even the knowledge of the Council he can send orders; if he marks a despatch as confidential or secret, the Council cannot see it.

17,844. (*Sir James Peile.*) Can he send it without the knowledge of any of the Council?—It is so difficult to say; he may, if he likes, show it to some.

17,845. You do not know?—I do not know.

17,846. You should not be so positive then?—I believe the Council means the whole Council; and if only one or two members see it, that is not the Council seeing the thing.

17,847. (*Mr. Naoroji.*) That is at the discretion of the Secretary of State?—The Secretary of State.

17,848. (*Chairman.*) But do you found your opinion of this power which you attribute to the Secretary of State upon any clause or section in the Act of Parliament regulating the Government of India?—Yes; this power that the Act gives to the Secretary of State to mark a despatch as confidential, and then send it on without the knowledge or cognisance of the Council, that is what I have in view.

17,849. And that, you say, is actually contained in the Act itself, is it?—Well, that is my impression.

(*Sir Donald Stewart.*) As I gather from the witness, he is referring to orders that may be issued in the Secret Department, which cause expenditure.

17,850. (*Chairman.*) That I understand?—Orders, which ultimately may lead to expenditure, not immediately.

17,851. (*Sir Andrew Scoble.*) Either directly or indirectly?—It may only be a course of policy or a course of conduct which immediately may not involve expenditure, but in the long run it may make expenditure inevitable.

17,852. Can you give any instances of what is in your mind when you say that, because if there were an order to take military proceedings, which is one case that you have mentioned, that would involve immediate expenditure, would it not?—It is so difficult for us to say definitely, because we do not see the proceedings of the Council; but I have such a case as this in mind, for instance, the Secretary of State wishes that the British Government should send an embassy to some place outside the limits of British India; well, if he marks that despatch as confidential, it need not come before the Council and the Council need not see it. However, the sending of this embassy may ultimately bring the country into difficulties that might lead to war.

17,853. Have you in your mind any concrete case of the kind?—Well, I think the consul that was sent to Cabul in 1879 by the Government of India; that was in consequence of instructions which Lord Lytton received direct from the Secretary of State.

17,854. That is your impression?—Yes, that is my impression.

17,855. (*Sir Donald Stewart.*) But in that case any expenditure that was involved in sending the embassy must absolutely come before the Secretary of State in Council, and be discussed in Council?—I thought that the mere sending of the embassy, if the despatch was marked confidential ——

17,856. I gathered your argument referred to a question of expenditure?—Yes; but it is not direct expenditure.

17,857. And all expenditure has to be discussed in Council?—What I mean is that, if it directly involved expenditure, it would come before the Council, but, if it only ultimately may involve expenditure, it would not come before the Council necessarily.

17,858. No expenditure whatever can be sanctioned by the Secretary of State without the concurrence of his Council?—Yes, I know that; but he might order a line of policy which immediately may not involve any expenditure, but which ultimately may necessitate expenditure. It then becomes merely a question of policy.

17,859. (*Chairman.*) Perhaps you would go on; you were dealing with the controlling authorities, I think?—The controlling authorities at present are: the Government of India controlling the Provincial Governments, the Secretary of State in Council controlling the Government of India (the Council sometimes tries to control the Secretary of State, but it is now much more dependent on him than it was once), and Parliament in theory controlling all. Now, in the first place, all this is purely official control, unless indeed, by a stretch of words, we regard the theoretical control of Parliament as to some extent popular. Real popular control, in the sense of control by the taxpayers, is, practically speaking, entirely absent from the whole system. There are, no doubt, the Provincial and Supreme Legislative Councils in India. But, so long as the budgets are offered for criticism only and have not got to be passed, and so long as the members are not allowed to move any resolution in connexion with them, they cannot be called controlling bodies in any proper sense of the expression.

17,860. Would you not allow that the free power of criticism is a real exercise of the power, I will not say exactly of control, but of check?—To some extent it may be a check, but it is not control; that is what I am saying. Of course, I admit that there is value, a great deal of value in these discussions. Secondly, I venture to think that even this official control, such as we have it, is, except in the case of Provincial Governments, of very little value from the taxpayers' point of view. The Provincial Governments are indeed controlled, and more than controlled, officially—they are, in fact, crippled. But as regards the Government of India and the Secretary of State in Council, where they are in agreement, their powers of incurring increased expenditure are almost unlimited; and unfortunately they are generally found to be in accord in matters in which the Indian taxpayer feels a direct interest, their differences being usually about matters for which he cares little or nothing.

17,861. Would you explain what you mean by "matters "for which he (the Indian taxpayer) cares little"?—Well, I might take the case of the increase of the army. Now that was a question in which the Indian taxpayer felt a direct interest. The Government of India proposed, and the Secretary of State sanctioned, the increase by telegraph. I do not mean here to question anything that they do; all that I want to do is to point out that in matters which involve large expenditure they are generally found to be in accord.

17,862. But then you say that their differences are in matters for which the Indian taxpayers care little?—Yes. They may differ as to whether there should be so many officers in a particular regiment or not. They sometimes differ from one another in such matters, but we do not feel much interest in their differences. If they differed, that would be a safeguard, because then the Secretary of State would act as an appellate body.

17,863. I think you have mentioned, have you not, that, on one or two occasions, on important questions there has been a difference between the Secretary of State and the Viceroy?—Yes; and to that extent that was very valuable; but I wish that they differed oftener than that.

17,864. Still your statement is put very broadly; would you not make some qualification?—I have been careful, I think, my Lord. I have said, I think "their differences being usually about matters"—on rare occasions they do differ—but usually "about matters about which we did not care much." Lastly, section 55 of the Government of India Act of 1858 is supposed to give protection to Indian revenues against their application to extra-Indian purposes; but it is now well-known how that section has failed to attain its object in practice. I will explain that later on.

17,865. Will you tell us what you consider to be the result?—The results of this state of things have been very unfortunate. Under the East India Company our revenues were certainly much better protected. The Company's government was, so to speak, a strong buffer between Indian interests and Imperial interests; and, as Sir Charles Trevelyan has observed, it was often able to offer a successful resistance to the demands of the Queen's Government.

17,866. Would you explain a little more what you mean by the revenue under the East India Company being better protected; in what sense do you mean that?—Against the demands of the Imperial Government, the Government here at home. Sir Charles Trevelyan has given that in detail before the Fawcett Committee, and he says that it often happened that extra charges were attempted to be put upon India, and the representatives of the Company fought with the representatives on the other side, and generally they carried their point. I have taken the statement from Sir Charles Trevelyan's evidence.

17,867–8. And do you think that in the financial administration of India itself the East India Company was more economical than the Queen's Government?—I think so. I think they were much more economical. It might be mentioned that so far as possible they avoided extra taxation; that was a characteristic feature of pre-Mutiny finance; as far as possible, they avoided additional taxation.

17,869. But there was a good deal of extra taxation put on under the East India Company, was there not?—Not much. If the whole period of their rule were examined, it would be found that they generally adhered to the taxes that were already in existence; and that it is since 1857 that so many more taxes have been imposed upon the country. This point, also, is brought out very well by Sir Charles Trevelyan in that evidence.

17,870. Will you proceed?—The inquiry which Parliament used to make into Indian affairs every 20 years, in those days, and the spirit of jealous wakefulness which it used to exhibit on those and other occasions, were a further protection to Indian interests. With the establishment of the direct administration of the Crown all this has gone, and the administration of the Indian revenues is now practically entrusted to a Cabinet Minister, assisted by a Council of his own nomination, a Minister who brings no special knowledge or experience of Indian affairs to the discharge of his duties, who, as a member of the Imperial Executive, naturally has an eye to Imperial politics rather than to Indian interests, and who is peculiarly liable to be swayed by the varying currents of English public opinion and other English influences. All financial power in regard to expenditure, executive, directive, and controlling—is centred in his hands; and with all these vast concentrated powers he has really no responsibility except

Mr. G. K. Gokhale.

12 April 1897.

to the Cabinet, of which he is a member and of whose support he is always assured, and to Parliament where he has a safe majority behind him in virtue of his position as a Cabinet Minister. The position virtually amounts to this, that it is the administration of the finances of one country by the Executive Government of another, under no sense of responsibility to those whose finances are so administered.

17,871. You say that all financial power in regard to expenditure is centred in his hands; are not the Council a check upon him in matters of expenditure?—Well, they are supposed to be a check; but I must say that we are not impressed by the way in which that check is exercised. Recently, for instance, there was an example in connexion with these Suakin charges. Two members, Sir James Peile and Sir Donald Stewart, protested, and the whole of India in fact was of the same opinion; the Government of India itself was of that opinion; and yet the Secretary of State was able to carry his point, so that practically he is supreme; the position comes to that.

17,872. But, though there was a protest made by two members of the Council, I gather from your statement that the remainder of the Council supported the Secretary of State?—That must have been so, I believe; that is also the inference I would draw.

17,873. And, therefore, that proves nothing to the effect that the Secretary of State has autocratic power in the matter?—Except this, that the members do not care to differ from him—perhaps I ought not to use that expression—but they generally are disposed to agree with him—the majority of the members. Well, that does not amount to an effective check.

17,874. Have you any reason for saying that the members generally agree with him?—That is what has been said by many men. Sir Charles Trevelyan notably said that he was hopeless of the Indian Council; "hopeless" was the expression that he used with all his knowledge. I mean to cast no reflection on any of its working, but that is the feeling in India. If the other members had taken the view that was taken by these two members, that would have been a good check.

17,875. But, of course, the other members of the Council may have been conscientiously of opinion that the step was the right one?—I quite admit that; I do not mean to say that they must have done it against their conscience, but we deplored their vote all the same.

For years past we have been treated as a vassal dependency, bound to render services to the suzerain power and to place our resources, whenever required, at its disposal. As a result, millions upon millions have been spent on objects which have not advanced the welfare of the Indian people so much as by an inch—even the empty sense of glory, which is a kind of barren compensation to self-governing nations for such large expenditure of money, is not available to us as a consolation. And not only have these vast sums been thrown away in the past—thrown away, of course, from the Indian taxpayer's point of view—but, as a direct result of that expenditure, the country is now pledged to indefinite, and possibly vaster, liabilities in the future. And all this has gone on, while the expenditure on objects which alone can secure the true welfare and prosperity of the people has been wofully neglected.

17,876. You say that as a result millions and millions have been spent on objects which have not advanced the welfare of the Indian people so much as by an inch. Could you tell us what you have in your mind when you say that?—I have in mind the past expenditure that has been incurred on the Northern and North-Western frontier in connexion with the frontier Imperial policy. When I say that that expenditure has not advanced our welfare by an inch, I mean that in matters of education, in matters of domestic improvement, we are where we were, whereas this expenditure has been going on increasing.

17,877. Would you apply that criticism to all defensive expenditure—that it is thrown away?—It would involve a discussion of a question of policy, but my own view is, that the Government ought to have confined themselves to the natural defences that they had, and not have gone beyond the frontiers and incurred all this expenditure.

17,878. That is quite a legitimate opinion of your own, but it is only your own opinion?—Of course, I can state only my own opinion.

17,879. And, I think, when you and I are speaking across the table, we are neither of us military authorities, are we?—I admit that. But it is not our fault, I mean the fault of Indians like myself, that we do not see the military point of view just as the military people would like us to understand it; we are non-official critics, and all the information that is available to us we utilise.

17,880. But we must bear in mind, must we not, that, while the criticism is what I may call lay criticism, though it may be perfectly legitimate criticism, on the other hand, a different opinion has been taken by the military authorities, who are experts in the matter; and it would be a very grave responsibility for the Goverment to take, would it not, to neglect the warning of their expert advisers in military matters?—Oh, I quite admit that; but there are even military experts who take the same view as we do. Colonel Hanna, for instance, has recently written three books, and in them he has said that the Government has made a great mistake in going beyond the frontier.

17,881. (*Mr. Caine.*) All that the witness said to you just now he would also mean to convey to the Commission, as the deliberate and unanimous opinion of all the Associations which he says he represents here. Would not that be so?—That is so.

17,882. There would be no difference of opinion on questions of frontier policy as expressed by you?—No difference of opinion amongst Indians, the Indian political Associations.

17,883. (*Sir William Wedderburn.*) And it is because Indian public opinion regards these expeditions as aggressive rather than as defensive that they object to them so strenuously?—That is so.

17,884. (*Mr. Courtney.*) Has any voice been raised by the Indian members of the Legislative Council against them?—Well, they protest occasionally. The non-official members of the Viceregal Council protest against charges; but there is no vote, no division, and it comes to nothing.

17,885. (*Sir Andrew Scoble.*) Do you remember any occasion of their entering such a protest?—Oh yes, I remember that two years back the Honourable Mr. Mehta, of the Bombay Presidency, protested very strenuously against these military expenditures.

17,886. Which expenditure?—The frontier military expenditure—Chitral, I think.

17,887. The Chitral expedition?—Against such expeditions as that; we say they were not necessary, they say they were necessary—and there is an end of the matter.

17,888. Then the protest, made two years ago, was made after the expedition was over, and the expenditure had been incurred, was it not?—When I mention Chitral, I mean expeditions like Chitral; the expeditions have been going on latterly rather too fast, and I do not remember just now whether it was against Chitral or some other expedition that Mr. Mehta protested.

17,889. Surely, if you speak on behalf of these political Associations, and protests were made on their behalf in the Legislative Council, you can tell us what the precise expedition was, and what was the precise protest, can you not?—I should like to refer to the discussion before giving an answer to that.

17,890. (*Mr. Naoroji.*) Were there any independent, non-official, partially elected, members at the time of the Afghan War; that is rather a later arrangement?—Yes, that is rather a later arrangement.

17,891. And at that time there were none?—No, there were none.

17,892. They were all nominated at that time?—Yes.

17,893. (*Chairman.*) What defects do you consider to exist in the present arrangements?—The principal defects in the existing arrangements to which, in my humble opinion, these deplorable results are to be traced are two: (1) autocratic financial power practically concentrated in the hands of a member of the Imperial Executive without adequate securities for its due exercise; and (2) the absence of effective protection to India against financial injustice at the hands of the Imperial Government, there being no impartial tribunal left to appeal to for redress of such wrong, and no constitutional power to resist unjust demands.

17,894. Now, passing to the Council of the Secretary of State, are there any observations you have to offer to us?—When the Government of India was transferred from the Company to the Crown, the Secretary of State's Council was intended to be a check on him, and guarantees were provided for securing the independence of members. But these guarantees have, nearly all of them, been swept away by the amending Acts of 1868 and 1876. Under the arrangements of 1858 the members of the Council were to hold their office during good behaviour, and were not removable except on an address of both

Houses of Parliament. They were thus placed in a position of dignified independence to exercise the important powers of control entrusted to them under the Act. The Act of 1869, however, profoundly modified this position of the Council. It provided that all appointments to the Council were thereafter to be made by the Secretary of State. The members were to hold office for 10 years only, and for special reasons, to be communicated by the Secretary of State to Parliament, they might be reappointed. These modifications at once lowered the position of the members, destroyed the independence of the Council, and virtually left the Secretary of State supreme in the direction of affairs. The Council was, in fact, reduced to the status of a subordinate consultative Board to be composed of the nominees of the Secretary of State, stripped of its original dignity and independence and left unfitted for the proper discharge of its high constitutional functions. The Act of 1876 empowered the Secretary of State to appoint three of the members for life, thus throwing additional power into his hands. The manner in which the Council is recruited is also open to the gravest objection. Nearly all the members are persons who have held high executive office in India. They cannot, as a rule, be unbiassed judges of the actions of their successors, for the simple reason that in their own time they had in all probability behaved in the same way. There are no representatives of independent Indian public opinion on the Council. Moreover, the machinery of the Secret Department enables the Secretary of State to order a course of action which may practically render large expenditure inevitable, without the knowledge of his Council.

17,895. You are criticising the Act of 1869, and you point out that it provided that all appointments to the Council should thereafter be made by the Secretary of State?—Yes.

17,896. By whom would you like the appointments to be made?—Well, I do not object to the Secretary of State making the appointments as the Council is now constituted; but the manner in which the Council is recruited is regarded as objectionable for this reason, that the class of men that are selected for it are generally persons who have occupied high executive positions in India.

17,897. We will come to that, if you please, afterwards. Just at the present moment I want to get your view as to the method in which the Council should be recruited. Your words would rather imply a criticism upon selection by the Secretary of State, and I wanted to gather how you yourself would prefer to see the nominations to the Council made?—I would wish it made by the Crown.

17,898. By the Crown; it would still be by the Secretary of State?—It may come to that ultimately; but there is a greater dignity felt, when the appointment is made by the Crown.

17,899. There may be a dignity in it being stated that the Crown makes the appointment; but the Crown can only act upon the advice of the Secretary of State, and, therefore, the result is the same whether the appointment is made by the Crown or by the Secretary of State directly. I want to gather from you whether you acquiesce in the Secretary of State as the person who is to choose the members, or whether you had in your mind any other method of appointment?—No; my point was this, that men who are presumably to control the Secretary of State should occupy a certain position in regard to their appointment; also I consider that there is greater dignity in the appointments if made by the Crown than by the Secretary of State.

(*Chairman.*) That is quite intelligible.

(*Sir Donald Stewart.*) But they are made by the Crown now.

17,900. (*Chairman.*) Are they?—No, by the Secretary of State.

17,901. Then that confines your criticism really to this, that you would like the appointment of these councillors to be made by the Crown as adding weight and status to their position?—Yes.

17,902. But, further than that, you do not contemplate any other method of appointment than by the Secretary of State; in either case the Secretary of State would be the virtual appointor?—I admit that.

17,903. (*Mr. Mowbray.*) Or would you mean the Prime Minister by "the Crown"?—If that could be secured, that would be better; I think if the Prime Minister could appoint—if the Crown could appoint on the recommendation of the Prime Minister—that would be better.

17,904. Had you that in your mind when you said "the Crown"?—I was not quite clear that the appointments by the Crown were really at the instance of the Secretary of State; I had thought it was at the instance of the Prime Minister, but I took it from the Chairman that they are at the instance of the Secretary of State.

17,905. (*Sir Andrew Scoble.*) I understood you to suggest that the alteration of the appointments from "during good behaviour" to a limited period of 10 years was a great objection, in your mind, to the fostering of that spirit of independence, which you would like to see in the Council of the Secretary of State?—Yes, that is so.

17,906. (*Chairman.*) You speak as if the Act of 1869 modified the previous practice. Before 1869 do you consider that the members of the Council were nominated in a different manner?—Yes, they were differently appointed. To begin with, out of 15 members eight were appointed by the Crown and seven were appointed by the Court of Directors.

17,907. (*Sir Donald Stewart.*) Would you read that? (*Handing copy of Act to witness*)?—This is the Act of 1858, but I am speaking of the Act of 1869.

17,908. The same form in practice still exists?—Under the first Act the appointments were to rest with the Crown, but the Act of 1869 provided that they were to be by the Secretary of State. I think Sir James Peile supports me in that, that the present appointments are by the Secretary of State.

17,909. (*Chairman.*) But, going back to what I was saying before, was not the old practice applicable to nominations to be exercised once only? The Act, I presume, contemplated that all new nominations would be made as they are made now?—The vacancies among those seven members were to be filled by a sort of co-optation, while all vacancies in the eight members were to be filled by the Crown.

17,910. And therefore you look upon it that at the beginning, under the original Act, the idea was that a certain number of the members for all time would be co-opted?—Yes; after the first nomination they would be co-opted.

17,911-2. Should you maintain that the Act of 1869 was a definite change in that respect, inasmuch as it vested the whole of the nominations in the Secretary of State?—Yes, that is what I mean.

17,913. (*Mr. Courtney.*) And do you think that that change in itself was one for the worse?—In this way, that the controlling body became more dependent upon the Secretary of State, and lost some part of its first dignity.

17,914. It would be no more dependent, when once appointed. A member of Council was as independent of the Secretary of State, after appointment, after 1869 as before?—The Secretary of State has also got the power of re-appointing after 10 years, which was not possible before.

17,915. Because formerly a member of Council was appointed for life?—Yes.

17,916. Do you think that it was desirable that the original appointments for life should have been maintained?—My own opinion about the Indian Council is that after all it would be an advantage to have short term appointments only; but we are talking at present from the point of view of control, and, so far as that goes, the change was for the worse, because the body became less independent.

17,917. You think a member of the Council, looking to the chance of having his tenure prolonged, is more dependent on the Secretary of State?—Well, I would not put it quite so strongly as that; but it makes a change.

17,918. In what other respect is there dependence?—If there is no suggestion of dependence in that, why have they made the English judges independent? They all feel that appointment for life secures better independence.

17,919. But, supposing with respect to English judges the law were altered so as to require them to retire at 70, which many people think would be desirable, would that affect the independence of the English judges?—That would not; but if any judge could be re-appointed after he was due to retire, well, that would to some extent have a tendency to affect his independence.

17,920. (*Sir Andrew Scoble.*) Have you ever heard it suggested that the prospect of a judge getting transferred to the Court of Appeal, or to the House of Lords, is considered by some people in England rather to diminish his independence?—Well, I have read of that, but I am not qualified to express an opinion.

17,921. You have heard that that argument has been used?—Yes, but I am not qualified to express an opinion upon it.

Mr. G. K. Gokhale.

12 April 1897.

17,922. (*Chairman.*) Then I do not take it that you condemn the principle of only appointing for a period of years in itself?—That has become inevitable now, I think; in any subsequent changes that might be made I think that has become inevitable. I would even go so far as to reduce the period from ten to five years, because circumstances are changing so fast in India now that even ten years is too long a period.

17,923. (*Mr. Courtney.*) From ten to five years without possibility o prolongation? — Without possibility of prolongation

17,924. (*Chairman.*) Can you tell us whether the members of the Council have often been re-appointed for ten years?—I believe recently there was an example, though in that case we all felt that it was a very proper re-appointment—it was in the case of Sir Donald Stewart. We all felt that it was a very proper re-appointment; but the power is there; I do not say that the power has not been properly used, but the very fact that the Constitution gives that power to the Secretary of State shows some weakness in the Constitution; that is my point.

17,925. Well, then, you say that it is an objection to the present system that so many of the persons appointed to the Council have held high office in India, and I understand you to think that that diminishes their power of useful independent criticism?—Well, executive offices I mean.

17,926. Yes, high executive offices; and I suppose what you mean by that is that that diminishes their power of exercising independent criticism? — Their opinions are already formed on the subjects that are likely to come before them, and they do not make quite impartial judges of things that are going on in India.

17,927. But, on the other hand, do you think it would be an advantage if the Council of India consisted of people who had no knowledge of India?—In a very short time I believe they might qualify themselves for that. It would not be a very great difficulty; besides, you might have judges from India. What I object to is persons who have been members of the Viceregal Council. There was a case, for instance, some time back brought to light. General Strachey had advocated the narrow-gauge system in India—in fact he was looked upon as the author of that narrow-gauge system—when the question was before the Supreme Government. The question afterwards came before the Secretary of State. General Strachey himself by that time had come into the Secretary of State's Council, and naturally, being a great expert, his voice prevailed over everybody else's. The same man who was responsible for the introduction of the narrow-gauge system, also ultimately approved of that system. I only want to point out that the opinions of these gentlemen are formed quite definitely, and they are not likely to form very impartial judges; I mean they are not likely to see the other side.

17,928. But, a council constituted like the Council of India would be perfectly alive—as much as you or I would be—to this danger of leaving any officer to determine—what I take to be your meaning—in his own case personally. The Council would be quite as able, I think, as anybody else to discount that danger, would they not?—It depends. When a person is a very strong person he is able to make an impression on his colleagues, and make them see just as he sees.

17,929. Of course it is then within the bounds of possibility that such a person might be right, is it not?—Oh, perfectly so; I do not say he was not right; I only say the control is not then properly exercised.

17,930. Do you not think the body of the Council, independent gentlemen—independent of such a person at all events—are quite able to discount, to appreciate this danger which you point out, and to guard against it?—In such technical matters it is an expert, whose opinion carries a great weight naturally.

17,931. Not necessarily a predominant weight?—No, not necessarily a predominant weight, but it would almost look like it. I myself should be very much influenced by an expert's opinion,

17,932. Naturally?—Naturally.

17,933. (*Sir Andrew Scoble.*) But you would not expect a man to give up the honest opinions he had formed during a long period of service in an executive office, simply because he happened to be placed in the Secretary of State's Council?—I do not; I know they would all stick to their opinion. That in itself constitutes a sort of incapacity to see the other side.

17,934. If they all stuck to their opinions, would you not get that friction which is so desirable in a body like the Council of the Secretary of State, so as to secure the expression of opinion on both sides?—I do not know how that friction would be secured, because they are all moulded more or less in the same groove and see things in the same manner.

17,935. Would not it lead to the conclusion that they were right, if they all agreed?—The Government of India or the Secretary of State in Council would have to be regarded as infallible if we were to argue like that.

17,936. (*Sir William Wedderburn.*) In that case of the adoption of the narrow-gauge system, there was very nearly universal public opinion European and Native, against it in India?—That is how I understand it to have been.

17,937. (*Sir Andrew Scoble.*) That was not the case, because there was a great division of opinion upon that question of the gauge?—But there was a very important opinion on the other side.

17,938. There was a very important body of opinion, as I recollect, on both sides?—Of course, since General Strachey was able to carry his point, it must have been that he was strongly supported.

17,939. I feel bound to say that I was a strong supporter of the broad-gauge system myself. I know there was a very great and important and valuable body of opinion on the other side?—I am pointing out what struck me as the defects in the constitution itself; though, sometimes, the defects might exist, yet the constitution might work better; but that does not mean that the defects themselves are not to be found fault with.

17,940. (*Chairman.*) Dealing with that question of the constitution of the Council, I would like to learn a little more fully from you whether you do not see a risk in a Council composed of people who have had no experience of India?—If judges, for instance, were put on the Council, they would bring a general knowledge of India to the discharge of their duties; and I have such faith in an Englishman's sense of duty, that I believe that in a short time they would qualify themselves for the work, and they would be more impartial men.

17,941. And would the Council that you think it would be advisable to form, consist altogether of Indian judges?—I only gave an example; there might be non-official leading Anglo-Indians upon it, and they might also appoint some men on the recommendation of the Legislative Council, of the representative members of the Legislative Council.

17,942. You do not mean that you would put on the Council Englishmen who had never been in India?—I would put some of them also, because they would be able to see things from a different standpoint; even now, I believe there is some provision like that.

17,943. (*Sir Andrew Scoble.*) There are some?—There are some even now.

17,944. There is an Indian judge on the Secretary of State's Council, is there not? Sir Charles Turner, lately Chief Justice of Madras?—I would strengthen the judicial element, and reduce, if not altogether abolish, the executive element.

17,945. (*Chairman.*) Do you not think there is a great advantage in the Secretary of State having at hand men who have held very high executive office in India, who are able to give him the benefit of their experience?—The real Government of India is in India, and ought to be in India. So far as general questions are concerned, it is only when questions are referred to the Secretary of State that the Secretary of State has to take cognizance of them; and I believe that, if judges and such other persons as I have mentioned qualified themselves properly for the discharge of their duty, they would assist the Secretary of State quite as well as the present executive members.

17,946. In your definition of the position of the Secretary of Sate, you observe there are very important questions that would be referred to the Secretary of State?—Yes, sometimes.

17,947. And you do not think it desirable that he should have at hand officers who know something of the circumstances under which the questions have arisen, and who are able to advise him from their knowledge of Indian opinion and of Indian tradition; you would leave him on those points to form his unaided judgment? I grant you that you have spoken of Indian judges being present; but the Indian judges, I understand, have not got the administrative experience that many of the present members of the Council have?—That is true; but under the present system it comes to this, that men who are

responsible for things in India, themselves in course of time come to be members; and they, therefore, cannot be expected to condemn what they themselves have done before.

17,948. (*Sir William Wedderburn.*) You attach more importance to impartiality than to special knowledge of the subject?—I do.

17,949–50. Because the matters that come up before the Secretary of State are generally in the nature of an appeal against some action of the Executive in India?—Yes.

17,951. And you do not wish those who have been the authors of these executive acts to come and sit afterwards in appeal upon those acts?—That is precisely my view.

17,952. *Mr. Courtney.*) I should like, before you conclude this part of your subject, to get some definite idea from you as to how you would wish this Council of the Secretary of State to be constituted; how many members would you like to have?—They have at present reduced the number to, I think, 10 members, and it might very well so remain. Each of them might hold office for five years or so—I would not put the thing quite definitely—only say five years or so.

17,953. Wait a moment; five years or so? Are you clear about that?—Well, I think so.

17,954. Do you think 10 years too long?—Well, I think it is rather too long; that is my view.

17,955. Next you would like to have them appointed nominally by the Crown?—By the Crown.

17,956. The appointment by the Secretary of State means the same thing?—If it comes to the same thing, well, there is no help; but there would be a greater dignity in the position.

17,957. You would have none appointed by any other authority than the Crown?—Well, the ultimate appointment should be by the Crown; some of the members should be appointed on the recommendation of the members of the Indian Legislative Council.

17,958. Of the representative members of the Supreme Legislative Council, I suppose, in India?—Yes, that is what I mean, the Supreme Council; but it all depends on how many members you give.

17,959. Suppose you take the allotment of three as you suggest?—Well, the representative members of the Supreme Legislative Council might nominate them.

17,960–1. Might nominate three?—Might nominate three.

17,962. (*Sir Andrew Scoble.*) By the "representative members" do you mean the non-official members generally, or only a certain class of non-official members?—The non-official members who are appointed on the recommendation of certain bodies.

17,963. Not those who are nominated by the Viceroy?—No, because that means Government nomination pure and simple.

17,964. Then how many members of the Viceroy's Council are there who fulfil that condition that you have named?—I believe there are seven or eight now.

17,965. Eight; and you would allow those eight to elect three members to the Secretary of State's Council?—But each member has behind him another electorate.

17,966. I did not ask you whom they represent; but you would allow these eight members to appoint three members of the Secretary of State's Council?—Well, I would, because there is no other machinery that represents India as these eight members do.

17,967. (*Mr. Courtney.*) It would not work out in your scheme that the eight would appoint three straight away? I mean, when it came into full operation, there would be a vacancy every two years or something of that kind?—It would be that.

17,968. You would have an appointment made by the eight members of this year, and the eight who would appoint two years hence might or might not be the same eight, but might be partly the same and partly different, and so on?—Yes.

17,969. That would amount to three out of the ten. Would you allow the Crown to have any veto on that nomination?—Oh, of course, the Crown must have the power of veto on that nomination.

17,970. The recommendation would be accepted, or not, by the Crown?—Yes.

17,971. You would expect it to be accepted as a rule?—That is what I mean.

17,972. With reference to the other seven, do you lay down any restriction as to the classes from which they would be chosen?—I did not expect to be asked to place before the Commission a definite scheme, but I should think that there should be three Indian judges; that is how it strikes me now; about three members might be Indian judges.

17,973. Three ex-judges out of seven?—Three ex-judges. Yes. Then if the members are ten there should be two Englishmen who have never been out to India, and two other persons who have been in India; they might belong to the Executive, or they might not belong to the Executive. I would not absolutely shut executive officers out.

17,974. You would reduce the representation of the Executive machinery of India to very modest dimensions?—That is because I feel our grievance is against them—not against any of the individual members, but against the system which makes them the judges of their own acts.

17,975. You say you are not expected to answer these questions, but, as far as the Government at home is concerned, it seems as if in your mind the efficiency of the control depended upon the composition of this Council?—Yes.

17,976. Therefore it is very important to have some idea—not a rigid one, but some idea—of the way in which you would like that Council to be constituted?—As a matter of fact, I do not expect that this Council would be modified in any way, or, at any rate, that there would be much modification in the constitution of this Council; but I have proposed a committee afterwards which would be a more effective committee of control; I attach more importance to that.

17,977. Who should be in London?—Who should be in London.

(*Sir Donald Stewart.*) Lord Welby, the witness is right in saying that the appointments to the Council here are made by the Secretary of State, but the Secretary of State's appointments are, as heretofore, submitted to Her Majesty for approval before they are published; that is the procedure, I believe.

17,978. (*Chairman.*) But the appointment does not actually state that it is made by the Queen?—Under the Act it is made by the Secretary of State; the names are submitted to Her Majesty for ratification.

(*Mr. Mowbray.*) Is that under the original Act.

17,979. (*Chairman.*) No; that is under the Act of 1869. Now then, perhaps, we will pass on to the point of the Government of India and the Finance Member?—Subject to the control of the Secretary of State, which often is only nominal, the Government of India can administer the Indian revenues practically as they please.

17,980. Would you let me just interrupt you there. I have some difficulty in reconciling that statement with what you have just told us; when speaking of the Secretary of State, you said the administration of the Indian revenues is now practically entrusted to a Cabinet Minister, assisted by a Council of his own nomination—a Minister who brings no special knowledge or experience of Indian affairs to the discharge of his duties, who, as a member of the Imperial Executive, naturally has an eye to Imperial politics; that all financial power in regard to expenditure—executive, directive and controlling—is centred in his hands, and that with all this vast concentrated power, he has really no responsibility except to the Cabinet of which he is a member, and of whose support he is always assured, and to Parliament where he has a safe majority behind him. I have some difficulty in reconciling that with your statement when you say "subject to "the control of a Secretary of State, which is often only "nominal"?—What I meant there was that that was the theory of the subject, and that in regard to any general questions of policy which involve large expenditure, the voice of the Secretary of State prevails; but, subject to that, in all ordinary matters the Government of India is practically able to count upon the assent of the Secretary of State. As a rule the Secretary of State adopts the views of the Government of India.

17,981. Then ought not your first statement to be made with some qualification, because it leaves us under the idea that the Secretary of State has the power of an autocrat in the matter of finance?—But the Constitution gives him that power, and how the Constitution is worked must depend upon the circumstances. I am now dealing with the actual working of the Constitution, but the Constitution gives, in the first place those, vast powers to him.

17,982. But should you not rather have stated it with that qualification, because I think anybody reading what

Mr. G. K. Gokhale.

12 April 1897.

you have stated to us would be under the impression that —I think these are your own words—the sole autocrat in Indian finance is the Secretary of State. Now it appears from this that you qualify this considerably in practice?—I would qualify my former statement by saying that under the Constitution he is so.

17,983. Would you go on?—The testimony of Sir Auckland Colvin and Sir D. Barbour on this point is of great importance. Sir A. Colvin was careful to point out that the present weakness of the Finance Member's position dates virtually from 1885. That being so, it is evident that the dissent of Lord Cromer, as also of Lords Northbrook and Ripon, from his and Sir D. Barbour's view is beside the point. It is true that Lord Lansdowne and Lord Roberts also do not endorse the view of the two Finance Members. But this was only to be expected, seeing that they themselves are the party against whom the complaint is directed. When Sir A. Colvin and Sir D. Barbour say that with the Viceroy on his side the Finance Member is as strong as he ought to be; and when they complain of the weakness of his position during their time, the only inference to be drawn from that is that the Viceroys under whom they served, viz., Lords Dufferin and Lansdowne, were not of an economical turn of mind; and, of course, we cannot expect Lord Lansdowne to concur in that view.

17,984. But, if it is the case that there has been a change of policy since 1885, it is quite possible that that change may have been necessary, is it not?—That view may be held on the other side; it is open to them of course to say that.

17,985. I mean, is it patent on the face of it that the Viceroy must have been wrong and the Finance Member right?—But I am expressing what is the non-official view of the matter; the official view, of course we know, is that it was necessary.

17,986. But, official view or non-official view, it does not really matter. It is sufficient to say that, when the Finance Member differs from the Viceroy, necessarily the Viceroy must be wrong?—Oh, I do not say that; but the presumption is that the Finance Member, being a member of the Executive Council, would not oppose a thing, if it were really necessary, merely on financial grounds. I would be disposed to attach something of extra importance to the opinion of the Finance Member.

17,987. That is attaching a very great weight, is it not, to the superiority of financial knowledge in the Council?—But that is because he occupies a unique position; he knows what the executive needs are, and he knows also what the country can afford. The other members think rather of the needs, as they take them to be, than of the finances.

17,988. Then how would you sum up the question?—The whole position may be thus summed up: (1.) The buffer of the Company's Government which fairly protected Indian interests is gone, and there is no effectual substitute; (2.) We have no effective constitutional safeguards against the misapplication of our revenues to extra-Indian requirements; (3.) The control vested in the Council of the Secretary of State under the Statute of 1858 is rendered almost nugatory by the alteration of its status under recent amending Acts. The mode of recruiting the Council is also radically faulty; (4.) The control of Parliament, as against the Secretary of State, has become entirely nominal, owing to the latter being a member of the Imperial Executive, with a standing majority behind him. The old periodical inquiry by Parliament and its jealous watchfulness are gone. In fact we have at present all the disadvantages of Parliamentary Government without its advantages. In the case of all departments except the Indian, ex-Ministers think it their duty and also feel it to be their interest to exercise the closest watch on the proceedings of their successors with a view to passing the most adverse criticism that may be possible. In regard to India alone, ex-Ministers vie with and sometimes even go beyond their successors in extolling all that exists and all that is done. The responsible opposition in this country thus abdicates its functions in the case of India only.

17,989. When you speak of the old inquiry by Parliament, I presume you refer to the inquiry which took place at intervals of 20 years into the constitution of the old Company?—Yes, at the time of renewing the Charter.

17,990. And you think that that was a valuable method of inquiry, which brought the whole question of the government of India before Parliament?—Yes.

17,991. But since the abolition of the Company in 1858, have there not been a great number of inquiries by Parliament into different branches of Indian expenditure—especially finance?—Yes, there have been; notably the Fawcett Committee, which came 20 years after 1853, and then this Commission, which comes 20 years after that; I know that, but there is such a great amount of trouble in getting these committees, and of course there is no constitutional safeguard that they will be readily granted.

17,992. The difference that you speak of lies in this, that, under the Charter of the old East India Company, these inquiries necessarily took place at the end of certain periods; under the present system you may have inquiries, probably equally valuable inquiries, but you have no security as to when, and under what circumstances, they will take place; is that it?—That is so, and there is another point also. In those days inquiries were made into the whole administration, while now generally certain points are specified. For instance, this Commission can inquire into expenditure, and not into revenue; there is that difference also.

17,993. There is another way of looking at that; if you appoint a Commission to inquire into everything connected with the administration, you generally find that from mere want of time it is obliged to slur over a good deal of its work. Do you not think there is a good deal to be said for appointing a Commission with a definite and more or less limited object; is it not more likely to get satisfactory results?—I quite admit the force of what your Lordship says, but there is this much on the other side, that the people could lay all their grievances before such a Commission, if it was a general one; and the fact that Parliament ordered these general inquiries before shows that they were alive to the importance of that consideration.

17,994. (*Sir William Wedderburn.*) And was it not a great point in those inquiries that the renewal of the Charter depended upon the Company showing that they had done good work?—Yes, that was so.

17,995. And that, previous to the inquiry, the Government of India was very anxious to put its house in order in every department?—I believe it was.

17,996. So that there was not so very much to find fault with by the time they came and asked for a renewal of their power?—I should presume that was so.

17,997. But now the officials know they have a permanent position, and they do not care much about public opinion in India?—Yes.

17,998. (*Chairman.*) You have drawn a distinction between the action of ex-Ministers when dealing with Home affairs and with Indian affairs, saying, with regard to India, that ex-Ministers vie with, and sometimes even go beyond their successors, in extolling what is done. May I ask, do the facts really bear that out? If we take the case of the cotton duties, I think we heard ex-Ministers extremely critical upon the conduct of Ministers who were responsible for the cotton duties?—But, my Lord, there was this distinguishing circumstance: The Government of India and the Secretary of State were not in agreement, and, therefore, those that were connected with the Government of India before, naturally took the side of the Government of India; but in connexion with the recent debate, for instance, on Sir William Wedderburn's motion Lord George Hamilton was not, if I may say so, quite able to put the case about famine insurance from the official side as strongly as Sir Henry Fowler did—well, in no other department do ex-Secretaries come to the rescue of the Secretary of State quite in that fashion; that is what I mean.

17,999. You make your statement rather sweeping, in drawing this distinction between the action of ex-Ministers in regard to English and in regard to Indian affairs. I have no doubt such a case as that you have mentioned could be adduced; but, on the other hand, I point out to you that Ministers received very severe criticism in Parliament on account of the cotton duties; and I might give you an instance on the other hand: there was a severe criticism on the actual Ministers in respect to the Dongola expedition—I am not saying in the least whether they were right or wrong?—It again comes under that category which I have mentioned, namely, when there is a difference between the Government of India and the Secretary of State.

18,000. I do not see the connexion between that case and that of which we are speaking. All I say is, that there is no kind of conspiracy of conduct between Ministers and ex-Ministers in regard to Indian affairs?—I do not say there is any conspiracy.

18,001-2. That is my own word?—But there is no interest felt practically by the ex-Minister in criticising the proceedings of his successor. In regard to the English

Budget, for instance, item by item there is a furious contest; whereas the Indian Budget is all passed or discussed in a few hours with empty benches, nobody feeling the slightest interest in the matter.

18,003. (*Sir William Wedderburn.*) But in the case of the cotton duties, to which the Chairman referred, I do not think Sir Henry Fowler proposed to take any action in the case until the end of the Session, when it was all settled and too late?—That was so.

18,004. And I do not think that he gave any assistance whatever, but rather was opposed to the motion with regard to the cotton duties which was made in the course of the session?—Yes; my point was that in the other departments ex-Ministers have a direct interest in discrediting the work—if I may use such a very strong expression—of their successors, showing up to the country practically that its affairs are not administered quite so well as they were by themselves. In regard to India there is no such motive.

18,005. (*Chairman.*) My outside experience leads me to believe that ex-Ministers are quite as ready to criticise their opponents in the Government in regard to India as in regard to any other matter?—I thought it was a sort of official etiquette not generally to oppose Ministers in regard to Indian matters.

To resume:—(5) the Government of India, as at present constituted, cannot be much interested in economy. Almost all internal administration having been made over to the Provincial Governments under the decentralization scheme, questions of foreign policy, large public works and military questions absorb almost the whole attention of the Government of India. Further, the Finance Member excepted, every other member of Council, including, since 1885, the Viceroy, has a direct interest in the increase of expenditure.

18,006. Well, in all governments there are heads of departments, who are interested in expenditure; that is not a peculiarity of the Indian Government?—But in India they are not afraid of the taxpayers, whereas in England they are afraid of the taxpayers, the control of the House of Commons being so effective.

18,007. It has been represented to us that, though they are not afraid of the taxpayers, at the same time heads of departments are aware that extravagant expenditure will necessitate increase of taxation, and they are aware that that is a serious matter?—Yes, but in England they have also to face a formidable opposition in order to pass their measure, whereas in the case of India there is no such thing.

(6.) Neither in England nor in India is there the salutary check of public opinion on the financial administration. Parliament is ill-informed and even indifferent. And the Supreme and Provincial Legislative Councils are simply powerless to control expenditure, since the budgets have not to be passed, and no resolutions in reference to them can be moved. Coming to the question of remedies, I think it is, in the first place, absolutely necessary that the Indian Budget should be passed item by item in the Viceregal Legislative Council. Government may retain their standing majority as at present, and that means an absolute guarantee that no adverse vote will ever be carried against them. We have no wish to see the Government of India defeated on any point in the Supreme Legislative Council, but the moral effect of recording and, so to say, focussing by means of divisions non-official disapproval of certain items of expenditure will, I expect, be very great. It must be remembered that, while large questions of policy can be discussed and settled with advantage only in this country, the details of Indian expenditure can be criticised effectively and with the necessary amount of knowledge only in India. I would also provide that, when a certain proportion of the non-official members of the Supreme Legislative Council, say more than half, are of opinion that the voting of a particular sum by the Council is prejudicial to Indian interests, they may, if they please, draw up a statement of their case and submit it through the Government of India to a Committee of Control which, I venture to suggest, should be created in this country. The creation of such a Committee of Control is a matter of the most vital importance. A Standing Committee of the House of Commons has been suggested, and would, I think, do very well.

18,008. You think a Committee of the House of Commons would do very well, although it belongs to a body that you have described as ill-informed, and even indifferent to Indian affairs?—But when certain members are specifically appointed to undertake a specific duty, I do expect that they will qualify themselves for that duty; or the Judicial Committee of the Privy Council might be entrusted with the work; or even the Arbitration Committee which now seems likely to be created might do for this purpose. And the duty of reporting to Parliament from time to time on matters of Indian finance might be assigned to it. But whatever the form, the Committee should have absolutely no powers of initiating expenditure, else, like the old so-called Board of Control, it will do more harm than good. The Committee should take cognizance of all appeals addressed to it by the non-official members of the Viceroy's Council, and might also call for papers of its own accord, and exercise general control over the administration of Indian expenditure. The proceedings should be reported to Parliament from time to time. If some such body were called into existence, the mere fact that non-official members will be in a position to appeal to it, thereby putting the Government of India and the Secretary of State on their defence, will have a tremendous moral effect, which will make for economy and sound finance in a very striking manner. There is nothing in this which will in any way affect the directive and executive powers of the Secretary of State or the Government of India. The plan provides only for a reasonable amount of control and will enable the representatives of Indian taxpayers, who have no powers of controlling expenditure, to make a complaint in a responsible and constitutional manner.

18,009. You say that there is nothing in this plan that will in any way affect the directive and executive powers of the Secretary of State or the Government of India; but you are vesting in the non-official members of the supreme Legislative Council a power of appeal to an outside body, which should on that appeal criticise, and report to Parliament on, the acts of the Executive. Now, without saying whether that would contribute to good government or not, it would be a very considerable interference with the executive power of the Secretary of State, would it not?—It would be this way: the Secretary of State or the Government of India might sanction a certain expenditure. This body might ultimately pronounce that the expenditure was not proper. The expenditure would have been incurred already; there would be no help so far, but it would have its effect afterwards.

18,010. Yes; but still, that power of a committee to report hostilely on the Secretary of State's action must be held to affect the executive power of the Secretary of State. It is an interference, surely, with the method in which the Secretary of State exercises his duties?—It would be a sort of control, and that would be necessary; but I do not see how it would be interference with his administrative work.

18,011. The Government would have an outside committee reporting upon their acts. It is very true it might not prevent the Secretary of State from giving an order, but it would be a very serious check upon him, which is no doubt what you seek. So far as it exercises that check upon him, it is an interference with his powers, do you not think so?—But your Lordship has already dwelt on the great importance of the effect of the independent audit. Now, arguing as you are now doing, might it not be said that that audit is an interference with the work of these Ministers? The audit would point out any irregularity, and that would be a sort of——

18,012. The independent audit merely reports whether the expenditure is in accordance with the law, or with Government orders, which are equivalent to law. In this case, as I understand it, the non-official members are to criticise the policy, and this Committee of Control is to report to Parliament on the policy of the Secretary of State. That is not the same thing as seeing whether the expenditure is legal or not?—The Committee would not veto the action of the Secretary of State or of the Government of India, but they would only report to Parliament.

18,013. (*Sir James Peile.*) Would they take evidence?—Yes.

18,014. And put the Government of India on its defence?—The Government of India would draw up a statement and send it up to that Committee; and, if the members wanted any more information, they might call for it; but we must really have some control of policy of that kind.

Thirdly, I would next suggest that, as a rule, the Council of the Secretary of State should be recruited from persons unconnected with the Indian Executive, and that a reasonable proportion be appointed on the recommendation of the representative members of the Indian Legislative Council.

18,015. (*Chairman.*) Is that the Council you are speaking of now?—No, it is the Secretary of State's Council. I do not disturb the Council very much.

Mr. G. K. Gokhale.

12 April 1897.

Fourthly, I would suggest that section 55 of the Government of India Act of 1858 be amended. This section as it stands at present enacts that "except for preventing "or repelling actual invasion of Her Majesty's Indian "possessions, or under other sudden and urgent neces- "sity, the revenues of India shall not, without the "consent of both Houses of Parliament, be applicable "to defray the expenses of any military operation "carried on beyond the external possessions of such "frontiers by Her Majesty's forces charged upon such "revenues." Now, this only safeguards the controlling powers of Parliament, and does not provide, as is commonly believed, against the diversion of our moneys from their legitimate use, the only thing secured being that the sanction of Parliament shall be obtained for such diversion. No doubt this is good, as far as it goes, but it is not sufficient, and I would press for an express and absolute statutory provision, giving us a complete guarantee against the misappropriation of our revenues for purposes unconnected with our interests. I therefore beg to suggest that section 55 of the Government of India Act of 1858 be so amended as to provide that, except in case of actual or threatened invasion, the revenues of India shall not be used for military operations beyond the natural frontiers of India, unless, at any rate, a reasonable share of such expenditure is put on the English estimates. I would further suggest that the frontiers of India should be definitely declared by statute, and should not be liable to extension without statutory amendment.

18,016–17. Then your proposal would be that, these frontiers having been defined, under no circumstances should India contribute towards any operations outside those frontiers unless a part of such expenditure is put on the English estimates. For instance, supposing it was a question of maintaining the independence of the Suez Canal—that is beyond the frontiers of India—I take it your law would not prevent the Government of India from contributing to the operations necessary for that purpose, provided always that the English Government took a share?—It would come to that.

Fifthly, I would urge that the elected members of the Legislative Councils of Madras, Bombay, Bengal, North-Western Provinces, and now Punjab and Burmah, be invested with the power of returning to the Imperial Parliament one member for each province. Six men in a House of 670 would introduce no disturbing factor, while the House would be in a position to ascertain Indian public opinion on the various questions coming up before it in a constitutional manner. I may mention that the small French and Portuguese settlements in India already enjoy a similar privilege. Here, again, I rely more upon the moral effect of the course proposed than upon any actual results likely to be directly achieved. Though only six in number, the Indian members, acting unanimously on any Indian question, would adequately represent the state of Indian public opinion on the subject, and Government would have to take note of that. Indian representatives in Parliament would further greatly strengthen British rule in India by giving the Indian people a tangible and gratifying proof of India being really considered a part and parcel of a great and free empire.

18,018. You say truly that six men in a House of 670 would introduce no disturbing factor. Do you contemplate that these Indian members should have full voting powers; in fact, that they should vote our taxes?—Yes, I think so.

18,019. You see no objection from that point of view?—I see no objection.

18,020. Of course, if you had such members representing Indian interests, it would open the door to more interference on the part of Parliament with Indian affairs?—But these men by themselves would not do anything unless they were able to induce others to share their own views; that means something important, I think.

18,021. (*Sir Donald Stewart.*) How would you secure unanimity of opinion between the six?—I do not secure it. If they were unanimous on any Indian question, that would mean that public opinion in India was strong upon that point.

18,022. (*Mr. Courtney.*) Your proposal is that each one of the six should be elected by a separate electorate?—Yes. There are the Legislative Councils in the six provinces already elected by the people; and the members of the Legislative Councils should elect a member each.

18,023. (*Mr. Mowbray.*) Might those be either people sent from India or people in England?—Any people; I would impose no restriction.

18,024. With regard to the Portuguese settlements that you spoke of, are the elected members Portuguese residents in India who are sent over to Portugal?—I do not think there is any restriction; they can send whom they please; they must be men in their confidence, that is all.

18,025. (*Mr. Courtney.*) The French have representatives of all their colonies in the Legislative Assembly?—The colonies of England are self-governed, therefore, they do not want representation in the Imperial Government. We are the only dependency without any representative government, therefore we must be provided for either here or there.

18,026. Not quite the only dependency; Ceylon may be much smaller, but Ceylon is a case?—But Ceylon is very nearly a self-governing colony. Ceylon has its Council, which is much more representative than our Council; it is nearly a self-governing colony.

18,027. (*Chairman.*) Your proposal is not for direct election of those members whom you would send to the Imperial Parliament; they are to be chosen indirectly, as it were by a college, namely, the members who have been already elected to serve in the Legislative Councils?—Yes, that would be so. The great advantage that we would then secure is this: At present, private members take up the cause of India, but the officials come down upon them, and say, "These are only self-constituted members for India"; these six Indian members will be men who are really representative of India; and, if they are unanimous, that will be of great moral strength to us.

18,028. Have you any suggestions that you would like to make with respect to the Viceroy?—Yes, there is one. The last suggestion that I have to make on this subject is that, as far as possible, Indian Viceroys should be selected from among men who have earned a distinct position for themselves for their grasp of intricate problems of finance. Among the first Ministers of England, no greater names can be mentioned than those of Walpole, Pitt, Peel, Disraeli, and Gladstone; and all these men were great Finance Ministers. I know that men in the very front rank of English politics do not care to go to India, but all the same, if men noted for their knowledge of finance were induced to accept the Viceroyalty of India, the arrangement would produce decidedly beneficial results. It would be a great advantage to all if the Viceroy, instead of being his own Minister for Foreign Affairs, were to be his own Finance Minister. At any rate, his immediate connexion with the Foreign Department should cease, the Department being placed, like other departments, in charge of a separate member of the Executive Council.

18,029. Do you mean by your suggestion that no one should be selected for the post of Viceroy who has not been Chancellor of the Exchequer?—Oh, I do not mean that, because no Chancellor of the Exchequer would care to go to India.

18,030. Well, I put the case very broadly in that way, because you said that the persons should be chosen among men who have earned for themselves a distinct position for their grasp of intricate problems of finance; I wanted, therefore, to see the class of men to whom you would restrict the field of choice?—I believe that in the debates in the House of Commons some men specially distinguish themselves in the discussions about finance; or there might be persons who have been connected for a long time with the Financial Department; it is so difficult to say definitely.

18,031. What you mean is such a member as the late Mr. Fawcett was?—Oh yes, the late Mr. Fawcett would have done very well.

18,032. That is the class of man you mean?—That would be a very proper name.

18,033. (*Mr. Courtney.*) But there would be no tangible test of qualities in such a man as that?—The test would be that the man would be willing to take the Financial Portfolio when he goes to India, so that, unless he really liked finance, he would not do that.

18,034. (*Chairman.*) Would not that be open to very much the same objection which, I understand, you advanced against the present practice in which the Viceroy is his own Foreign Secretary? As I understand your objection, it is that the Viceroy should not be Minister of any special Department, and therefore you object to his being the Foreign Secretary. Might not objection be taken equally well to his being Finance Member?—He should not be Minister of any spending department, that is what I mean; otherwise, he is directly interested in spending.

18,035. Might there not be a certain risk in making the Viceroy a specialist in this way? Important as most of us think finance to be, a man who had only an eye to finance

might make in government grievous mistakes, might he not?—Sir Robert Peel and Mr. Gladstone made extremely able Prime Ministers of England, and they were both Chancellor of the Exchequer and Prime Minister at one time; Mr. Gladstone was at one time both Chancellor of the Exchequer and Prime Minister, and so was Sir Robert Peel also.

18,036. But the Viceroy, of course, is the head of the executive Government; and objection has been taken here to the Prime Minister taking a particular branch of administration into his own hands, as a question of principle. Sir Robert Peel was only Chancellor of the Exchequer for a few months in 1834; but, of course, you are perfectly justified in quoting his case, as he was Prime Minister and Chancellor of the Exchequer at the same time: Now we come to the subject of provincial finance?—I now come to the very interesting and important subject of Provincial Finance. While gratefully acknowledging that the decentralization policy has done a great deal of good, even as far as it has gone, I think the time has come when an important further step ought to be taken. It is now 15 years since this policy was carried to the point at which it now stands by the Government of Lord Ripon. The fact that nearly the whole internal administration of the country is in the hands of the Provincial Governments explains why the people of India are so anxious to see the position of Provincial Governments in the matter of finance strengthened much more than it is at present. The expenditure administered by the Provincial Governments is principally devoted to objects which are intimately connected with the well-being of the people, and the larger, therefore, this expenditure, the better for them. The chief defects of the existing arrangements are the following:—The "so-called Provincial Contracts," to use Sir James Westland's expression, are really only one-sided arrangements practically forced on the weak Provincial Governments by the Government of India, which is all-powerful in the matter. The contracting parties not being on a footing of equality, the Government of India virtually gives the Provincial Governments such terms as secure the maximum advantage to itself; and the power which it possesses of disturbing the contracts even during the period of their currency leaves the Provincial Governments in a state of helplessness and insecurity, and all this is very prejudicial to the interests of the internal administration of the country. A reference to the tables, given on pages 47 and 48 of the Appendix to Section I. of the evidence recorded by this Commission, will at once show how at each successive revision the Government of India, while keeping to itself all the growth of revenue which had accrued to it as its share of the normal expansion, has, in addition, resumed a large portion of the share of growth that had accrued to the Provincial Governments, compelling them thereby to cut down their expenditure in the first year or two of each new contract. Thus, taking Bombay as an illustration, we find that in 1886–7, the last year of the Contract of 1882, its expenditure was Rx. 3,998,912. This expenditure had, however, to be reduced to Rx. 3,814,500 in 1887–8, the first year of the next contract, and it was not till 1891–2 that the level of 1886–87 was again reached, when, at the next revision, it was again put back. The same was the case with almost every other province. How sore is the feeling of Provincial Governments on this subject may best be seen from the following remarks, which the Lieutenant-Governor of Bengal thought it his duty to make on the matter in the Supreme Legislative Council last year:—"I must say I "deprecate the way in which these quinquennial revisions "have too frequently been carried out. The provincial "sheep is summarily thrown on its back, close clipped "and shorn of its wool, and turned out to shiver till its "fleece grows again. The normal history of a provincial "contract is this—two years of screwing and saving and "postponement of works, two years of resumed energy on "a normal scale, and one year of dissipation of balances, "in the fear that, if not spent, they will be annexed by the "Supreme Government, directly or indirectly, at the time "of revision. Now all this is wrong, not to say, "demoralizing. I say the Supreme Government ought "not to shear too closely each quinquennium. It is as much "interested in the continuity of work as the Provincial "Governments, and ought to endeavour to secure this "and avoid extreme *bouleversements* of the provincial "finances. . . . . It would be an immense gain to "local administrations if the Government of India could "see its way to renewing the contracts with as little "change as practicable on each occasion. It is only in "this way that the element of fiscal certainty, which was "put forward in 1870 as one of the main objects of "decentralization, can be secured. Hitherto we have had "but little of certainty." A similar protest was made last year by the Lieutenant Governor of the North-West Provinces from his place in the Legislative Council of that Province; and this year the Government of Madras has addressed a very strong remonstrance against the surrender of an additional 24 lakhs of rupees a year demanded by the Supreme Government.

18,037. You say that the Supreme Government is in a position to secure on revision of the contract the maximum advantage to itself, and you have given us the instance of Bombay; but could you give us any general figures on the point?—Yes, I have taken out figures in connexion with the progress of expenditure.

18,038. Could you make use of them to explain your view to us?—The present contracts are on the basis in which they were made by Lord Ripon's Government in 1882–3. Since then there have been two more revisions. It is interesting to note how the growth of net expenditure has been divided between Imperial and Provincial since 1882, when provincial finance was placed on its present basis. Putting together Tables I and 21 of Sir H. Waterfield, we have the following result.

Year.	Total Net.	Provincial Net.	Imperial Net.
	In crores of rupees.	In crores of rupees.	In crores of rupees.
1882–83 -	41·79	10·98	30·81
1883–84 - -	41·66	10·83	30·83
1884–85 -	41·90	11·62	30·28
1885–86 - -	45·43	12·27	33·16
1886–87 -	44·55	12·12	32·43
1887–88 - -	47·37	12·35	35·02
1888–89 -	46·44	12·52	33·92
1889–90 - -	47·34	13·10	34·24
1890–91 -	45·66	12·64	33·02
1891–92 - -	49·50	13·60	35·90
1892–93 -	52·43	13·40	39·03
1893–94 - -	51·87	13·33	38·54
1894–95 -	52·74	13·13	39·61
Increase in 1894–95 over 1882–83.	10·95	2·15	8·80

18,039–40. You might give us three years (not to give us the whole mass of figures), 1882–3, 1889–90, and 1894–5; I think that that would exemplify your contention?—I would put it in this way: 1886–7 was the last year of Lord Ripon's provincial contract; the provincial expenditure in that year amounted to Rx. 12·12, and this expenditure was 13·13 in 1894–5. There has been altogether an increase in those 13 years of Rx. 2,000,000; out of that more than one-half was in the first four years.

18,041. You say the provincial net expenditure was 12·12, and in the last year 13·13?—Yes, therefore it is less than one million, but the total is 2·15.

18,042. From the beginning?—Therefore, I mean that during the first four years the increase was more than one half of the total increase.

18,043. Let us put it in this way; in your first year, 1882–3, the provincial net expenditure was 10·98, that is very nearly Rx. 11,000,000, is it not?—Yes.

18,044. In 1894–5 it was 13·13?—Yes.

18,045. Showing a difference upon that whole period of 2·15?—Yes.

18,046. But now I want you to show the effect of these new contracts by showing what has happened to the Imperial Government?—Yes. If your Lordship will allow me, I will read five or six lines I have written in explanation of this table:—It will be seen that, while the expenditure of the internal administration of the country has been allowed to increase in 13 years by only a little over two crores of rupees, the expenditure administered by the Government of India has increased during the time by nearly 9 crores. It may also be added that, during the three years of Lord Ripon's viceroyalty which belong to this period, the net Imperial expenditure was not only not increasing, but actually showed a tendency to decrease. On the other hand, more than half the increase in provincial expenditure took place in the first four years, *i.e.*, during the currency of the provincial contracts made by Lord Ripon's Government. Your Lordship will see that the provincial expenditure for 1885–6 is 12·27; the next year it is 12·12; and then your Lordship might come to 1891–2, when it is 13·60, then there is 13·40 again; it is put back at each revision, while the

Mr. G. K. Gokhale.

12 April 1897.

Imperial expenditure, on the other hand, has been going higher up.

18,047. You point out that over the whole period the provincial expenditure has risen by 2·15 on about 11 ?—Yes.

18,048-9. While the Imperial net expenditure has risen by very nearly 9 on 30. Is the difference in percentage between those two very great ?—Well, I fear it is not quite right to put it in that way.

18,050. In rough figures the Imperial expenditure is a little more than three to one of the provincial ?—Yes, at the starting.

18,051. Multiply 2·15 by 3 and you would be getting on for 7 ?—6·45.

18,052. While the increase in the Imperial was very nearly 9 ?—Yes, nearly 9.

18,053. Therefore you see by those figures that the Imperial net expenditure has increased at a greater rate than the provincial net expenditure ?—Yes.

18,054. Your Imperial net expenditure is on a limited number of services, I suppose, is it not ? You exclude debt, do you not ?—The debt, of course, belongs to the Government of India; the Provincial Governments have nothing to do with debt.

18,055. But how do you make up your Rx. 30,000,000 ? What services make up the 30·81 in 1882-3 ?—Sir Henry Waterfield has given all that in his evidence. You have the Army, for instance, in the first place; then there are certain services which are directly under the Government of India, and there are railways, the deficit on railways; there are some irrigation works also which are still under the direct control of the Government of India; then the home remittances; all these come under the Government of India, whereas the administration of each province is entrusted to the Provincial Government.

18,056. But you see the total net expenditure on these services is only, in the last year of your figures, 52·74 ?—Yes.

18,057. And, of course, there is a very large sum beyond that to make up the budget of Indian expenditure. What is the difference, because what you call the Imperial net expenditure does not represent the whole of the expenditure of the Indian empire ?—No. I have taken the figures given by Sir Henry Waterfield. 52·74 is given net, but he excludes cost of collection; that is a matter of difference between him and us. Then there are about 25 crores on railway account, that is also eliminated, and then, I think, though the nominal Budget is for 96 crores the net budget is practically 52·74, according to Sir Henry Waterfield's way of putting it, or about 60 crores according to our view, including the charges of collection. Excluding the charges of collection, and all those other things, it stands at 52·74.

18,058. And those are Sir Henry Waterfield's figures ?—Those are Sir Henry Waterfield's figures; I have said that.

18,059. Do you out of those figures prove, or consider that you could prove, that the Imperial Government has taken more than its fair share of the increase of these provincial revenues ?—Oh, yes, much more than a fair share; if the contracts had continued as they had gone on before, then the Imperial share would have been less, because Sir Henry Waterfield himself gives in the Tables 47 and 48 how much was resumed each time from the Provincial Governments by the Imperial Government. I can give all those figures, if your Lordship pleases.

18,060. I do not quite see that the Imperial net expenditure proves that, because part of the Imperial net expenditure might have been derived from an increase of the revenues reserved to the Imperial Government ?—No, but the facts are here. I will just read them out to your Lordship; I did not put them separately in, because they are all contained in Sir Henry Waterfield's own statement that so much was resumed each time. Here they are. First contract (1870), gain to Imperial Treasury ·33. The second contract, in 1877, gain to Imperial Treasury, Rx. ·40 million.

18,061. ·40 is Rx. 400,000 you may say, putting it very roughly ?—It would mean Rx. 400,000 roughly. The third contract was in Lord Ripon's time, 1882-3, when he took nothing from the Provincial Governments. The fourth contract was in Lord Dufferin's time, when the Supreme Government took ·64 million Rx. in addition to what was legitimately the increase of the Government of India. In Lord Lansdowne's time, 1892-3, they took again ·46 million Rx. from the Provincial Governments. These are apart from the contributions occasionally demanded; they are separate.

18,062. And you would hold that each of these percentages is so much taken, in addition to the Imperial Government's share of normal increase, out of that proportion which at first, it was thought, might fairly be given to the Provincial Governments ?—Yes, it was that.

18,063. And do you make a total out of these ?—It would be 1½ millions, or more accurately, 1,800,000*l.*; it would be like that—all these revisions.

18,064. Rx. 1,800,000 ?—Yes, altogether.

18,065. And that is the sum that you contend the Imperial Government has taken away from the provincial revenue, which would better have been left in the pockets of the Provincial Governments ?—Yes, that is what I think. If your Lordship will look at this table given on pages 47 and 48, of Sir Henry Waterfield's published evidence—he gives here the tables of the provincial contracts, the different provincial contracts—it will be seen that in the last year of each provincial contract the expenditure of the Provincial Governments is much larger; the first year of the new contract the expenditure has to be reduced, because the Imperial Government takes away a large portion.

18,066. If that extra sum were left in the pockets of the Provincial Governments it would increase by that amount, would it not, this Rx. 13·13 millions which appears against the year 1894-95 in the table ?—Yes, it would.

18,067. And, if you took that sum off the Imperial net expenditure and added it to the provincial net expenditure, the position would be reversed, and the provincial net expenditure would have increased at a greater rate than the Imperial net ?—No, it would not quite come to that.

18,068. Just put the figures for yourself ?—There is Rx. 13·13 millions.

18,069. And adding Rx. 1,800,000 ?—But Rx. 1,800,000 is from the beginning, from 1870, taking the first contract.

18,070. Taking the year 1870 ?—For the purposes of my table, we must add these last two figures only.

18,071. It will quite suffice; you have given us Rx. 1,800,000 as your figure ?—That includes also the resumptions of 1870 and 1877, since the first original contract was made. Beginning with 1882-83, there were only two resumptions, one by Lord Dufferin and one by Lord Lansdowne; they come to Rx. 1,100,000 millions, ·64 and ·46; those are the only two.

18,072. That is, 1·1 ?—Yes.

18,073. Add it to 13·13 you get 14·23 ?—14·23.

18,074. Take 1·1 off 39·61 and you get 38·51 ?—38·51.

18,075. The comparison would be 14·23 against 38·51 ?—Yes. Then it would be like this; it would be a little over 3, on the left side, the net provincial (I deduct 10·98 from 14·23); then that would give 3·25 as the provincial increase. On the other side I take away 1·1 from 39·61, that would mean 38·51, and from that I take away 30·81; that leaves 7·70.

18,076. Therefore, you say, if that were done, the proportion would be reduced very much ?—Well, slightly; not very much.

18,077. But it would be reduced ?—Yes; but it should be remembered that the level of the expenditure, the imperial level and the provincial level, are not based on any proportion; there are certain revenues that go exclusively to the Government of India.

18,078. That was why I wanted to draw your attention to this table, because it seemed to me that you could not really compare the two services, the provincial net and the imperial net; different causes were acting upon them?—But, where they actually resume provincial revenues, that constitutes——

18,079. Confining yourself to the Rx. 1,800,000, which, in your opinion, ought to have gone to the Provincial Governments; if that had been done, would it not have necessitated increase of taxation in order to meet these Imperial charges ?—As your Lordship has brought out in one of the questions recorded in the evidence, when there is a special reserve available, then the expenditure has a tendency to increase; but when Government has to face the unpopularity of imposing extra taxation, it would think twice before it increased expenditure. Meanwhile, if the money had gone to the Provincial Governments, education, police reform, separation of judicial and executive functions, these very necessary reforms would have been carried out.

18,080–1. Carrying out that argument, would you reduce the Imperial revenue to *nil*, in order that the Imperial expenditure might be correspondingly reduced?—Oh, certainly not, but there is ample provision already; they have already secured to them a certain portion of the normal increase.

18,082. That is rather an assumption, is it not? Supposing that competent authority—I do not say they are right—thought that this increase of expenditure was necessary, it would have involved increase of taxation? —That only means that we have to say nothing against what the Government of India may do. It comes to that ultimately. I would only say this, that the Provincial Governments are as much interested in the good government of the country as the Imperial Government. They are certainly not irresponsible, as some of us are called—these Governors and Lieutenant-Governors—and when they say, "You should not take so much from us," that means something.

18,083. Did you not say that the heads of Departments did not care for finance, but only cared for the efficiency of their Departments? Does not the same thing apply to the Provincial Governments, and will not their tendency be to look simply to the efficiency of their own government, with a certain carelessness as to what the Finance Member might in the end have to do in the way of increasing taxation?—All English officers think of the safety of India first, and second to that, they think of the success of their own administration. Besides, this tendency of which your Lordship has spoken in itself does not deserve to be condemned; it depends on what the department is in regard to which it is exercised. If the Provincial Governments want to increase their expenditure, we think that is perfectly legitimate; when the Imperial spending departments, military and others, want to increase their expenditure, we feel we must protest—that is all.

18,084. Therefore, if the Judicial Department wanted to increase its expenditure, they must necessarily be extravagant; but if the Provincial Government want to improve a service, that necessarily is economical?—But the Judicial Department is under the Provincial Government.

18,085. Take an Imperial service then?—The Army.

18,086. The Army is struck off; give me another instance?—The railways.

18,087–8. Whatever is imposed by the Imperial Government by way of increase of expenditure on railways must be extravagant; but whatever is proposed by the Provincial Government must be economical?—I do not quite say that; but the Provincial Governments deal directly with matters which are properly connected with the enlightenment and progress of the people. And our Indian people's view, at all events, is that we are more interested in provincial than we are in Imperial expenditure. Of course, this is our criticism of what the Government have been doing; the Government must certainly be able to allege reasons on the other side, else they would not have done it.

18,089. But each department is interested in its own efficiency, and has the same tendency to, I will not call it extravagance, but to free expenditure, which perhaps the general finances will not bear; and there is the same tendency on the part of the Provincial Government as there is on the part of the Imperial Government?—That is true; but if the Educational Department, for instance, wanted to increase its expenditure, I would welcome that tendency; if the Military Department wanted to increase its expenditure, I should be very jealous and should protest.

18,090. But, on the whole, your plea is one for additional expenditure?—Yes. The Provincial Governments must increase their expenditure very much.

18,091. And, in consequence, have additional taxation? You would give this 1,800,000*l.* over to the Provincial Governments to spend?—Yes, I would.

18,092. You have got no means of showing that the Imperial net expenditure could be reduced by that sum; would that be possible?—That might be possible.

18,093. But you have got no means of showing so? If that is not possible, then the whole expenditure of India would be increased by 1,800,000*l.* Your plea, therefore, in that case would be for an increase of expenditure, and, inasmuch as it is only about in equilibrium at the present moment, that would be a plea for increase of taxation; must not that be the result?—I have faith in the Government's fear to face the unpopularity of increased taxation, and they will reduce their expenditure, I think.

18,094. Now will you pass on to some further remarks upon the principle upon which these contracts are based? —I have pointed out one defect of the provincial contracts, namely, that they are one-sided arrangements forced upon the weak Provincial Governments by the powerful Imperial Government. Secondly, there is no fixed or intelligible principle on which these contracts are based, no uniformity in their plan, no equality in the burdens which they impose on the different provinces. The share of Imperial expenditure which the different provinces have to bear is not determined by any tests of population or revenue. A calculation, made by Sir James Westland and printed on page 400 of the second volume of the Finance Committee's report, gives the following results:—

The proportions or percentages of revenue surrendered by each province to the Supreme Government are as follows:—

	Per cent.
India Districts (General)	26
Central Provinces	56
Burma	58
Assam	51
Bengal	68
North-West Provinces	76
Punjab	45
Madras	52
Bombay	46

The contribution of each province per 100 of the population is as follows:—

Province.	Rupees contributed per 100 of Population.
	Rs.
Central Provinces	71
Burma	312
Assam	97
Bengal	107
North-West Provinces	177
Punjab	82
Madras	123
Bombay	155

These figures are sufficient to show the totally arbitrary character of the present contracts. The fact is that these inequalities are a legacy from the pre-decentralization period, when the expenditure of the different provinces was determined, as men like Sir Charles Trevelyan, Sir John Strachey, General Chesney and others have put it, not by the resources or requirements of those provinces, but by the attention that their Governments succeeded in securing from the Central Government, *i.e.*, by the clamour that they made. And when the first step was taken in 1870 in the matter of decentralization, the level of expenditure that had been reached in the different provinces was taken as the basis on which the contracts were made, and the inequalities that then existed were, so to say, stereotyped. I think it is high time that an effort should be made gradually to rectify these inequalities.

18,095. Then your criticism in this matter is, not so much that there should be one uniform percentage levied on the provinces, as that the present division is a purely arbitrary one; that it is not based upon the ascertained requirements of the provinces, or their claims upon the central Government for special consideration, but that it is a hand-to-mouth arrangement, based upon a state of things which existed before the new provincial system was introduced?—That is so, and also this, that the burdens ought to be more fairly distributed. It is very hard on certain provinces—for instance, Madras is very hardly treated; we are better off in Bombay, but the North-West Provinces are very badly treated also. And there is another point, Government has now added Burma. This new province required a large outlay to begin with, that burden has to be shared by all the other provinces without any principle, so, if there was any limit like that, the burden would be thrown equally upon all.

18,096. The proportion of revenue surrendered by Burma to the Supreme Government was rather a high one —58 per cent.?—That was Lower Burma. This was written in 1886 by Sir James Westland when he had the Accounts of 1884 before him; Upper Burma was not annexed at that time.

18,097. But even at that time is it not the case that Lower Burma was an expensive province to the Imperial Government?—Lower Burma was not.

18,098. Not at that time?—And there is another peculiarity. Burma is very thinly populated, so that the

Mr. G. K. Gokhale.

12 April 1897.

number of rupees contributed per 100 of population is 312; and, if your Lordship will look at the proportion of revenue surrendered by Burma, it will be found to be 58 per cent., or more than one-half.

18,099. That is the figure I have before me. Your contention would be, therefore, that the contribution required by the Imperial Government was excessive in Burma?—Yes, in Lower Burma; I am not referring to Upper Burma, which was annexed in 1886.

18,100. No, I quite understand. Now, take another of these provinces, and perhaps you would apply the same reasoning to that—any one you like?—Say the North-West Provinces. They are called upon to contribute 76 per cent. of the revenue to the Imperial Government, and Bengal is called upon to contribute 68 per cent.

18,101. Now, has the Imperial Government to contribute very largely in return to the North-West Provinces?—I do not think so. They do not contribute to any of the provinces.

18,102. And you base upon that your contention that the rate of contribution is entirely arbitrary in each case?—That is what I say. It is, moreover, the official view itself. Sir James Westland, who is now Finance Member, himself constructed these tables.

18,103-4. But you are not in any way arguing for a rigid 50 per cent. to be levied, we will say, from all the provinces?—That should be the ideal that we should keep before ourselves, and it should be gradually reached; that is what I mean. I will explain how that could be reached afterwards; in fact Sir Charles Elliott's proposals aim at that.

18,105. Perhaps you will proceed?—The third defect of the existing schemes is that, while it operates as a check on the growth of provincial expenditure, it imposes no similar restraint upon the spending propensities of the Government of India. The only way in which these defects could be remedied, was clearly pointed out by four members of Lord Dufferin's Finance Committee. They were the President, Sir Charles Elliott, late Lieutenant-Governor of Bengal, Sir W. W. Hunter, Mr. Justice Cunningham, and Mr. Justice Ranade. In a note which they submitted to the Government of India on the subject, they made the following four proposals, and urged that their adoption would be attended by very beneficial results:—(1) That there be no divided departments, but that those departments of receipts and expenditure which are now wholly or almost wholly Imperial, or which it may be found convenient to make Imperial, should be set on one side for Imperial purposes, and that the receipts and expenditure of the provincialised departments should be entirely provincial. (2.) That whatever the sum be by which the Imperial expenditure exceeds the income from those sources of revenue which are not provincialised, that sum should be declared the first charge on the Provincial revenues. So this provides fully for the interests of the Government of India.

18,106. But would not the result be very much the same as it is now?—No, it is not so. The scheme, in the first place, secures greater fixity to the Provincial Governments.

18,107. Do you propose to show that to us afterwards?—Yes. (3.) That the provincial surplus which arises from the excess of receipts over expenditure should be the fund from which, in the first place, all Imperial necessities should be met before any increase can take place in provincial expenditure. (4.) And that as regards the future growth of revenue, it should, as far as possible, be divided equally between Provincial and Imperial, subject to the condition that if the Imperial exigencies ever required a larger share, the Imperial share should be increased. Taking the accounts of 1884-85, Sir Charles Elliot and the other members thus illustrated the working of their scheme: They proposed that opium, salt, customs, tributes, post office, telegraph, mint, interest on debt, superannuation receipts and charges, the East Indian, Eastern Bengal, Guaranteed and Southern Maratta Railways, military works, Army, exchange and home charges, should be wholly Imperial, and that the Government of India should also bear the charges and receive the revenues of the Imperial districts, *i.e.*, the parts of India which are not included in the provinces. On the other hand, they proposed that land revenue, stamps, excise, assessed taxes, forests, registration, and the civil departments should be wholly Provincial, such heads as stationery, printing, miscellaneous, and railways, canals, and other public works as were already Provincial, continuing to remain so. The accounts of 1884-85, excluding Provincial rates, were as follows:—

	(In Thousands of Rupees or Hundreds of Rx.)		
	Imperial.	Provincial.	Total.
Revenue - -	503,569	175,537	679,106
Expenditure -	505,066	174,854	679,920

These accounts, on the basis of readjustment suggested above, would have stood thus:—

	(In Thousands of Rupees or Hundreds of Rx.)		
	Revenue.	Expenditure.	Surplus or Deficit.
Imperial - -	326,799	505,365	- 178,566
Provincial -	354,307	176,559	177,748

Your Lordship will notice that Rx. 35,000,000 is the revenue at the disposal of the Provincial Governments, out of which Rx. 17,000,000 they spend for themselves, and the rest they hand over to the Imperial Government. This means that on the basis of division proposed, the provinces would have to pay about 17¼ crores, *i.e.*, about 50 per cent. of the revenues made over to them to the Imperial Government to enable the revenue of the latter to come up to its expenditure. This scheme, if adopted, would have the following advantages over the existing arrangements:—

(*a.*) It would remove all irritation at present felt by the Provincial Governments and secure to them, under ordinary circumstances, half the normal growth or revenues in their provinces, enabling them thereby to make steady efforts towards the progressive improvement of the internal administration of the country.

(*b.*) It is, of course, not possible to secure *at once a* complete equality in the burdens which the Imperial expenditure imposes upon the different provinces. Provinces that contribute less than half their revenue to the Imperial Exchequer, cannot be suddenly called upon to reduce their own expenditure and pay their full share with a view to reducing the share of those that at present contribute more than half. Existing facts after all must be respected and the present level of expenditure in the different provinces must be left untouched. But the effect of contributing to the Imperial Exchequer an equal portion of all future increase in revenue (viz., 50 per cent.), will be that year by year the relation which the contribution of a province bears to its revenue will tend more and more towards equalization. Thus the provinces which now pay, say, 60 per cent. of their revenue will, after paying only 50 per cent. of their increase for some years, be found to have dropped down to a ratio of 58 or 57 per cent. And similarly in the provinces which pay less than 50 per cent. at present, the ratio will constantly work itself up to 50 per cent. The proposed scheme, while making ample provision for the necessities of the Central Government, imposes at the same time something like a check on its spending propensities. It secures to that Government the entire normal growth of the imperialised items of revenue and also half that of the provincialised items, and leaves to it besides the power to demand more than half in times of sore need. But it is expected that in ordinary years more than half the normal growth of provincial revenues will not be devoted to non-provincial purposes. The adoption of the scheme will place the financial system of India once for all on a sound basis and will bring it more in a line with the federal systems of finance in other countries, such as Germany, Switzerland, and even Canada and the United States. In these countries, so far as I have been able to gather, the central and constituent governments have their separate resources, but the latter are called upon in Germany and Switzerland to make special contributions on extraordinary occasions. There is one safeguard which I would add to the foregoing scheme and which, I think, is very important. It is this, that the Government of India should have no power of claiming for itself a higher proportion of the provincial increase than 50 per cent., except in

those extreme cases described by Lord Ripon's Government as dire necessities, and that, whenever in the opinion of the Government of India those extreme cases arise, a formal declaration of the grounds on which such opinion is based should be drawn up and sent to the Secretary of State to be placed by him before Parliament. Moreover, the increase should not be allowed without the sanction of the Secretaries of State, so that the Provincial Governments, if they wanted to protest against it, would have an opportunity of doing so. I am confident that the Provincial Governments in India will welcome such a settlement of the question. Before concluding this portion of my evidence, I may be permitted to remark that it would have been a matter of general advantage if representatives of Provincial Governments had come here to give evidence on this subject before the Commission.

18,108. I have a question to ask you on the proposal you make; but first of all, could you explain what you mean by expressing the wish that representatives of Provincial Governments should come here? Do you mean by that that witnesses from the Bombay and Madras Governments should have been invited to come over to give evidence?—On this particular subject of provincial finance.

18,109. Your criticism upon what the Commission have done is that they have restricted themselves to hearing the evidence of people who represent the Central Government?—Yes. I do not criticise what the Commission have done. I only say that it would have been well if the Central Government in India had asked the Provincial Governments to send representatives to give evidence.

18,110. I quite understand. You say that, if the suggestion which you have explained to us were carried out, it would remove all irritation at present felt by the Provincial Governments; but do you not think that there would be a certain feeling of irritation in the Provincial Governments if you not only doubled their income—which you would do if you increased it from 17½ millions to 35—but immediately afterwards took part of that away from them to give to the Imperial Government?—I do not think so.

18,111. Do you not think that there would be a little irritation?—No, there would be no irritation. They would know, of course, that they have to provide for the Imperial Government, as at present, but the great advantage of that scheme would be that 50 per cent. would definitely belong to the Provincial Governments and 50 per cent. would be all that would be taken away.

18,112. You give the analogy of Germany. Have you never heard that in Germany there is a very great deal of irritation felt over what I think they call the *matricular* contribution; the tendency of the Empire is to increase that *matricular* contribution, and—I am only speaking of what I have read—that increase does not tend to make the relations between the subordinate governments and the Supreme Government more pleasant?—It is very much to be wished that exactly the same state of things should reproduce itself in the Government of India so far as the relations of the Provincial and Supreme Governments are concerned. There would then be some guarantee that there would be some check on the tendencies of the Imperial Government; at present it has things all its own way.

18,113. I do not see where the check on the Imperial Government would be, if the Imperial Government at the end of the time said "We have spent so much, hand it over"?—No, it would not be that; the contract would be there. If at the end of the year they were able to show that some dire necessity had arisen, they would come first of all to the Secretary of State; that is what I have provided. The Provincial Governments would then put forward their views, and the Secretary of State's sanction would be necessary, and the whole matter would ultimately come before Parliament. That is all that can be done at present; I wish more could be done, but it does not seem feasible.

18,114. We will say at the present moment that the expenditure of this test year is 50 millions; you take that as the existing expenditure?—Of 1884-5.

18,115. I am taking it for that year?—Yes.

18,116. And the revenue which the Imperial Government enjoyed in that year was a sum slightly less than that?—Yes.

18,117. Under the reform which you have brought before us 17½ millions of those revenues would be taken away from the Imperial Government?—Yes.

18,118. But they would be handed over to the Provincial Governments simply to get taken again?—But there would be this advantage, the departments would once for all be classed as provincial and Imperial, so that the Budgets may be separate, everything may be separate, and there need not be this complication which is inevitable at present. The present theory is a very defective theory; all the revenues belong to the Government of India; they are only nominally received by the Provincial Governments in trust for the Government of India, and then the Imperial Governments hands over to the Provincial Government so much. Under my scheme there would be a complete division of resources.

18,119. Now we will confine ourselves to the advantage of distinctness of account. We will say that, instead of the Provincial Government levying taxes on behalf of the Imperial Government, they would levy these taxes on their own behalf; but, as soon as they had done that, they would immediately have to give over in this particular year this very large sum to the Imperial Government. It seems to me to leave matters very much where they were before, and up to this point you have provided no check upon the Imperial Government. From what you have told us I think you see your way to providing a check; I think you told us that, as far as the growing revenue was concerned, not more than 50 per cent. was to be taken by the Imperial Government; is that the safeguard upon which you rely against extravagance on the part of the Imperial Government?—One of the safeguards.

18,120. What were the others?—The other is that, if the Government of India wanted more, then it must draw up a declaration to come before the Secretary of State, and the declaration must go before Parliament. Of course necessities must be provided for, but there would be this, that they would not care to submit themselves to all this, unless the occasion were really an urgent one.

18,121. But, in the meantime, the expenditure is going on, and the Imperial Government finds it necessary to incur expenditure; how would it incur it, when one-third of its revenue was taken away?—But there are large balances which the Government of India has; surely extraordinary expenditure might be met out of them, and it has powers of borrowing also.

18,122. We are told that these balances are only carefully adjusted to the present necessities, and, if you made further demands upon it, the Government would have to have bigger balances. When an extraordinary occasion arises, they must draw on their balances?—As a matter of fact, there are no stringent limits about their balances; sometimes they drop down to 12 crores, sometimes they amount to 23, and so on.

18,123. It has been put before us by the responsible officers that the balances, as they at present stand, are not, on the average and in the main, excessive for the present needs?—Yes.

18,124. But, if the Imperial Government, carrying on its expenditure, cannot draw upon the Provincial Governments until the Provincial Governments have made an appeal home, and the Secretary of State has heard both sides and sanctioned the transfer of the sum, it appears to me that the Central Government must have very largely increased balances out of which to provide in the meantime?—But how much does it take at at a time from the Provincial Governments? Not much, after all, whenever it demands these contributions; it took, for instance, at one time less than a million, and at another time less than a million.

18,125. But, in this case, your proposal takes away at once one-third of the revenue of the Imperial Government?—Yes.

18,126. (*Mr. Courtney.*) That is only, as I understand it, when the arrangement is first made; after you have made your arrangement for allocation of revenues, and your distribution of accruing revenue and surplus, the whole machinery would be automatic?—Yes.

18,127. And that is your best guarantee; there would be an automatic revenue received by the provincial administration, and an automatic share given to the Central Government?—Yes, that is what I mean.

18,128. And so, if after three or four years a crisis arose in which the Central Government was pinched, it would have to make a solemn declaration of the special circumstances of its situation, which should be forwarded to the Secretary of State, who would then sanction an indent upon the provincial revenues?—Yes, exactly; my case has been very fairly put; that is exactly what I mean. The only thing that I would add to that is, that, whenever the Government of India resumes an additional portion of the surplus of the Provincial Governments, the portion does not come at once; it is only a small dribble at the

Mr. G. K. Gokhale.

12 April 1897.

beginning, but it secures that portion to itself permanently. So it is not of much immediate importance in the case of a real emergency, which wants a large expenditure at once. If the emergency was not a pressing one, but if the Government of India wished to increase its expenditure permanently, there would be time for them to go to the Secretary of State and get his sanction.

18,129. (*Sir James Peile.*) A deficit in the Imperial Budget would always be an emergency such as you would look to?—No, I do not think so.

18,130. Why?—They may meet a deficit out of their own resources, out of the balances for the first year; they do not keep the balances at a specified level; there have been many years where they have reduced the balances, and the next year, when they have better revenues, they make them up.

18,131. (*Mr. Courtney.*) Your hope would be that, with this chasm lying before them, they would always pull up in time?—Yes, that is what I mean.

18,132. (*Sir James Peile.*) But, if they did not meet a deficit out of the balances, they would have to meet it by extra taxation, would they not?—Yes, they have that power also of extra taxation, and I would not touch their power in that respect.

18,133. (*Chairman.*) But you are only going to allow the Imperial Government, under any circumstances, 50 per cent. of the increase of the proceeds of taxation?—Yes, 50 per cent. of the provincial revenues, in addition to the whole 100 per cent. of its own revenues.

18,134. The whole of its own, yes; but only 50 per cent. of the increase of the provincial, and therefore, to that extent you increase the powers of the Provincial Governments to spend?—Yes.

18,135. That being the case, it is very probable, is it not, that the Imperial Government would find itself short?—I do not think so. In the year taken by Sir Charles Elliott it required 50 per cent. of the provincial revenues to make up its budget; last year also in the Supreme Legislative Council this same point was pressed by a non-official member, and on that occasion he divided the Budget in the same manner as this. Last year the Budget was, say, 96 millions; out of that 48 were Imperial and 48 provincial, according to this scheme. Well, out of that 48 the Provincial Governments spent 24, and contributed 24 to the Imperial Treasury, so that the scheme would automatically work like that. The Imperial Budget would be the Imperial receipts, *plus* contribution from the Provincial Governments; the provincial Budget would be so much revenue, *minus* so much contribution to the Imperial Government.

18,136. What you want really to do is, is it not, to secure to the Provincial Governments of India what you think is a fairly sufficient revenue with which the Imperial Government could not meddle?—That is my object.

18,137. And, in order to get that end, you would not mind leaving the Imperial Government to the necessity of imposing extra taxation, which otherwise might be avoided?—Well, they avoid it at present by starving the most useful things; I do not approve of that; they starve education, and all that.

18,138. But it is necessary that we should understand whether you do not shrink from extra taxation in order to secure to the Provincial Governments that revenue?—I do not shrink from that, because I know that the Government would not care for that unpopularity, and that the taxable resources are nearly exhausted now in India.

18,139. Now we come to the progress of expenditure, and, perhaps, you would give us your views upon that subject?—Yes. Our expenditure shows a large and continuous growth since the transfer of the Government of India from the Company to the Crown, and recent changes in the frontier policy have accelerated its pace in an alarming manner. Excluding railway receipts, the average expenditure for the five years preceding the Mutiny was about 30 crores. It now stands at over 73 crores, nearly 2½ times what it was before the Mutiny. Increase of expenditure, taken by itself as a feature of national finance, is not necessarily open to any serious objection. Everything depends in this matter on the nature of the purposes for which the increase has been incurred, and the results produced by such outlay of public money. In the United Kingdom, in France, in Italy—in fact, almost everywhere in Europe—there have been large increases in national expenditure during the last 30 years; but the increase in Indian expenditure during this time differs from the increases elsewhere in a most fundamental respect. While increased expenditure in other countries under proper popular control, has, so far as we are able to judge, helped to bring increased strength and security to the nations and increased enlightenment and prosperity to the people, our continually growing expenditure has, in our opinion, under autocratic management, defective constitutional control, and the inherent defects of alien domination, only helped to bring about a constantly increasing exploitation of our resources, retarded our material progress, weakened our natural defences, and burdened us with undefined and indefinite financial liabilities.

18,140. May I stop you there for a moment and ask you what you mean by "increasing exploitation of our "resources has retarded our material progress"?—Yes. What I mean thereby is this: The resources of our Empire are really vast; but the great difficulty in India is about capital, and we are unable at present to take advantage of these resources ourselves, but our hope is that in course of time we might be better able to spend money in that direction, and then we should be able to utilise our resources for ourselves. At present, owing to the vigorous manner in which railways are constructed, and the way in which foreign capitalists are encouraged to invest their money in India, the result is that we get only the wages of labour, while all the profits that are made there are taken out of the country and our resources are being utilised by others.

18,141. Then you would prefer to have gone without the railways all this time? Your idea of improving the material prosperity of India would have been to have adopted none of these improvements such as railroads, which most people think tend to develop a country?—Well, I am not quite so sweeping in my assertion. I do not mean that the railways themselves are to be condemned—all the railways—but the manner in which the Government are going in for more and more railways, starving more useful things, is an objection; and this has resulted in the exploitation of our resources by the indigo, tea, coffee, and other planters. The policy of free trade has, moreover, been forced upon us too early, thereby destroying all our important industries that existed before, and throwing all the people on the precarious resource of agriculture.

18,142. Do you consider it a great drawback in the development of Indian resources that a great tea trade has been established, which has gone very far to put India in the place that China formerly occupied as supplying England with tea?—So far that would be an advantage, but the profits go to Europeans; and if we were able to accumulate capital the——

18,143. But, if this capital had not come from this country, this new industry would not have been developed?—That is so.

18,144. It is quite open, at the present moment, to Indians to use their large resources, if they are large resources, in cultivating this tea; but apparently they do not do it?—We have very little capital to invest in these industries.

18,145. And, therefore, no improvement would take place and at the present day you would be cultivating as you were 50 or 100 years ago, because you have not got capital. In such a case is it not an advantage to a country to be able to borrow capital, and borrow it cheaply, in another country, in order to help the development of its resources?—But, if I had a vast property myself, I would rather allow that property to remain as it is, with the consciousness that I may make full use of it when I have the means, rather than allow somebody else to come and use it and give me only a pittance, the outsider getting all the rest; it is *my* property.

18,146. I only want to understand your view. You would have had no railways; you would not have had very good roads, I think; and none of these trades would have been developed. Do you think that that would have been for the benefit of India?—I did not say that there should have been no railroads at all; but my complaint is about the manner——

18,147. I think you say in one part of the paper which you have given me, that you think that at the present moment railroads ought only to be executed out of surplus revenue; that is to say, that India should make her own railroads?—Yes.

18,148. It is another form of saying it?—Yes.

18,149. And that principle you would have applied from Lord Dalhousie's time forward?—No, I should not have done that. I think we must be up to the times after all; and the main trunk lines would have been constructed.

18,150. Therefore, it is only a question of difference of degree; the main policy was right, and the main policy

was a benefit to India, inasmuch as it introduced these improvements which have been adopted by every other country under the sun; and, on the whole, you would not have liked India to have been left entirely without a share in these improvements? Your difference of opinion with the Indian Government is that they had been pushed too far?—That is one; and I look at the motive power which sets in motion the whole machinery. No Viceroy goes out to India, but a body of merchants waits upon him in England and says, "You must do something for railroads," and so on; there is a feeling in India that these railroads are mainly undertaken in the interests of the English commercial classes. We have got the main trunk lines; we would rather go without the others.

18,151. What I understand is, that the foreign English capital should have made the main trunk lines, and nothing more should have been done, unless out of surplus revenue. I think you have rather minimised the surplus revenue; that amounted to very little, in your opinion, did it not; at the present moment the surplus revenue is not very much?—Yes.

18,152. And, therefore, you would be practically putting an end to all railroad expenditure at the present moment?—They might make economies and have a larger margin; if they are really anxious for these railways, they might make economies and have a larger margin, and devote that margin to railways if they please.

18,153. (*Sir William Wedderburn.*) They need not have expeditions to Chitral?—They might very well dispense with those; that is what we think.

18,154. (*Chairman.*) This, of course, is a perfectly fair argument to put forward; but it is always accompanied by the argument on the other side that competent people thought these things necessary?—That is so; but in the House of Commons the members who criticise are not military experts themselves, and yet they do not feel themselves debarred from criticising.

18,155. Will you tell us how the making of railroads has retarded your material progress, because you say "that "the increasing exploitation of our resources has retarded "our material progress"?—Well, this free trade policy that has been thrust on the country has killed all our industries. No colony has accepted this policy. The result is that our people are growing poorer and poorer, because they are all thrust back on agriculture. Sir James Caird, in his report, says that there are so many idlers now connected with land; I believe half the number would do the agricultural work; and the other half are kept on land because they have nothing else to do; and the result is so much labour is practically idle there; and the old industries that we had are swept away under the competition of steam and machinery; so that has retarded our progress.

18,156. Then the opening of fresh trades must have the opposite effect, must it not?—But that is very little; we get only wages there, and everything else goes out.

18,157. Quite so; but you speak of the people not having anything else to do except being on the land, the consequence being that too large a population, as I understand, are being employed on the land. Any new trade opened must find larger employment for the people, and, therefore, be beneficial?—Your Lordship should take both parts of my scheme, namely, protection coupled with that. Then, of course, our other industries also would remain; and the result of it would be that our unemployed would find work there. After all, it is the ideas that mould these activities; and our contact with the West has given us the necessary ideas.

18,158-60. I want to keep to the question I was putting to you, namely, there are too many people on the land; the opening of fresh trades, and thereby finding fresh employment, must tend to relieve that glut, must it not?—That is true, so far as it goes.

18,161. And, therefore, when you get within 50 years an enormous new trade like the making of railways—I think I am right in calling it enormous—there is a tendency in that direction, is there not?—Economically I must admit that it has a tendency in that direction; but I do not approve——

18,162. I am only taking that as an instance; and any development of Indian resources, that gives employment to labour, has a tendency to relieve this glut, has it not?—Yes; but those men were already employed before; not these exactly, but those who represented them in the old days.

18,163. But you have just told us that there are too many on the land now?—Yes, because our industries have been killed by free trade.

18,164. And when other industries are opened up, those new industries tend, so far as employment is concerned, to redress the balance?—That is true; but you should never have forced free trade upon us and killed our old industries.

18,165. Then your remedy is protection?—Yes. India needs protection very badly; that is my view.

18,166. Then it comes to that, that your remedy is protection?—Well, yes; though the evil has already been done.

18,167. Is the feeling that protection is necessary universal throughout India?—So far as I know that is the general feeling. We are like the colonies in that respect.

18,168. (*Mr. Naoroji.*) What is the reason they were not able to take up these industries, such as tea or any of these industries, or any of these enterprises which the foreigners came and took possession of; is it not because our capital is carried away from the country?—Yes, that is so.

18,169. Is not that at the root of the whole thing?—Yes; it is at the root of the whole thing.

18,169*a*. If that were not so, and we were able to preserve what we produce, we should be able to welcome the foreigners to do what they liked, and we should be able to compete on equal grounds with them?—Yes, exactly.

18,170. Otherwise we are reduced to mere labourers hewers of wood and drawers of water; whereas now, of the profits of all these new improvements and trades and manufactures introduced into the country nothing remains; those profits are all taken away by somebody else?—Yes.

18,171. Because we ourselves cannot devote our money or our capital to the subject; is not that so?—That is so; I would give one illustration which would make my meaning clear. It is like a house in which there is only one person, and that is a paralytic, and there are a number of good things in the house. The person himself can take no advantage of those good things; but other people come in, throw a pittance to him and take away all those things; it is almost like that.

18,172. (*Chairman.*) Take them away! But they buy them?—Well, they say they buy them.

18,173. There is a price given for them?—But only a very inadequate price.

18,174. Take the case of a railroad; that costs money to make, does it not?—Yes, it does.

18,175. That money has been supplied from here?—Yes.

18,176. Is not that buying? Is not that a case of buying a portion of the receipts of the railroad back again? If England sends over 500,000*l.* worth of rails which are laid down, for the moment that costs India nothing. England buys a certain share of the proceeds of this industrial undertaking by providing these rails; is not that an exchange between the two countries? That is not taking the things out of the Indian's house without paying for them?—I do not say without paying; you throw a pittance to us in the shape of wages; the profits are all taken clean out.

18,177. Is it not the case that the whole work has been done, or the great part of it has been done, by goods which Englishmen have bought and sent over?—Yes.

18,178. Plant?—Yes.

18,179. And in all fairness has not the return been a perfectly fair bargain between the two countries?—But they are our resources; why should English capital alone find its investment there?

18,180. But there is nothing to prevent your resources being employed, only you say you have not got them?—The natural resources are our own, the land is our own, everything is our own.

18,181. At all events you could subscribe to these railroads and find the capital for them, but you do not?—We have no capital.

18,182. As far as I understand, the English Government would be only too glad if you would pour out your accumulated wealth to buy these railroads, but you will not?—There is not much accumulated wealth.

18,183. (*Mr. Naoroji.*) Is it not the case that we cannot buy them because our capital is taken away by somebody else?—Yes, what would otherwise be our capital.

18,184. We have not the capital to pour out, otherwise we would be only too willing to devote it, and leave the foreigners also to come in with their capital?—Yes;

Mr. G. K. Gokhale.

12 April 1897.

if what the nation might have saved in normal circumstances had remained in the country, we might have been much better able to take advantage of those resources.

18,185. (*Chairman.*) I think we had better pass on?—Compelled to meet the demands of a forward Imperial frontier policy and the exigencies of consequent Imperial defence, and constantly borrowing for commercial enterprises, often undertaken in consequence of the pressure of English commercial classes, our Indian Government has little money to spare, with all its increase of taxation, for purposes of national education. Nor has it been able, amidst constant embarrassments of the military budget, to forego some prospective land revenue by granting the boon of a permanent settlement to provinces ripe, and more than ripe, for the concession under the conditions laid down in Sir Charles Wood's and Sir Stafford Northcote's despatches (1862 and 1867), nor again has it found itself during all these years in a position to carry out pressing administrative reforms like the reforms of the police, and the separation of judicial and executive functions. It is this feature that marks the difference between the growing expenditure of British India and that of other countries, and constitutes our national grievance in respect of the administration of our national expenditure. Whereas the capacity of the country to bear increased burdens is growing perceptibly less, our expenditure, under the existing conditions of administration, is rising higher and higher, necessitating a heavy incidence of taxation, exhausting all our fiscal reserves, and, what is still more alarming, thrusting on our hands expanding responsibilities.

18,186. Are you prepared to prove that the capacity of the country to bear increased burdens is growing perceptibly less?—I think so. These famines—this present famine, for instance, and the suffering that it is causing—are good evidence on the point. The people now go down at the first touch of famine.

18,187. But when you say that the capacity of the country to bear increased burdens is growing perceptibly less, I think, on the whole, the evidence placed before us has shown that, apart from increase of taxation, revenue has grown. You say that it is perceptibly growing less; but, on the contrary, it is perceptibly growing better?—My view is that the people are growing less prosperous; we perceive it. Men who think with me perceive that the people are growing less and less prosperous.

18,188. The outward and visible sign is the capacity to pay the same amount, or a larger amount, of revenue where there has been no difference of taxation. If the produce of taxation increases, is certainly is not a perceptible sign of incapacity of the country to bear increasing burdens?—There is another thing also—increased burdens. I mentioned, and the Government themselves have admitted it in several places, that it is not possible to impose increased taxation on the Indian people. That is one thing; and, secondly, your Lordship might look at the income-tax returns, for instance. For all practical purposes the income is steady, and there is the normal growth of population. Still we feel that the capacity of the country is growing relatively less.

18,189. Will you go on?—Under the Company's Government things were, on the whole, managed with economy, and increase of taxation was, as far as possible, avoided, which is a characteristic feature of our pre-Mutiny finance. The conquest of the country completed, the Company's Government entered, in 1852–53, upon a career of administrative improvement and internal progress, and did much in both directions without increase of public burdens. And during the next five years the fiscal system was reformed, the police was reorganised, the judicial and other establishments were revised with largely extended employment of natives in some of the higher branches, and great activity was shown in regard to public works. Over two crores a year were spent on canals and roads and buildings, and arrangements were made with railway companies for the construction of the main trunk lines of railway communication; and yet the expenditure was under 30 crores. Then came the Mutiny; it was a serious national disaster. It added 47 crores to our National Debt; and our permanent annual expenditure increased at one bound by about 9 crores, the civil charges going up from 11·7 crores to 15·8 crores, the Army from 12·7 crores to 14·9 crores, and interest from 2·9 to 5·5. The cloud of distrust, suspicion, and prejudice, then raised, still hangs over the country, and casts its blighting shadow more or less over the whole of our Indian finance. In respect of military expenditure—so, too, in regard to the extended employment of natives in the higher branches of the civil and military services of the Crown—the effects of the Mutiny are still broadly visible. I beg to be allowed to put in two statements here which I think will help the Commission to comprehend at a glance the progressive nature of our expenditure. The first statement gives figures of total expenditure *minus* railway receipts, figures of the exchange charge, and, lastly, figures of total expenditure *minus* railway receipts and exchange for the last 40 years. The second statement divides the period from 1862 to 1895 into three periods—the first from 1862–1870, that of centralised finance; the second from 1871–1881, that of partially decentralised finance; and the third from 1882–1895, that of decentralised finance.*

18,190. I understand these figures to include the revenue so decentralised, do they not? It is the total revenue in each case?—Yes, the total; and the statement gives the salient facts connected with our expenditure during all these years. Both these statements have been prepared from the annual financial statements.

18,191. The table which you put in is a very interesting one; but of course it is impossible for you to give us these long columns of figures, and I would ask you to look down and give us two or three figures out of it, in support of what you are saying?—Yes. Well, what I meant was that, if these statements are put in as appendices to my evidence (they have been prepared with great care), they will illustrate this point: I say that the periodical averages, without exchange, have been as follows:—1852–3 to 1856–7, 30·3 crores; that was the first level. Then during the four years, which were very disturbed, after the Mutiny, there was an increase of 16 crores, 46·1; that was the average. That level was practically maintained during the next 10 years. From 1862–3 to 1870–1 it was 46·9; from 1871–2 to 1881–2—that was a disturbed period of war and famine—it went up to 53·9. From 1882–3 to 1894–5, which has been a period of expeditions and increase of military expenditure, and so on, the increase, without exchange, has gone up, on an average, from 53·9 to 58·8. With exchange, the figures are much worse; they are 30·8; 46·1; 46·9; 55·8; 65·4.

18,192. Now you follow that with six statements?—Two make up each division; there are three divisions, three periods into which I have divided the whole from 1860 to the present. In 1860 our finances were placed on their new basis by Mr. Wilson.

18,193. Is this the table, that you call "post-Mutiny period"?—Post-Mutiny period, Division 1, from 1862 to 1870–1. I would ask the indulgence of the Commission only for two or three minutes while I point out the most salient points. I would not weary them by reading all these; but I would point out——

18,194. Would you point out the object you are aiming at; then, if the tables are put in, we can see in detail how you work it out?—I have tried to point out, first, what have been the elements of uncertainty during each period, and how those elements have gone on increasing until at last they have got to quite a large number now. Then I give a list of the fiscal reserves during each period, and I proceed to show that these are now nearly exhausted. The Government has been drawing not merely upon the old reserves, but upon several other reserves.

18,195. Perhaps you would give us what you call the elements of uncertainty?—During the centralised period, the elements of uncertainty were War Office demands, about which the Government of India itself has said it did not know what might be thrust upon it; then demands for public works under the pressure of the commercial classes; then, the opium revenue having become uncertain, the fluctuations in the opium revenue; and the railway finance. These were the elements of uncertainty during the first period. The fiscal reserves were balances, taxation, and curtailment of optional expenditure, that is, public works. Now, if your Lordship will turn to the second division, there the elements of uncertainty and the fiscal reserves are mentioned of that period; War Office demands; famine and protective action; public works; commercial demands; opium; and railway finance; they remained as they were. Exchange is added now as another element of uncertainty.

18,196. Which table are you on now?—It is the post-Mutiny period, 1871–2 to 1881–2, Division 2. Two more elements of uncertainty have been added, in the shape of exchange and exigencies of Imperial policy in Central Asia. The taking of Khiva brought on a change of policy. The fiscal reserves were balances, taxation, curtailment of public works, optional expenditure, and famine grant. That came under the fiscal reserves. Then during the third period, the elements of uncertainty during the period—five of those were the old ones; then exchange, and Imperial policy in Asia, conquests and frontier

* *See* Appendices No. 77 and No. 78.

protectorates; these are the expeditions and other things. They are an additional element of uncertainty. The fiscal reserves were balances, taxation, curtailment of public works, optional expenditure, famine grant, contributions from Provincial Governments, periodical revision of provincial contracts, transfer of public works from revenue to capital, as has been done in the case of strategic railways, and so on.

18,197. Then these six tables are really an analysis of the different causes which have affected Indian finance during the time?—Yes; they are an analysis of the financial statements and the appropriation reports of the Government of India for the last 30 years and more; they are intended only to give a clear idea of how our finance is getting more and more embarrassed, showing how the clouds are gathering thicker and thicker.

18,198–9. Now, is there any conclusion, which you would like to put before us, that you have yourself drawn from these tables?—Yes, the conclusion is just this, that the position is becoming worse and worse, and might become hopeless, if not looked after in time. Here are the noteworthy features that I have given. On the left-hand side of each sheet I give the facts, and on the right-hand side I give the remarks; and in these remarks my opinions are expressed, and if your Lordship will allow me I will read those remarks—they are nearly the same as I have already explained: (1) Large administrative improvements were required after the Mutiny ; (2) Provincial administrations made increasing demands for varied local improvements, not being themselves responsible for funds; (3) Public opinion in England urged measures for material progress (deemed neglected by the East India Company); (4) The commercial interests of England demanded improvements of communications and other public works; (5) The recurrence of famines emphasized the obligation of the State as to protective works; (*a*) Private enterprise encouraged in all ways; (*b*) State agency since 1867 employed to co-operate (100 crores in all spent on public works); (6) War Office measures in respect of the British Army imposed a net charge of 450,000*l.* due to amalgamation and unequal partnership; total expenditure rose from 42·9—49·3; expanding demands for expenditure, (1) General administrative improvement; (2) Public works, productive, ordinary, protective; (3) Provincial needs; (4) War Office demands, (2) and (4) beyond the control of Government of India; necessity for limitation of expanding demands; in respect of (3) provincial decentralization carried out, 1870–71. I have brought in here the salient points of the financial system and its working during the first period. During the second period (1) it was an abnormal period of war and famine; (2) English public opinion continued to urge measures of material progress, yet public works expenditure had to be reduced, which fell from 100 crores to 70 crores during the period; (3) The famines and the vast expenditure required led to the formation of a famine insurance fund, yet the fund was diverted to war; (4) Fresh War Office charges amounting to 48 lakhs due to amalgamation came upon the Indian Budget for increase of military efficiency; (5) What disturbed Indian finance most was a change of policy on North-Western frontier. Imperial policy in Central Asia entered upon a new phase with Russia's conquest of Khiva. Afghanistan was given up as a neutral zone, and the Amir was promised material and moral aid against unprovoked foreign aggression, a change of policy which converted Afghanistan virtually into a British frontier protectorate. The line of the Indus was given up as the border line of British India. Indian finance was loaded with cost of schemes of Imperial territorial expansion in Central Asia; and a preponderance came to be given to military considerations in our financial arrangements, and Indian interests were subordinated to the exigencies of Imperial policy; (6) Exchange difficulty increased. Total expenditure increased by 9·7 crores. Expanding demands, (1) General administrative improvement; (2) Public works, pressure of English commercial interests; (3) War Office demands (amalgamation); (4) Treasury Office demands, Central Asian Imperial policy; (5) Exchange, (2), (3), (4), and (5) all beyond the control of Government of India. In respect of (1) further decentralization. In the third period (1) the period was a disturbed period of war, panic, and military precautionary measures and territorial annexations, costing us about 70 crores during it; (2) English public opinion pressing for material progress, the commercial interests demanding railway extensions, the local services clamouring for increased pay and pensions, and exchange compensation, the strain on Indian finance was severe; (3) Developments of Imperial policy in Asia involving us in large trans-frontier and other liabilities; Upper Burma and other frontier provinces thrust on our hands for administrative development, which means vast future outlay. India now in touch with the great Powers of Asia is necessarily pledged to vast military expenditure. Indian defences weakened. Indian finance at the mercy of military considerations. Indian armies increased; (4) Exchange difficulty enormously increased concurrently with a fall in opium. Grant of exchange compensation allowance. Total expenditure increased by 14·44 crores as against 9·7 and 6·4 of the previous periods. Expanding demands, (1) Public works; (2) War Office demands; (3) Demands of Central Asian policy; (4) Exchange, all beyond the control of the Government of India. Taxation having reached its utmost limits, the enormous growth of expenditure during the period leaves us no fiscal reserve; yet elements of uncertainty and instability of Indian finance have largely grown, and the Government of India is compelled, in the interests of financial solvency, to be able to meet fluctuating and expanding uncontrollable demands to keep tight its hold on every fiscal resource, limiting the means of the provincial administrations on the one side and reserving its freedom of action in regard to famine grants, productive public works expenditure, and provincial contributions.

18,200–1. We have already dealt with the question of Imperial and provincial net expenditure; perhaps, therefore, we may pass on now to military expenditure?—Yes. Military expenditure. No student or critic of Indian finance will fail to be struck by the position which military charges occupy in the administration of Indian expenditure. It is indeed difficult to enter into a thorough examination of this branch of our expenditure without raising a discussion about certain matters of policy which have been held to be outside the terms of this Commission's reference. My friends, Mr. Morgan Browne and Mr. Wacha, have, however, already placed the views of the Indian people on some aspects of this subject before the Commission, and I have no wish to go over the same ground again. I will therefore content myself with a statement of certain additional facts connected with our military expenditure, leaving the Commission to draw its own conclusions from them.

The strength of the Army in 1894–5 was:—

Standing army		219,778
British troops	73,119	
Miscellaneous British officers	921	
Native troops, including British officers	145,738	
Native Army Reserve		13,862
Volunteers		29,089
Total of armed strength on mobilisation		252,729

A strength even smaller than Japan commands and about equal to that of Greece.

Its cost in 1894–5 was:—

	Rx. millions.
Ordinary expenditure	20·0
Military works (ordinary)	1·1
Total (ordinary)	21·1
Special expenditure during the year	·6
Exchange	3·6
	25·4

Ratio of ordinary military expenditure to total expenditure, excluding railway receipts, for the year $\frac{25·4}{73·2}$ = nearly 35 per cent., thus comparing with what we have in other countries.

	Millions £	
United Kingdom	$\frac{17·8}{91·3}$	= 19 per cent.
France	$\frac{25·9}{138·0}$	= 19 „
Italy	$\frac{9·4}{72·4}$	= 13 „
Japan	$\frac{2·6}{16·2}$	= 16 „
Greece	$\frac{·58}{4·2}$	= 13 „
British India	$\frac{25·4}{73·2}$	= 35 „
or omitting exchange	$\frac{21}{73}$	= 30 „
Russia	$\frac{23·9}{115}$	= 21 „

Mr. G. K. Gokhale.

12 April 1897.

The growth of our military expenditure, excluding all exceptional items, exchange, and even military works, has been as below:—

Years.	Average Strength.			Average Expenditure in Millions Rx.
	British.	Native.	Total.	
1837–8 to 1856–7 (20 years).	43,826	222,915	266,741	10·85
1861–2 to 1873–4 (13 years).	62,458	123,881	186,340	15·68
1874–5 to 1880–81 (7 years).	61,884	122,556	184,441	16·17
1881–2 to 1884–5 (4 years).	57,975	119,939	177,714	16·55
1885–6 to 1894–5 (10 years).	70,704	140,682	211,387	18·25
1894–5 - -	74,040	145,738	219,778	20·1

Taking, according to Mr. Kellner's estimate, seven native soldiers as financially equal to three European soldiers, we may summarise the periodical expenditures on our Army thus:—

Period.	Total Strength European Standard.	Total Cost in Millions Rx.	Charge per Combatant in Rupees.
1837–8 to 1856–7 -	139,383	10·85	778
1561–2 to 1873–4 -	115,550	15·68	1,357
1874–5 to 1880–1 -	114,408	16·17	1,413
1881–2 to 1884–5 -	109,291	16·55	1,515
1885–6 to 1894–5 -	130,996	18·25	1,393
1894–5 - -	140,400	20·1	1,430

18,202. What Mr. Kellner is that? is that the gentleman who was for a long time in the Indian service?—Yes; he gave evidence before the Fawcett Committee.

18,203. (*Sir Donald Stewart.*) Where did you get those figures, because they do not sound to me to be quite accurate, or nearly accurate, about the strength?—From various sources—"Army Commission's Report," "Army List," "Statistical Abstract"—in fact, it has been a matter of very great labour.

18,204. (*Chairman.*) How did Sir George Kellner arrive at his equation between the seven native soldiers and the three Europeans?—From his knowledge of the Indian Army; that is all I can say. I am unable to go into that question, because I do not know the details; but his opinion has often been quoted.

18,205. (*Sir Donald Stewart.*) Do you depend upon this statement that the Army has been increased in the year 1894–5 by 4,000 men?—It is not like that; it is over the average during the 10 years—the average was 70,000 for 10 years. The increase that was contemplated in 1885 was not carried out at once.

18,206. In 1894–5 you say it was increased to 74,000?—But in 1893 also it was nearly 74,000.

18,207. Is it the average over a series of years?—It is the average for the 10 previous years.

18,208. (*Chairman.*) But what Sir Donald Stewart means is that you have given 1894–5 alone?—That is shown separately, because that is the present strength.

18,209. (*Sir Donald Stewart.*) Is that the present strength?—Yes.

18,210. Then I think it is wrong?—I am open to correction; but, if only a copy of the latest Statistical Abstract is given me, I will point out.

18,211. I think about 71,000 is what it ought to be?—I think for 1894–5 I have taken the figures from the Statistical Abstract. During the 20 years preceding the Mutiny, a most eventful period of war and conquest, we had under the Company's rule an armed force about as strong as now, but maintained at nearly half the cost, the charge per combatant being Rs. 775. The Mutiny came, and the transfer of India to the Crown followed; Army amalgamation was carried out, a Staff Corps formed, and other changes in Army organisation effected, and our military expenditure rose at a bound to 14·89 crores from 10·85, the average of the pre-Mutiny period. It has gone on ever since steadily increasing till we come to the present year, when it stands at full 20 crores, exclusive of exchange, the strength being about the same as before the Mutiny. Now, I make a few observations—(*a*) Looking to the composition of the Army we have 74,000 British troops to 145,738 native troops, or almost exactly in the proportion of 1 to 2. During the 20 years preceding the Mutiny, the proportion of British to Native troops was 1 to 5, and sometimes much lower. The outbreak of 1857 followed; a Royal Commission inquired into the matter in 1859, and in its report submitted the following recommendation to Her Majesty:—"As regards the third "question, the proportion which European should bear "to Native corps in cavalry, infantry, and artillery, "respectively, your Majesty's Commissioners are of "opinion that the amount of Native force should not, "under present circumstances, bear a greater proportion "to the European, in cavalry and infantry, than 2 to 1 "for Bengal, and 3 to 1 for Madras and Bombay respec-"tively." The proportions thus laid down were recommended in view of the circumstances of the disturbed period, and were not absolute, precluding all future modification as things should change. The present organisation, however, practically rests on that recommendation, the proportion being, as a whole, as 2 to 1, the differential proportion recommended for Bombay and Madras being ignored. Taking the recommendations of the Royal Commission and looking to the local distribution of the armies, we have—

——	Native Troops.	British Troops.	Excess of British Troops over the accepted Standard.
Bengal ($\frac{1}{2}$) - -	84,614	46,379	4,072
Madras ($\frac{1}{3}$) -	32,306	14,195	7,266
Bombay ($\frac{1}{3}$)	28,878	13,466	
			11,338

This is the amount of excess British force over the accepted standard which we have in the country, and I submit that there is nothing in the present condition of things to justify such a large departure from the recommendations of the Commission; things admittedly have changed for the better, and with our increasing appreciation of British rule, and growing attachment to Her Majesty's throne, we should have expected the proportions to be modified the other way. As it is, we have on our hands an excess force of more than 11,000 British troops, and, taking the cost per European combatant at Rs. 1,430 a year, this excess force burdens our military budget with a needless 1½ crores for more exactly Rx. 1,573,900). 1½ crores a year is rather too heavy a charge for a poor country to bear unnecessarily.

18,212. (*Chairman.*) You observe that the report of the Commission, from which you quote, is very nearly 40 years old?—Yes.

18,213. Many things happen in 40 years, do they not?—Yes; but the first proposals were made by that Commission; and the Government have always taken their stand on the recommendations of the Commission.

18,214. (*Sir James Peile.*) Do you know that Lord Ripon said that his Government had most carefully and thoroughly considered the question, and had come to the conclusion that one European soldier to two natives is the right proportion?—That is true: but this was a Royal Commission that investigated the subject.

18,215. Lord Ripon's investigation was a great many years after the Commission?—I know, but it was an investigation by the Government of India itself; this was by a Royal Commission.

18,216. You could not trust Lord Ripon to take care of the interests of India?—I should not like to say that; that is a very difficult question to answer in that way.

18,217. (*Chairman.*) Would you not lay any stress upon the inquiry made by the Government of India itself?—I attach more importance to a Royal Commission's inquiry.

18,218. (*Sir Donald Stewart.*) That was the result of the inquiry of a commission of Indian officials?—Yes, the Army Commission of 1879; in fact the Secretary of State and the Government of India have all along been assuming in their despatches that the proportion should be one to

two; but the original recommendation on which the whole thing was based is what I have given, and I only wanted to bring it out; that is all.

18,219. (*Chairman.*) Will you go on?—The strength of our existing army is further in excess of the military needs of the country, as laid down by the Army Commission of 1879 by the recent increase of 30,000 troops. That Commission even contemplated, among other things, in framing their estimate of our requirements, "the contingency of operations beyond the frontier, not merely "against Russia, with Afghanistan, as our ally, but against "Russia assisted by Afghanistan," and as Mr. Ilbert and Sir A. Colvin in their dissent point out, no circumstances have arisen which necessitated these augmentations.

But again, the existing organization of our army is so faulty that it imposes a needlessly grievous burden on the Indian Exchequer. Our army is always practically on a war footing; we have no peace establishment proper; and the strength we could mobilize in an emergency is—including volunteers and reserves—not more than 252,719 men all told. And it is for such meagre armed strength that we have to spend under the present vicious system 25 crores and more a year. While most countries in Europe have adopted short service and the system of reserves, a system which gives them a maximum of combatant strength at a minimum of cost, India alone has to keep up her armies on a war footing even in time of peace and has to pay a heavy penalty, getting no commensurate return for the money she spends. In these days the armed strength of a nation is measured, as stated by Lord Wolseley, not by the number of men under arms in its standing army, but by the total number of trained soldiers it could put together for active service when needed, service with the colours being but a course of training for the recruits much more than active preparedness for war, and in an emergency the reserves being relied upon as the first line of national defence. While the United Kingdom spends about 18 millions on her army, and has a total armed strength of 588,785 men; France spends about 26 millions, and has an active army of 572,102 with reserves numbering 1,778,000, or a total of 2,350,000; Germany spends 27 millions, and maintains an active army of 562,014, and can mobilize in time of war with her splendid reserves a total force of 3,000,000; even Japan, an oriental country which has so successfully copied the European system, spends 2½ millions on her armies, keeping up a standing force of 37,719, and is able to mobilize a force of 269,748; British India, though she spends even more than the United Kingdom itself on her armies (25 crores), has but a standing force of 219,778, and with the reserves and volunteers, of 252,729 to show, a strength even smaller than that of Japan, and scarcely one-tenth of Germany.

England adopted short service in 1871–2, but did not extend the benefit to the Native Army. How wasteful our existing system is, may be more clearly seen when we find that we have had to add three crores to our military budget to increase our armed force by 30,000 troops.

Taking the two component parts of the Indian Army:—

(a.) *British Troops.*

(1.) Here we pay for short service, but the advantage of the system goes all to England. The peculiar merit of the system is that it gives a large reserve. Our English reserve is in England, and is not always available to us. Hence the British troops in India are all placed on a war footing.

In respect of the recent increase, the argument strongly urged was that we could not always depend on England for reinforcements, possibly least when we should need them most. Though the Indian revenues contribute so largely to the maintenance of the army reserve in England, we could not count upon getting the British troops augmented in India when we should have to take the field on a large scale. Meanwhile we have to bear the disadvantage of heavier transport charges, due to short service.

(2.) We have yet the peculiar disadvantage of short service, a paucity of seasoned soldiers in the standing force. Lord Wolseley has told us that men of under 2 or 2½ years' service are seldom sent on active service, and whenever mobilization takes place for field service in European countries, it is the reserves that are largely drawn upon. As we have no reserve in India, we pay for a force which is not all available for field duty.

(b.) *The Native Army.*

Our Native Army, though theoretically a long-service army, is practically in the main a short-service one. Under the regulations a man can claim his discharge after three years' service, and it is calculated that as many as 80,000 trained native soldiers return to their homes in 10 years, time. The Army Commission of 1879 proposed the formation of reserves in order to retain a portion of these 80,000 men bound to the obligations of service, and also in the hope that the reserves so formed in time of peace might "enable the Government to reduce the peace strength "of the Native Army," and expressed their view that such a restricted reserve system could cause no political danger to the country. The proposed reserves were calculated to absorb 58,200 men out of the 80,000 retiring from the army every 10 years.

The formation of such reserves to the Native Army was decided on in 1885–6, and Lord Dufferin's Government proposed, when Sir Donald Stewart was Commander-in-Chief, to begin with two kinds of reserves, regimental and territorial, of which the latter system was evidently the more suitable of the two, and could have succeeded better. But the Secretary of State vetoed the proposal as far as it related to the formation of territorial reserves, apprehensive of political and military dangers of such a step, and sanctioned only regimental reserves. Accordingly, we have now the feeble and straggling reserve that there is, numbering about 14,000.

Of course, as far as it goes, it is a step in the right direction, however halting, and a strong effort ought to be made to organise on a sound basis a large effective reserve to the Native Army, so as to permit of reduction in its strength, which, while increasing the total armed strength of the country would bring material relief to the finances of the country. The wasteful costliness of the existing system is obvious.

We next come to the *Officering* of the Native Army.

Before the Mutiny, there were two classes of Native regiments, "regular and irregular." In the regular regiments the nominal staff of British officers was 25 strong, of whom about 12 were actually present, the rest employed in civil and other departments. In the irregular regiments, there were only three British officers, the rest of the staff being entirely Native. When the armies were reconstructed after the Mutiny in 1861, the irregular system was adopted throughout the Native Army, first in Bengal and later in Madras and Bombay, with the change that the number of British officers per regiment was increased from three to seven. In 1874–5, the strength of English officers was increased by the addition of two probationers to each corps. In 1882–3, one more officer was added to the cadre; so that we have now eight British officers in each regiment, ousting the Native officers virtually from the entire field of higher regimental command. Before the Mutiny, and in the irregular regiments, the British officers commanded wings and squadrons, leaving the command of the troops and companies on the field to Native officers. Since the transfer and reconstruction of the armies, the field of employment for Native officers has steadily contracted, and they have not now even the command of troops and companies, and hold a lower status in the army. In their place a costly European agency has been put in, thereby imposing a great burden on the finances. My impression is that under Russia the native races in Central Asia have far more honourable military careers open to them, and the comparison must fill all friends of British rule in India with regret. The late General Chesney, who generally was not with us on Indian questions, has protested against this state of things in most eloquent terms, and I beg to be allowed to read a brief extract from his "Indian Polity":—

"In the cavalry the position of the Native officer has even gone back, for whereas formerly he could rise to the command of a squadron, the squadrons are now commanded by British officers, the most junior of whom takes precedence over the oldest Native officer. So far then as the Army is concerned, the Queen's Proclamation on assuming the direct government of India is a dead letter. This proclamation declares that 'Our subjects, of whatever 'race or creed, shall be freely and impartially admitted 'to office in Our service, the duties of which they may 'be qualified by their education, ability, and integrity, 'duly to discharge.' To a very large number of a most important class of Indian gentlemen, descended in many cases from ancestors who held high military office under former rulers, the only palatable, and, indeed, the only form of public service practical and possible for them is the military, and that is closed to them. While this is the case, it cannot be said that the promise held out in the proclamation is fully acted upon. It may be replied, indeed, that the class in question is excluded from service by the condition of fitness laid down, by reason, that is, of their defective education. And certainly, in regard to a service the routine business of which is conducted in the English language, this contention may be held to be good,

Mr. G. K. Gokhale.

12 April 1897.

if the proclamation is read in a literal sense, without regard to the spirit which animates it. Some very gallant and distinguished Native officers, among them hereditary chiefs who have brought their clansmen by the hundred to join our standards, men who closely resemble in many respects the chiefs of the Highland clans 150 years ago, have been unable to read or write in any language; yet men labouring under the same deficiency have carved out kingdoms for themselves. A man of this sort, a thorough gentleman in manner and feeling, if illiterate, with all the pride and bearing of birth and high family tradition, leading his own kinsmen like the Highland chief of old, will by his own chivalrous example show his men the way to victory, and that after all is what has to be aimed at in choosing officers" (pp. 268–269).

* * * * *

"It may be, indeed has been, said that the change of policy here advocated would be dangerous; that men of rank and influence raised to high military position might take advantage of the position; that the Mutiny might have had a very different ending if there had been men of rank and ability in the army to take advantage of the opportunity. Plain speaking is here the best. Nothing will be concealed by silence, for this defect in our military system is so prominent as to be the subject of constant comment. The studious exclusion of Indians from all but the humblest places in our army is so conspicuous, that only one inference can be placed upon it, that we are afraid to trust them, and the danger from one point of view may be freely admitted. The Indian people are not held to us by any feelings of attachment. When in almost every country of Europe men are found plotting against their fellow countrymen, with the experience of Ireland before us, it would be absurd to expect that loyalty in India should take a higher form than expediency, the recognition that our rule is the best available at present, and that it is too firmly established to be attacked without risk. But apart from any question of justice or good faith, it is surely safer as a matter of policy to have men of talent and ambition with you, their interests enlisted in our system as offering possibilities of high advancement, than that their only chance of escape from a life of obscurity and inaction should be felt to lie in subversion of our rule and the anarchy attendant on such a revolution. There can be little room for doubt on which side the choice should be taken, for much time has already been lost before entering on the course indicated by policy as well as good faith. Meanwhile contrasts, not to our advantage, are publicly made between the Russian system, its ready assimilation of the races brought under its influence, the utilisation of ability which might otherwise be dangerous, and our hard and fast representative system. And when the step forward is taken in the right direction, it will be satisfactory to consider that while the Army necessarily contains the elements of danger inherent in every body formed under such conditions, it has been rendered of late years a much safer as well as a more efficient weapon. No one class has been disproportionately increased in strength, while for the indiscriminate infusion of class and caste, the separate class and caste system has been largely substituted. For precaution, the Army must be held to its duty by liberal terms and strict discipline, a still more effectual precaution would be that indicated by considerations of justice and policy, that the military classes, equally with all other classes, should feel that to them a career suitable to their tastes and aspirations is open, bounded only by their capacity to take advantage of it, that service under the Queen may offer more than can be hoped for by any other way (pp. 270–271)."

18,220. On what occasion did he say that?—This is a work on Indian Polity, and that quotation is from chapter 16.

18,221. (*Sir Donald Stewart.*) Which edition is that?—1894.

Even in the lower positions the number of Native officers has sensibly fallen off during the past 20 years. In 1876–7 the number of these officers was 2,812, in 1895–6 it is 2,759—a decrease of 53 officers, though the strength of the Army has risen during the period from 120,672 to 141,257 (*i.e.*, 20,000). On the other hand the number of British officers shows an increase of 149 officers (from 1,431 to 1,580).

Lastly we come to a feature of the existing army organisation, the most wasteful of all.

The Indian Staff Corps is a corps of officers intended for the Native Army as well as for civil employ in the political, police, survey, and other departments, and in the frontier and non-regulation provinces.

When the amalgamation was carried out in 1861, there was a complete change in the system of officering the Native Army. The old supply from the British regiments was stopped, and a staff corps was established in each presidency for the purpose. All officers of the Army except those who declined were transferred to the new corps. The promotion in the new corps was entirely by length of service, not by succession to a vacancy, so that lieutenants became captains, and captains, majors, and so on, though the promotions were not needed for the work of the army. The system is still in force, which is as under:—

Ensigns on transfer to the corps to become lieutenants.
Lieutenants after 11 years' service to be captains.
After 20 years' service to be majors.
And after 26 years' service to be lieutenant-colonels.

Further privileges were in 1866 conceded to the staff corps. Previous to that year a certain number of lieutenant-colonels succeeded on vacancies occurring to colonel's allowances. These carried with them an extra pension of 664*l.* a year. In 1866 the Secretary of State allowed all officers then in the staff corps and all who might join, to succeed to colonel's allowances after 12 years' service in the grade of lieutenant-colonel, without reference to any fixed establishment of colonels with colonel's allowances. Thus every officer could in future rely on getting colonel's allowances if he lived and clung to the service till he had served 38 years. The general result of this extraordinary system of promotions and pensions has been that the upper ranks of the service are filled with officers for whom there is no work.

The colonel's allowances previous to 1866 were granted only to a certain number on ground of special merit, at the rate of one to 30 officers. Since then it has been indiscriminately allowed to all, and we have now 501 officers in receipt of colonels' allowances on a staff corps of 2,826 strong, *i.e.*, more than one in six officers.

The grant of such allowances is now placed under new conditions, but the heavy burden on the Exchequer due to the measures of the past, taken in the interest of the officers, grows heavier every year. The old system of promotion is still in force; regulated not in accordance with the needs of the services but in the interests of the officers, as if the army was for the officers and not the officers for the army.

The whole question regarding the constitution, terms of service, rates of pay and pension in regard to this costly and privileged corps requires to be carefully examined. As it is the whole system rests on an unsound basis, the corps is over numerous and drawing privileged rates of pay and pension, inflicting a heavy burden on the national exchequer.

18,222. (*Sir Donald Stewart.*) I presume that you are aware that this system, which you condemn and which probably most people condemn, is coming to an end?—It is coming to an end, but the burdens are still there.

18,223. (*Chairman.*) I think that brings us to the services?—Yes.

18,224. I think we will begin to-morrow with those?—Yes; the remaining portion will not take us long, I think.

The witness withdrew.

(Adjourned till to-morrow at 11 a.m.)

At the India Office, S.W.

FORTY-FOURTH DAY.

Tuesday, 13th April, 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir JAMES PEILE, K.C.S.I.
Mr. G. L. RYDER, C.B.
Mr. DADABHAI NAOROJI.

Mr. COLIN G. CAMPBELL, *Secretary*.

Mr. GOPAL KRISHNA GOKHALE recalled and further examined.

Mr. G. K. Gokhale.

13 April 1897.

18,225. (*Sir James Peile.*) I gather that you hold the doctrine held by Mr. Naoroji and Mr. Wacha of the increasing poverty of India?—I do.

18,226. Now your indictment of the Government depends entirely on the truth of that doctrine?—The truth of what?

18,227. Of that doctrine that India is falling into deeper poverty?—I have not gone into that question in detail, because that does not come within the terms of the reference. Only in one place have I incidentally referred to it.

18,228. Still, if you give it as a state of India which justifies an indictment of the Government, you ought to be prepared to support the doctrine by proof. In fact, you did so, because, I think, you were asked on what you rested that opinion, and you said the condition of the people in famine. Would you please repeat what you said about what happens to the people in famine?—I said that, at the first touch of famine the people suffered in large numbers, and that was a sign that the people were not in a position to bear burdens that were put upon them.

18,229. By "the people" do you mean the whole people or the agricultural people?—Well, in regard to famine, those who suffer from famine—the large bulk of the population. Petty traders and artizans also come under the same category, but agriculturalists mainly, of course.

18,230. Have you studied the course of prices of agricultural produce in India within the present century?—I have given some attention to that, but I cannot say that I have studied the question.

18,230*a*. You know, of course, that in the first 20 years of the century there was the wildest disorder prevalent in India. Large tracts were laid waste by fire and sword, villages burnt and people outraged and murdered?—Yes.

18,231. After that, order was introduced, and up to about 1850, the prices of agricultural produce fell; do you agree?—I have read such descriptions.

18,232. Of course, the reasons of that are very obvious. The cultivation extended very rapidly in conditions of peace; produce was very largely grown; there were no railways, so that it could not be carried about easily, and, of course, the value of it fell so that it scarcely fetched any price at all. After about 1850, during the administration of Lord Dalhousie, came the time of the introduction of railways. From between 1850 and 1860 onwards they were very rapidly constructed; the result of that has been that the values of agricultural produce have risen enormously, is it not so?—In some places they have risen; the tendency has been towards greater equalisation, I think.

18,233–5. No, not merely that. I think I can show you that it is not so. We have periodical revisions of the land revenue assessment, in which the data are the price of produce at the time of the previous settlement before 1850, and the prices at the revision. It is very frequently found that the prices of agricultural produce have risen 100 per cent., or even more, in the markets of the small country towns; and, if you take the settlements of that period, the old settlement before 1850 and the new settlement after, that is invariably the case. Of course, if the settlement to which you are looking back, took place after the railways were introduced, it is probable that there has not been, at any rate, a great rise in prices between that first settlement and the second. Well, the value of the produce exported from, or moved in, the country after the introduction of railways increased enormously. We have also data of the importation of precious metals. I took from the "Statist" a table drawn up by the Bank of Bengal, which gave for 33 years up to March 1892 the amount of bullion imported and kept by India. It was 230½ millions sterling in silver and 126 millions of gold; 356½ millions in the aggregate, or an annual average of 10¾ millions. Now I will show presently where part of that went to; you accept those facts, I think?—I accept the figures from you.

18,236. Are not these facts that I have mentioned signs of decreasing, rather than of increasing, poverty?—I do not think so.

18,237. You do not; can you tell us why?—It all depends on what classes all these things go to. In addition to what you have mentioned you must also be able to show that these increased imports of precious metals found their way into the pockets of the agriculturists—into the pockets of these poorer people.

(*Sir James Peile.*) I will try to show it presently in a question I will put to you.

18,238. (*Chairman.*) May I ask a question on that. The fact of these large amounts pouring into India shows that India as a whole was not decreasing in wealth?—I do not think that they are very large sums after all, when you remember what a large country India is. Besides, I should like to know how much of that went to keep up the currency of the country; how much was absorbed by Native States, and how much remained in British India. The whole question will have to be gone into carefully, and mere total figures will not assist us much.

18,239. That is not my question. My question is a very simple one. In regard to these figures I speak of India as a whole. Do you admit that India as a whole was increasing in wealth?—I should not admit that; these precious metals do not come in for nothing; a large quantity of the produce of the country goes out as a sort of exchange. I do not think that mere imports of precious metals can be accepted as an addition, economically speaking, to the wealth of the country.

18,240. But you must suppose that the produce that is sold, that passes out as surplus produce and is sold—it is quite a voluntary matter to sell—would be sold at a profit?—Well, as a matter of fact, our exports are greater than our imports, owing to these home charges.

Mr. G. K. Gokhale.

13 April 1897.

The fact that such large quantities of precious metals come into the country, shows that the imports in other shapes are fewer than they would otherwise be. I do not think that is any very conclusive evidence of the growing prosperity or poverty, either way; it is simply an economical fact.

18,241. But a great quantity of the precious metals coming into a country and stopping there, shows that there is at all events a power of hoarding or accumulating, if it does not go out?—I do not quite see that.

18,242. Perhaps you hesitate to accept proofs of prosperity?—I am quite open to correction, but I do not quite see clearly how the mere fact of the imports of gold and silver being so and so can mean that the country is increasing in prosperity. This is a fallacy of the mercantile system long regarded as exploded.

18,243. If I find at the end of the year in my banker's account a couple of hundred pounds more than at the beginning, am I a poorer man?—I do not say that; but if your income in one year was a couple of hundred pounds, and so many commodities, and in the next year you get fewer commodities and a hundred pounds more, that does not necessarily mean that your lordship is richer. It all depends on what the total amount comes to.

18,244. (*Sir James Peile.*) Well, now, we will go on to your argument, based on famine. Your argument is that the people of India cannot stand up for one year against famine, because they have no resources to fall back upon?—Not exactly that.

18,245. Will you state it then, please?—I will take the famine of 20 years back. You were one of the Commissioners who gave particular attention to that, so of course I speak to you on the matter with considerable diffidence, but the opinion I have formed after reading the Famine Commissioners' report is this. So far as our Bombay Presidency is concerned, there were two successive failures of rain, one in 1876 and then in 1877. During the first year the distress was not so very great, but during the second year the distress was most intense. On the other hand this year there has been a famine; the failure of rains, however, was not so great as it was 20 years ago, and yet the extent over which famine now prevails is much larger than the extent over which it prevailed then.

18,246. Surely you are wrong in one point, that the failure of the rain was over a smaller area this year than it was in 1876-7?—I am not talking of other parts of the country; I am talking of the Bombay Presidency at present. Taking the figures on the relief works for Sholapore, for instance, I find the number has now increased to over 100,000—that is about 125,000. Now this figure was never reached even in the worst days of 1877. The highest total was, I believe, about 98,000 then.

18,247. Supposing the conditions of work and the pay of the work in this famine are a good deal more liberal than they were in 1876-7?—I do not think it is more liberal than what it was in 1877, *i.e.*, in the second year of the famine—no doubt, in the first year it was very bad, but in the second year things had admittedly improved.

18,248. I have not got the exact figures about it, but I am told that is the case?—That is the official view, but our complaint is that the famine relief workers get very insufficient wages at present.

18,249. I think it would be a very difficult thing to establish a proposition of that kind, that the people are poorer now and call more largely for relief; that is a somewhat hasty conclusion, I think. Let us return to the general considerations of famine?—I have got some figures to prove my point.

18,250. You say that the people generally have no resources, and that they cannot tide over even one year?—Yes.

18,251. Now, is that condition of things peculiar to the English Government?—But after 50 or 60, or 100 years of settled government, surely things ought to have improved for the better.

18,252. I think they have; but one sees it very often said that the famines are entirely the fault of the British Government?—I never said so.

18,253. You have heard of the famine of 1770, before the British Government had anything to do with Bengal——?—But I never said that British government brought famines into the country. I do not say——

18,254. In which one-third of the population died without any measures being taken to assist them?—I do not know anything about that.

18,255. (*Mr. Naoroji.*) Was there not British possession of Bengal before 1770?—Yes; the Company governed under the nominal suzerainty of the Emperor.

18,256. (*Sir James Peile.*) We had not direct responsibility for the executive Government?—I think in 1770 you had; it was only two years before the regulating Act.

18,257. But, if you look into the form of the government, you will find that the native executive was still responsible?—If you will excuse me just a minute I will find it, because General Chesney gives it, and I have his book here. In 1770 you were the rulers practically. The nominal ruler was the Emperor; virtually all government was in your hands—the revenue and everything.

18,258. The question is whether the British then would be responsible for famine relief?—I cannot go into that question, because I have never asserted that the British were responsible for famines.

18,259. I do not wish to go into the question. The point is that India was subject to famines in those days as severe or more severe than they are now?—With this difference that the data about those famines are very insufficient, and this is admitted in the Famine Commissioners' report.

18,260. Now, taking the number of persons in relief at the present time, do you know what the total amount is—the highest figure?—Yesterday I read in the "Times of India," I believe, that it comes up to about 400,000 or more at present.

18,261. I think it is hardly so large; it got up to three millions?—That was because the reaping was going on in some parts, and some had found employment elsewhere. The last figure was 430,000 or so.

18,262. Four millions you mean?—Yes, four millions; I beg pardon.

18,263. I do not think it is so many. It got up a little above three millions, and then it fell?—I made a remark to Mr. Naoroji yesterday that the number had gone up by about 30 per cent. since my leaving India.

18,264. Now, we will take your figure of four millions?—Yes.

18,265. Do you know the population of the provinces in which these relief works are undertaken?—I cannot say offhand.

18,266. The Government of India has given the area in which the famine is very bad, and the area in which it is not quite so bad?—Yes.

18,267. I think the one was 40 millions of people, and the other 37 millions, I take it, in round numbers?—Yes.

18,268. Call it 80 millions?—Yes.

18,269. That is 4 millions in 80 millions?—I beg pardon, four millions absolutely destitute, but many, many more in fact who suffer quietly at home, too proud to go to the relief works.

18,270. You say they have no resources?—They have no resources; if they starve, that is no resource.

18,271. That is an assumption which I do not admit?—I speak from personal experience of the famine in Sholapore. I was there about a fortnight only recently before coming here; I found, as a matter of fact, that there was very great distress.

18,272. I have no doubt "distress" most assuredly; still the people manage to live through it?—Well, if you will excuse my saying so, the Famine Commissioners themselves have said that, when 10 per cent.—10 per cent. or 12 per cent. is the figure they give—of the people are on the relief works, then the distress must be described as extremely acute. Now the population of Sholapore district is about 800,000—if I am correct, 700,000 to 800,000. Well, one-tenth of that would be about 70,000. If, therefore, 70,000 were on famine relief, the distress would be extremely acute, and it would be a severe famine. The number of men on relief works at present is about 120,000, somewhere about that, and, therefore, according to that statement in the Famine Commissioners' report, the distress there is very much more acute now than the standard laid down.

18,273. I was not at all arguing whether the distress was acute or not?—You seemed to say that 4 millions out of 80 millions did not indicate much distress.

18,274. What I was arguing was, that if 4 millions out of 80 millions come and ask for relief, and say they are starving if they do not get support from the Government, that shows that a considerable majority of the population are not driven to that extremity, and are able to support themselves through famine?—I do not think so. Much depends on the social status of the sufferers. There are people of the higher classes who would die rather than go to relief works; in fact, the Famine Commissioners themselves admit so.

18,275. What proportion are the highest classes? Are they not a very small percentage?—Not the highest classes, but the upper section of the lower classes. Moreover, the women do not go to relief works above a certain class. They suffer at home; they cannot go out and work; and there are various other things to be borne in mind. It is really difficult for me to go fully into the question offhand.

18,276. You are making all sorts of statements which I do not dispute; but, take the general result that out of 80 millions four millions come and seek for relief, would you not infer from that that a very large proportion of the people have resources which enable them to tide over famine?—I do not think so.

18,277. You do not think so?—According to your own standard, 10 per cent. represents severe distress; out of 80 millions, what would 10 per cent. be? I do not quite see how the whole thing would work.

18,278. Well, 4 millions to 80 is how much? It would be 5 per cent.?—But it must be remembered that this is the first year of the famine; besides, the total 80 millions includes also areas where the distress is not acute—where the distress is only mild, and all that.

(*Sir James Peile.*) Let us proceed, because I merely wish to go into very general considerations, and not into particulars.

18,279. (*Chairman.*) May I ask here, have you any returns of the mortality caused by this famine?—It is for Government to give those returns; the Government have not yet published them.

18,280. (*Sir James Peile.*) They cannot yet, of course?—Sir William Wedderburn has been asking for them in the House of Commons for some time.

18,281. You can hardly get them yet?—I do not think it is so very difficult.

(*Chairman.*) Are there any returns showing what the mortality of the famine districts is, and whether it is very much in excess of the ordinary rates?

18,282 (*Sir James Peile.*) It varies very much. In some it is in excess, and in others it is not in excess?—I remember a statement drawn up by Mr. Goodridge who was recently Judicial Commissioner of the Central Provinces; and in it he gives the mortality for several districts in the Central Provinces, and the increase in several places is three or four times the normal rate.

18,283. You mean lately, this last year, in this famine?—In this famine.

18,284. During the early part of it?—Yes, during this famine.

18,285. Well, now, what class of persons suffer first?—In case of famine?

18,286. Yes?—I can speak from personal knowledge of my Presidency only. They are the small agriculturalists who hold direct under Government; they are the persons.

18,287. Who first feel it?—Of course, simultaneously with others; the day labourers——

18,288. Do not the weavers feel it first generally?—The weavers also; they are in the first ranks.

18,289. Do the farm labourers come next?—Well, they also go with them.

18,290. Before the agriculturalist?—By agriculturalist I mean those small agriculturalists who are also labourers, not the landlords in whose name——

18,291. You mean the ryots, the peasant occupiers?—Yes, for the most part. A great many of them work on the soil themselves in Bombay.

18,292. Farm labourers, then?—Yes.

18,293. Weavers, and then farm labourers. Well, if you take farm labourers and mill hands in England, supposing that a great calamity fell upon England, and the food supplies were suddenly stopped, do you think that farm labourers and weavers and mill hands, and so on, would have resources which would enable them to live over the period of high prices which would result?—That is a very hypothetical case, because such a calamity never seems to come to England.

18,294. (*Chairman.*) The actual case did happen in the cotton famine of 1860?—I think that was a very extraordinary occasion, and your people assisted them, I believe, very well here.

18,295. But I want to point out that that has happened?—Only once in a way; that is, not so often as we have in India.

18,296. The question was whether such a thing had happened?—And it was, besides, a very small class, merely the operatives in mills, I believe, in Lancashire.

18,297. We do not think that the operatives in Lancashire are a very small class?—I do not say so. But the agriculturalists in India are about 80 per cent. of the population; the operatives in mills here are not such a large class.

18,298. (*Sir James Peile.*) There is another question I want to ask; is it a fact that the people have shown that they have no resources? Are you aware what happened in the last famine, when silver ornaments of enormous value were sent down by people up country to the mint to be coined owing to pressure of famine in order to obtain the means of support?—But that itself shows the extreme acuteness of the distress. Every woman in India, for instance, feels that she must have a certain minimum of small silver ornaments; well, owing to the customs of the people, that is almost as necessary as the breath of life; you cannot construe that into the wealth of the people.

18,299. My question was whether in time of famine they do not use that accumulation of ornaments to sell or dispose of, and so obtain food?—As a last resource they do.

18,300. Is it not, then, a resource?—It is a resource, but it is a very cruel resource to use.

18,301. I find that the last total is 2,800,000 on relief works?—Is that so? I beg your pardon. But your figure, I think, does not include all the children who are receiving relief.

18,302. I will just wind up what I was saying. Then, to sum up, it seems to me that you must greatly modify this statement that the bulk of the people have no resources?—I do not see how.

18,303. In respect of having all those ornaments sent down to be coined?—That does not prove that the ornaments are increasing; nothing has been said about that.

18,304. My question was whether the people have any resources?—The question is a relative one, whether the resources are increasing or decreasing.

18,305. I have shown two points; an enormous portion of the agricultural population do not go on relief at all; and, secondly, they possess a considerable fund in the shape of ornaments, which they coin when the famine attacks them. I say, having those two points in view, must you not greatly modify the statement that the bulk of the people have no resources and fall down at once?—They have comparatively no resources; that is what I mean; I do not see any reason to qualify it.

18,306. Very well, that will do; and also I have shown that there are very important facts which point rather to a decrease than to an increase of poverty?—I should like to know them.

18,307. I gave them to you before?—They have not convinced me, at all events.

18,308. We traced the rise of agricultural prices?—But that means that everything has gone up, including the cost of agricultural produce; then, the agriculturalist has had to purchase certain other things for himself; and these too have gone up in price.

18,309. Let us take that for a moment; the agriculturalist grows his own seed?—Yes.

18,310. He also grows his own food?—Very little remains for himself.

18,311. There you are begging the question. What remains he sells; and he gets the increased prices?—That is only the theory of the subject.

Mr. G. K. Gokhale.

13 April 1897.

18,312. That is not the theory; that is the positive fact in every house in the country. I think it is useless to prolong this discussion?—It is not a fact.

18,313. (*Sir William Wedderburn.*) Is it not the case that the ryot is so much in the hands of the money-lender, that is to say, the trader, that he has to give him his produce at the price that the trader chooses to give him for it?—That is what I meant to explain just now, but I was asked not to go on.

18,314. And your general proof of the increasing poverty of the people is that, whereas in the late famine the people were able to stand up against the first failure and only suffered very materially in the second failure, in the present famine they have shown no power to stand up against the first failure?—That is what I mean.

(*Sir James Peile.*) I must ask for a little evidence of that.

18,315. (*Sir William Wedderburn.*) And that on the first failure on this occasion there are more people seeking relief than there were on the second failure in the first famine?—Yes.

18,316. That is your argument?—Speaking for the Sholapore district, of which I have experience.

18,317. And you deduce from that that the people are in a rather worse condition than they were before?—Yes.

18,318. And that the fact of their dying from hunger is evidence that they have no resources to fall back upon?—Yes.

18,319. (*Sir James Peile.*) But is there any proof whatever that they have come more largely on to works?—I gave you the figures for Sholapore.

18,320. And I gave you the official figures. Will you now read them?—I cannot go into the whole question, but I know about one district, the Sholapore district.

18,321. I do not think this is anything to the point. We want the total figures for all India, which you gave us as 4,000,000 on relief works?—Well, I am open to correction as to a matter of fact.

18,322. Will you give us what it is in the official communication which I have put before you?—It is 2,800,000.

18,323. Then the whole argument falls to the ground on the figures?—It does not. I never based it on 4,000,000 or 3,000,000. I based it on our experience in the district of Sholapore. I know for a fact that there the number on relief is about 120,000, and on the last occasion, even in the second year, it was less than 100,000.

18,324. And if the famine this year is a great deal worse than on that occasion, and if the terms and conditions of the relief works are more liberal than they were on the last occasion, then you naturally get more men on the works?—I myself heard the Collector of Sholapore say that this year it was only an "eight anna" famine at Sholapore. It was not so intense as the famine of 20 years back, although the extent was greater, and there were many more people who suffered than before.

18,325. What is the comparative price of food?—I cannot give an offhand answer to that question.

18,326. That would be the leading point of the whole question, would it not?—If I had expected to be cross-examined on this point I would certainly have come prepared. But I thought this was outside the terms of the reference to the Commission.

18,327. You are making statements. Of course one must examine into them?—I beg your pardon. You make statements, and I only reply to them.

18,328. You make statements in regard to Sholapore, and I see Sir William Wedderburn has tried to give point to them by putting to you that the people are in a worse condition?—I beg pardon. I did not volunteer these statements. You said the famine was not more intense, although the extent of area affected was greater. I say it is a milder famine, but it is causing much more suffering.

18,329. I said the extent of area covered by the famine was greater than the last, and it is an undoubted fact?—Well, I see no use in pursuing this matter further.

18,330. (*Chairman.*) I will now pass on to where we left off yesterday, the services?—My Lord, I will say just one thing about the figure of 4,000,000. I gave that as only my recollection after reading a weekly paper yesterday. It may be wrong; there might be a misprint; but I did not take my stand upon this particular figure, and now that this authoritative statement is put into my hands I am ready to modify my own. Your Lordship will see that I based no argument on that 4,000,000.

18,331. I think you were going to offer some observations on the services?—Yes. In every department of Indian expenditure the question of agency is one of paramount importance. According to a Parliamentary return of May, 1892, we have in India in the higher branches of the civil and military departments, a total of 2,388 officers, drawing Rs. 10,000 a year and upwards, of whom only 60 are natives of India, and even these, with the exception of such as are judges, stop at a comparatively low level. And they are thus divided:—

	Natives.	Eurasians.	Europeans.	In Thousands of Rupees. Total Salaries of Natives.	Total Salaries of Eurasians.	Total Salaries of Europeans.
Civil Department	55	10	1,211	947	151	25,274
Military	1	1	854	12	11	13,268
Public Works	3	4	239	33	45	3,415
Incorporated Local Funds.	1	—	9	10	—	113
Total	60	15	2,313	1,002	207	42,070

In addition to these the railway companies employ 105 officers, drawing Rs. 10,000 a year and more. They are all Europeans, and their total salaries come to 16 lakhs 28 thousand rupees. If we come down to officers drawing between Rs. 5,000 and Rs. 10,000 a year, we find that we have 421 natives in the civil department, as against 1,207 Europeans and 96 Eurasians. In the military department there are 25 natives as against 1,699 Europeans and 22 Eurasians. In the Public Works Department there are 85 natives as against 549 Europeans and 39 Eurasians. And in the Incorporated Local Funds there are four natives as against 22 Europeans and three Eurasians. The total salaries of officers of this class are thus divided:—Civil Department, Natives, Rs. 2,905,000; Eurasians, 650,000; and Europeans, 8,830,000. In the Military Department, Natives, 164,000; Eurasians, 139,000; and Europeans, 13,698,000. In the Public Works Department, Natives, 537,000; Eurasians, 278,000, and Europeans, 3,962,000. And in the Incorporated Local Funds, Natives, 25,000; Eurasians, 17,000, and Europeans, 146,000. In addition to these there are, under the railway companies, 258 officers of this class, of whom only two are natives, eight being Eurasians and 248 Europeans. Their salaries are thus divided:—Natives, 12,000; Eurasians, 50,000; and Europeans, 17,10,000. In England 125,360*l.* is paid as salaries by the Indian Government, and 54,522*l.* by railway companies, all to Europeans. The financial loss entailed by this practical monopoly by Europeans of the higher branches of the services in India is not represented by salaries only. There are besides heavy pension and furlough charges, more than 3½ million sterling being paid to Europeans in England for the purpose in 1890. The excessive costliness of the foreign agency is not, however, its only evil. There is a moral evil which, if anything, is even greater. A kind of dwarfing or stunting of the Indian race is going on under the present system. We must live all the days of our life in an atmosphere of inferiority, and the tallest of us must bend in order that the exigencies of the existing system may be satisfied. The upward impulse, if I may use such an expression, which every school boy at Eton or Harrow may feel, that he may one day be a Gladstone, a Nelson, or a Wellington, and which may draw forth the best efforts of which he is capable, that is denied to us. The full height to which our manhood is capable of rising can never be reached by us under the present system. The moral elevation which every self-governing people feel cannot be felt by us. Our administrative and military talents must gradually disappear owing to sheer disuse, till at last our lot is stereotyped, as hewers of wood and drawers of water in our own country. The Indian Civil Service is nearly 1,100 strong. Under the rules of 1879, since abolished, we were entitled to one-sixth of the whole recruitment, and in course of time we should have had about 180 natives in the Indian Civil Service. The Public Service Commission, appointed by Lord Dufferin,

proposed the abolition of those rules, and recommended that 108 posts, usually held by covenanted civil servants, should be set aside for Indians. The Government of India and the Secretary of State thought this recommendation too liberal, and ultimately decided to throw open only 93 such posts to which the natives of India may be appointed, after certain existing claims were satisfied. That these higher posts are guarded with extreme jealousy as practically a close preserve, may be clearly seen from the following illustration. Mr. Jacob gives, in Appendix 16 of section II. of this Commission's Report, the total number of District and Sessions Judges in India as 126. Out of these only five are shown as natives. Now the capacity of natives for the efficient discharge of judicial duties has been over and over recognised, and the Public Service Commission expressly recommended that one-third of all District and Sessions Judgeships should be given to natives, which meant 42 out of 126. Instead of these 42, however, we have at the present day only five native District and Session Judges. So, again, in the Police, out of 230 district superintendents only three are natives. Only five natives qualified to do the work of District and Sessions Judges, and only three for the work of Police Superintendents in all India, after close on a century of British rule! The same is the case with the Forest, Acounts, Opium, Mint, Scientific, and other departments. In the Public Works Department we have a total strength of 800 engineers, of whom only 96 are natives. The Indian civil engineering colleges have been working for years, and yet not more than 96 of their trained graduates are to be found in the higher branches of the engineering service. In this connexion I may mention that the Finance Committee of 1886 recommended that the connection of the Indian Government with the Cooper's Hill College be terminated as soon as possible, and that there be a larger recruitment of students of Indian colleges. This recommendation, however, was not accepted by the Government of India. I may also be permitted to make one or two general observations here on this Public Works Department. This department has been for a long time overmanned, and Lord Dufferin's Finance Committee thought it necessary to pass some severe criticism on the point. The sanctioned strength is 760. The actual strength in 1884–85 was 898, in 1893 it was 857, and now it is about 800, which is still 40 in excess of the sanctioned strength.

18,332. (*Sir James Peile.*) In the Civil Department? You mean the Higher Department?—Above Rs. 10,000 a year.

18,333. (*Chairman.*) May I ask, was 760 the number of which Lord Dufferin's Committee approved?—Yes. It was sanctioned by the Secretary of State. Ever since the expansion of the Department in 1860, and notably from 1868 to 1875, we have had the superior staff arranged less with reference to the work to be done than to the condition of things as regards the position of officers. I may mention here briefly that these points have been expressly admitted, by Sir Theodore Hope, who was in charge of the Public Works Department for a considerable time. There has frequently been hasty and irregular recruitment during the periods of expansion, followed by blocks in promotion, requiring in their turn corrective efforts in the shape of special allowances or better pay and pensions, not founded on a consideration of the executive needs of the Department. And more than once officers have been specially induced to retire from the service on very favourable conditions as to pensions, to reduce the redundancy of officers.

18,334. That is a very intelligible criticism on the administration, but, may I ask, is not that common to all administrations? I do not know any country to which that kind of charge does not apply, namely, that in one shape or another, under pressure or owing to error on the part of the Government, charges, which part of the community think excessive, are incurred. That is not peculiar to India, is it?—I do not know much about other administrations.

18,335. (*Sir William Wedderburn.*) Might not that difficulty be met by the temporary employment of natives of India instead of taking on permanent European officials, who have claims for permanent service and pensions?—Yes, and I would also add that these special concessions are general, and invariably made in the interests of the European services only. I do not know a single instance where native services have ever clamoured for increased pay or pensions, or ever got any concessions. The Finance Committee of 1886 recommended that Royal Engineers in the Indian Army should be put on the Civil Staff, remarking that "it is necessary to "maintain a considerable establishment of Royal "Engineers in India for military requirements. . . . "Such of them as are not needed for purely military "duty in time of peace can be best employed in the "Public Works Department, and should, in our opinion, "have the first claim for employment in that Depart-"ment in preference to all others," and the Committee suggested that the Military Works Branch of the Department should be abolished as a separate branch for military works, and amalgamated with the general Department. The suggestion as to the abolition of the Military Works Branch has not been carried out, and only 70 Royal Engineers from a total of 273 are at present on the civil staff, the greater number of the remaining 200, or so, doing little or no work. It may be added that these suggestions of the Finance Committee had the full approval of the then Commander-in-Chief.

18,336. (*Chairman.*) Do you consider it advisable to do away with the Civil Engineering Staff altogether?—I only mention what the Finance Committee themselves recommended.

18,337. Do you advocate total abolition?—Well, the recruitment from Cooper's Hill College was to be stopped; they said that for the most part the recruitment should be from the Indian colleges.

18,338. You said "for the most part." Do you think the military engineers were to form the total engineering staff of the Government?—I have not quite caught the question.

18,339. Do you consider that the Finance Committee recommended that the civil staff should be entirely done away with, and that the whole of this engineering staff should be supplied by the military?—Oh, no, not at all. They said that there should be European civil engineers; but that no special places should be given to a particular college, and that every man should be recruited in the general market; also a much greater recruitment might be made in India.

18,340. Well, do they consider the point, how far you could attempt to weaken the military staff?—They themselves said they were not exactly in a position to say how much the Royal Engineers could be reduced; but they said the Royal Engineers were not doing much work, and that such a large number as 127, which was the strength then, was not required for the repairs of barracks and such small things as they had to do.

18,341–2. You say 70 Royal Engineers are employed on the civil staff at present. I want to know whether the strength of 70 Royal Engineers at all corresponds to the numbers which were in the minds of the Finance Committee, when they recommended that military engineers should be employed on the civil staff?—I do not think so. I think this is the tenor of their recommendation. They thought that by far the larger portion of the Royal Engineers should be employed on civil duty. Moreover, they proposed that the Military Works establishment was to be amalgamated with the civil. In that case, the Royal Engineers would be amalgamated with the civil staff, and they would do military work where that was necessary, and they would do other work, civil work, when they had no military work to do.

18,343. But I do not understand from this that the Committee inquired into, or formed an opinion as to, how many men were necessary for the military works? It seems to me that the first point to be ascertained, before military men are drafted away to do civil work, is to what extent you could afford to do it; and the Committee do not appear to me, from your statement, to have taken that into consideration?—They said the information at their disposal was not sufficient to justify a recommendation on that point. But then under this scheme there would have been only one General Public Works Department, and the Royal Engineers and the Civil Engineers would have all belonged to that one Department.

18,344. But I am keeping to the military engineers; I see that out of the force which you mentioned as 127 ——?—70 are on the civil staff at present.

18,345. Did you not mention 127 Royal Engineers?—That was the strength at that time, yes.

18,346. Well, at present, 70 are employed on the civil staff. It does not seem clear to me at present that the real meaning of the Committee has not been given effect

Mr. G. K. Gokhale.

13 April 1897.

to, if there are 70 so employed out of 127?—Out of 273 at present; the present number is 273.

18,347. That is the total force?—The total number of Royal Engineers at present is 273.

18,348. Is 273. Well, what I want to ascertain is, whether the Finance Committee, who seem to have been rather vague upon this point, would have considered 70 out of 273 as practically satisfying their objects?—I am not qualified to express an opinion on that; but the impression on my mind, after reading what they have written, is that they would not have been satisfied. They expected a much larger proportion to be employed on civil work.

18,349. But at the same time, if they did expect it, it was a shot in the brown, because they had not taken means to ascertain how many of these Royal Engineers would be required for military purposes?—It should be remembered that their view was supported by Lord Roberts at that time—by the Commander-in-Chief.

18,350. And did he name any numbers?—No, because he also proposed an amalgamation, so it was not thought necessary to mention a special number.

18,351. Well, we will now pass on to the exchange compensation allowance, upon which, I think, you wish to offer some observations?—This allowance was granted to all non-domiciled European and Eurasian employés about the middle of 1893, and the figures for the last three years have been as follows:—

Year.	Amount in Rx.
1893-94 - - -	618,468
1894-95 - - -	1,239,275
1895-96 - - -	1,327,632

I have taken these figures from the Financial Statements. The allowance consists in converting half the salary of each officer into sterling at the rate of 1*s.* 6*d.* to the rupee, subject to a maximum of 1,000*l.*, and then converting it back again into rupees at the current rate of exchange. Practically, it has amounted to a general increase of salaries. Now, in the first place, it is admitted that these employés of Government had no legal claim to the compensation. The pay of the European soldier in India is fixed in sterling, and the Government have now to make to him a much larger rupee payment than before. Nobody, however, has ever suggested that this rupee payment should be reduced. If anyone had made the suggestion, he would have been told that the soldier was legally entitled to it. The guaranteed companies are now getting 5 per cent. on their capital, though they do not earn so much, and though Government can to-day borrow at the rate of $2\frac{1}{2}$ per cent. If anyone were to say that 5 per cent. was now too high a rate to pay, and that the companies should be asked to be satisfied with less, he would be told "a contract is a contract." My point in giving these illustrations is this: if existing contracts are not to be disturbed *in favour* of the Indian Exchequer, why should they be disturbed against it? Secondly, if the European employés of Government suffered from the fall in exchange, Government itself, as representing the taxpayers, suffered much more from the same cause. When such a general misfortune has overtaken all classes of taxpayers, to single out a particular class for special relief by imposing additional burdens on the remaining classes, and these not well able to bear them, was entirely unjust. Thirdly, though it is quite true that the fall in exchange has considerably lowered the gold value of the rupee salaries, the salaries themselves were so excessively high, considering especially the great change that has taken place in the facilities and means of communication between England and India, that even with the fall in exchange they were very high. I think it will be admitted that non-official Anglo-Indian testimony on this point is very valuable. The Bombay Chamber of Commerce is recognised to be one of the foremost and most important representative bodies of the English mercantile community in India. This Chamber, in writing to the Finance Committee on the subject of reduction of expenditure in 1886, thus wrote on the subject of salaries paid to Englishmen in India:—"The question of the salaries "paid by Government to its servants is one on which "the Chamber holds very decided views. The "just apportionment of remuneration to the exact quality and quantity of work done may, from the "standpoint of individual cases, call for very nice "discrimination and intimate knowledge of the "circumstances surrounding each appointment; "but the Chamber, having many amongst its "members in a position to form a true estimate "of the standard of pay necessary, at the present "day of widespread education and keen and "increasing competition among the members of "the middle classes for responsible employment, "to ensure the attainments required from civil "servants, covenanted and uncovenanted, does not "hesitate to say that the entire scale of remuneration, "but more especially of the senior classes, is pitched "at too high a level. At the time existing rates "were settled, not only did the requisite educational "acquirements command a higher premium than they "do now, but there were other considerations calling "for monetary compensation. In former days an "Indian career practically entailed expatriation, "officials frequently lived very solitary lives, were "exposed to exceptional temptations, and exercised "great responsibility. In latter years these conditions "have been greatly mitigated, and in some cases "thoroughly reversed. Communication with England "is constant and rapid, life in India is healthier and "attended with more comfort and less expense, whilst "control is so centralized that responsibility is, in a "great measure, taken out of the hands of officials "except of the highest ranks. Under these circumstances, a revision of all salaries, but particularly "those above, say, Rs. 1,000 per month, is manifestly "justifiable and called for. In all recent discussions "on this subject the decline in sterling exchange "has been urged as a strong argument for non-"reduction; but in the view of this Chamber that is a "matter which Government should not take into "account. What it has to look to is purely the "amount it must pay under all existing conditions "and circumstances, in order to secure the necessary "qualified labour in this country, leaving individuals "themselves to provide for the wants of their families "in Europe, and their own requirements for leave. "The Chamber, in fact, would go even further than "this, and advocate that, under the new rules for "future contracts, all civil pensions and retiring "allowances should be paid in the currency of the "country. India is no longer a *terra incognita* to "the educated classes of England, and even under the "comparatively less tempting inducements indicated "above, the Chamber feels convinced that there would "be no lack of suitable men ready and anxious to "recruit the ranks of the service. This naturally "leads to the consideration of the economy practicable "by a larger employment of natives. Much might, "doubtless, be saved in this way, particularly in "connexion with the Judicial Department, where the "opening for efficient native agency seems widest; "but the Chamber is not prepared to formulate, nor "possibly your Committee to discuss, a settled scheme "for the entrance of natives into the covenanted and "uncovenanted services."

18,352. May I ask what you mean by all "classes"?—Well, the whole country, because we had to pay increased taxation, or rather we did not get the relief we might otherwise have got.

18,353. "General misfortune had overtaken all classes" would rather seem to me to mean that every class in India had suffered by the fall in exchange?—The taxpayers; I would modify it in that way.

18,354. And when you say that all classes have suffered, you mean that, in order to provide this exchange compensation allowance, money was appropriated to it which might have been applied to other better objects?—That is what I mean.

18,355. (*Sir William Wedderburn.*) All classes of taxpayers, I suppose?—I should put it like that.

18,356. (*Chairman.*) When you quote the Chamber of Commerce as an advocate that all civil pensions and retiring allowances should be paid in the currency of the country, have you turned your attention to what is done in colonies?—No, I only place before the Commission the Chamber's view.

18,357. But I presume you are supporting that view?—It commends itself to me; yes, I support it.

18,358. Do you know at all what is the rule in Ceylon?—No.

18,359. Perhaps I might mention it to you; there, I believe I am right in saying, the salaries are fixed in rupees?—I am glad to hear it.

18,360. I want to see what the Chamber of Commerce are asking in this respect?—Well, they ask for a reduction of the salaries of the civil servants.

18,361. Yes, but they say here that "all civil pen- "sions and retiring allowances should be paid in the "currency of the country"?—Yes, they go further, and say that the pensions of civil servants, which are fixed at 1,000*l.* sterling, should also be fixed and paid in the currency of the country.

18,362. That is what they mean, that this rule should be confined to the pensions paid in this country?—Yes, all pensions that are drawn in sterling should be fixed and paid in rupees; that is what they mean. I will give you an illustration: Take the uncovenanted civil servants; their pensions were fixed at Rx. 500 a year. In several cases they were 600, but 500 was the general rule. When the rupee began to go down, they agitated for a special concession. Sir Henry King espoused their cause, and in 1890 they got a special rate fixed at which rupees should be turned into sterling, namely 1*s.* 9*d.* Here were rupee pensions which were converted into sterling at a fixed rate.

18,363. That is to say, those pensions were practically fixed in sterling?—They were fixed in rupees originally but they were converted into sterling in 1890.

18,364. But from that time they were practically in sterling?—They were practically in sterling, yes.

The letter of the Bombay Chamber continues:—"All I "am instructed to lay stress upon in that direction is "that, when Government decide on the competence of "Natives to hold certain posts, due allowance should "be made in fixing their pay for the proportionate cost "of living and expenditure between them and Euro- "peans of a like grade."

Fourthly, assuming that some relief was needed, it was most unfair to give the allowance to all. I mean men who went out to India after the rupee had fallen below 1s. 4*d.*, *i.e.*, who accepted the rupee salaries with their eyes open, as also those who had no remittances to make to England—these, at any rate, ought not to have been granted the allowance. This indiscriminate nature of the grant constitutes, in my opinion, its worst and most reprehensible feature. No wonder after this that the Indians should feel that India exists for the European services and not the services for India. While the miserable pittance spent by Government on the education of the people has stood absolutely stationary for the last five years on the ground that Government has no more money to spare for it, here is a sum larger than the whole educational expenditure of Government given away to its European officials by one stroke of the pen.

The salaries of some of the officers are fixed in rupees by statute. The grant to these men seems to be illegal as long as the statute is not amended. The question, I understand, has been raised, but it has not yet been disposed of by the Secretary of State. Meanwhile the allowance continues to be paid to these officers pending such disposal.

18,365. The next branch to which I would call your attention is that of Education?—The meagreness of the Government assistance to public education in India is one of the gravest blots on the administration of Indian expenditure. No words can be too strong in condemning this neglect of what was solemnly accepted by the Court of Directors in 1854 as a sacred duty. During the last four or five years the Government grant to education has been absolutely stationary. In 1891–2 it was Rx. 889,173.

18,366. (*Sir James Peile.*) Is that net or gross?—Gross; the receipts have not been deducted, but, if they were deducted, it would be still worse. In 1894–5 it was Rx. 910,972, showing an increase of only Rx. 21,800 in four years. But even this increase was only an addition to the salaries of European officials in the department in the shape of exchange compensation allowance, as may be seen from the fact that while there was no charge for this allowance in 1891–2, in 1894–5 the compensation to educational officers was Rx. 18,800. About Rx. 30,000 is the increase in five years. Side by side with this might be noted another fact, viz., that during these same four years the Government expenditure on public education in Great Britain and Ireland increased from 5 millions to nearly 9 millions sterling—the contrast is too powerful to need any comments. One cannot help thinking that it is all the difference between the treatment of children and step-children. There are more than 537,000 towns and villages in India, with a total population of about 230 millions, and yet there are less than 100,000 public primary schools for them. The population of school-going age in India is about 35 millions, out of whom only about 4 millions (including those attending private or unaided schools) are under instruction, which means that out of every 100 children of school-going age, 88 are growing up in darkness and ignorance and consequent moral helplessness. Comment on these figures is really superfluous.

I may add that in 1888 the Government of Lord Dufferin issued a Resolution, which amounted to a virtual change of policy in the matter of education. Only four years before that Lord Ripon had issued a Resolution, addressed to all Provincial Governments, urging them to increase their expenditure on education and even offering assistance from the Imperial Exchequer, where absolutely necessary. In 1888, however, Lord Dufferin directed the Provincial Governments, in express terms, to gradually reduce the share contributed by Government to public education.

18,367. (*Chairman.*) Has the Resolution been published?—Yes, it is appended to Sir Alfred Croft's review of education from 1882 to 1886. It was published in 1888.

18,368. (*Sir James Peile.*) I do not get the figures to correspond to yours?—If I get a copy of the Statistical Abstract, I will show them.

18,369. I think you have not taken education managed by local bodies?—No, of course not; that is separate altogether.

18,370. Why?—That is local taxation; it is not contributed from provincial revenues. In the Statistical Abstract itself the figures are represented separately. The first column is from provincial revenues, the second is from local rates.

18,371. But local rates, that means one-third of the cess on land revenue?—Yes, but that is for local purposes. According to your view municipal money might also be added.

18,372. Certainly?—That is not a Government contribution. The 5 millions and 9 millions I have spoken of as expenditure in England do not include local rates.

18,373. You are merely giving what the Government itself provides out of the taxation fund?—It might be said that is local taxation, whereas this is provincial taxation.

18,374. Did you include the scholars who were taught in the local rate schools in the total that you took?—I have taken all.

18,375. (*Chairman.*) Are the 4,000,000 scholars you have mentioned out of 85,000,000 aided out of local rates as well as out of the public taxes?—And even those attending schools not aided. There are some schools in India that receive no aid from Government. Anybody who attends a school is included.

18,376. (*Sir James Peile.*) The number of educated persons has largely increased?—Well, of course they must increase in that way.

18,377. It is always increasing. It is increasing, and it began from a very low scale indeed under native rule?—That I admit. But of course the British Government should never think of comparing itself with previous Governments in such matters.

18,378. It must begin where they left off, you know?—What I complain of is this change of policy. Lord Dufferin distinctly called on Provincial Governments to reduce their educational expenditure.

18,379. On higher education?—No, on all education.

18,380. You mean that he wished to elicit the spontaneous energy of the people in promoting education. That is what he says, I presume?—He says the share of Government must be reduced, that is all he says.

18,381. On what ground?—He says the work of Government is to pioneer the way; that is how he puts it. That has been done, and now these things must be left more to the people.

18,382. Was not that what Lord Ripon said four years previously?—No, certainly not.

18,383. (*Chairman.*) You have not got that Despatch here?—I could give you the reference. There was the review of the education in India by Sir Alfred Croft, Director of Public Instruction in Bengal, after the Education Commission. It is the first quinquennial review published by Government, and there is prefixed

Mr. G. K. Gokhale.

13 April 1897.

to that review a resolution of the Government of India dated June 1888, passed upon it. If that volume is brought I would read it to you. I wanted to bring my copy, but it was too heavy.

18,384. While the book is being got out, perhaps we might pass on to the subject of railways?—Yes, my friend Mr. Wacha has gone into this question in great detail, and I will only add one or two observations to what he has said. In the evidence already recorded by the Commission, satisfaction is expressed in one or two places that in India the working expenses of railways form a smaller percentage of the total railway receipts than in England, and the conclusion seems to be drawn that Indian railways are constructed and worked more cheaply than English railways.

18,385. Are you putting that forth as a grievance?—No, no; I am only stating what strikes me as a conclusion not quite warranted.

18,386. The fact remains that railroads were constructed cheaply, whatever the reason?—Not cheaply as judged by the Indian standard; certainly cheaply compared with the English standard. If they used more native agency, the working expenses would be even lower. Before the Fawcett Committee the whole question was gone into. In the case of the Great Indian Peninsular the actual expenditure very largely exceeded the estimates; it nearly came to double the estimated amount. Mr. Thornton, who was Secretary in the Railway Department, I believe, has himself stated that the whole thing was done very badly and very extravagantly.

18,387. But the fact still remains that of almost all the railway systems in the world the working expenses of the Indian railways bear the smallest relation to the gross receipts; therefore that means that, as a Government speculation, it is a beneficial one?—I do not think so, my Lord, for this reason, that our wages are very low, and therefore the working expenses must be low.

18,388. Still that does not alter the fact that the undertaking is a profitable one, that is all?—I will make a few remarks on that afterwards.

18,389. I say that, if the working expenses of a railroad are 45 per cent. of the gross receipts, it shows that the undertaking is more profitable than if they are 70 per cent.?—That is true.

18,390. I do not want to go further than that, because that is quite sufficient for me?—I might, however, state that this lower percentage of working expenses is not peculiar to our railways only, but is, in fact, a necessary condition of all industrial undertakings in India. Labour with us is very cheap, while capital is very dear, so a much larger margin is necessary for profits, and a much smaller one suffices for the working expenses than is the case in England. The mere fact, therefore, that the working expenses of Indian railways form a smaller percentage of the total receipts than they do in England does not in reality prove anything. Meanwhile it may fairly be asked, if Indian railways are, on the whole, a profitable undertaking, why do English investors, with all their enterprise, almost invariably insist on a Government guarantee of interest in one form or another? There was an excuse for the first companies requiring such a guarantee. But after so many years' experience of Indian railways, and after so many protestations, both from the existing companies and from Government, that there is a great, a prosperous, future for Indian railways, it is astonishing to see that every new scheme proposes that all elements of risk and possible loss should be shifted on to the Indian taxpayer, securing an absolutely safe, clear percentage of profit for the English investor. So long as the Indian Government has to bear a net loss on railway account, no matter from what cause, so long it is futile to represent the Indian railway enterprise, whatever may be its other advantages, as a commercial success.

18,391. Then may I take it that the conclusion you draw from this is, that it is a mistake to have made any railroads at all?—I do not say that.

18,392. I do not see, if you speak of Indian railway enterprise in these very strong terms, that any other conclusion is left to you?—I explained before that, so far as the main trunk lines are concerned, the only complaint we would make is that they have been constructed in a very extravagant manner, as was given in evidence before the Fawcett Committee; but the increased activity which the Government is showing now is not required. I make a distinction between the main trunk lines and the other lines that are now being constructed.

18,393. Are you able to say that the cost of construction, as compared with railroads in other countries, is very dear?—I am not prepared to say that.

18,394. If you are not prepared to say that, is it quite fair to speak in strong terms about the extravagance?—Extravagant about what?

18,395. As I understood your words, they were that the cost of construction of the railways has been very extravagant?—Of the earliest railways. The earliest railways were constructed in a very uneconomical manner.

18,396. I did not hear you limit your criticism to the earliest railways; but, on the whole, are you prepared to say that the mileage expense of construction in India has been extravagant compared with what it has been in other countries?—Well, I have not looked at it from that point of view.

18,397. I think, from your evidence, one would gather that that was your view?—No, my view is this, that there is a net loss which the State has to bear on the railway account, and, as there is greater and greater activity, there will be even more and more.

18,397*a*. I quite understand that you would now prefer caution; you would not go so fast; but your recent evidence has been founded upon the charge of extravagance; and I want to know whether you have actually gone into the charges, and been able to satisfy yourself that the cost of the construction of railways in India is dearer than it is in other countries, and, therefore, open to the charge of extravagance?—I fear I must not have expressed myself clearly. What I meant was that the railway lines that were first constructed were constructed extravagantly; and, so far as that is concerned, I can give some evidence; but, in regard to the lines that are now being constructed, I do not think they are being constructed wastefully or extravagantly. I do not say so; but I mean that this rushing of programme after programme is burdening us with responsibilities.

18,398. Now, with regard to the earlier railway lines, have you ever heard that the earlier lines in almost every country have been constructed at a very high rate?—That may be; but in the construction of the earlier Indian railways there was a great waste in India, which was condemned as culpable by men who knew the subject—by men like Mr. Thornton, who had been connected with railways for a long time. Bridges had to be re-constructed; there was such lack of supervision, and a great deal of money was misappropriated, and things of that kind; there was a great waste in all that.

18,399. Is that a criticism of individuals, or a criticism of any responsible body?—Mr. Thornton appeared before the Fawcett Committee as a responsible representative of the Government of India; and in 1867, when the Government decided to build on its own responsibility, it drew up a long statement of the whole case; and there also it dwelt upon the wasteful character of the expenditure of the guaranteed companies owing to the want of proper check. These facts are all admitted by the Government. I have no fault to find with the present railway construction of Government on the ground of extravagance or wastefulness. What I mean is, that the revenues of the country are being burdened in an increasing proportion with these liabilities.

18,400. Of course there is another matter to be taken into consideration; namely, that a railroad, which opens up a country, confers considerable benefits upon the country, which may be fairly purchased even if the railroad is not worked at a profit and if it becomes a charge, in consequence, upon the taxpayer?—Yes; but that becomes then a question of which benefit is comparatively greater. I would prefer Government spending much more on education to its bearing this net loss on railways.

18,401. But that is a preference of your own?—Oh, yes.

18,402. In this case you dwell, in dealing with the railroads, upon the fact that the State has to pay a certain sum towards the expenses of the railroads, but you omit any allusion to the fact that the opening up of the country in itself is usually held to confer a benefit on the inhabitants, which benefit must be set against any such loss as that of which you speak?—But I have

said in my evidence that "whatever the other advantages may be," from the financial point of view I find fault with it. I say, "So long it is futile to represent the "Indian railway enterprise—whatever may be its other "advantages—as a commercial success."

18,403. You say "as a commercial success." It may be a commercial success on account of the benefit which it confers upon the country generally, even though it may cost the Government something. However, perhaps you will proceed?—I have two suggestions to offer on this subject of railways. The first is, that the time has now come when the same restrictions that now exist on the outlay of public money on unproductive public works, should be imposed in the case of these so-called productive works also; these restrictions being, that in future all Government expenditure on these works, direct or indirect, should be out of surplus revenue only, and not out of borrowed money. A new programme, costing 28 crores of rupees, has just been announced, and a private letter which I received from India by the last mail says that it has been sanctioned in spite of the protest of the Finance Member, Sir James Westland. When one remembers that the condition of Indian finance is at present most depressed, that all really important lines have been already constructed, and that many of the most pressing needs of the country, such as education, receive no attention from the Government on the ground of the poverty of its exchequer, one cannot help thinking bitterly of this reckless profusion of Government in the matter of railway construction, especially as the Indian people feel that this construction is undertaken principally in the interests of English commercial and moneyed classes, and that it assists in the further exploitation of our resources. The second suggestion is that the guaranteed railways should be taken over by Government at the first opportunity in each case, without exception. The waiver of the right to take over the Great Indian Peninsular Railway 20 years ago was very unfortunate. Apart from the loss entailed by the high guarantee, by the unfair manner of calculating the surplus profits, and by their calculation six-monthly, instead of yearly, there is another very deplorable loss which the Indian exchequer must bear in the matter of these guaranteed railways. The shares of these companies are at a high premium, and that is due, in great measure, to the Government guaranteeing a high rate of interest. The premium thus is, to a considerable extent, only artificial, and yet Government must pay it when it has to take over these railways.

18,404. That really means, does it not, that you would put a stop to railroad extension now almost entirely?—Unless funds can be supplied out of revenue.

18,405. Quite so; but the surplus having been comparatively small, it would mean, would it not, that practically no railroads would be made?—If it comes to that, I would be prepared to accept that.

18,406. (*Sir William Wedderburn.*) Looking to the very difficult position of Indian finance, you think that railways are a luxury for which the country can wait a little, though they do desire them?—That is my view; that is also Sir Auckland Colvin's view.

18,407. (*Chairman.*) Would you really impress it on the Commission that the Secretary of State and the Government of India have undertaken these railways principally in the interests of English commerce and commercial monied classes; is that a direct charge of yours?—That is the impression in India, because the facts are there. Whenever a Viceroy goes out to India there is a deputation that waits on him, and they put pressure upon him to construct these railways, and he makes a promise, more or less, that he will do his best. There is no feeling in India that there should be these railways—the Finance Member is opposed to them. The Famine Commission recommended that 20,000 miles of railways would be practically sufficient, so far as protection from famine was concerned—that total has been reached, and still there is a new programme of 28 crores.

18,408. (*Sir James Peile.*) Not for protective lines?—I have not caught the question.

18,409. The programme of 28 crores contains no protective lines?—We do not want any more of their lines; spend more on education for the present, and afterwards on railways. You are going in one direction and going in no other directions. All these railways cannot be a disadvantage—I am prepared to admit that—but it is a question as to which advantage is greater.

18,410. (*Chairman.*) And do you hold that the Viceroy is only a registrar of what the commercial classes here choose to tell him?—Not choose to tell him, but the pressure is felt by the Secretary of State owing to the peculiar position of English politics.

18,411. You do not think it possible that the Viceroy may think this policy for the advantage of India?—It is difficult to put the thing exactly that way. I rather hesitate to put the thing as strongly as that, but more or less that is the impression.

18,412–3. But you have stated that this construction is undertaken principally in the interest of the English commercial and monied classes?—That is what we feel.

18,414. And I think anybody listening to that must feel that you are yourself supporting the idea that the Viceroy was not doing this mainly in the interest of the Indian public, but principally in the interest of the monied classes here?—That is the only conclusion that we can derive from certain facts. I will mention one. In 1879 a Parliamentary Committee sat to inquire into this subject of public works. Well, after a great deal of careful inquiry they recommended that $2\frac{1}{2}$ millions a year should be the limit of borrowing for Indian public works. Of course, the Secretary of State and the Government of India between them can alter this limit; and, as a matter of fact, they have not been acting up to that limit lately. This new programme of 28 crores, which is to be finished in a short time, also shows that they are setting aside this limit; so the impression that we have is that it is all undertaken more in the interests of the commercial classes.

18,415. (*Sir William Wedderburn.*) Has any great native Association, like the Indian National Congress, ever pressed for that rapid extension of railway communication?—Never.

18,416. In the 12 years in which they have made representations to Government, that has not been included in their programme?—Never.

18,417. Therefore, you assume that it has not been owing to Indian pressure, but it has been owing to English pressure that this activity has gone on?—Yes. That is my view.

11,418. (*Chairman.*) Now we come to the Famine Insurance Fund?—All statistics on the subject of this fund are already before the Commission. Of late years, there has been a great deal of controversy as to the real object with which the fund was created. I think the best evidence that I can offer on this point is to quote the following extract from the Report of a Parliamentary Committee, which examined in 1879 the subject of public works in India, and of which Lord George Hamilton was chairman:—"During the "financial years 1877–78 and 1878–79 additional taxation was imposed in India in order to establish an "annual Famine Insurance Fund of 1,500,000*l.* That "amount was fixed with reference to the famine "expenditure, which, during the last six years, had "amounted to the enormous sum (excluding loss of "revenue) of 14,487,827*l.*, of which a very large portion "had been met by borrowing."

18,419. (*Sir James Peile.*) Will you give us what that taxation was; you say taxation; what taxation?—The special taxes that were imposed by Lord Lytton.

18,420. What were they?—Well, the license tax was imposed, the officers of Government and certain other classes were exempted, but then the traders and such other persons were taxed; it was known as the license tax.

18,421. The question is what the license tax Act said; was it said in the Act that it was imposed to establish a fund of 1,500,000*l.*?—Well, the proceeds of the license tax were to form a famine fund.

18,422. Was it mentioned at all or referred to in the license tax Act?—I cannot say exactly what was contained in the Act itself, because I never thought anything of that.

18,423. It would all depend on that, would it not?—I have read the Viceroy's speech.

18,424. The object of the taxation would be stated in the legislation which established the tax?—I have read the Viceroy's speech and Sir John Strachey's speech on that occasion.

(*Sir James Peile.*) I gave in Mr. Wacha's evidence the preamble of two Acts which were passed in 1878 or 1879, one for the North-West Provinces and the other for the Punjab, in which I showed that the taxation

Mr. G. K. Gokhale.

13 April 1897.

was imposed—local rates it was—to strengthen the general finances in order to enable them the better to deal with the relief of famine. It was not said the taxes were set aside as part of the Famine Fund, as it is called.

18,425. (*Mr. Naoroji.*) You are reading now an extract from the report of the Parliamentary Committee?—I quoted from a report by a Parliamentary Committee, of which Lord George Hamilton was president.

18,426. (*Chairman.*) Yes, but I think the legislation itself is better evidence than what somebody said about it?—It depends on the view you take of the matter. I have in my hand here a despatch written that very year by the Secretary of State to the Government of India on this same subject of famine insurance. Lord Cranbrook there also uses precisely the same language. I will read from that after I have finished the extract from the Committee's report, but he uses precisely the same language.

18,427. Yes?—This is what the Parliamentary Committee says:—"The object, therefore, of this Famine "Insurance Fund was, by increasing the revenue, to "avoid the constant additions to the debt of India "which the prevention of periodical famines would "entail, by either applying that increase of income to "works likely to avert famine, and thus obviate famine "expenditure, or by reducing annually debt contracted "for famine, so that if famine expenditure should again "become inevitable, the reduction of debt made in years "of prosperity would compensate for the liabilities in"curred during scarcity. This increase of taxation was "sanctioned by the Secretary of State in Council on "this understanding. Last September, the Home "authorities received a despatch from the Indian "Government adverting to the difficulty of discrimi"nating between works strictly productive, and those "only admissible as providing against the effects of "famine, and proposing 'to accept a yearly maximum "'dead-weight charge, to be fixed, as experience may "'suggest, for works constructed as productive, "'whether under the existing strict conditions, or, "'as now proposed, in order to prevent famine or give "'protection from famine, or diminish the expendi"'ture for the counteraction of famine, if it occurs.' "In other words, 'they would limit to a specific "'maximum amount the net expenditure for the "'interest on the capital cost of all such works and "'their maintenance, after setting off all the net "'income yielded by the works.' In addition to the "annual loss entailed by 'their net existing liabilities,' "they proposed to add an annual sum not to exceed "25 lakhs of rupees, and they thought that that "amount might form a primary charge upon the "Famine Insurance Fund 'on the consideration that "'the construction of any works not fully productive, "'according to the existing definition, which may be "'thus facilitated, will cause an equivalent reduction "'of the ultimate liability on account of famines when "'they occur.' The first portion of this proposition "has been already suggested by the Indian Govern"ment in 1876, and rejected by the Secretary of State "in Council. The latter part of the suggestion by "which it is proposed to permanently assign 25 lakhs "of rupees of the Famine Insurance Fund, in order "to raise money for the construction of famine works, "not fully productive, is an entire inversion of the "object for which the fund was raised. This increase "of taxation was justified as necessary, in order to "meet, as far as was possible, famine expenditure for "the future out of income; but to immediately "appropriate a portion of the income so raised to pay "the interest of new loans was a proposal which, in "the opinion of your Committee, the Secretary of State "in Council had no option but to reject." Lord George Hamilton is now Secretary of State for India, and, judging from a recent debate in the House of Commons, his Lordship seems to have forgotten what he wrote in 1879 as chairman of that Parliamentary Committee. The Indian people, however, have a better memory. There is another document that I would also put in here with your Lordship's permission,* and that is a despatch written by Lord Cranbrook on the 20th February, 1879, on this same subject of the Famine Insurance Fund, and therein he expresses precisely the same views. In paragraph 6 he says:—"It had been laid down "by Lord Northbrook in 1874, 'that, besides a fair "'surplus of income over ordinary expenditure, such "'a margin should be provided, in addition, in ordi"'nary times, as shall constitute a reasonable provision "'for meeting occasional expenditure upon famines'; "and, in referring to the subject in the debate of the "27th of December, 1877, Sir John Strachey mentioned "the argument of Lord Northbrook, 'that, if this "'surplus were devoted to the reduction of debt, or "'to preventing the increase of debt for the construc"'tion of reproductive or public works, in years of "'ordinary prosperity, there would be no objection "'to the public expenditure exceeding the public "'revenue in occasional years of adversity, so that we "'might then, without objection, meet the charges on "'account of famine from borrowed funds, to the full "'extent to which our surplus had permitted the dis"'charge of debt or prevented its increase.'" Then Lord Cranbrook proceeds to say:—"The cost of the "famines was estimated, on an average of years, at "about 1,500,000*l.*, and provision was made for meeting "this expenditure by measures of financial decentrali"sation, and by new taxation. 'The Government of "'India,' said Sir John Strachey, 'intends to keep "'this million and a half as an insurance against "'famine alone; . . . . we consider that the esti"'mates of every year ought to make provision for "'religiously applying the sum I have mentioned to "'this sole purpose; and I hope that no desire to "'carry out any administrative improvement, how"'ever urgent, or any fiscal reform, however wise, "'will tempt the Government to neglect this sacred "'trust.'" That is a quotation from Sir John Strachey's speech which Lord Cranbrook has given here. Then he proceeds to show how the hypothecation of 25 lakhs of rupees would be an inversion of the fund. The whole thing is, in fact, stated as we have it there in the Parliamentary Committee's report, which I have already quoted. Further, in 1884 there was another Parliamentary Committee on Indian Railways, and this Committee also went into the subject of the Famine Insurance Fund. Lord George Hamilton was also a member of this Committee, Mr. Arthur Balfour was a member, the late W. H. Smith was a member. This Committee of 1884 wrote about this question as follows:—"Having regard to the certain recur"rence of periodical famines, and being of opinion "that the cost of famine reliefs should not be added "to the permanent debt of the Company, the Govern"ment of India established, in 1878, an annual Famine "Insurance Fund of 1,500,000*l.* This sum was fixed "upon the calculation that famine reliefs would cost, "in every 10 years, 15,000,000*l.* And the additional "taxation required to provide the Famine Insurance "Fund was sanctioned by the Secretary of State in "Council, on the understanding that the revenue thus "raised should be applied to the construction of works "likely to avert famine, or to the reduction of debt "contracted for famine expenditure. Proposals have "more than once been made by the Government of "India to hypothecate a portion of the annual Famine "Insurance Fund to the payment of interest on money "borrowed for the construction of railways. But the "Secretary of State in Council has declined to sanction "these proposals, and the Select Committee of 1878-79 "were also of opinion that the appropriation of a part "of the Famine Fund for the payment of interest on "loans raised to be expended on famine works, not "fully productive, would be an entire inversion of the "object for which the fund was created." They repeat that again later on too; that is the gist of the whole thing.

18,428. (*Sir James Peile.*) That is all very well, Mr. Gokhale, but has not that been substantially carried out?—No. You pay now the interest of the Bengal-Nagpore and Indian Midland Railways out of the Famine Insurance Fund.

18,429. That is looked upon as a protective line, but that is a small item. What I wish to draw attention to is the statement made by Sir James Westland in the last financial statement. You saw, no doubt, that in 15 years 17,500,000*l.* of famine grant surplus had been actually expended. You object to one item, but I think there were 10,000,000*l.* on railways and 5,000,000*l.* on the redemption of debt, the total being 17,500,000*l.* in 15 years. Now, there was no absolute legal obligation to put aside the 1,500,000*l.*, whether there was a surplus or not. There must be a surplus before you can put it aside, and the Government of India have actually managed to put aside 17,500,000*l.* in 15 years; also they have lately decided that, the protective railways being now completed, it is no longer necessary to put aside so large a sum as 1,500,000*l.* surplus, but that 1,000,000*l.* would suffice. I want to know what your

* Appendix No. 79.

grievance is?—I believe Mr. Jacob has given all the figures connected with this, and they are published in one of the appendices of the first report of this Commission. There the figures are given from 1879 or 1880 up to the present. During five years, during Lord Dufferin's time, the allotment for the famine grant was very small; and then for several years past this hypothecation of a portion for paying the interest on railways, which was expressly condemned by two Parliamentary Committees, and by the Secretary of State twice, has been also now allowed, and our grievance is in respect of this; when the fund was first created, it could be devoted to two objects only, namely, either to capital expenditure on the construction of productive public works, or to paying off debt; on no third object was it to be used.

18,430. Not on direct famine relief?—I beg pardon, that was, of course, implied; in fact, Lord Cranbrook called on the Indian Government to transmit every year half the money to England to be invested, or paid off in discharge of previous liabilities; that was the original idea of the fund. How the fund is now administered is well known.

18,431. (*Chairman.*) The Government of India has changed its view on certain matters; it is not bound not to change its view as long as it maintains a sufficient reserve?—No doubt; but special taxation was imposed.

18,432. (*Sir James Peile.*) I combat that, and ask: is there a special taxation?—There is.

18,433. There is the law?—And there are the speeches of Sir John Strachey.

18,434. And there are the Acts?—I should take my view of them from——

18,435. More from what people say than from legislation?—More from what a responsible Secretary of State says.

18,436. Than from legislation?—The Secretary of State sanctioned the taxes.

18,437. Than from the legislation itself?—I have not seen the Act; I cannot say anything.

18,438. You have not looked up the Act?—I did not think anyone would dispute what the Secretary of State himself had said about his own object.

18,439. Not when he legislates and puts his thoughts into an Act. Is not what he says in an Act more important than what he says as an *obiter dictum*?—Here he distinctly says that the legislation was sanctioned on this understanding; the understanding of the Government of India would not appear in the Act.

18,440. Your claim is upon a pledge given by the Government, not upon any legislation?—Yes.

18,441. (*Sir William Wedderburn.*) It is not upon any legislation, but it is upon a personal pledge given by the Government that they were raising the money for a special purpose, and making it a sacred trust. That is your ground?—Yes.

18,442. The Government never made it a sacred trust; such words were only used?—Lord Lytton said, "to say anything else is to insinuate a calumny"; those were the words he used.

18,443. (*Chairman.*) There have been quotations made from Sir John Strachey, but I think it rather interesting to take the whole of his statement. Sir John Strachey, in explaining, on the 27th of December 1877, to the Legislative Council in India the measures that had been taken, said:—"It is the firm intention of "the present Government to apply the funds now to "be provided for this special purpose, strictly to the "exclusive objects which they were designed to "secure. In such matters, no doubt, Governments "cannot fetter their successors; and nothing that we "could now say or do would prevent the application of "this fund to other purposes. Without thinking of a "future far removed from us, events might, of course, "happen which would render it impossible even for us, "who have designed these measures, to maintain our "present resolutions. So far, however, as we can now "speak for the future, the Government of India intends "to keep this million and a half as an insurance against "famine alone. In saying this, I should explain that "we do not contemplate the constitution of any sepa-"rate statutory fund, as such a course would be "attended with many useless and inconvenient compli-"cations, without giving any real security. Unless, "then, it should be proved hereafter by experience that "the annual appropriation of a smaller sum from our "revenues will give to the country the protection "which it requires, we consider that the estimates of "every year ought to make provision for religiously "applying the sum I have mentioned to this sole "purpose"; and this is the point which has been relied on after the statement that has been quoted:—"And I "hope that no desire to carry out any administrative "improvement, however urgent, or any fiscal reform, "however wise, will tempt the Government to neglect "this sacred trust." Here, in the speech in which Sir John Strachey explains the Bill which he is going to bring in, he especially says that, if it should be proved by experience in the future that the annual appropriation of a smaller sum will suffice, it may be varied, and, further than that, he expressly says that he cannot bind future Governments. Now, I do not think you can say that such a speech as that creates a sacred trust which can never be departed from. And, further than that, I would ask you this: Would you really mean to say that because a statesman said, 20 years ago, that a certain charge is necessary, that that statement is to be binding for all time?—In regard to the first part of your Lordship's question, I may say I was aware of that quotation from Sir John Strachey's speech. It was used in the recent debate by either Lord George Hamilton or Sir Henry Fowler. I was careful, therefore, not to make any quotation from Sir John Strachey myself. That quotation is one given by the Parliamentary Committee and another by Lord Cranbrook himself, and I only read those two extracts; but Sir John Strachey was there only speaking as a member of Council; Lord Cranbrook, however, showed on what grounds the formation of the fund and the imposition of the tax were authorised by him. I believe that ought to dispose of that first question. In regard to the second, I quite admit that a mere declaration made 20 years back need not always be binding, but the Government should openly come forward and say so. When Lord Dufferin, for instance, wanted to take away a large portion of the Famine Grant, what he should have done was this: he should have formally announced that the Famine Insurance Fund, for which extra taxation was imposed, no longer could be contributed to in that manner. In fact, what the Government did was to take advantage of the Famine Insurance Fund in that year, and escape the additional unpopularity which would have come to them, if this fund had never been created, from the imposition of new taxes. If there had been no Famine Insurance Fund in 1886, Lord Dufferin would have been compelled to put on certain extra taxes, when he wanted extra expenditure. But, having been able to take advantage of the Famine Grant as it stood, they escaped that unpopularity.

18,444. Now, it appears to me to be the judgment of the Government at present that the end for which the Famine Fund was established has been accomplished, that this sum of 17,000,000*l.*, which has been applied, has accomplished the end, and that they are in a position now to reduce the annual sum to 1,000,000*l.* What do you say about that? Do you consider that they are entirely wrong, that the works up to the present are not sufficient, and that this dictum of 20 years ago is to be as if it were a sacred communication from on high which is never to be departed from, namely, that 1,500,000*l.* in good weather or bad weather, adversity or prosperity, is to be spent by the Indian Government, whether it is wanted or not?—I do not say that, but I would say this, that the reduction of the Famine Grant from 1,500,000*l.* to 1,000,000*l.* was decided on about a year and a half or two years ago, when the present famine had not visited the country; in fact, the Government seemed to think that, because for a few years there had been no famine, therefore they need not take that possibility into account. The present famine has profoundly modified the situation; I should expect a change of view in the Government.

18,445. (*Sir James Peile.*) They never said they thought that there would never be any more famine?—They have not said that, but they thought they had made adequate provision for famine.

18,446. Did you see what Sir James Westland said as to the results of the Famine Grant, that, though the present famine is a very much more widely extended one than the famine of 1876, yet the Government anticipated that the expenditure would be considerably less; and that he attributed to the construction of protective railways from the Famine Insurance Grant?—That remains to be seen; if the famine extends over two years as it did 20 years ago, I fear things will be too horrible to think of. That is my view.

Mr. G. K. Gokhale.

13 April 1897.

18,447. It is not necessary to assume that, in order to give a dark colour to the picture?—I do not want to, but you must compare like with like. That famine lasted two years; how can you compare that with this famine?

18,448. That is not what Sir James Westland did?—I have not read that speech; surely he would not compare two years with one.

18,449. (*Sir William Wedderburn.*) If the Government determined to vary that original arrangement and reduce the 1,500,000*l.* to 1,000,000*l.*, do you not think it would have been a reasonable thing also to reconsider the special taxes, by which that money was raised, and, if only 1,000,000*l.* was wanted, to reduce the taxes that were to produce that sum?—Yes.

18,450. (*Chairman.*) I have a paper before me, which Sir William Wedderburn gave me, on the subject of the Famine Fund, and it carries the receipts from assessed taxes up to 17,000,000*l.* I am informed that that column is not a correct one. First of all, it leaves out the local assessments which were made for the purpose, and, next, it includes the extra money which was obtained when the license duty was converted into an income tax; and I am informed that practically these extra cesses and these license duties, at the rate at which they were imposed under the bill of Sir John Strachey, would not amount to more than 1,000,000*l.* a year?—My Lord, the Secretary of State, writing at that time, admits that the extra taxation was intended to raise this sum of a million and a half. That puts the Indian Government out of court, I believe, on this point; it is too late now to say that the extra taxes raised less than that amount.

18,451. I do not think it is so, begging your pardon; what I believe to be the case is that he put the insurance against loss of revenue and actual expenditure on famine at not less than Rx. 1,500,000. The first step taken to meet this charge was to extend the system of decentralization of provincial finance, by which the Imperial revenue was relieved by about Rx. 400,000 a year; that is to say, Rx. 400,000 was added to the Imperial surplus. This left Rx. 1,100,000 to be obtained by taxation, and the extra taxation imposed was, therefore, to be Rx. 1,100,000 for this purpose, and, as a matter of fact, Rx. 1,100,000 was the produce of the extra taxation?—I would only make one observation, if your Lordship will allow me; I accept those figures which have been just now given by your Lordship. What I mean to say is that that is comparatively a small point. My complaint is two-fold. First of all, they have been paying interest out of the fund, which was repeatedly declared to be an entire inversion of the fund; secondly, when they first diverted the fund to other purposes, they never made an express declaration that they were so doing, which they were bound to make in view of the pledges which they had given before.

18,452. (*Sir James Peile.*) I want to revert for a moment to what I said about the resources of the people in time of famine, as shown in the ornaments being sent to the mints?—Yes.

18,453. I wish to read a paragraph from the Indian Currency Committee's Report: "During the period of "the great famine of 1877 and the following years, "large quantities of silver ornaments were minted. In "three years no less than Rx. 4,500,000 were thus "turned into money"?—How much?

18,454. Rx. 4,500,000?—But for what population?

18,455. That you may take as a general statement. The famine affected the people in Madras and Bombay?—But it would indicate a very small amount of relief.

18,456. That is not the question?—Then what is it?

18,457. (*Sir William Wedderburn.*) But from the fact of their ornaments having been sacrificed in the last famine we may assume that they are in a less favourable position to meet the present famine?—Certainly.

(*Sir James Peile.*) Why?

(*Sir William Wedderburn.*) Unless we know that they have been replaced.

18,458. (*Sir James Peile.*) But do you know that they have not been replaced?—You must also look to the habits of the people. The parting with ornaments in our case is like parting with hats and clothes and other hings looked upon as necessary by the English people.

18,459. (*Chairman.*) The Indians are luxurious?—My Lord, it is only a small ornament here and there. But your Lordship may calculate how much that Rx. 4,500,000 is per head. The people live in the most simple manner possible. Each girl that is married feels that she must have some small silver thing.

18,460. It shows a taste for luxury, which is expensive?—They spend next to nothing on their daily wants, and on their clothes and other things.

18,461. But, with regard to what Sir William Wedderburn says, I think we have what looks very much like a proof that these ornaments have been replaced, because a very large amount of silver and gold has gone into India, which has not, as far as our returns go, been exported?—But who has absorbed that, that is the question. What classes have absorbed the gold and silver?

18,462. It only shows, as I say, the great taste of the Indian people for ornament, which is a form of luxury?—Just in the same way they have to spend large amounts on funerals. They groan under the system, and have to go to the money lender; but they must do it; it is the social life of the people.

18,463–4. (*Sir William Wedderburn.*) For a respectable Hindu woman to give up all her ornaments would be like a woman in this country parting with her wedding ring, so to say?—Yes. That would be a proper parallel.

18,465. (*Chairman.*) Now, would you pass on to the Civil Departments of the Bombay Presidency?—Yes, I now come to a criticism of the Civil Departments of my Presidency, on which subject, I understand, the Commission would like to hear my views. I may mention that a very exhaustive memorial criticising the working of these departments, from the financial point of view, was submitted in 1886 by the Poona Sarvajanik Sabha, of which I was Hon. Secretary for seven years, to the Finance Committee appointed by Lord Dufferin. In so far as the situation has undergone no change, that criticism has only to be briefly repeated on this occasion. Where the situation is altered, I must modify our observations of 10 years ago.

General Administration.—The total charge under this head in 1884–85 was about 12½ lakhs of rupees. In 1894–95 it was over 14½ lakhs. A large part of the increase is due to exchange compensation allowance. About half a lakh is due to the transfer of the charges of the Inspector-General of Gaols, Registration, and Stamps to this head. The increase in the Civil Secretariat is striking, being about Rx. 6,000. The expenses of the staff and household of the governor have also increased from Rx. 8,600 to over one lakh. It has long been felt that the Bombay expenditure under both these heads is on an extravagant scale. In Madras they manage things much cheaper. Madras is a larger Presidency than Bombay, and yet, in 1894–95, its Civil Secretariat expenditure was only Rx. 39,640, as against Rx. 41,400 for Bombay. Similarly the staff and household expenditure in Madras in that year was Rx. 4,600, as against Rx. 10,700 for Bombay. On this point I would suggest that the staff and household allowance in Bombay should be commuted into a lump sum of about Rx. 6,000 a year. The intermediate supervising staff of Commissioners of Divisions also comes under this head. Its cost in 1894–95 was over 3½ lakhs. This item of expenditure is a very heavy and perfectly needless drain upon the revenues. This institution of the Commissioners introduces an unnecessary step between the district and the headquarters of government, causes culpable delay in the speedy despatch of public business, and is opposed to the proper efficiency of the district government. The commissionership of the central division was, moreover, created 20 years ago, in consequence of the pressure of famine, and it ought to have been abolished as soon as the pressure had disappeared. *Land Revenue Administration.*—The charges under this head are about 65 lakhs and have for some years past been more or less steady. In the Presidency proper there are 12 senior and 9 junior collectors, with 41 assistant collectors. There is besides a large number of supernumeraries. Then there are about 50 deputy collectors and a large number of mamlatdars, one for each taluka. On an average, each district has one collector, two assistant collectors, one or two supernumeraries, and two deputy collectors, with a mamlatdar for each taluka. When the Revenue Department was first organised, the other Departments of the State were not formed, and the Revenue officers were the only officers whom Government could regard as its principal executive officers. Collectors therefore found it almost impossible to conduct their duties efficiently, and their staff had to be

strengthened by the addition of assistant collectors; but during the last few years, most of the other Departments have been fully organised, and each Department has now its special staff of administrative and executive officers. Under these altered circumstances, therefore, there no longer exists the necessity of maintaining the staff of assistant collectors under the District Revenue Officer, except so far as the necessary provision of training some few covenanted civilians for district work might require. For this purpose, one instead of two or three—the present number of assistants—would be more than sufficient. This change, without affecting the efficiency in the slightest degree, will relieve the State of a needless and costly burden. The district in India is the proper unit of administration, the collector being the chief representative of Government in the district. The present scheme of district administration, however, is radically defective, and entails a large waste of public money. The great multiplication of Central Departments which has taken place in recent years has, while imposing a heavy strain on the finances, considerably weakened the position of the collector, and the machinery of administration has, in consequence, become much more vexatious to the people than it was before. The great fault of the existing system is that the number of inspecting, controlling, and supervising officers is wholly out of all proportion to the number of real workers. Government, in all its departments, fixes the salaries of its officers high enough to show that it trusts these officers, and expects from them efficient and conscientious work; but, after showing this mark of confidence, it imposes check upon check, as if no officer could be trusted to do his duties. Perhaps, such a state of things was inevitable in the early days of British rule, when everything had to be properly organised, and various administrative reforms had to be carried out. But now that things have settled themselves, and most of the work done is comparatively of a routine character, it is a sheer waste of public money to maintain such a system of checks and over-centralization. I have already spoken of the Divisional Commissioners, who are at present only a fifth wheel to the coach. In the North-West Provinces, Punjab, and Bengal there are, besides the Commissioners of Divisions, Revenue Boards of two or three members. This double or treble machinery serves no useful purpose beyond a nominal but very often vexatious check. It may be admitted that some check is necessary, but too much check defeats itself by becoming either vexatious or nominal or both. What is wanted is a check more real, by its being more on the spot. The district being a unit of administration, the collector's position should be that of the President of an Executive Board, consisting of his Revenue, Police, Forest, Public Works, Medical and Educational assistants, sitting together each in charge of his own department, but taking counsel in larger matters with the heads of the other departments under the general advice of the collector-president. To this Official Board the Chairmen of the District and Municipal Boards may be joined as non-official representatives. These 10 members, thus sitting together, and representing as many departments, would form the best check on each individual department. With such a self-adjusting, simple, and effective system at work, the present complicated and less efficient system of check and over-centralisation might be dispensed with to the great relief of the people and of the finances of the Presidency. In fact, just as they have now got provincial decentralization, so if there was district decentralization, things would evidently improve.

18,466. The next point in your paper, Mr. Gokhale, is the Forests?—Yes. The expenditure under this head was Rx. 96,400 in 1891–2. In 1894–5 it was Rx. 103,400, an increase of Rx. 7,000 in three years. The increase was mainly due to exchange compensation allowance. The administrative charge in this department is excessive. The salaries of the conservators, deputy conservators, and assistant conservators, who, with the exception of one man, are all Europeans, amount to no less than $3\frac{1}{3}$ lakhs of rupees, or one-third of the whole expenditure. The Department, moreover, is working in a most unsatisfactory manner, causing immense discontent and irritation among the rural classes—a discontent gradually culminating in some parts in outbreaks of lawlessness. It also comes frequently into conflict with the Revenue Department. If the work be handed over to and placed under the charge of the collector with a forest assistant, its operations will be much less vexatious to the people, the conflict between it and the Revenue Department would be avoided, and the arrangement would result in a saving to the State. The Forest Department is at present controlled by three conservators, 19 deputy conservators, and nine assistant conservators. There are, besides, about 20 extra assistant conservators. This excessively costly staff could now be reduced and replaced by much cheaper agency, if the suggestion made above were carried out. Moreover, the work done by the lower-paid establishment should be, as far as possible, handed over to the village officers, who would do it much more efficiently and cheaply, as a small increase in their existing remuneration would be deemed by them as adequate payment for the extra work. Forest, irrigation, and agriculture are all at present separate departments, each working in its own orbit, though they all are supposed to discharge duties practically allied to each other. The promotion of the agricultural industry of the country is the common object of all; but, the departments being separate, work on their own lines—not always convergent to the main end. And there is necessarily a considerable waste of funds and effort. Even under the existing system, if these epartments were amalgamated, one supervising establishment would do where we now have three. The change will be attended with advantage to the agriculturists and relief to the finances of the country.

18,467. Do forests cover a large space in Bombay—I understand that it is to Bombay that you are addressing your remarks?—Well, they cover a fair proportion, I believe; I do not think that the forests are themselves excessive. I am in favour of having large forests; but the manner in which the forests are worked is what I find fault with.

18,468. You are not opposed to the protection of forests?—No, I am not.

18,469. The great forest district is Madras, is it not? I am not quite sure about that.

18,470. When you say that the manner in which the Forest Code is applied causes great discontent and irritation among the rural classes, gradually culminating in some parts in outbreaks of lawlessness, does that arise from the fact that, until the Forest Department was constituted on its present footing, great waste of forests was taking place, and that the local inhabitants resent any interference with their power of waste? Or do you think that it is possible to preserve the forests completely in the interests of India without arousing such a feeling?—This used to be the ground of complaint at one time, when the Forest Department was first formed; now the people have got used to that. But the principal complaint now is that the department tries to work itself as a department of revenue; and, therefore, the poorest classes, the lowest tribes, who live a nomadic kind of life in the forests, who gather fruit and small branches of trees that fall down and so on, and sell loads of small wood in bazaars, are being restrained from doing these things. Their ordinary source of livelihood is thus being stopped to them, and they are now taking to assaulting Government officers, which is a very serious thing. Only a few months back there was an outbreak in the Kolaba district, and there was another outbreak after that. The Deputy Collector was assaulted and the poor, ignorant people exacted from him a bond in writing that they would get cheaper food grains and salt, and that they would be allowed to take wood and all that sort of thing. The manner in which the Forest Department is worked is so entirely unsympathetic that the people are feeling greatly irritated.

18,471. When you speak of the Forest, Irrigation and Agriculture being all at present separate departments, each working in its own orbit, though they are all supposed to discharge duties practically allied to each other, may it not fairly be said that forestry is a special science?—Yes, that is so; but forests are for the benefit of agriculture; that is the principal object of forests, and under my scheme, if the Collector was made the supreme authority in the district, he might have a Forest assistant and an Irrigation assistant and an Agricultural assistant.

18,472. You do not propose to send the Agricultural assistant, who knows nothing about forestry, to take care of forests?—Oh, no, not at all; I only want the Forest assistants' conflict with the other departments to cease, which would be secured if they were all subject to one man, subordinate to him.

18,473. Now what would you wish to tell us upon the subject of the police?—The charge under this head in

Mr. G. K. Gokhale.

13 April 1897.

1894-95 was over 56 lakhs of rupees. In 1892-93 it was less than 51⅕ lakhs. The increase is chiefly due to the reorganization scheme carried out in 1894 at an annual cost of over 4 lakhs for the Mofussil police, and about 1 lakh for the police of the Presidency town. As in the case of several other departments, this department is largely over-officered in the upper staff. In 1884, the inspector-generalship of police was created with a salary of Rx. 2,400 a year. The creation of this office was not favoured by the Government of India itself for a long time, but it yielded at last to the persistent pressure of the local Government. This needless centralisation, in addition to being expensive, has disturbed the harmony which previously prevailed in the district administration, when the district police officer was a direct subordinate of the collector of the district. The police department has no policy of its own to carry out, and it may well remain directly under the collector in each district. I may mention that men like Sir Barrow Ellis were strongly opposed to the creation of the inspector-generalship. The superior staff has been constantly on the increase. In 1879 the number of district superintendents and assistant superintendents was 22. In 1886-87 it was 30. It now stands at 38, all Europeans. There are, besides, about nine probationers. The institution of the grade of police probationers has all along been regarded by the Indian public as a great scandal, and evidence was offered before the Public Service Commission that all the 13 probationers that had till then been appointed were relatives of persons occupying high posts in the administration, men who had failed in qualifying themselves for any other career.

18,474. (*Sir James Peile.*) There are no probationers now, are there?—Well, last year there were two or three appointed.

18,475. No probationers; by probationers you mean men appointed in India by the Provincial Government?—I do not know by whom appointed, but the civil list of January gives three appointed last year.

18,476. From England, I think?—I know that the condemnation of the appointments by the Provincial Government has led to a change; but how far the change has gone, I am not in a position to say.

18,477. (*Chairman.*) The probationers are Europeans?—Oh, Europeans, of course. But while the superior staff is excessive and too costly, the lowest grades in the department, the class of constables, requires large improvement. A much better type of men must be attracted to the ranks by offering adequate inducement. It is no exaggeration to say that the Indian police of the present day, outside the Presidency towns, are a thoroughly incompetent, unscrupulous, corrupt body, causing vast misery to the bulk of the people. They are often found to be themselves actively aiding and abetting crimes, especially crimes connected with property. Outside the Presidency towns there is no detective service worth mentioning. A large increase of expenditure is necessary, if the department is to be effective for protecting, and not harrassing, the general population.

18,478. (*Sir William Wedderburn.*) The quality of the rank and file would be very much improved if there were a reasonable prospect of good promotion?—I should think so.

18,479. A better class of men would come into the service?—Yes.

18,480. And if the positions that have been given to police probationers were given to experienced men who had worked their way up, that would do a good deal to improve the style of men in the police?—Certainly.

18,481. (*Chairman.*) Roughly speaking, what sort of number is the police force in the Bombay Presidency?—I should like to refer to the latest Administration Report before answering that question.

18,482. Could you not give us any idea; is it 10,000, 15,000, 20,000?—I must consult the Report; I have got one here; but I believe last year, when the new reorganization scheme came on, they made additions also to the lower ranks.

18,483. (*Sir James Peile.*) The reorganization was made lately?—Last year; they offered a little better pay also.

18,484. And in other provinces also the police has been reorganized lately?—I have read so in some newspapers, but I do not know anything definitely.

18,485. There is a movement generally towards reorganization; improving the pay, or both the promotion and the pay?—And so far that is good.

18,486. (*Sir William Wedderburn.*) The Provincial Governments would be glad enough to do it, if they had the money, I suppose?—Certainly, and therefore we are fighting for more money being given to the Provincial Governments.

18,487. (*Sir James Peile.*) The proposals to reorganize the police of a province come up to the Government of India and are approved by them, and come to the Secretary of State to be sanctioned. If he sanctions them, an arrangement is made about the money; the money is made available by the Government of India for the use of the province?—I do not think so; the Police department under the decentralization scheme is entirely a provincial department.

18,488. Certainly; but, if new expenditure is countenanced by the Government of India, they make an arrangement for supplying the money?—They have not done it in the case of these five lakhs. Not only that, but the exchange compensation threw a large portion on the Bombay Presidency not contemplated at the time of the contract.

18,489. Is it five lakhs in Bombay?—Five lakhs in Bombay; I think they thought it too small to need special assistance.

18,490. (*Sir William Wedderburn.*) You mention that, as a body, the district police are an unscrupulous and corrupt body. Is not it a very great argument for the extension of local self-government, that it gives the power in the villages to the respectable villagers, instead of to these men who are picked up in the bazaars, and whose object is to get more power rather than to do any good work?—Yes, that is so.

18,491. (*Chairman.*) The police force in Bombay appears to be very nearly 19,000; of that, may I take it that 38 are Europeans?—No; 38 is the number of the Superintendents and Assistant Superintendents.

18,492. Yes, then we come to the inspectors; are the inspectors European?—Some of them are Europeans and some are natives. Their salary stops at 250 rupees a month.

18,493. I suppose not many inspectors are Europeans?—There are some inspectors who are Europeans. I know of some. I believe it is about half and half. I am not quite sure, but it would be like that.

18,494. There are 277 deputy inspectors; are they natives or Europeans?—The deputy inspectors, I believe, must be natives for the most part.

18,495. And the sergeants or head constables?—They must be all natives, except a very few in the Presidency town.

18,496. When you say of the police that they are a thoroughly incompetent, unscrupulous, corrupt body, causing vast misery, I find that this large force of men is chiefly officered, except quite at the very top, by native officers. Does that look to you as if the native officers were very competent?—That is not my point, my Lord; my point is that the rank and file consists of such a low class of men that it is impossible to make them efficient.

18,497. But what I mean is that the actual discipline of these men lies in the hands of native officers?—The Superintendents are, in the first instance, responsible.

18,498. And I want to ask you whether you are satisfied—whether that is a good result? Because, native officers being in charge of these men, the only thing that you can say about them is that the men, for whose discipline these native officers are responsible, are a thoroughly incompetent, unscrupulous, corrupt body?—If the responsibility is to be apportioned in that way, the Superintendents and the District Superintendents will come in for their share first.

18,499. At the top?—Yes. At the top.

18,500. But the actual discipline, you must pardon me for saying, throughout the country must lie in the hands of this large force of native officers?—The better classes do not go into the force, because there are no good prospects; they must stop at a certain level. Above that all are Europeans, so they do not care to go into the service.

18,501. (*Sir William Wedderburn.*) Do you not think we could get for the police men as trustworthy and men as well educated for the higher grades as we have for

the subordinate judicial service—that same class of men?—Yes, there is no reason why we should not have them if equally good pay were offered.

18,502. And that class of subordinate judges in India is universally respected and trusted by the people?—Oh, yes, and by Government too; they have always been saying that they are a very efficient body.

18,503. (*Chairman.*) You advocate the necessity of a large increase in the expenditure on education, I think?—Here, too, a large increase of expenditure is necessary, if Government desires to discharge its duty adequately by the people. The charge under the head of education at present is about 20 lakhs, of which 3 lakhs are consumed in direction and inspection. Our percentages are no doubt slightly better than those for the whole of India, but that is hardly a matter for congratulation, seeing that what is being done is almost as nothing compared with what ought to be done. So long as we have only 9,000 public primary schools for over 25,000 towns and villages, and about 80 children out of every 100 of school-going age are growing up in utter darkness, so long the educational policy of the Government will always be a reproach to it. In this connexion there is one point to which I am anxious to draw the particular attention of the Commission. That point is the absolutely inelastic character of the financial provision which is made for primary education in rural areas. In these areas, primary education is now entrusted to local boards, Government contenting itself with a grant-in-aid to these boards of one-third the total expenditure. Now, the only revenue that these boards have at their disposal is the proceeds of the one anna cess, and these proceeds are devoted, in certain fixed proportions, to primary education, sanitation, and roads. As our revenue settlements are for periods of 30 years, it follows that during these periods the proceeds of the one anna cess must be more or less stationary, which means that the amount that local boards can devote to primary education, being a fixed proportion of those proceeds, must also remain more or less stationary during the currency of each period of settlement; and as Government will, as a rule, contribute only one-third of the whole expenditure, *i.e.*, one-half the amount spent by the boards, it is clear that the resources that are available for the spread of primary education are entirely inelastic for long periods. I believe Sir James Peile proposed, when he was Director of Public Instruction in Bombay, that local bodies should be empowered to levy special educational cesses if they pleased. In the absence of Government finding more money for the education of the masses—a duty definitely accepted as a sacred trust—this seems to be the only possible solution of the difficulty.

I now come to *Law and Justice.*—The charge under this head in 1894–5, excluding the cost of jails, was 46 lakhs of rupees. Of this sum the expenditure on the High Court came to about 6¾ lakhs. It has long been a matter of complaint that our High Court is managed on a more extravagant scale than that of Madras, the expenses of the latter in 1894–5 being less than 5½ lakhs. The great item of difference is the expenditure of the original side, which in Bombay is about 2¼ lakhs, and in Madras not even one lakh. The appellate side of the Bombay High Court, which does the appellate work for the whole Presidency, is maintained at a cost of about one lakh of rupees only. The expensiveness of the High Court is, however, not due so much to the cost of the machinery employed as to the monopoly enjoyed by solicitors and barristers, whose fees represent a charge on litigation which is almost prohibitive. It is, indeed, high time that the system of the civil and criminal administration of justice in Bombay was improved so as to render it less costly.

18,504. (*Sir William Wedderburn.*) You mean in the city of Bombay?—In the city of Bombay, I mean. The Finance Committee of 1886 made certain proposals about reducing the cost of the Bombay High Court, some of which have not yet been carried out. The Clerk of the Insolvency Court still continues to receive fees, amounting to nearly the salary of a puisne judge, for only nominal work. The Judicial Department is specially a department for high posts in which the qualifications of natives have been repeatedly recognised. The Public Service Commission recommended that one-third of the district and sessions judgeships should be set apart for natives. No effect, however, has yet been given in practice to that recommendation. The question of the separation of judicial and executive functions comes under Law and Justice. It is contended on behalf of Government that such separation would entail extra expenditure of something like half a crore of rupees for the whole of India. Now, in the first place, this appears to be simply an over-estimate. Assuming, however, that the additional cost would be as high as that, it is much less than what was given to the European services by one stroke of the pen in 1893—I mean the exchange compensation allowance. This year, in certain famine areas, sub-judges are entrusted with criminal work also, to the relief of revenue officers, and the experiment, so far, has succeeded very well. A similar experiment was tried during the famine of 1877 with equally satisfactory results. The stipendary sub-judges and sub-magistrates may with advantage be relieved of a portion of their lighter work by the appointment of honorary magistrates and arbitration courts. Honorary magistrates have already been appointed in the larger towns, but benches of such magistrates may be constituted in Taluka towns with great advantage to the Government and the people. Further, the caste and trade Panchayats may be utilised for the purposes of settling civil disputes. There has already been a reform in the manner of disposing of petty cases, and arbitration courts have been recognised as cheap and efficient institutions for the administration of justice in small cases. If the same principle be extended to the courts of subordinate judges, and if civil juries are associated with the sub-judges in the disposal of suits involving larger amounts of money, as also in deciding questions regarding rights and customs, ample relief will be afforded to the superior courts, which may ultimately enable considerable economies to be effected.

Then I come to the *Public Works Department.* The expenditure under this head, including provincialised railways and irrigation and civil works, was about 35 lakhs of rupees in 1894–95, out of which about one-third was for establishment. The first two items came to a little over 1 lakh, and the rest was for civil works. Except in Sind, we have no irrigation worth speaking of, and I think it would be a great advantage if the construction of storage tanks and wells in areas where the rainfall is uncertain were undertaken by the Government on a large scale and in a systematic manner. This was recommended by the Famine Commission; nothing has been done, however. As regards the civil works outlay, it is noticeable that the highly paid machinery of executive engineers, &c. is still kept up in all the districts, though in several of them the expenditure on civil works from the provincial revenues does not exceed a mere trifle, and the works required by the local funds are of a sort that far lower establishments can safely undertake. The reduction in the executive engineer's charges appears to be urgently called for.

18,505. (*Chairman.*) Next you wish to call attention to the question of the monopoly of the higher offices by Europeans?—Yes. Similar criticism might be offered about the remaining departments, but I have no wish to weary the Commission with further observations of the kind. But there is one great evil common to all the departments, and a few words on that may be allowed. This evil is the practical monopoly of all the higher posts by Europeans. The following analysis of the Civil List for the Bombay Presidency for January 1897 will make my meaning clear. *Covenanted Civil Servants*, or, as they are now called, Civil Servants of India. The total number of these civil servants attached to Bombay at present is 156, out of whom only 5 are Indians, these 5 having entered by the competitive door in England. There are besides 8 statutory Indian civilians. The Members of Council, the High Court Civilian Judges, the Commissioners of Divisions, the Secretaries to Government, the Senior Collectors, are all Europeans. *City Magistrates.*—There are four city magistrates, two on Rs. 800 a month, and two on Rs. 500 a month. The two former are held by Europeans (not covenanted), the two latter by natives. *Land Records and Agriculture.*—There are six posts in this department with a salary of over Rs. 400 a month. They are all held by Europeans. *Forest Department.*—There are 29 posts in this department, with salaries ranging between Rs. 400 a month to Rs. 1,600 a month. They are all held by Europeans. There are nine Europeans even below Rs. 400 a month. *Salt.*—There are 12 posts with salaries ranging between Rs. 400 to Rs. 1,130 a month. Only one of these is held by an Indian. *Post.*—The Postmaster-General is a civilian. There are 11 posts under him with salaries above Rs. 400, out of which seven are held by Europeans.

Mr. G. K. Gokhale.

13 April 1897.

Telegraph.—There are 12 posts in this department with salaries ranging between Rs. 400 and Rs. 1,000, and they are all held by Europeans. There are, moreover, 40 posts between Rs. 100 and Rs. 400 a month. Of these, also, 36 are held by Europeans. *Revenue Survey.*—There are 10 posts in this Department with salaries above Rs. 400. They are all held by Europeans.—*Accountant-General's Department.*—The Accountant-General and Deputy Accountant-General are civilians. There are five posts under them with salaries ranging between 400 and 1,000 rupees, four of which are held by Europeans.—*High Court Judges.*—Out of seven judges, two are natives.—*Government Law Officers.*—There are seven Government Law Officers of whom six are Europeans. Four of these get Rs. 2,000 a month and above, one gets Rs. 1,000, and the sixth man gets Rs. 250. There is only one native among these who is paid Rs. 300 a month.—*Officers of the High Court.*—There are 14 officers with salaries ranging between 400 and 2,500 rupees a month. Of these, six are Natives.—*Prison Department.*—The Inspector-General draws Rs. 2,000 a month, and there are under him 11 officers receiving Rs. 350 to Rs. 1,200 a month. They are all Europeans.—*Cantonment Magistrates.*—There are 11 such magistrates with salaries ranging from Rs. 100 to Rs. 1,250 a month. They are all Europeans.—*Police.*—There are 54 officers in this Department with salaries ranging between Rs. 250 and Rs. 1,800 a month. Of these only three are natives, and they are all drawing Rs. 250 a month. There are moreover, five officers in charge of railway police. They are all Europeans and draw salaries ranging between Rs. 350 and Rs. 1,000 a month.—*Education.*—The director is paid Rs. 2,500 a month, and under him there are 45 officers receiving between Rs. 400 and Rs. 1,500 a month. Of these only 10 are natives, and, with one exception, they get either Rs. 400 or Rs. 500 a month; the one gentleman mentioned as an exception is a native Christian and draws R. 633 a month.—*Ecclesiastical.*—There are 31 paid officers in this Department. They draw between Rs. 400 and Rs. 800 a month, and are, of course, all Europeans.—*Medical.*—The Surgeon-General draws Rs. 2,500 a month, and there are under him 59 officers drawing salaries between 400 and 1,600 rupees a month. Out of these only four are natives.—*Sanitary.*—There are seven posts in this Department with salaries between Rs. 400 and Rs. 1,200 a month. They are all held by Europeans.—*Political.*—There are 66 officers in this Department, drawing salaries ranging between Rs. 400 and Rs. 3,500 a month. This gentlemen drawing Rs. 3,500 a month is at Aden. Only two of these are natives, one of them drawing Rs. 400 and the other Rs. 450 only.—*Public Works.*—There are 83 officers in this Department, drawing salaries between Rs. 250 and Rs. 2,500 a month. Of these 23 are natives. The subordinate judgeships and deputy-collectorships are the only branches of the public service which are free from this practical monopoly by European officers. It may be mentioned that the posts in the special departments mentioned above are not reserved for a particular class of men by statute, and, subject only to departmental rules, their bestowal is entirely in the discretion of the Executive Government. It cannot also be urged, in the case of most of these departments, that the appointment of natives to the higher posts in them is ever likely to have an element of political danger in it. In the case of collectorships they may say the Collector is the head of a district, and the Government would not care to entrust everything to a native, but in the Forest and Accounts Departments what is there of danger?

18,506. Is there no possible danger in the case of the Police?—I have said most of the departments. I anticipated such a question, and therefore said "most of the departments." The question is essentially one of patronage. The word "patronage" I have taken from one of Mr. Lee Warner's minutes; and our complaint is that the best part of that patronage goes to persons who are not children of the soil.

18,507. That completes the remarks which you would wish to offer upon administration?—Yes.

18,508. We have yet another branch of our inquiry which you have not as yet touched, namely, the Apportionment of Charges between England and India?—Yes; I have not much to say upon this. On the narrower ground which the Government of India have chosen to occupy in this matter, they have, I think, stated the case for India very effectively. I agree, however, with Mr. Dadabhai Naoroji and Mr. Wacha in thinking that the field, in respect of which equitable apportionment is necessary, is much wider than that. I will add a few observations to explain my meaning:—*The India Office Charges.*—These, which stand at about 273,000*l.*, ought to be borne by England, or, at least, divided half and half between England and India. The Secretary of State for India, as a member of the Imperial Cabinet, represents the Imperial Executive and discharges the Imperial function of general controlling supervision in respect of Indian administration just as the Secretary of State for the Colonies does for the Colonial Governments. The salary of the Colonial Secretary together with his office charges is borne on the Imperial Estimates. In strict justice, therefore, the India Office ought to form part of the Imperial Establishments and be paid out of the Imperial Exchequer. I am, however, aware that it is urged on the other side that, under present arrangements, the India Office has to do much directive and executive work in regard to Indian administration which the Colonial Office is not called upon to do, and I should therefore be satisfied if the charges were divided half and half between India and England. (2) *Army charges due to recent additions.*—These increases were due to the panic caused by the Penjdeh incident, and were alleged to be necessary for the better protection of the north-west frontier. Upper Burmah was, however, subsequently annexed, British Beluchistan was organised, various frontier enterprises carried out, and almost the entire increased strength has been thus absorbed in these newly conquered territories, a fact which shows that they were not really required for purposes of the defence of the north-west frontier. Similar temporary additions were made at the same time to the Imperial garrisons in other parts of the Empire in view of an imminent conflict with Russia, Mr. Gladstone obtaining a large vote of credit for this purpose; but, as soon as the emergency passed away, the garrisons were reduced everywhere else. Only in India was the increased strength maintained. These additions were in excess of the maximum defence requirements of the country as defined by the Army Commission of 1879 in view of frontier and other contingencies, even Russia and Afghanistan making common cause. The additions were protested against, when made, by two members of the Viceregal Council, including the Finance Member, who urged that in the first place they were not necessary, but that, secondly, if they were wanted, that was for purposes of the Imperial policy, and the Imperial treasury should pay for them. This increased force, therefore, of 30,000 troops forms no part of our Indian Army proper, but is an Imperial garrison, and serves as an Imperial reserve, and the cost of it ought to be an Imperial charge.

18,509. In mentioning that two members of the Council protested, we must bear in mind that they were the Finance Member, and the Legal Member?—Yes.

18,510. As against that, one must bear in mind that the expert members of the Council thought differently, and considered that this force was necessary for the defence of India?—Yes, I am quite aware of that, but then my argument is this; if the force that was then added was necessary for the purposes of strengthening the north-west frontier, why have they not increased the army on account of Burma? They have now more territory thrown on their hands on account of Burma, British Beluchistan, Gilgit, and Chitral; and yet the same army suffices, which means that at one time so much was not wanted. That is the only inference that I can draw as a non-official critic.

18,511. (*Sir Donald Stewart.*) But supposing Burma had not been annexed, is it not possible that that force might have been reduced?—I should have thought so.

18,512. Very good then; but the annexation of Burma absorbed the whole of that additional force?—A very large portion of it, yes.

18,513. (*Mr. Naoroji.*) But then it was not necessary that Burma should have been annexed to India; it might have been treated as a separate territory?—Yes.

18,514. And the Indians, the National Congress, declared so?—Yes, but my point is this; in the correspondence that took place between the Secretary of State and the Government of India the increases are spoken of as permanently wanted; in fact there was a telegram from the Secretary of State inquiring whether the increases were meant to be permanent, and the Government of India telegraphed back, "yes." If they were permanently wanted for the north-west frontier before Burma was annexed, how could they withdraw

a portion and spare it for Burma, when Burma was annexed? That is the only inference that I draw.

To resume—(3) *Our ordinary debt.*—Our ordinary debt as distinguished from our Public Works debt stands at present at 68 crores. This portion of our debt would not have until now remained undischarged, but for charges unjustly imposed upon us in the past in respect of various wars and expeditions in promotion of Imperial schemes or territorial expansion:—

	Cost in crores.
First Burmese War (1823)	13
First Afghan War (1838-42)	15
Abyssinian War	·6
Second Afghan War (Total cost = 22 crores minus Imperial contribution - 5 crores)	17
Egyptian War	1·2
	46·8

Add to this 67·8 crores thrown upon India since 1885 in pursuance of an Imperial policy as shown in the following Table:—

Frontier Expenditure since 1885.	Aggregate Charge during the Period in Crores or millions Rx.	Permanent Annual Charge in Crores or millions Rx.
Military roads	1·250	—
*Strategic railways	14·000	·600
Special defence works	4·630	—
Army increases (including Beluchistan garrison).	22·000	3·900
Frontier extensions:—		
(1) Upper Burmah	14·920	·925
(2) British Beluchistan	—	0·086
(3) The Gilgit Agency and Protectorate (including Chitral).	—	·220
(4) Somali Coast	—	·012
(5) The Afghan Protectorate	—	·180
Cost of expeditions, &c. (exclusive of Burma).	8·240	—
Political expenditure	2·838	·457
Total in crores	67·878	6·038

* The charge is met from capital and not from current revenue.

18,515. (*Chairman.*) I do not quite understand the separation between these charges; is the 6·038 crores Rx. in respect of loans which have been raised for the purpose?—More than three millions is for the army increase; it is 3·90 for army increase—30,000 troops.

18,516. How do you arrive at the annual charge of army increases?—From the Army Budget, 22 crores is the total charge—I mean the total charge we have had to bear during all these 10 years for this increase in the army.

18,517. Cumulative evidently?—Cumulative; and this 3·9 millions is the annual charge which we are to bear every year; but for this increase we should not have had to bear this charge.

18,518. It is an easy way of raising a heavy charge, is it not, first of all to say that this charge is unjust, and then to add up the sums so expended over many years? If it goes on for many years, it is rather an easy way of making out a large bill. I am not sure that we could not all make a heavy bill against somebody in that way?—It is the natural way of looking at the thing for those who think a charge is unjust.

18,519. What a charge we might make out in England now! It is easy for me to say that 200 years ago William III. acted wrongly in going to war with France, and, therefore, to carry forward all expenditure that happened in consequence during that 200 years—we ought to add on interest—that is an easy way of raising a formidable charge, I think?—I think that is putting it in too extreme a manner; this is only a matter of 10 years; and this increase was carried out in spite of the protest of the people, and in spite of the protest of some of the advisers of Government.

18,520. But this charge will go on, and will increase every year. I am criticising only your cumulative bill. I am not criticising the position that you have a right to say that you think such-and-such charges are heavy?—I mention it, because we make a claim for restitution of so much money on behalf of India,; just as in the case of the Irish Commission, they have mentioned a certain sum in regard to which Ireland claims restitution. We get thus a total of 111 crores of rupees, unjustly imposed by the Imperial Government on us in furtherance of its own policy. If even half the sum were refunded to us, our ordinary debt would practically disappear.

18,521. I observe that that statement rests entirely upon the assumption, which is by no means proved, that the charge was unjustly imposed?—But take the first Burmese War. The Court of Directors protested against that, but the Imperial Government insisted upon its being undertaken. The first Afghan War—the Board of Control ordered it, and it was prosecuted under orders sent directly, and against the wishes of the Indian Government. The second Afghan War was also ordered direct from England by Lord Beaconsfield. In the case of the Egyptian War the Indian Government protested.

18,522. But in many of those cases the Government undertook the war believing that it was necessary in the interests of India, did it not?—The Government here ordered the war, the Government there protested against it.

18,523. (*Sir Donald Stewart.*) Who initiated it?—The Government here—the British Government.

18,524. Have you any authority for that?—I believe from all that I have read—this seems to be accepted by almost everyone—that the first Afghan War was ordered by the Chairman of the Board of Control directly.

18,525. Go to the last Afghan War?—Yes, even in regard to that I think the same. Lord Northbrook resigned rather than carry out certain instructions which he received from his Government here; then Lord Lytton was sent out to succeed him, with special instructions, I think, to carry out a certain policy, and that brought on the complication.

18,526. I doubt if there is any real authority for that statement?—I think Mr. Naoroji went carefully into this question. Declarations of Mr. Gladstone, Lord Salisbury, and Mr. Fawcett were quoted to show that that was essentially an Imperial war.

(*Mr. Naoroji.*) Lord Lytton has said, on the authority of Lord Salisbury, that he was instructed to regard it as an indivisible part of a great Imperial question.

18,527. (*Chairman.*) Perhaps the method you adopt may be put in this way, that whenever native opinion says that it does not altogether approve a charge, that charge is to be put into an account, and England is to be called upon to make restitution; that is the argument, is it not?—Not quite that. When the Government of India also is on the same side, I think that alters the position very much.

18,528. Will you go on?—I would mention in this connection that we have paid every shilling of the cost of British conquest, including even the cost of the suppression of the Mutiny (which was close on 50 crores). England contributing absolutely nothing in aid of all this expenditure. England has paid such charges for Imperial conquest or settlement in respect of her colonies. She has even paid the cost of the suppression of the insurrection in Canada (1838-43), out of Imperial revenues. Nor has she ever called upon her colonies—not even the Cape—to undertake Imperial wars or to contribute towards their charge. *Upper Burmah* lies beyond the Indian frontier, and we have had no interest in its conquest and annexation except as a province to be held and administered as an Imperial trust. The conquest was effected in furtherance of Imperial policy and the commercial interests of the Empire, and no special Indian interest was ever here at stake. British Beluchistan and the Gilgit Protectorate are beyond the line of our impregnable defences, and India has no concern with them except as Imperial charges. These are new conquests, and, as years pass by, will require large

Mr. G. K. Gokhale.

13 April 1897.

expenditure for purposes of administrative improvement and material development. And it is suggested that they be taken off our hands, as Ceylon, St. Helena, and the Straits Settlements were in a former day—and be directly administered as appanages of the Crown. I would only add one thing, Ceylon was conquered at the expense of India, and has been raised to the position of a Crown Colony; but the expenses India incurred in connection with Ceylon were not refunded. Certain pensions which were granted to officers India continued to pay up to a very recent time. Bechuanaland (South Africa), is administered as a Crown Colony, and is not thrust on the hands of the Cape. *Political Expenditure beyond the Frontier.*—This is properly Foreign Office expenditure as being connected with the general foreign relations of the empire. Foreign policy and control of foreign relations are Imperial functions, and charges in connection therewith, in whatever part of the empire, ought to be borne on the Imperial estimates. India has no interest whatever beyond her territorial borders, and has only to maintain peace and order on her own side of the frontier. The Indus, the desert, and the Himalayan wall are impregnable lines of defence on the north-west, behind which she can remain in perfect security. All such expenditure, therefore, as is represented by the subsidies to the Amir and other tribal chiefs, and other like charges, is strictly Imperial in furtherance of Imperial interests in mid-Asia. Lastly, *The irreducible minimum of Europeans.*—If England thinks that a certain number of European officers and a certain strength of the European Army *must* always be maintained in India, she must be prepared to pay a fair share of the cost thrown on India for the purpose, the maintenance of British supremacy in India being a matter affecting the most vital interests of England.

18,529. And also the most vital interests of India?—Therefore, I say, the charges should be divided between the two.

18,530. (*Sir James Peile.*) You have quoted this resolution of 1888, of the Government of Lord Dufferin, I think?—Yes.

18,531. What you refer to is this 17th paragraph, I think (*showing book to witness*)?—Yes, and the 18th.

18,532. And the 18th. What the Government of India says is this—you consider that it said that the educational expenditure should be stopped?—I did not say "stopped"; I said they should be "a constantly "diminishing quantity." You will see they have put it more clearly in the next paragraph at the bottom.

18,533. The point is to see under what circumstances and under what conditions the Government of India proposed that it should be reduced?—Yes.

18,534. Would you read it?—Yes. "Passing from "the statistics of attendance at the various classes of "Indian schools and colleges to the expenditure on "education, we find that in 1881–82 the total "expenditure on public instruction in India was, in "round numbers, 186 lakhs of rupees. Four years "later (in 1885–86), the total had risen to 240 lakhs; "and last year it stood at a little over 252 lakhs. At "the beginning of the five years the government bore "73 lakhs of this expenditure, while local and "municipal funds contributed 32 lakhs; the balance "of 81 lakhs, consisting of fees, subscriptions, "endowments, &c., falling on the public. In the year "1885–86 the share of the Government is shown at "80 lakhs; that of local and municipal bodies at 48; "and that of the public at 112 lakhs. The share "assigned to local bodies, however, is not entirely the "proceeds of local taxation, but includes an item of "4½ lakhs contributed by government, so that in "effect the share of Government at this period stood at "about 84½ lakhs. Next year the shares are shown "at 85½ lakhs for Government, 49 lakhs for local and "municipal boards, and 117⅓ lakhs for the public. "But of the 49 lakhs expended by local bodies, 6½ were "contributed by Government, so that there has been a "progressive increase in the Government expenditure. "The Governor-General in Council considers that the "growth of the share borne by local bodies should, for "the future, exhibit a more marked increase than it "has done since 1885, and that there should be a "tendency to decrease rather than to increase in the "share which now is defrayed from the public "treasury." Then comes, further, this:—"The "Government of India recognises its responsibility "to provide so far as its finances permit, facilities for "the education of the people. But in educational, as "in all other matters, it is the policy of the Govern-"ment of India to avoid entering into competition "with private enterprise; it pioneers the way; but, "having shown the way, it recognises no responsibility "to do for the people what the people can and ought "to do for themselves. When, therefore, local effort "or private enterprise shows itself able and willing to "supply the educational wants of the people in any "locality, it is the policy of Government to retire from "the field of direct instruction and to help by reason-"able subventions of money the operations of indepen-"dent institutions. Under this policy it is the aim of "the Government also, wherever there is vitality of "private effort, to restrict official action to the main-"tenance of a few schools, in which the system of "instruction and discipline shall afford a standard for "the emulation of private or aided institutions in the "neighbourhood. In pursuance of this policy, the "expenditure from provincial revenues on Government "educational institutions should not ordinarily increase "in proportion to the total expenditure, but should, "rather, be a constantly diminishing quantity, pro-"vided that there is the assurance that the ground "abandoned by the Government shall be occupied by "local effort."

18,535. You see the last words "provided——"?—These inconvenient provisos are likely to be forgotten, and only the idea carried out in practice.

18,536. I think the proviso at the end is an essential part of the document, is it not? The Government will not diminish its contribution, *unless* it is assured that the place of that contribution will be taken by private funds. The whole paragraph is entirely in favour of local self-government, is it not?—Well, so far as this sort of expenditure is concerned, of course Government would throw the responsibilities on the Provincial Governments. I would mention one point. During the four or five years previous to the issue of this Resolution, in consequence of the orders issued by Lord Ripon in 1884, the educational expenditure had been increasing in a fairly satisfactory manner, but from 1890 it has been at a standstill. For the last five years there has been only an increase of Rx. 30,000, when in England you have gone from 5,000,000*l.* to 9,000,000*l.*

18,537. That is an increase in the Government expenditure?—Of Government expenditure.

18,538. But has the expenditure from local funds and other sources increased or not?—Oh yes, it has increased.

18,539. Then the purpose of the Government in that paragraph has been fulfilled?—That is not my point. Language such as is used in this Resolution would not have been held in the House of Commons by any responsible minister during the recent debates on the Education Bill, to the effect that Government were to recognise no responsibility to do for the people that which the people can and ought to do for themselves.

18,540. (*Chairman.*) Yesterday you were reducing the Army to the unit of the European soldier, and in support of your view, you were quoting an officer of repute, namely, the late Sir George Kellner; and I think he estimated according to your quotation from him, that seven native soldiers were financially the equivalent of three Europeans, did he not?—Yes.

18,541. I was questioning the value of that reduction to one unit, because various people will vary in the way they look at it; and in support of that my attention has been called to Sir George Kellner himself. In 1873, he said, "the soldier is the true unit of military expenditure," I am quoting his evidence taken before the Select Committee on East India Finance, "in order "to get that unit, I propose to take four native soldiers "as equivalent to one European soldier, financially, for "the purpose of comparison." That rather shakes the authority, does it not?—One European soldier equal to——?

18,542. "I propose to take four native soldiers as equivalent to one European soldier"?—Financially?

18,543. For financial purposes?—Is that so?

18,544. I am bringing this divergence before you in support of my remonstrance against these somewhat arbitrary reductions of different classes to one denomination?—I was not aware of this expression of opinion on the part of Sir George Kellner, who was Accountant-General in the Military Department for a long time.

18,545-6. I quite admit your justification in quoting him; I only wanted to point out to you that, in quoting

high officers, sometimes they take such various views of the same circumstances that it does not suffice to build important financial conclusions on their statements?—Yes; but we are not military experts. We can take our stand only upon what these experts say. I was not aware of this other expression of opinion on his part, else I should not have quoted him.

18,547. (*Sir William Wedderburn.*) There is a point on which it was suggested that you might be able to inform the Commission; it is with regard to the action of Lord Elgin in regard to a petition which was presented to him at Poona. It is stated that that petition was returned to the persons who presented it, for some purpose. Do you know for what purpose; can you tell us the circumstances of that petition?—Yes. I was one of the secretaries of the Poona Sarvajanik Sabha at the time when we proposed to present an address to his Lordship. It was an address of welcome, and in that we had, as was the usual practice, stated our grievances, as we had done in similar addresses to previous Viceroys, Lord Ripon and Lord Dufferin, when they were in Poona, and we had also drafted our address in the same manner. There were, I believe, four or five paragraphs in that draft which referred to Imperial grievances, Imperial expenditure, and railway policy, and things of that kind, and there were four or five paragraphs which were about local matters. In India, we generally send these drafts in advance to the persons to whom the addresses are to be presented, to enable these high persons to prepare their replies, and so we sent this in accordance with that practice to his Lordship about 10 or 12 days before the time. We, however, received the draft back with an intimation that his Lordship declined to hear anything about Imperial matters, that he was in Bombay, and he only wanted to hear about Bombay matters, and he wanted us, therefore, to take out the four or five paragraphs that referred to Imperial questions, otherwise he would not accept the address. Now, our point, with regard to Bombay grievances was this, that we had the Governor there; we could go to him when we wanted. There were questions not in the discretion of the Governor, in regard to which we had to go to the Government of India. The Viceroy comes once in a way to Poona, and a political body, like the Sabha, would naturally take advantage of his presence to press upon him their grievances in regard to the whole country, in which all were equally interested. We had done that before in the case of Lord Dufferin, and in the case of Lord Ripon; but, in this case, Lord Elgin told us that, if the paragraphs were not omitted, he would not receive the address; and, on the principle of half a loaf being better than no bread, we omitted the paragraphs.

Mr. G. K Gokhale.

13 April 1897.

18,548. Can you state definitely what the last four or five paragraphs related to?—It is rather difficult to recall at this moment. There was, I believe, a paragraph about military expenditure, a paragraph about railway policy, a paragraph about the Jury Bill, which was at the time agitating the people. I cannot give all the points just now; but, if I had only a little time to consult newspapers, I could do so.

18,549. There was no objection raised to the form of the petition, on the score of the language not being respectful?—Absolutely none.

18,550. It was the substance of it that was objected to?—Yes.

18,551. You will, perhaps, not have so much personal knowledge of it—but are you aware that the same objection was raised in Madras by Lord Elgin?—I have read of it in the papers.

18,552. What was the result?—The Madras Mahajan Sabha took a firmer stand than we did, and they declined to present the address.

18,553. And the address was not presented?—The address was not presented. May I here volunteer information on a point connected with that? When Lord Dufferin came to Poona, there was also a little incident, but not exactly of this kind. The Public Service Commissioners had just been appointed by his Lordship, but the people in India were not satisfied with the constitution of the Commission. In our address we condemned the constitution of the Commission. We sent a draft of the address to his Lordship, and, although he did not raise any formal objection, an intimation was privately, and very tactfully, conveyed to us that, if our opposition was not quite so uncompromising, he would be able to make a statement on the subject, which otherwise he could not make. We modified our statement a little, and that satisfied him. But this was entirely private. Lord Ripon raised no objection to the address which was presented to him.

The witness withdrew.

(Adjourned.)

At the India Office, S.W.

FORTY-FIFTH DAY.

Thursday, 13th May, 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart, G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Mr. G. SUBRAMANIA IYER, Editor of "The Hindu," Madras, called in and examined.

Mr. G. Subramania Iyer.

13 May 1897.

18,554. (*Chairman.*) In what capacity, Mr. Iyer, do you come before the Commission?—As a Member of the Mahajana Sabha of Madras, a political Association representing Southern India.

18,555. Would you tell the Commission what posts you have held in India, or what special opportunities you have had of learning Indian opinion upon the questions which are before the Commission?—I have been a journalist for

Mr. G. Subramania Iyer.

13 May 1897.

the last 18 years, editor of "The Hindu" newspaper, and in that capacity I have had to study different questions bearing on the politics of India, and discuss them in my newspaper.

18,556–8. Your special knowledge is of the Presidency of Madras, is it not?—Yes.

18,559. What are the chief points in the administration and management of expenditure in India, which, in your opinion, deserve consideration?—These are the points. There are no provisions in the constitution of the Government of India to protect the taxpayers sufficiently against unnecessary and excessive growth of expenditure. What exist at present are inadequate or ineffective. The debate in the House of Commons, the Secretary of State and his Council, Section 55 of the Government of India Act, the Government of India and its Legislative Council, the system of provincial finance, are all parts of the machinery which have more or less failed to impose an adequate check on the growth of expenditure.

18,560. You say that existing checks have more or less failed to impose adequate check on the growth of expenditure?—Yes.

18,561. Does not that assume that the expenditure was not necessary?—Yes.

18,562. A point which requires proof?—Yes.

18,563. Will you develop your argument as to inadequacy of check?—Yes. In consequence, the expenditure of the Government of India in its military department has grown considerably within the last 12 years, and there is no certainty that in the coming years this expenditure will not grow. A forward military policy has led to constant frontier expeditions,* which have been very costly and have necessarily crippled the resources of the Empire.

18,564. You speak of the increase in the military expenditure; I think you have some figures in proof of that?—Yes.

18,565. Would you give them to us?—

		Rx.
Net expenditure, including exchange	1885–6	19,133,907
	1894–5	23,303,761
Net expenditure, excluding exchange	1885–6	18,692,977
	1894–5	18,830,900

18,566. Do not your figures show that, excluding exchange, military expenditure has not increased very much?—Yes, they show that.

18,567. Therefore, as far as these figures are concerned, they would appear to show that the great increase in the militar expenditure is due to exchange?—Yes.

The expenditure in the civil departments has also grown, as follows:—

Civil Departments, (1884–5 and 1894–5):	Rx.
The total net increase is	5,517,276
Of which Imperial share is	1,951,078
Provincial share	3,566,198

A chief feature of this growth is that the expenditure on services which are of direct benefit to the people, such as Education, Post Office, Medical Service, Police, Roads, &c., show but a moderate increase. These increases have led to fresh taxation amounting to more than seven crores, not including the increase in the assessments of land revenue.†

18,568. May not part of that increase of revenue arise from increase of consumption?—In some respects it does, my Lord.

18,569. And, again, have not revisions of the land revenue been a recognised rule of the Indian financial system?—Yes.

18,570. Do you know what share of the produce the Government takes; is it not moderate as compared with former times?—Yes, in theory it is supposed to be moderate, but in practice it is not moderate.

18,571. You have not the figures before you to show what the share of produce taken is?—No, I was under the impression that it was outside the reference of this Commission.

18,572. Quite so?—Owing to excessive expenditure, the Government has been obliged to enhance the burden on the cultivating classes. The assessment of land revenue is being increased at each revision, which it is now proposed, at all events in my province, to undertake and carry out at shorter intervals than has been the case till now. The duration of assessment used to be till now 30 years. But Lord Wenlock's Government proposed that it should be reduced to 20 years.

18,573. (*Sir James Peile.*) Do you know what the result of that proposal has been?—Yes; in reply to a question which was put in the Legislative Council of Madras very recently, all that the Government said was that each case would have to be decided upon its merits, that no definite reply could be given.

18,574. Was that the answer given by Lord Wenlock?—In the Legislative Council the reply was given by the Honourable Mr. Bliss, not by Lord Wenlock, if I remember correctly.

18,575. Was the question about Madras generally, or was it about Tanjore?—I think it was about Madras Presidency generally; I speak from memory, and am subject to correction.

18,576. But you are not aware of what the decision of the Secretary of State in Council is?—No.

18,577. You should wait for it before making up your mind?—In the Legislative Council of Madras the members put the question frequently. I do not think the reply of the Secretary of State in Council has been communicated.

18,578. They should keep on asking?—I think they will.

Years of deficit in the financial estimates are frequent, and even the surplus that is now and again exhibited is not a real surplus, being in many cases arrived at by cutting down grants in one direction, and suspending the normal growth of expenditure in others, or by borrowing, or by fresh taxation. The debt of the Government has increased, especially the sterling debt.

18,579. (*Chairman.*) I see you have prepared a note of surpluses and deficits running over a great number of years?—Yes.

18,580. Is your statement on the question of deficit based upon those figures?—Yes.

18,581. I observe that they run over a great number of years, with the result of a net deficit between 1849–50 and 1894–95 of Rx. 37,000,000?—Total net deficit, Rx. 2,839,202.

18,582. Rx. 37·2 million?—Taking the latest figures, my Lord, the net deficit is Rx. 2,839,202.

18,583. Ah, but you append a note showing the result of the finance between 1849–50 and 1894–5?—Oh, I beg your pardon; yes.

18,584. Showing a net deficit over the whole of that time of Rx. 37·2 millions?—Yes.

18,585. I will call your attention to this point. Is it not the case that the Mutiny in itself caused a deficit of more than that amount?—Yes.

18,586. And therefore the deficit to which you call attention is really the deficit of the Mutiny?—Yes, to some extent it accounts for it.

18,587. Had it not been for the Mutiny there would have been a surplus?—No, if your Lordship will turn your attention to the other figures I have given from 1884–5, including the latest figures for 1897–8, the total net deficit during the last 14 years comes to Rx. 2,839,202.

18,588. Quite so, that refers to a different period; your note refers to the long period from 1849–50 up to 1894–5?—Yes.

18,589. I only want to establish, with your consent, that the large deficit which you show over that period would really be covered by the deficit which arose upon the Mutiny?—I daresay.

* Between 1884–5 and 1894–5, excluding charges on account of Upper Burma, the total cost of special operations was no less than Rx. 4,925,877, (p. 84. vol. II.). If the estimate in 1895–6 of Rx. 318–900 and Rx. 1,750,000 for the Chitral Expedition be added, the accumulated cost in 12 years would be Rx. 7,153,696.

†

Year.	Customs.	Assessed Taxes.	Salt.	Provincial Rates.
	Rx.	Rx.	Rx.	Rx.
1884–5	1,029,943	511,828	6,507,236	2,791,461
1894–5	3,854,955	1,808,060	8,665,749	3,541,154
Increase	2,825,012	1,296,232	2,158,513	749,693
Total increase Rx. 7,029,450.				

18,590. That does not touch the point, to which you have just referred, of the deficit in the second period?—No.

18,591. You say, I think, that even the surplus that is now and again exhibited is not a real surplus. I do not quite understand what you mean by a real surplus. A surplus is the excess of income over expenditure. If there is such an excess, it is a real surplus, is it not?—What I meant was that the surplus is not due to any increased payments by the taxpayers resulting from their increased prosperity; it is merely an adjustment of accounts, or fresh loans, or fresh taxation, that is what I mean.

18,592. Fresh loans would not enter into the balance of income over expenditure, would they?—In some years loans have been utilised for the purposes of administration.

18,593. That is your point, that loans have been utilised for the purposes of administration?—Yes.

18,594. Services that you would maintain, but which ought to have been paid out of income, have been defrayed out of loans?—In some years.

18,595. Can you give us an instance?—Yes. In the financial statement for 1893-4, for instance, a loan of Rx. 3,000,000 was raised, and it was said that that amount, with other amounts, would be utilised for the public works, for the Secretary of State's Bills, and for other ordinary wants of Government.

18,596. For other ordinary purposes of Government?—Yes.

18,597. And you consider that, so far as the loan met the Secretary of State's bills and other ordinary expenses of Government, that was a meeting of the ordinary expenditure out of loans; that is your contention?—Yes.

18,598. (*Mr. Courtney.*) Was it pretended that a surplus was established by means of that loan?—At all events, it was utilised to decrease the deficit.

18,599. (*Chairman.*) But again, you say that surpluses are in many cases arrived at by cutting down grants in one direction or another?—Yes.

18,600. But a surplus produced by reduction of expenditure is a real surplus, is it not? Are you not entering there upon a different question, namely, whether the reduction of expenditure was wise? If the reduction of expenditure produced a surplus, that was a real surplus, was it not?—That reduction of expenditure imposed fresh obligations, my Lord. They have to meet that deficit in some subsequent years; I had in my mind the Famine Grant for instance. They reduced it in one year, but that does not relieve Government of the obligation; they have to incur the same, or increased, expenditure in subsequent years.

18,601. You do not mean by that expression to deprecate a reduction of expenditure?—Oh yes, I do in regard to this instance, especially in regard to Famine Grant.

18,602. But in times of financial pressure, if equilibrium is to be maintained between income and expenditure, there are only two methods of effecting that equilibrium?—Certainly.

18,603. Either cutting down expenditure or increasing taxation?—Certainly.

18,604. In such a case as that, I presume you do not go so far as to deprecate a reduction of expenditure?—No, not in regard to that special instance; but on the whole the policy redounds to the disadvantage of the taxpayer, that is what I mean.

18,605. Will you proceed?—The debt of the Government has increased, especially the sterling debt. The present famine has made the Secretary of State propose a sterling loan of 3½ millions, besides the 4 million Rx. which the Government of India proposes to raise. The fact that no sinking fund can be provided and that the amount of interest payable every year will necessarily rise, ought to weigh against an endless accumulation of debts. Unlike other countries, the indebtedness of India involves payment of large amounts to persons who are not natives of the country, and the foreign payments constitute a serious economical and political evil. The recent conversions have reduced the interest on the rupee debt; but this cannot be had recourse to frequently; it will shake public confidence in Government investments. I understood Mr. Stephen Jacob to say in his evidence that there has been a saving of 1 per cent. or 2,200,000*l.* in interest, and though, so far as it concerns the taxpayer, this saving rather more than counterbalances the increased payment due to the fall in exchange, still in consequence of the fall in exchange India cannot enjoy the benefit of this saving. Yet, in spite of these discouraging circumstances, railway construction is being pushed forward with great energy and the speed of the progress is such that it has caused general disapproval, which was given expression to last year and this year by certain non-official members of the Viceroy's Legislative Council. The famine insurance fund, which was created for the special purpose of undertaking measures to protect the people against famine, has not been provided for every year;* and during the last three years it has been reduced permanently to one million Rx. from one and a half millions which it was in theory. Sir James Westland's explanation is that all the important protective works have been carried out, and that there is no longer need for the same amount of one and a half millions being spent. If that were the case, either taxation should be remitted or there should be more money spent for the benefit of the poorer classes.

18,606. You speak of the increase of the debt. On what occasion has India borrowed in the interval of which you speak for other than reproductive purposes?—I can only speak from memory, my Lord; it borrowed for famine.

18,607. Within the period of which you speak? I was under the impression that you were speaking generally of the period since 1884-5?—The loan I speak of was borrowed before that time.

18,608. Yes?—In this year they are going to borrow money not exactly for reproductive purposes.

18,609. For the famine?—For the famine.

18,610. Quite so, but are there any other occasions? These are very serious occasions, in which it is necessary to incur a large extraordinary expenditure, which could not reasonably be expected to be defrayed from ordinary income?—I will just refer to another instance in 1893-4, when they borrowed, I think, three millions or so to meet, among other charges, ordinary expenses.

18,611. (*Sir James Peile.*) Do you know why they raised their loan in sterling in that year?—In 1893-4, because they had no money to meet their wants.

18,612. Are you sure?—I think I am sure.

18,613. Was it not at the time that the Mints were closed?—Yes.

18,614. And was not an enormous amount of rupees kept in the Treasuries in India?—Yes. I am referring to loans raised in India. A loan of three millions was to be raised in India.

18,615. But you understand that rupees were kept in the Treasuries in India for a certain financial purpose. Instead of that, money was borrowed at home, was not that so?—I beg your pardon. I am referring to a loan that was raised in India.

18,616. We were speaking of sterling borrowing, were we not?—Yes.

18,617. And you said there was sterling borrowing at home for other purposes than for public works and the like. I asked you whether there was not a reason for borrowing in sterling in the year 1893-4?—Oh yes, in that year there was, of course.

18,618. (*Chairman.*) You say that the indebtedness of India, unlike that of other countries, involves payments to aliens. You are aware that almost every country, except perhaps three or four leading European countries, whenever they have occasion to borrow, place the loan in foreign markets—take such a case as Australia?—Yes.

18,619. Australia is constantly borrowing, and, I think you may say, always in the London market?—Yes.

18,620. She is borrowing usually for reproductive purposes, and it is not generally held that that indebtedness is bad economy? I call your attention to the point, because of your making a distinction between India and other countries which I think is hardly tenable, is it?—In addition to other peculiarities of the economical condition of India, this aggravates the evil. Constantly money is drained out of the country for other purposes, and, added to that, this flow of money into a foreign country aggravates the evil.

18,621. I quite understand your argument upon that point, but it is the phrase that you use, "unlike other countries." I would put before you that it is not unlike other countries. There is no distinction between India and the countries that I have mentioned in that respect?—Yes.

18,622. You say that, in spite of the discouraging circumstances, railway construction has been pushed forward with great energy and has given cause to general depression?—Yes.

* *See* Q. 10,644, Vol. I. p. 314. The average, including the year 1896-7, is Rx. 1,165,261.

Mr. G. Subramania Iyer.

18 May 1897

18,623. Generally speaking, are you opposed to the construction of railways?—No.

18,624. Your contention is that the construction of railways ought to be moderated?—Yes.

18,625. In accordance with the resources of the people?—In accordance with the resources of the people.

18,626. In accordance with the ability of the Indian Government to meet the expense out of income?—Yes, that is what I mean.

18,627. (*Mr. Courtney.*) Out of income?—It might be out of borrowed money, but only, I contend, that the expenditure should be more moderate.

18,628. (*Chairman.*) But you do not extend your criticism to this, that railways ought to be constructed out of income?—No, no.

18,629. Within moderate limits, you would construct them out of borrowed capital?—Yes.

18,630. Your criticism is that expenditure has been pushed forward at too fast a rate for India?—That is the point. Especially with regard to military railways, I would not object to loans being raised for them and the railways constructed, but, as regards ordinary railways of a commercial character, I certainly think the progress might be more moderate.

18,631. You speak of a reduction that has taken place in the amount which, you think, was promised to be set aside for the Famine Insurance Fund. Do you consider that the Government should increase Indian expenditure now by Rx. 500,000 a year for the Famine Fund, even though the Government itself does not think that expenditure necessary?—I cannot say that it can do so this year especially, but I am speaking in a prospective aspect. The policy of Government in the past as regards that fund has often been wanting in regard to obligations it has incurred on behalf of the people. Perhaps in this particular year it would not be justified in spending a large amount; but I daresay in subsequent years when Government is in more prosperous circumstances, it is certainly bound to spend more money for that special purpose.

18,632. That is your view?—Yes.

18,633. It is a perfectly fair view to put forward; but, if the Government itself thinks that a million a year is a sufficient sum to set aside against famine, do you think that they would be justified in making that fund Rx. 1,500,000, thus imposing Rx. 500,000 on India which they do not think necessary?—It might be spent for other purposes concerning the interests of the poorer classes, for whose protection the Famine Fund was raised.

18,634. Would you describe the people of India as an agricultural people?—Yes.

18,635. (*Sir Andrew Scoble.*) Do you know how much of the Famine Fund has been applied since its establishment to the reduction of the public debt?—I think about Rx. 5,500,000.

18,636. Do you know what the extra charge expected to be thrown upon the Government by the present famine amounts to?—Last year it was about six crores; I think the revised estimates were about Rx. 6,000,000.

18,637. Then the reduction of debt and the increased expenditure on account of the present famine just about balance one another, do they not?—Yes

18,638. (*Chairman.*) Will you go on?—In the face of an almost crushing embarrassment, the Government of India, in 1893, decided on giving compensation allowance to its European employes. In that year the amount was 63 lakhs odd, and in subsequent years it amounted to more than a crore. The Government was unmindful of the fact that its European employes were not legally entitled to that compensation, and that the taxpayers, from whose pocket the amount of the compensation must come, were affected far more injuriously in several ways than these high-paid officials. Any consideration from the State was due to the weaker party. There is a great drain of money from India to England by the excessive employment of foreign agency, not only in the various branches of the public service, but also in the administration of railways. Every foreign enterprise in the country is a source of drain. This drain mainly, along with other causes, is steadily impoverishing large classes of people, and bringing to the surface the most serious problem of a large pauper population. I shall make only one quotation from a Government Resolution in 1888.

18,639. May I ask what Resolution that was, on what occasion was it issued?—Lord Dufferin wanted to have an inquiry made into the condition of the agricultural classes in pursuance of the policy recommended by the Famine Commission, I believe, and this Resolution summarised the result of that inquiry. This is the quotation:—"It may be briefly stated that, over the greater "part of India, the condition of the lower classes of the "agricultural population is not one which need cause any "great anxiety at present. The circumstances of these "classes are such as to secure in normal seasons physical "efficiency for the performance of agricultural work, "though in the tracts classed as 'insecure' there is always "a risk, in the event of the failure of the rains, that the "more indigent classes of the people may be overtaken by "distress in various degrees and forms, and be deprived of "wages ordinarily provided by the agricultural operations "on which in normal seasons they depend for their "livelihood."

18,640. I think your quotation points, does it not, to a difficulty in the future, namely, that the population may become too numerous for the soil?—I do not follow your Lordship.

18,641. You bring forward this quotation, I think, in proof of the distressed condition of the agricultural population?—Yes.

18,642. Well, I say, does not your quotation point to a difficulty of which one occasionally hears, namely, the risk that the agricultural population of India may become too numerous for the soil to support?—It may become so. I suppose the agricultural population increases in all parts of the world.

18,643. Your quotation appeared to me to be made for the purpose of bringing before us the condition of the agricultural population; and the constant increase of the agricultural population adds to the danger?—The point I want to make out is this. Even in normal seasons their standard is only just what would give them physical efficiency for the performance of agricultural work, and these normal seasons are few and far between, and very frequently abnormal seasons crop up, and people are immediately upset at the first appearance of an abnormal season; and therefore I contend the policy of the Government must be to give those people who are subject to such frequent risks a fair margin for such risks, taking normal seasons and abnormal seasons together.

18,644. That is to say, at present there is a difficulty in providing a comfortable subsistence for the people from the soil?—No difficulty at all; if only the Government policy to the cultivator in regard to assessment and general measures of administration were more moderate and more considerate to the people, I believe the populations of India would be as well off as the population of any other part of the world.

18,645. Listen to the words you quoted: "The condition "of the lower class of the agricultural population is not "one which need cause any great anxiety at present. The "circumstances of these classes are such as to secure in "abnormal seasons physical efficiency for the performance "of agricultural work, though in the tracts classed as "'insecure' there is always a risk in the event of a failure "of the rains that the more indigent class of the people "may be overtaken by distress." When you quote these words, do you not mean that there is a difficulty in keeping the present agricultural population in a comfortable position?—The difficulty arises from the policy of the Government, that is what I want to make out.

18,646. What has the Government to do with it?—The Government burdens them with additional taxation every time it revises the assessment, and in regard to other matters also the general burden of taxation is so heavy that the mass of people have hardly any margin for their livelihood in times of difficulty.

18,647. (*Mr. Naoroji.*) And I think you said that the drain caused by the political condition of India is a great cause of this want?—Certainly it is one of the causes of this anxious condition of the agricultural classes.

18,648. (*Sir Ralph Knox.*) Notwithstanding this, the population increases very rapidly, does it not?—I cannot say it increases very rapidly; my impression is that the population of India does not increase more rapidly than that of certain other countries.

18,649. (*Sir Andrew Scoble.*) Take the case of Behar, is not the growth of the population there enormous?—I do not know. I cannot say what the rate of growth is in that particular province, but my impression is—I am speaking subject to correction—that on the whole the population of India does not increase to any particular extent more

rapidly than the population of other countries. At all events, there are some countries in the world where the population increases as rapidly as the population of India, yet the condition of the agricultural population there is not so bad as the population of India.

18,650. Can you give an instance?—An instance of what?

18,651. Of a country where the population increases as rapidly as in India and where the condition of the people is better?—No, I am sorry that I cannot give an instance off hand.

18,652. (*Chairman.*) But I think it is evident on the population returns before us that the population has increased and is increasing?—Oh, yes.

18,653. And, if you take an interval of 20 or 30 years, the increase is very large?—Oh, yes.

18,654. Do you think it an important thing to endeavour to find fresh employment and open new classes of industry to the people of India?—Certainly; that would give them great relief.

18,655. That would be one means, would it not, of meeting the objects which the Government had in view when they issued this Resolution which you have been quoting?—Very likely.

18,656. (*Sir Andrew Scoble.*) Is there not a strong disinclination on the part of the natives of India in many districts to leave their own homes and try other parts of India where there is more room for them?—There is, but I think it is becoming less marked nowadays.

18,657. It is diminishing, is it not?—It is diminishing.

18,658. Now that facilities of travel have increased by means of railways, people travel more, and have not the same objection to leaving their native villages?—No. They are even willing to go abroad outside India for a livelihood now.

18,659. (*Sir Ralph Knox.*) In that way railways have been a great educator of the people?—Certainly. Still, with all the advantages, there is a limit to the expenditure on railways.

18,660. (*Chairman.*) But you would advocate the opening of new industries as far as possible?—Certainly.

18,661. Well, have you ever considered how that can be done?—Yes, it can be done in several ways, my Lord. People themselves may show more enterprise, and the Government may help those enterprises in certain ways.

18,662. But, if Government interfered to encourage those industries, capital would be necessary, would it not?—Yes.

18,663. Therefore, the introduction of foreign capital could not be such an evil as, I should gather from your statements, you think it?—All these cases I want to put together, my Lord. Each in itself separately may not be such a very serious evil; but still, looking to the special conditions of India, money is ever drawn out of the country by the necessary employment of foreign agency to a certain extent. Every foreign enterprise unfortunately is exercised to the detriment of the people. In certain aspects foreign enterprises are to the good of the people; they employ large classes of people, no doubt.

18,664. But you speak of the people of India being bled. Let me put such a case as this; supposing by the introduction of capital a new industry is opened and profitable employment is given to the people. Do you think that the interest upon that capital which is doing benefit to the people of India, can be fairly described as bleeding the country?—I would not look at it in that way. I would take the whole together over a series of years. In one year, or in a certain locality, those things may do good; but, when a large amount of capital is invested in the country, the number of other persons employed in the country feed themselves upon the proceeds and the profits of the industry, and they carry away a large proportion of their earnings; and over a long series of years they cripple the energy of the people, the resources of the people, and render them more and more unfit for independent enterprise; that is what I want to urge.

18,665. When you speak of the country being bled by this drain, your words appear too sweeping, because the only conclusion one could draw from them is that, if the interest on the whole of this capital which has been supplied by foreign capitalists is bleeding the country, it has been all wasted money?—I did not apply that expression to the enterprise specially, my Lord; I had in my mind more especially the official agency; this also operates in the same direction.

18,666. But you would admit that a certain qualification must be made in that statement, to whatever extent it can be shown that the foreign capital introduced has been opening up the country and giving means of fresh employment? So far, may I take it, you would somewhat modify that very strong statement that the foreign drain bleeds the country?—So far as that is concerned, I would qualify it.

18,667–8. (*Sir Ralph Knox.*) But is your statement practically much more than this, that it would be much better for India if the capital were raised in India?—Certainly.

18,669. You would like such a condition as that, that the capital should be raised in India?—In India, as far as possible.

18,670–1. Do you think it is possible to raise in India for this purpose more capital than has been raised?—May I ask what you have in your mind especially?

18,672–3. Is it to be assumed that there is no capital in the possession of Native Indians of all classes to be invested in this way?—In the industries, you mean?

18,674. Well, for all these purposes; is there no capital in the hands of the Indian?—There is capital, of course.

18,675. Is it invested, however, for these purposes?—To some extent native capital is invested, but the great fact is that hardly any capital is allowed to grow in the country.

18,676. But you said just now that there was no capital in the country?—There is some little capital, of course.

18,677. But it is not invested to any very large extent for these purposes?—So much of it as is available for these purposes, I daresay, is invested.

18,678. (*Chairman.*) But is it not the case that people possessing capital in India can lend out their money in India at much better rates of interest than that which the Government gives; and that, therefore, they are not willing to invest in a security that gives them a smaller return than that which they can obtain in the country?—I am not sure whether that applies generally in regard to small capitalists that they are unwilling to invest in these enterprises, because they do not yield any large interest; but in big cities such as Bombay, Madras, and Calcutta, I daresay, there are capitalists who are willing to invest their money in railways and other enterprises, and for small interest.

18,679. As a matter of fact, the Indian capitalist is not a great lender to the Government, is he?—No, I do not believe he is.

18,680. (*Sir Andrew Scoble.*) The introduction of foreign capital has very much reduced the current rate of interest throughout India, has it not, within your experience?—I am not sure that the current rate of interest has been reduced at all. In out of the way places, I do not think it has been reduced.

18,681. What is the current rate of interest in Madras now among the natives?—It depends on the amounts lent, they lend one, two, five, ten rupees, and they get about six pies for every rupee.

18,682. That is how much per cent.?—Six pies would mean half an anna in 16 annas, that is about 3 per cent. a month, I think.

18,683. Did you say 3 per cent. a month?—Yes.

18,684. That is 36 per cent. a year; that is pretty good, is it not?—They get six pies for every rupee lent, that is, 36 per cent. per annum.

18,685. No doubt then they do not care to put their moneys into railways and spinning industries, which only yield them about five or six per cent. per annum?—These people are small capitalists who lend small sums of money in ordinary ways, they do not care for investments of other kinds; but there are capitalists in big cities, as I was just saying, who are willing, and who do invest their capital, so far as I am aware, in railways and other enterprises.

18,686. There have been two cases in Bombay lately, I think, in which small railways have been built, mainly with native capital, the Ahmedabad-Parantij Railway and the Tapti Valley Railway?—I am aware of one in Calcutta which is said to be mainly the enterprise of natives.

18,687. Yes, is that the Tarkessar?—Yes.

18,688. That is not a peculiarly native enterprise, is it? It is local capital, European as well as native?—I do not know. It used to be said that it was one of those railways which were constructed out of capital raised in the locality.

18,689. Raised in India?—Yes.

Mr. G. Subramania Iyer.

13 May 1897.

18,690. But till lately, there has been no great development of enterprise in India by purely native capital, has there?—No, for the simple reason that there is no capital in the country, very little capital.

18,691. Is it not for the simple reason that they can get a higher rate of interest by lending their money on their own terms among their own people?—I do not believe that applies to the big capitalists. As a matter of fact, some have invested their money; more has not been invested, because there is no more money.

18,692. Take the great native capitalists, the great Shroffs, is not their business mostly in regard to transactions in *hundis*, native bills of exchange?—Yes.

18,693. Do you know what the average rate of interest upon these transactions is?—In Madras, they get 24 per cent. a month sometimes.

18,694. That is better than the return they would receive from an investment of their capital in railways or in spinning mills?—It is.

18,695. (*Mr. Naoroji.*) Is not most of this capital coming from the Native States? At least it is so in Bombay, I do not know how it is in Madras?—I am not sure, I cannot say where most of it comes from, because I am not aware. Some portion at all events comes from Native States.

18,696. Is not this high interest owing to the want of capital, because there is scarcity of capital?—Certainly, that is what I am driving at, what I want to make out.

18,697. In British India, there is no investable capital?—There is not.

18,698. (*Sir Andrew Scoble.*) Surely you know the great firm of Luckmichund of Muttra, do you not?—No, I do not.

18,699. That is one of the biggest firms of India that deals in *hundi* business?—Yes.

18,700. (*Mr. Naoroji.*) There are very few in British India; the Marwari and Kathiawari capitalists are all from Native States, are they not?—Perhaps; that I do not know.

18,701. (*Sir Andrew Scoble.*) Yes. The heads of the firms live in Native States, but their *gomastas* come into British India and carry on business there?—Is that so?

18,702. Yes?—I cannot say, I have not given my attention to the question whether capitalists come from Native States or not; but this I say, there is very little capital in the country invested in those enterprises, and that is due to the fact that little money is allowed to remain in the country; for several reasons money flows out of the country, and people become poorer and poorer; therefore there is not much capital left for investment in these objects.

18,703. Have you considered at all the amount of gold and silver bullion imported into India in late years?—Yes. I do not believe that affects the question in any way at all.

18,704. What becomes of it?—I daresay most of it goes into Native States for ornaments.

18,705. And only into Native States for ornaments?—Much of it.

18,706. Do you know any part of India in which there is not a large proportion of the population who wear silver ornaments or gold ornaments, in one form or another?—I have heard this argument advanced frequently, but nobody has calculated the value of those ornaments; as a matter of fact, even the poorest classes wear some ornament, but that ornament is worn more as an indication of their married state in many cases; they look upon a gold and silver ornament as an indication of their married condition; they would not part with it for any consideration.

18,707. That condition applies, does it not, to British India as well as to Native States?—I have not much experience of Native States, because, in Madras, the only Native State is Travancore.

18,708. You do not mean to say that the possession of silver and gold ornaments is confined to the inhabitants of Native States?—What I say is that the possession of silver and gold ornaments does not indicate prosperity; does not indicate possession of capital.

(*Sir James Peile.*) But it is a resource in case of famine, it is a resource in the last resort; when it comes to the point of starvation and death, they will part with their jewels.

18,709. (*Sir Andrew Scoble.*) But the possession of these ornaments is really a savings bank for the native agricultural population throughout India, is it not?—No, I would not call that a savings bank. A savings bank is an institution into which people put what they can spare.

18,710. (*Sir James Peile.*) Are you aware that in the famine of 1876-78 ornaments which were turned into Rx. 4,500,000, were sent down to the Mints by the people from the famine districts?—Yes, I have heard of it.

18,711. Well, that is a resource, is it not?—Yes, but only in the sense in which, if your Lordship will excuse my saying so, the people in this country will part with their ties and collars when they are put to an extreme; you would not call that a resource; there they do it when they are driven to a most desperate state.

18,712. (*Chairman.*) The tie or collar of an indigent man here could hardly be put in comparison with an ornament of gold or silver worn by a native of India?—I referred to that to show that the ornament becomes part and parcel of the native's attire.

18,713. (*Sir Andrew Scoble.*) You do not put a silver ornament on the same footing as a linen collar, do you?—In some cases I would do so. It is as much a necessity as the wedding ring is in this country; they look upon it as part and parcel of their personal equipment.

18,714. (*Mr. Naoroji.*) Is not that amount of gold and silver quite small compared with the immense population over which it is distributed?—Very little.

18,715. And individually it comes to a very small amount?—Very little. It is a few grains. Sir James Westland stated that it would only amount to a few grains of silver apiece, if it were divided among the population of India.

18,716. (*Sir James Peile.*) Do you ascribe the asserted decline in agricultural prosperity to the increase of the land revenue assessment on revision?—That is one of the causes; I have mentioned it as one of the causes for their depressed state.

18,717. You are interested in the Tanjore district, are you not?—Yes, I am.

18,718. Would you say that in the Tanjore district the increase of the assessment has affected the prosperity of the agricultural classes?—Yes, certainly, it has affected them materially.

18,719. The last settlement, in fact the one still in existence, I think, was made in 1859?—No, they revised it very recently, two or three years ago.

18,720. Exactly, that has just been introduced; has it been introduced?—Yes, it has been; it is in operation now.

18,721. The previous settlement was in 1859?—I am not aware. I do not know.

18,722. Was it not notoriously an extremely light assessment, that in 1859?—So the Government said.

18,723. You have not studied it?—No.

18,724. Now, do you know what the increase upon revision was? How much per cent.?—Yes, including the cess, I think it is 15 lakhs, Rx. 150,000.

18,725. I mean what percentage on the former assessment?—I cannot say. I suppose it is 30 or 35 per cent.

18,726. I will tell you, if you like; it is 32 per cent.?—Yes, 32 per cent.

18,727. Over the previous assessment; can you tell us what percentage on the gross produce the previous assessment was, that of 1859?—No, I cannot say.

18,728. Are you aware that the Famine Commission worked out the incidence of the assessment on the gross produce, and brought it out at an average of 7 per cent.?—Yes.

18,729. Now, supposing that to be the case in Tanjore, if you added 32 per cent. you would get up to about 10 per cent. of the gross produce, would you not?—Yes.

18,730. Are you aware that in the examination of Tanjore for the purpose of this revision, it was ascertained that the prices of produce had risen more than 100 per cent. during the time of the settlement?—All I can say is that the last revision has placed an addition of 35 per cent.; and this assessment has been so unequal, and done in such a haphazard fashion, that people have now to pay, after the revision, about 50 per cent. more—cent. per cent. more in some cases.

18,731. (*Mr. Naoroji.*) I understood you to say that, as the question of revenue and assessment, in all its departments, does not come within the reference, therefore you did not particularly prepare yourself for it?—That was my impression; otherwise I should have come with more facts

on that question. I myself consider it a very important question; but, as I understood it was not within the reference to the Commission, I did not come prepared with facts.

18,732. (*Chairman.*) That, no doubt, is the case. We desire to give a certain amount of latitude to witnesses, in order that they may express their views freely; but of course, if you do raise the question, you must be prepared for some questions being put to you upon it?—Yes.

18,733. (*Sir William Wedderburn.*) With regard to the question of over-population in India, is it not the case that, if the cultivator were able to employ capital for irrigation and manure, the land could bear a very much larger population than it does at present?—Certainly. He is not able to do so under present circumstances.

18,734. You attribute that to faults in the administration, owing to which an industrious and frugal population has not an opportunity of agricultural enterprise?—Yes, that is what I meant to say.

18,735-6. And therefore the population at present is too large for the land, because the land does not get fair play?—Yes.

18,737. (*Mr. Mowbray.*) When you say that he has not got an opportunity, you mean that he has not got the capital? You do not mean that the Government in any way puts an obstacle in the way of his employing any capital which he may have in hand?—What I mean to say is, the Government takes away the margin which the ryot has over the requirements of his livelihood. He is not allowed to have any surplus money in his pocket to improve the land; and, further, what improvements he effects in the land are swept away in the next revision. This uncertainty has prevented many a well-to-do man investing any money in the cultivation and improvement of the land.

18,738. Would you say, on the figures Sir James Peile put before you, that the whole improvement had been swept away?—I do not say the whole improvement.

18,739. I so understood you?—A large portion, a substantial portion of the improvement.

18,740. (*Sir Ralph Knox.*) Does the cultivator carry on his business with any capital at all?—In many cases without any capital; the poorest class of people have hardly any capital.

18,741. Yes, but is it not necessary to have some capital in order to carry on the business?—Well, in many cases he has got a few head of cattle and a plough, that is the only capital he has.

18,742. He has not to borrow?—He has to borrow whenever he is driven to a strait; but he borrows more for his livelihood than for his cultivation.

18,743. The cultivator is generally a borrower, is he?—He is.

18,744. From whom does he borrow?—From the money-lenders.

18,745. The money lender, then, has capital?—Yes, he has.

18,746. (*Mr. Naoròji.*) With regard to the increase in population, are you aware that the percentage of increase in this country, in England, is greater than the percentage of increase in India?—That was my impression when I first mentioned that fact that in other countries population rose, at all events, as quickly as the population in India.

18,747. (*Chairman.*) You speak of the heavy taxation of the cultivator. Have you at all worked out what the charge on the Indian cultivator is—what taxes he pays?—I am sorry I have not worked out the figures exactly.

18,748. But, generally speaking, you would know what taxes he pays?—He pays the salt tax; he pays several duties for forest produce; if he wants to drink a little toddy, he pays a duty.

18,749. For forest produce?—Yes.

18,750. But, surely, that is a payment for produce obtained?—He used to get it all gratis formerly.

18,751. (*Sir James Peile.*) He helped himself to it from a Government forest?—Yes.

18,752. (*Chairman.*) Is it not the case that forest administration was undertaken merely for the benefit of all India to prevent the destruction of the forests, which I understand was in very fast progress, when they were left unattended?—I daresay, in the long run, it may be good to the people in the way of supplying them with manure, material, and firewood, and so forth; but the produce which they used to get for nothing they have to pay for now; especially for the grazing of their cattle they have to pay, which they used to get without payment formerly. In all these ways this forest administration has added to the difficulties of the village people.

18,753. Taking the salt duty, can you say what the amount of the duty is now compared, we will say, with 30 years ago? Is it less or greater?—I think it is greater.

18,754. (*Sir James Peile.*) Is it not less in Bengal?—I am not aware of the state of things in Bengal. In Madras and Bombay it is now 2 rupees 8 annas per maund. And another fact is, people used to get their salt for nothing; they used to go to some brackish place, and melt the earth and get the salt out of it.

18,755. It was very bad for them, was it not?—Well, but they did not pay anything for it; now they have to pay for it.

18,756. (*Chairman.*) And were these brackish soils universally at hand, so that they could supply the whole population of India?—A large part of the population, my Lord; and in the grazing of the cattle they used to give a little salt to the cattle. That they got for nothing; now they have to purchase it.

18,757. (*Sir James Peile.*) Were they not largely supplied by Brinjaris, who carried the salt in sacks on donkeys?—I have not seen that in my part; it is not so in Madras. Every pinch of salt they get they have to buy.

18,758. That would be on the coast of Madras, but not inland; you would not get any natural salt on the Neilgherries?—No salt is given for nothing now, that I can say.

18,759. (*Sir William Wedderburn.*) The amount of the duty for one anna's worth of salt according to the cost of production, is about 20 annas. I think the amount of the duty is about 20 times the cost of the salt, is it not?—Yes, I think so; I think it was about 2,000 per cent.

18,760. (*Sir James Peile.*) Do you know what a pound of salt costs in India on the average?—I do not know.

18,761. We brought it out at ·65 of a penny. And how much does a man consume in a year?—I have not worked out all this.

18,762. About nine pounds, I believe?—Yes; still the cost of salt is a material element in the cost of living; it must be borne in mind that the people of Southern India especially are a vegetable-eating people, they consume a large quantity of rice; they require a large quantity of salt, much larger than people subsisting on another character of diet. Their cattle they give a large quantity of salt to, and to a man earning two annas a day the cost of salt is a material element in his expenditure.

18,763. (*Chairman.*) Will you go on?—The general tendency to increase the expenditure should be controlled by giving to the representatives of the taxpayers in the various Legislative Councils a more direct and substantial voice in the legislation. The system of provincial finance, as it is now worked, does not altogether fulfil the object which it is designed to fulfil, and should be further developed.

18,764. You propose now to develop those two points, do you not?—Yes.

18,765. Perhaps you would proceed, then, with the administrative machinery, under which, I understand, you are going to show us the manner in which a better control over the finance of the country might be given?—Yes. I said above that the checks on the administration of expenditure provided in the constitution of the Government have proved mostly to be ineffectual. But it is patent that there should be checks which are fully effectual, and either those which already exist should be improved, or new ones should be provided. The President of this Commission himself observed in the course of its proceedings: "One great difficulty, of course, is that you have in India "always a present danger, namely, the constant emergencies "that occur, such as famine, which make it more desirable "than in a country like this that the financial situation of "the country should be kept essentially safe. I mean by "that, there should be, as far as possible, a good surplus "maintained against such emergencies. The general "tendency of the administration, unless it is very much "checked, is to work expenditure up almost to the limit "of the revenue"—an observation in which Sir Auckland Colvin expressed concurrence. This very much checking is sadly wanting. The existing safeguards may be taken thus:—There is first the British Parliament, which is finally responsible for the good government of India. But this responsibility it considers to be satisfactorily discharged

Mr. G. Subramania Iyer.

13 May 1897.

by an annual debate on the Indian Budget. We all know how ineffectual this debate is. As a rule it takes place long after the period to which the Budget under discussion refers is closed; it comes at the end of the session, when members of Parliament, after the wearying exertion of a busy season, are anxious to get away; and, as a fact, only a handful of members remain in the House to listen to the Secretary of State's exposition of the financial statement; and it cannot be said that all the members present possess a sufficient knowledge of Indian affairs or take an earnest interest in the subject of the debate. Parliament takes its responsibility easily, and leaves the Indian Minister virtually uncontrolled. The Indian Minister, who is the link between the Government of India and Parliament, rarely possesses a competent knowledge of Indian affairs. He is a Member of the Cabinet, and takes as much interest in British politics as in the affairs of the country over whose destiny he presides, for the time being. The influence of the India Office on the financial administration of India has not been always in favour of economy. The Secretary of State, acting in concert with his colleagues in the British Cabinet, occasionally chooses to over-rule his Council. He is assisted by a Council of which the members are supposed to be chosen for their special knowledge of India. But, in most cases, this special knowledge is antiquated. Things change rapidly in India, and it is exceedingly desirable that Members of the Council should vacate their appointments after a shorter period than ten years, and should not be eligible for reappointment as a rule. The worst evil in the position of the Secretary of State is that he is the mouthpiece of the officials of India and does not judge impartially between them and the people. Our great complaint is that against the decision of officials in India we have to appeal to a body consisting of the same officials with the same bias and the same views. The Secretary of State often looks at Indian questions through British politics, and this circumstance often makes him a biassed authority, preferring British interests to those of India. His decision in regard to the cotton duties, the cost of the Indian contingent to Suakim, and the occupation of Chitral, was viewed by the Indian public in this light. The India Office, on the whole, is not favourable to economy. It is not so, at all events, in regard to expenditure on railways. Section 55 of the Government of India Act was designed to operate as a check on the Secretary of State and his colleagues in the British Cabinet, when they may decide on using the Indian revenues in the execution of military enterprises for the advancement of British interests. But the highest authorities have admitted that it has entirely failed to produce this effect, and that some effective check is necessary. Looking into the figures during the last decade, I think that the real check that is wanted is not so much upon the Provincial Governments or even upon the Government of India as upon the Secretary of State, who is subject to no check practically when he sanctions one frontier expedition after another and incurs big expenditures out of the Indian revenues. Sir Auckland Colvin said: "In a country where "the taxpayer is an alien, and is not able to make his voice "directly heard, the need of giving close attention to "economy in administration is greater than it would other-"wise be." The idea is no doubt excellent; but in the actual business of a Government conducted by a foreign agency over a dependent people mere ideas are of no use unless they are embodied in the working constitution of Government. Nor do I think it practicable to give to the Finance Member of the Government of India more power than he now possesses, or to make the Secretary of State and his Council the Finance Minister's support against his colleagues jointly or individually. If he got the support of the Secretary of State, it would be indeed a strength to him. The best way to strengthen the hands of the Finance Minister is however to give him an opportunity of pointing to Indian public opinion, as constitutionally expressed in the Indian Legislative Councils, in support of his own views. The reform which was introduced in the constitution and powers of our Legislative Councils by the Parliamentary Act of 1892 should be carried further, and the Members of the Council should be empowered to vote on the different items in the Budget. There should be also more scope for interpellation in these bodies. The present rules should be modified so as to give to the non-official Members a wider discretion in asking questions. Often the interpellating member is shut out by the arbitrary decision of the Viceroy, or the head of the Provincial Governments, ruling the question to be inadmissible. Sometimes complaints are made that unofficial Members put too many questions, but it must be remembered that India is a vast Empire and the Legislative Council meets not more than half a dozen times throughout the whole year. I am not sure that the questions put in the Governor-General's Legislative Council for a whole year are so numerous as those put in the House of Commons in a month. The Government should show greater disposition to consult public bodies and individuals. Lord Ripon, when he was Viceroy, issued a resolution to this effect; but I believe that since his time the matter has been forgotten. The present Viceroy, in his last tour in 1895, did not encourage unofficial representations to him on public questions. He declined to receive addresses from public bodies unless these addresses dwelt on topics of no controversial nature. He objected to certain paragraphs in the address of the Sarvajanik Sabha of Poona, which referred to the re-imposition of cotton duties, to retrenchment of expenditure, and to the payment by the Government of the expenses of non-official witnesses that might be summoned by this Commission. He similarly objected to certain paragraphs in the address which the Mahajana Subha of Madras proposed to present. These paragraphs referred to the Government's decision in regard to Chitral, to the reimposition of the cotton duties, and to the heavy taxation of the agricultural classes. The Subha refused to omit these paragraphs, and did not present the address. There is a tendency, I apprehend, to neglect, not merely unofficial public opinion, but subordinate Governments also. The Government of my Presidency has often suffered for the fault of its being far away from the seat of the Central Government. Sir James Westland recently apologised to Madras for not sending his financial statement to that Presidency in advance as he sent to Bombay. After the publication of the financial statement sufficient time should be allowed before the debate, so that Members of the Council might have sufficient time to master the details of the statement, and produce a useful and effective criticism. There would then be time for public criticism also, and the non-official Members would be in a position to consult their respective constituents. Sir James Westland's explanation of the circumstances which rendered the present arrangement necessary illustrates the frequent disregard of public opinion by Government in India. He said: "19th (of March) is about the earliest "we can present it (the financial statement), and this "year it was nearly the latest also—if we were to "postpone it for a few days longer, it would cause consider-"able inconvenience to this Council, as the Council, "according to the usual arrangements, dissolves before "the end of March." These official gentlemen going to Simla cannot certainly be more important than an adequate consideration of the finance of the Empire. The discussions of the Provincial Budget in the Provincial Councils are useless, because all the allotments are previously submitted to the Government of India who have to approve of them, and the Members of the Council can only pass an academical criticism to be mostly disregarded by the Government. I think it is worthy of consideration by the Commission whether the Governor-General, who is the President of the Council, should be entrusted with the control of any particular department. His function should be to exercise a wholesome and judicial control over all the departments. His position should give him no interest in the expansion of any particular department. The Viceroy is in charge of the Foreign Department, which has a very large political area beyond the Indus, which causes very considerable expenditure. Sir Auckland Colvin's remarks in this connection are relevant. He said: "I think again that, with all its "advantages, the decentralisation scheme has weakened "the Financial Member's power a good deal indirectly "by throwing the balance of the Viceroy's interest into "a class of questions in which he has more direct "concern and over which he has now exclusive control, "such as the public works, military and foreign matters. "The Provincial Governments, since the decentralisation "scheme was introduced and elaborated, have taken the "internal administration of India from off the shoulders of "the Council, and of the Viceroy as representing the "Government, in a degree which before was never dreamed "of. The result is, I think, that the internal affairs of "India occupy less the attention of the Viceroy than the "external, which are costly. I am not speaking of the "rightness or the wrongness of it. The public works as "well as the military engage his time, and engage his "attention in a far greater degree." Since 1885, it is the common belief that military considerations have received greater weight in the decisions of the Government than financial, and questions connected with them have pushed into the background questions of internal improvement. Military affairs and the difficulties of falling exchange have divided the Government's attention, and for some time past the famine has engrossed the energy of the Government as well as of the officials. Lord Elgin expressed his regret, at a meeting of his Legislative Council in March last, that he had not been able to devote attention

to the all-important question of the material condition of the people. In illustration of this fact of the Government of India not being able to give sufficient attention to internal affairs, I can mention several other instances. The organization of an agricultural department has been in the preliminary stage for the last 25 years. Lord Dufferin had his attention drawn to the encouragement of technical education, and a "note" upon that subject was published in the Home Department. The subject has apparently been forgotten since then. In a resolution dated December 1887, the Government of India directed an analysis of agricultural tracts should be gradually set on foot with the view, firstly, of ascertaining in what parts of the Empire the agricultural population, and the lower classes of the people are suffering from an insufficiency of food or agricultural capital; secondly, of discovering the causes of any conditions of degradation which might be found to exist; and lastly, of suggesting or providing such remedies as might be found necessary or desirable. In pursuance of this plan, Lord Dufferin had an inquiry instituted in 1888, which he himself characterised as of a "cursory and incomplete character." So far as the public are aware, this inquiry has not been followed up by one deeper and more thorough.

18,766. That I think brings you to the remedies that you would suggest?—Yes.

18,767. Perhaps you would run through them, would you?—Yes. Before proceeding to express my views on the subject of the system of provincial finance, which is an important wheel in our financial machinery, I shall point out my remedies thus far. 1. There can be no doubt that one way of strengthening the financial position of India would be as Sir Auckland Colvin says: "In some way "without undue interference with the authority of the "Government of India, to establish a control emanating "from what theoretically is at present the last Court of "Appeal, Parliament. A committee of the Members of "Parliament, such as Sir William Wedderburn has "suggested, to scrutinize the financial statement every "year and to submit a report to the House of Commons "before the financial statement is brought up for discussion, would in some measure secure this end. The "Committee would of course pay due attention to the "opinions of the non-official Members expressed in the "Legislative Council of the Viceroy." It came out fully in the evidence before the Commission that the present system, by which disputes regarding the apportionment of certain charges between the two Governments are kept up for years and finally decided to the satisfaction of neither party, should be put an end to. It has been suggested that the principles which should be the general basis of apportionment should be laid down in a Treasury Minute, and that the application of these principles to instances where the two Governments might not agree, should be left to an arbitrator, or a body of arbitrators, chosen by both the Governments. This suggestion commended itself to the Marquess of Ripon and the Marquess of Lansdowne. It would be a better system, I think, to rest the power of final decision in the Judicial Committee of the Privy Council. The Privy Council is a tribunal well known in India, and would command from the people greater confidence than any arbitrators chosen from time to time. I have already pointed out the importance of the Members of the Secretary of State's Council being men in touch with the actual financial conditions of the day in India. To secure this end, the present system of appointing them for ten years, and keeping them on for a further period if the Secretary of State chooses, should be abolished. Their term of office should extend only to five years like the Members of the Government of India and the Provincial Governors, and they should not be eligible for re-appointment. Among the Members of the Council there should always be several Indians possessing necessary qualifications and not necessarily official. They should be appointed on the recommendation of the elected Members of the Legislative Councils. They would take care to put before the Secretary of State the Indian view, which he has no means of knowing under the existing system. Coming to the constitution of the Government of India in India, I have already pointed out the desirability of the Governor-General being divested of control over any particular department, so that he may have more time than he has at present to attend to internal affairs of the country, which unfortunately do not receive the same attention that they used to receive in years previous to 1885. The Members of the Governor-General's Legislative Council should be empowered to vote on the Budget, although any decision adverse to the Government of India may be overruled by the President. There should be given greater scope for interpellation, and, whenever any measure of legislation affecting finance is in contemplation, the views of public bodies should be obtained beforehand as far as possible.

18,768. You say that the British Parliament considers its responsibility satisfactorily discharged by the annual debate on the Budget; are there not many other occasions in which Indian affairs are discussed in Parliament?—Yes there are, but they are more due to chance; I think they are not provided for in the constitution, that is what I mean.

18,769. No, but is there then no scope for definite debates upon subjects, because Parliament does not interfere with the ordinary course of legislation in India? If it is open to any Member of Parliament to bring forward questions affecting India, surely that gives every opportunity for the discussion of those questions?—Well, I am not acquainted with the forms of the House of Commons, but my impression is, and the impression in India is, that it is exceedingly difficult for any Indian question to be brought up in the House of Commons for discussion, and practically no effective debate comes up. The only occasion provided for in the constitution is the annual statement of the Secretary of State about the finances of India.

18,770. Did not the cotton duties and also the Suakin Expedition form the subject of debate in which the Government policy was very freely criticised in the two Houses of Parliament?—Yes, such occasions are very few and due more to accidental circumstances.

18,771. There are plenty of members of Parliament who are quite ready to take up an Indian case, if they think there is cause for it?—The point is, what facilities exist for their bringing forward Indian questions.

18,772. You wished to establish a control emanating from Parliament, and you would exercise this control by appointing a Committee of the House of Commons to scrutinize the financial statement and report to the House of Commons?—Yes.

18,773. This Committee therefore must examine and form an opinion upon the details of Indian taxation and expenditure, must it not?—Yes.

18,774. Then they would undertake a very important administrative duty. To discuss questions of expenditure and taxation involves the discussion of very important administrative questions, does it not?—I understand their duty would be more in the nature of control and suggestions.

18,775. But, if they are to discuss the proposals in the Budget, they must discuss the expenditure and the taxation, must they not?—I believe so.

18,776. And those are administrative duties, are they not?—Yes.

18,777. Do you think that such a committee would have a knowledge of the subject sufficient to make their report of value?—They would have the facts placed before them, I believe, and their duty would be to decide upon the facts placed before them.

18,778. But, if they are ignorant of the circumstances which have led to these facts, do you think that their Report would be of any advantage?—They could get any help that they wanted, my Lord, I think. Any help that they might require, in the way of more knowledge or information, I think they might get very easily.

18,779. But, if they had not themselves any knowledge of the subject, might they not be led or fall into very great error?—I do not believe there is more likelihood of that than of the Secretary of State or the Viceroy falling into such errors; they have only to bring their experience and statesmanship to bear upon the questions and facts placed before them, and submit to the House of Commons what they think on the facts and information placed before them.

18,780. But, observe, the Viceroy is out in India at the head of the Government there, solely employed on the Government work, with all Indian official experience behind him. He is in a different position from a Member of Parliament, who has generally a number of other avocations, has no knowledge, perhaps, or a very slight knowledge, of India. If he comes in to judge these very important questions of Indian administration, is there not a difficulty there?—I believe it is possible to get on this Committee members who are acquainted with Indian affairs; but I am willing to admit that they will be at a greater disadvantage than a Viceroy or a Secretary of State. Still, on the whole, their duty would be the duty of control and suggestions; and I hold they would exercise a salutary check on the growth of expenditure in India.

Mr. G. Subramania Iyer.

13 May 1897.

18,781. You speak of the members who are present at the Indian Budget as a handful of members; but these are exactly the members who take an interest in Indian affairs, are they not?—Yes, they must take more interest than others that are absent, of course.

18,782. And yet you say that it cannot be said that all the members present possess sufficient knowledge of Indian affairs?—That is my belief.

18,783. Even though those are the members who take a special interest in Indian affairs?—Some members do take an interest, but it does not necessarily follow that they possess the necessary knowledge.

18,784. You comment upon those members as not possessing a sufficient knowledge?—Yes.

18,785. Still, the committee would naturally be chosen from among those men who possess knowledge of Indian affairs?—Yes.

18,786. But of whose knowledge of Indian affairs you do not express a high opinion?—There are two or three who might be occasionally chosen, who possess a fair knowledge of Indian matters.

18,787. But the committee would deal upon those questions by a majority?—Certainly.

18,788. Where would you wish those gentlemen who have no intimate knowledge of Indian affairs, and who are yet to be a controlling power over Indian administration, to get the information?—From any quarter from which they could get it, from the India Office or from the Government of India.

18,789. I notice you lay great stress, and I think very rightly so, on the necessity of knowledge of Indian affairs, because you say things change rapidly in India?—Yes.

18,790. You wish that the Members of the Council of India should hold their posts for five years only, in order that they may be more in touch, I suppose, with the actual state of things in India?—Yes.

18,791. But, if this minute knowledge of India is essential in the Council who advise the Secretary of State, would you expect great results from entrusting the examination of Indian Finance to a council—because that is the body you are going to create—as ignorant of India as I think you have described Members of Parliament to be?—My idea is that they would have different functions to discharge. This Parliamentary Committee I have in my mind would exercise a power of control, not actually directing the administration which the India Office does. The Secretary of State and his Council are the final directing body, they are the administrative body of India, which this committee perhaps would not be. I believe that the chief function of the committee would be to examine the policy of expenditure of Government and communicate to the Secretary of State, or any other proper authority, what they think of the expenditure that is being incurred.

18,792. But this committee of which you have spoken would be what I may call the supreme controlling power by which you would bring influence to bear on the Secretary of State; and, though you lay such stress upon Indian experience in the Council that advises the Secretary of State, you think no Indian experience is necessary in the persons who are going to criticise and perhaps cause the reversal of the administrative acts of the Government in India, especially in such delicate and difficult questions as those of finance?—They would act more as jurors and judges than as practical administrators, that is my view. This Parliamentary Committee I have in my mind would do the work of jurors and judges on the facts placed before them, whereas the India Office people would be the direct administrators. I do not know whether I have made myself intelligible to the Commission?

18,793. Still, this committee on whom you would impose such important duties would be men of no experience in India, and they would have to express what is almost a final opinion upon the most intricate questions of finance in India?—So far as that constitutes a disadvantage, they would certainly be subject to that.

18,794. In asking these questions I am not in any way desirous of expressing any opinion against the desirability of strengthening Parliamentary control. My object in asking them is to point out to you objections that occur to one's mind in such a difficult matter as this, to bring before you that there is a very considerable danger, or there may be a considerable danger, in trusting too much to the opinions or to the recommendations that may be made by men who are entirely ignorant of India?—Yes, making allowance for the disadvantage that your Lordship refers to, I think on the whole that it would be beneficial to have this Committee with some power of control.

18,795. (*Sir William Wedderburn.*) Might I ask a question? I understand that the Select Committee would not exercise duties of control; it would only report to the House of Commons?—That is so, yes.

18,796. Therefore it is not proposed to create any new power, but only to enable the House of Commons to have a little better information for the exercise of its existing power?—Quite so.

18,797. And its existing duty?—Yes.

18,798. (*Mr. Mowbray.*) How long do you suppose the Committee would take to make such an investigation as you suggest? I mean, at what stage would you bring in this Committee which you suggest?—I think as soon as the financial statement is discussed in India this Committee might be given the facts, and I think they could be set to work.

18,799. But then would the whole administrative arrangements of India be hung up pending the report of this Committee?—No, not necessarily. I do not see how it follows. The administration would go on as it goes on ordinarily.

18,800. You said that the Committee would possibly have to get evidence and facts from the Government in India?—If necessary.

18,801. A process which might take some little time?—I expect all the facts that the Committee would require would be on record in the financial statements and the other publications of the Government. If any fact or information were specially wanted, they might obtain it from the proper quarter; meanwhile the administration of India might go on just as usual.

18,802. The Budget, having been carried in the Legislative Council in India, would be the working arrangement for the year?—Yes, it is so even now.

18,803. Of course it is now?—Although the Secretary of State brings up——

18,804. I want to know, in what way would this Committee control the action of the Government?—This Committee would help the Secretary of State and Parliament by placing before them their own special opinions, arrived at after a very mature consideration of the facts placed before them, which ordinarily Parliament is not in a position to do.

18,805. What I am wishing to point out is, that to arrive at the result of a mature consideration upon facts, some of which might have to be ascertained from India itself, would probably take a very considerable time?—Yes, but now, though the Budget is passed in India in the month of March, it does not come before the House of Commons before the month of October or November.

(*Mr. Courtney.*) August generally.

18,806. (*Mr. Mowbray.*) August?—Meanwhile this Committee might be working up questions.

18,807. That would be your idea, that they should sit, say, upon the Budget in the interval between its discussion in the Legislative Council in India and its discussion in the House of Commons in England?—Yes.

18,808. (*Sir Ralph Knox.*) Have the people in India been generally satisfied with the results of the Parliamentary inquiries which have taken place into Indian affairs from time to time?—Oh, yes, especially in the Company's days.

18,809. Take, for instance, what was known as Mr. Fawcett's Committee, were they satisfied with the inquiries which took place then?—I think that was an unfortunate exception; but even that inquiry brought out a number of facts, which would not have been made available to the public but for that inquiry.

18,810. And in that way it showed itself very useful?—Certainly.

18,811. How long did that Committee last?—I think, from memory, it lasted for a long time.

18,812. It ran into two or three years, did it not?—I think so.

18,813. Do you not think that an inquiry instituted from time to time into the progress of Indian expenditure would be more satisfactory and more thorough than one instituted only into a single budget, and necessarily having to be got through very quickly?—The inquiry which I have in my mind would not be in the nature of the inquiry by this Commission; it would be more or less an inquiry by a certain small body of experts, and they would

examine the facts and sift the information placed before them without calling for witnesses or any such thing. I do not believe that inquiry would be anything like the inquiry of Mr. Fawcett's Committee, or anything——

18,814. But do you not think a thorough overhauling periodically, say, every five years or every seven years, of the expenditure in India would be of more value than to discuss from year to year the details of the Budget?—I beg your pardon, there would be no overhauling at all by this Committee which I propose.

18,815. There would not?—No.

18,816. What would its object be?—They would report to the Secretary of State or to Parliament.

18,817. They could make no report without going into the matter?—They would go into it, but no action would be taken upon the recommendations unless the Secretary of State or Parliament thought it necessary to take it.

18,818. That is the case with all?—There would be no overhauling; they would say that such and such an expenditure was too large, or such and such an increase should be reduced; and in that way they would make recommendations.

18,819. (*Sir William Wedderburn.*) With regard to the knowledge of Indian affairs among the members of such a Select Committee, you would hope that the examination that they would make of the accounts would have an educational effect upon them and increase the knowledge and interest in Indian affairs in Parliament?—Necessarily, it would have that effect.

18,820. And as regards the comparative experience of members of Parliament and of the Viceroy and his Council in India, you do not dispute the special knowledge of the Viceroy; but what you desire in a Select Committee is the impartiality that you hope to get, and the willingness of such a body to hear both sides of the case?—Yes, they would bring fresh unbiassed minds to bear upon the facts placed before them.

18,821. This impartiality you value even more than a detailed knowledge of Indian affairs?—That is what we want.

18,822. (*Chairman.*) Your Select Committee would represent more or less the views of the majority in Parliament, would it not?—I believe so.

18,823. Committees are constituted more or less upon the principle, are they not, that the majority in Parliament has the majority on the Committee?—Do I understand your Lordship to say that the Committee would be of one party or the other?

18,824. No; if there are 15 members of the Committee, eight would represent the party in the majority, and seven the party in the minority?—Not necessarily?

18,825. That is the general rule?—Yes.

18,826. Now, do you think that it would be perfect security to the people of India to rely upon the recommendation of a committee which would be influenced by the views prevalent with a majority of the House of Commons at a given time?—I do not expect that their recommendations would be influenced by the party to which the majority may belong.

18,827. Is not that rather a large assumption, that the members of the party that, we will say, are supporting the Government, will not favour the policy which the Government has adopted?—I do not see any connexion between Indian questions, which would be the issues that would be placed before them, and the party to which they belong.

18,828. Take such a question as the Cotton Duties, upon which there is a very strong opinion very strongly held in Parliament?—Yes.

18,829. Do you feel quite certain that the majority of the committee would judge the question of the Indian Cotton Duties uninfluenced by their constituents' views as to the methods by which those cotton duties should be levied?—Ordinarily this committee would not have to consider questions of that kind.

18,830. Oh, but I beg your pardon; if they are going to consider the financial statement, they must consider the whole of it; and they must consider the proposals as to taxation, and as to expenditure, which the Budget contains?—What I mean is, that it is not every year that cotton duties are imposed or questions of this kind crop up; but I will take a committee subject to such questions arising.

18,831. But still, I ask you whether you would have perfect confidence in the impartiality of the committee so created, remembering what great influence the wishes of their constituents have upon members?—Well, I would rather have confidence in the gentlemen appointed.

18,832. Now then, take another point; supposing the Indian Budget provided for, we will say, the abolition of the income tax; that the tax was repealed; and that this committee afterwards condemned the repeal of that tax; would not that be introducing a very awkward element into Indian administration?—That would depend upon the judgment of the Secretary of State or the Government; if they thought that effect should be given to that recommendation, I daresay effect would be given. I suppose we can have confidence in the judgment of the authority as to whether the needs of administrative continuity require effect to be given to the recommendation or that it should be left in abeyance for some time.

18,833. This Committee, from your point of view, is to afford means of making effective the parliamentary control over Indian Finance?—Yes.

18,834. If the Committee differed very much from the scheme of Indian Finance which the Budget contained, would it not be a very awkward circumstance, because the Budget, according to your views, as I understand, would be given effect to some months previous to their report?—It would have that effect; but still I think the moral effect would be very great.

18,835. (*Mr. Courtney.*) You are not much acquainted with the operations of the Standing Committee of the House of Commons?—No.

18,836. You have heard of special committees appointed from time to time?—Oh yes.

18,837. And your attention has been more fixed on them than on the work of standing committees?—Yes.

18,838. What are the special conditions that have attracted your attention?—Well, I have not given much attention to the special committees of the House of Commons. I have read occasionally of special committees being appointed, but I do not believe I ever watched their proceedings, or how they worked.

18,839. Then you are not well acquainted with the working of any committees, whether special or standing?—Practically it amounts to that, that I am not well acquainted with the working of any committees of the House of Commons.

18,840. You have more faith than knowledge perhaps?—Yes, I have faith.

18,841. We have a Standing Committee of the House of Commons called the Committee of Public Accounts; have you ever heard of it?—Yes, I have heard of it.

18,842. Do you know what its work is?—No.

18,843. It was suggested to you just now that members learn their work by serving on committees?—Yes.

18,844. Would you believe that a member could have sat on that committee for many years, and never know what its work was?—No, I do not know.

18,845. That would appear incredible to you?—Yes.

18,846. Yet it is a fact. If that is possible, would you still have great confidence in the excellent working of an Indian Standing Committee?—We are referring to this only as one point in the machinery.

18,847. Yes, but I want to bring you to detail, in order to see how much you know about what you are suggesting, and what real ground there is for believing that anything would come out of it?—So far as Parliament is vested with any power of control over the finances of India, I think that this control might be better exercised by means of a committee of this kind than in the manner in which it is done now.

18,848. I want to work that out. A committee would be appointed, as Lord Welby has said, representing the House of Commons; in this, the majority of the committee would correspond to the majority of the House?—Yes, they would.

18,849. That is a law that could not be altered, that law of composition?—No.

18,850. That being so, the majority of the committee are of the same temper as the Secretary of State already?—Yes.

18,851. Do you think that a committee so constituted, with such knowledge as I have suggested, might be worked upon by one or two independent members to come to resolutions correcting the action of the Secretary of State?—Well, it appears to me that we can have more faith in the judgment of a number of gentlemen experienced in

Mr. G. Subramania Iyer.

13 May 1897.

the House of Commons than we have in the judgment of a Secretary of State already committed to official views.

18,852. It is faith?—In the control of Parliament. We have faith in the control of Parliament as it is at present..

18,853. Now another point. This committee would have brought before it a financial statement?—Yes.

18,854. By the Secretary of State or someone from the India Office?—Yes.

18,855. Would you provide any machinery for bringing forward criticism of that statement?—This committee would criticize that statement, would examine that statement.

18,856. Yes, but how is the committee to be informed? When you have got a jury, you have got a prosecutor and you have a defendant, and you have got a "vakeel" on the one side and on the other?—Yes.

18,857. Here you have got the Secretary of State bringing forward a financial statement agreed to by the Government of India and approved by him?—Yes.

18,858. How are you going to bring forward the other side?—There would be the views of the Members of the Council, more especially the unofficial Members of the Viceroy's Council.

18,859. And they would send over every year somebody to state their views?—If necessary, they would do so.

18,860. Is that part of what you considered should be done?—I think so; whenever any question arises upon which there may be difference of opinion expressed in the Viceroy's Legislative Council between the official Members and the non-official Members, the discussion bearing upon this difference would, I think, be sent to this committee for their information.

18,861. That might be done perhaps by having reports of discussions in the Council?—Yes.

18,862. Would that be enough?—I think so; ordinarily it would be enough.

18,863. Well now, having these materials before them, would they go through the Budget clause by clause?—I should expect them to do so.

18,864. Taking the Revenue; the Land Revenue is stated as so much; would you expect them to form an opinion as to whether that was too high?—I think so.

18,865. Or whether the assessment—the recent assessment—had been put up too much?—Yes, for some time they might not be able to do so, but in subsequent years, as they gathered more experience and more materials, they would acquire greater competency.

18,866. But whence would the materials for judgment come before them?—Discussions in the Council, and such literature as might be available.

18,867. So you think every item, the customs duties, he income tax, the Excise duties, would be examined by them and their propriety considered?—I think so. If consideration becomes necessary, I expect them to give the consideration to them.

18,868. And they might be occasionally found coming to a conclusion adverse to that of the Government which they represent?—If necessary we expect them to come to an adverse opinion.

18,869. And so also with respect to expenditure?—Yes.

18,870. They would go item by item through the expenditure?—Yes. I do not believe there will be much difficulty in the examination that you suggest.

18,871. The examination being that of a statement put before them by the Government?—Yes.

18,872. Which defends the statement?—Yes.

18,873. (*Chairman.*) You also wish the Legislative Council to have the power which the House of Commons possesses of rejecting votes? I want to understand clearly whether you wish the Legislative Council to occupy in that respect exactly the position of the House of Commons?—I do not exactly realize the position of the House of Commons in this matter, but I am aware of the position of the Legislative Councilin India. What I mean is that the Members of the Council should vote upon the different items of expenditure.

18,874. And, therefore, have the power of rejecting them?—Yes.

18,875. Yes, quite so; you are in fact applying to the Legislative Council in India, so far, the powers of the House of Commons. They would have the absolute power of rejecting a vote?—With this difference, my Lord, that the Government would have the power of overruling their decision.

18,876. You reserve to the Government the power of overruling the decision of the Legislative Council?—The majority of the Council of course.

18,877. You wish to give a large power of interpellation, and you have given some description of the limits now put upon it. Could you describe to us a little more fully what those limits are? Does the Governor-General often forbid questions to be put?—I cannot say he often does, but he sometimes does. I think the restrictions now obtaining relate to most topics of a controversial nature or that bear upon military matters. In certain other departments questions are not allowed. Often the issue arises whether a particular question put comes within the restriction recognised by the rules, and the judgment of the Viceroy, or of the President of the Provincial Council, often clashes with the view of the gentleman who puts the question or the view of the public.

18,878. But is it a serious limit, do you think? Are questions often rejected?—Well, I do not believe it is a very serious matter. I merely mention it as one of the suggestions that go to improve the situation.

18,879. You were speaking of the Viceroy, I think, refusing last year to receive petitions; are you under the impression that Lord Elgin introduced a new practice, and that, previous to him, Governors-General practically accepted the petitions or addresses presented to them?—Practically; practically Lord Elgin's proceedings marked a departure—a very marked departure.

18,880. You think that previous Governors-General allowed controversial questions to be brought before them containing an expression of the opinion of the body that had drawn up the address?—Yes.

18,881. And I should gather from what you said that Lord Elgin refused on several occasions?—He did so in Madras and he did so in Poona; and previous Viceroys used to admit questions of a controversial nature, and they expressed their opinions, even though they differed from the body addressing them.

18,882. You wish time to be allowed for the Legislative Council to consider the Budget before discussing it. Do you mean by that that the financial year should be altered?—Not necessarily. Now hardly a week is allowed. The Budget is published and the next week the discussion is brought to the Council.

18,883. But we have had evidence before us that, with the financial year ending on the 31st March, it is very difficult to produce a Budget at an earlier time. Your suggestion would rather imply, I think, that the Budget should be produced some time, we will say, before the 19th of March?—Not necessarily, my Lord; the discussion might be postponed; it might be taken up at a later date.

18,884. You mean that the Government might postpone their departure for Simla?—If necessary.

18,885. You speak of the desirability, I think, of divesting the Governor-General of India of control over any particular department?—Yes.

18,886. Now, supposing there was a chief of the Foreign Office, that would not prevent the Governor-General turning his attention to those matters of Indian Government that he thought most deserving of attention, would it?—Practically; it has stood in the way of his giving attention to internal affairs, and I have given instances to show that of late some matters that were pressing for consideration have not received the consideration due to them.

18,887. You quoted Sir Auckland Colvin on the point that decentralization had taken away many branches of business to which no doubt the Viceroy used to have to pay his attention, leaving him with fewer subjects to pay attention to, so that he gave his attention to military matters—I am speaking from your point of view you know—and foreign affairs, in a manner that had not tended at all events to economical government?—The exact point. It has tended to questions of internal affairs not being sufficiently considered.

18,888. You confine it to them? You want him to take up more internal affairs?—Yes.

18,889. You do not mean that you would reverse the policy of decentralization?—Oh no.

18,890-1. But you think that, if he had a Foreign Member of Council under him, he would not necessarily be so much engrossed in foreign affairs, but he would have more time

to give to domestic affairs?—This is what I mean. The work might be distributed as circumstances might require.

18,892. (*Sir James Peile.*) But would it be possible for the Viceroy to dissociate himself from the Foreign policy of the Indian Government?—Yes, it is; but what happens at present is that he becomes more interested in certain Departments such as the Military, or in the annexation of provinces, and questions of that kind, while other questions such as Education, &c., are apt to be neglected. At all events they do not receive the consideration from the head of the Government that they deserve.

18,893. (*Chairman.*) You want, if possible, to get him to give more attention to internal matters?—To place him in a situation which would enable him to do so.

18,894. You do not mean by any means to weaken his position in the Government?—By no means.

18,895. You do not mean to reduce him to the position of a constitutional ruler who reigns but does not govern?—On the other hand, it would strengthen his hands by giving him a firmer and more impartial position in the Council.

18,896. There is one point you made a remark about, namely, the powers of the Provincial Councils and the Provincial Governments; you spoke of them being subject to the control of the Central Government; do you put that in a general sense? Would you wish to see the Provincial Councils and the Provincial Governments made entirely independent of the Central Government?—I will not say entirely.

18,897. But you think that at present the Central Government interferes too much?—Yes, it does.

18,898. (*Mr. Mowbray.*) Could you give us any instance of what you mean by the Central Government interfering too much? I mean what had you in your mind when you made that statement?—In fact in almost every detail of administration the Central Government interferes; as far as I understand, the Provincial Governments have no power to incur any fresh expenditure or make any appointments or introduce any new policy.

18,899. Those are the general principles?—Yes.

18,900. You had not any special case which you wished to bring forward?—I am not prepared to mention a special case just now.

18,901. (*Chairman.*) Would you now proceed to give us your views on Provincial Finance?—Yes, there is no more important question than the system of Provincial Finance in considering the means by which the growing expenditure of the Indian Government can be brought under salutary control. The revenues of the country are spent in certain proportions by the Government of India and by the Provincial Governments. The Government of India spends a larger proportion, and spends it mostly on objects which are not beneficial to the people or which concern only their indirect and remote interests. On the other hand, the expenditure of Provincial Governments is incurred for purposes which concern the direct and immediate interests of the people, appeal to their sympathies and promote their well-being. Still, while the Provincial Governments are constantly called upon for contributions to Imperial expenditure and the improvement of the provinces is thus obstructed, the Central Government is practically under no control and pursues its course of extravagance. I would commend to the Commission a perusal of the debate in the Viceroy's Legislative Council on the last Financial Statement. There the question is fully discussed, Sir James Westland pleading with all his ability and knowledge for the Central Government, and the Lieutenant-Governor of Bengal, supported by several Non-Official Members, more notably by the Honourable Mr. R. M. Sayani, urging with great effect the side of the Provincial Governments. The two sides approach the question from opposite points of view. Sir James Westland's opinion is as follows: "The Revenues of "India are the Revenues of the Government of India—a "constitutional possession. The Government of India is "a body created by Act of Parliament, and if reference is "made to that Act of Parliament it will be seen that the "revenues of India are the revenues of the Government "of India and of that Government alone. Every action "that the Provincial Governments take in respect of them "must be justified by a specific order of the Government "of India, and apart from that Government they exercise "no financial powers whatever." The other point of view is well put in the following words of Sir Charles Elliott, which Sir Alexander Mackenzie, the Lieutenant-Governor of Bengal, quoted with qualified approval. Sir Charles Elliott strongly urged a modification of the present system, "so that the contract should be a continuing one not subject "to sudden ruptures and renewals, but that its leading "principle should be that all the revenues of the Province "should be provincial, the Government of India receiving "a certain per-centage on the entire sum which should be "the contribution of the province to Imperial Government "and defence." He also represented "the unreasonable-"ness and the hardship of requiring every province to give "up a constantly increasing share of its revenues whenever "a new contract is framed." Sir Alexander Mackenzie also quoted Sir David Barbour's opinion expressed before this Commission, and added that the present system could not last long. He suggested that "the Government "of India should, with the consent of the Secretary of "State, refer the whole question to a conference at which "the Provincial Governments should be adequately repre-"sented, and endeavour to lay down the lines of a system "which would be satisfactory to the Provincial Govern-"ments, while meeting fairly the undoubted exigencies of "Imperial finance." He characterised the existing system as one "which, with all its admitted advantages of "diminishing Imperial interference in petty details, leads "to so much quinquennial bickering and heartburning "and involves so much uncertainty and haphazard in "provincial administration." "In framing it and working "it successive Finance Ministers and Secretaries of State "have simply dictated their own views without giving "Provincial Governments an opportunity of being heard, "except as to details after principles had been laid down "authoritatively, I had almost said despotically." "If "the policy of the present day is still one of decent "decentralisation in legislation and finance, let us for "any sake devise a workable scheme. As matters "stand, the Provincial Government is bound to justify "to its local council and the local public financial "measures which it is only allowed to criticise within hard "and fast limits laid down by the Financial Department of "the Government of India." "It would be better for both "of us—and I speak for all Provincial Governments—"were our financial relations regulated as much as possible "by automatic self-acting principles, save when some "serious calamity like widespread famine, or national "exigency like a great war, comes to sweep away all "ordinary rules, and rally, as they would do, all the Local "Governments to the side of the Supreme Government in "simple and self-sacrificing unity." The Honourable Mr. Sayani took in effect the same view. He described its features to be "unequal and unfair apportionment of "revenue between Imperial and local needs, on the one "hand, and as between one province and another, on the "other, a standing source of irritation and discontent in "itself, short term settlements not calculated to inspire a "sense of security or certainty, periodical re-adjustments "of assignments, generally resulting in curtailment of "provincial resources, and impairing the continuity of "provincial work, extraordinary provincial contributions, "levied, apparently, without convincing reason or clearly "demonstrated necessity; these are some of the features of "the system, and there is no wonder that they reduce its "value, and in its practical working do not show it to "much advantage. In fact our present arrangements do "not tend materially to promote provincial progress, as "was originally intended, but, on the other hand, by "dissociating power from responsibility and leaving the "provincial administrations with uncertain and inadequate "resources to meet the requirements of their respective "provinces, have simply served to bring to the Imperial "Government administrative relief, and a freedom from "financial anxiety in respect of internal progress which "the conditions of the case scarcely justify, and tend "moreover to a diversion of its energy and funds to less "legitimate objects." The present Governor of Madras, Sir Arthur Havelock, on the occasion of the Budget statement in his Legislative Council in March last, characterised the present system in the following language: "It appears "to me that the present system, so called, is bad in itself. "It is demoralising to the Supreme and Provincial Go-"vernments; it is bad in that each revision that takes "place has a terribly disturbing and dislocating effect on "the local administration, especially in the important "department of Public Works, to which the pruning "knife has to be suddenly and ruthlessly applied. It is "demoralising to the Provincial Governments, because it "tends to impair the sympathetic co-operation between "the Supreme and Provincial Governments which is so "desirable, and because it tempts the Provincial Govern-"ment, in its financial relation with the Supreme "Government, which is master of the situation, to have "recourse to the tactics of the weak. When we are in "wealth we try to hide our money, and spend it recklessly "lest the Supreme Government should lay its hands on it.

Mr. G. Subramania Iyer.

13 May 1897.

"When we are poor we try to give undue emphasis to our "poverty. The system is demoralising to the Supreme "Government, because it relieves that Government from "the consequences of extravagance. In my opinion, the "financial condition of the Presidency will not be satis- "factory, until a larger degree of financial independence "and control is conceded to the Provincial Government, "and until some arrangement more consistent, more "permanent, and less one-sided, than the present contract "system, has been adopted." It is impossible not to agree with these official and non-official critics of the existing system. On the theory of the whole Indian revenue being the "Constitutional Possession" of the Government of India, it takes for its own expenditure 44 millions Rx., while giving to all the eight Provincial Governments only 20 millions Rx. The proportion taken for the Government of India is too large, and, by keeping within rigid bounds its own expenditure, it should allow to Provincial Governments increased latitude in their expenditure, so that the difference in the respective proportions of the Central and Provincial Governments might generally diminish, until the future revenues come to be divided equally between Imperial and Provincial purposes. Another beneficial change in the present system would be to extend the duration of contract over ten, instead of five years. Sir James Westland objects to a *permanent* settlement of apportionment between the Central and local Governments, but I do not think anybody proposed a permanent contract, nor is it a valid objection to the change that is advocated that any alienation of revenues for a permanent or long period would render a remission of taxation difficult. There is no reason why there should not be a remission of taxation by the Provincial Governments and the Government of India within their respective spheres. As a fact, there has not been much of remission of taxation of late, and in the present year the improvement in exchange is a source of gain to the Government, but the taxpayer is not given the benefit of it to any extent. The improvement under exchange in 1896 and in 1897–98, amounts to Rx. 3,982,000 or nearly 4 million Rx., but of this improvement no portion was utilised for remission of taxation, although repeatedly has the Government promised reduction in the salt duties at the first opportunity. I would also urge that the proportion of the total revenues disbursed among the different provinces should be based on a more equitable principle. It is a wrong principle to tax the progressive province for the benefit of the backward province. There is no reason why the ryot of Madras should be taxed for the development of Burma and Beluchistan, and possibly for the development of some other frontier tract which the ascendent policy of military aggression may bring within the limits of British Indian dominion. There can be no doubt that the system that will work satisfactorily to the Supreme Government as well as the Provincial Governments is the one that was suggested by the Finance Committee of 1886. Professor Gokhale dwelt at length on the proposals made by this committee, and I may also quote them here:—"In a note "which they submitted to the Government of India on "the subject, they made the following four proposals, and "urged that their adoption would be attended by very "beneficial results:—(1) That there be no divided depart- "ments, but that those departments of receipts and "expenditure which are now wholly or almost wholly "Imperial, or which it may be found convenient to make "Imperial, should be set on one side for Imperial pur- "poses, and that the receipts and expenditure of the "provincialized departments should be entirely provincial. "(2) That, whatever the sum be by which the Imperial "expenditure exceeds the income from those sources of "revenue which are not provincialized, that sum should "be declared the first charge on the Provincial revenues. "(3) That the Provincial surplus which arises from the "excess of receipts over expenditure should be the fund "from which, in the first place, all Imperial necessities "should be met, before any increase can take place in "provincial expenditure. (4) And that as regards the "future growth of revenue it should, as far as possible, "be divided equally between Provincial and Imperial, "subject to the condition that, if the Imperial exigencies "ever required a larger share, the Imperial share should be "increased.

"Taking the accounts of 1884–85, Sir Charles Elliott "and the other members thus illustrated the working "of their scheme. They proposed that opium, salt, "customs, tributes, post office, telegraph, mint, interest "on debt, superannuation receipts and charges, the East "Indian, Eastern Bengal, Guaranteed and Southern "Mahratta railways, military works, army, exchange, and "home charges, should be wholly Imperial, and that the "Government of India should also bear the charges and "receive the revenues of the Imperial districts, *i.e.*, the "parts of India which are not included in the Provinces. "On the other hand, they proposed that land revenue, "stamps, excise, assessed taxes, forests, registration, and "the civil departments, should be wholly Provincial; such "heads as stationery, printing, miscellaneous, and rail- "ways, canals, and other public works, as were already "Provincial continuing to be so."

18,902. May I interrupt you to ask whether the Committee make any estimate as what would be the effect of making such an arrangement as that which you have been describing?—Well, I am only quoting this from Professor Gokhale's evidence. I have not gone into the report, but I would merely confine my attention to the suggestions which they make.

18,903. It is rather important, if you are bringing this before us, that we should know what would have been the financial effect of the change; that is to say, taking the figures which you have quoted recently, that the Imperial Government took 44 crores and gave 20 crores to the Provincial Governments, would that mean, we will say, the Central Government taking 40 crores and the Provincial Government taking 24; that is the opinion which, I think, we should like to have?—Yes, I think, so far as these go, they make provision for it.

18,904. Without troubling you on that point now, will you kindly look at it, and perhaps another day, when you come before us, you would tell us?—Yes.

The result of the new contract regarding the Madras Presidency is, that as against the receipts estimated in the Budget at Rx. 3,168,400 the estimated charges are Rx. 3,326,900, which, of course, reduces the opening balance of Rx. 258,500 to Rx. 100,000 at the close of the year. There is a net reduction, excluding land revenue and expenditure on famine relief, of Rx. 233,500 under expenditure, of which Rx. 225,000 falls under irrigation and public works, and the closing balance of the year is estimated to be Rx. 100,000 instead of the obligatory minimum of Rx. 200,000. A saving of about Rx. 20,000 is estimated during the year in the exchange compensation allowance, and this saving will go to meet an increase of charge under general establishment, due to three additional deputy-collectors on Rs. 500, three temporary deputy-collectors in Madura and Malabar, the travelling allowance of 157 tahsildars (to whom a daily allowance of one rupee has been sanctioned for every day spent on tour), and increased charges under remuneration to copyist and examiners. I refer to this to show how any improvement in the resources of the Provincial Government will be applied for the benefit of the public service and of the people. I have already referred to the large reduction in the public works grant as the result of the curtailment enforced by the Government of India, both in the contract assignment and in the estimates. Under "Provincial Loans and Advances," in the Financial Statement of Madras, the following remark is made:—"The Govern- "ment of India has curtailed the grants under this section "to a considerable extent, on the grounds that, in the "special circumstances of the present year, it is not "possible to comply in full with the demands made by "local governments; that as regards loans to munici- "palities the Government has at present no funds to "lend for purposes of water supply and drainage schemes; "that works of the kind should either be put off until "funds are available, or the municipalities should borrow "in the open market."

I need not say how the Central Government's encroachment on the resources of the Provincial Governments retards progress in administrative reform. For some time past, for example, the condition of the clerks in the Taluk establishment, who have the important duty of checking the revenue accounts prepared by the village officers, has attracted the attention of the Government. A provision was made in the Budget of 1896–97 for the improvement of the position of these "Taluk Gumastas," as they are called, but it lapsed that year, and in the Budget of 1897–98 we have it stated that the *decrease* under Criminal Courts follows that under Land Revenue, owing to the *retrenchments* made in the provision for improving the position of the Taluk Gumastas and the travelling allowances of sub-divisional establishments.

For a long time past, public opinion has demanded most emphatically a reform in the present system of combining in the same officer judicial and executive functions. A good deal has been written and spoken about the question, and very high authorities have supported the unanimous demand of the Indian public. The evil is indeed admitted, but the necessary reform is put off on the plea of want of funds. In the Madras Presidency, a

small though important step in the direction of reform has been taken by the appointment of what are called stationary sub-magistrates as distinguished from itinerary magistrates. But a further advance is needed, and want of funds is in the way.

18,905. That, I think, concludes your remarks upon Provincial finance?—Yes.

18,906. Do you consider that the policy of decentralisation and the delegation of large powers to the Provincial Governments tend to economy or the reverse?—They tend to economy in the sense that money is spent to the best effect. I daresay there may be more expenditure absolutely speaking, but the Provincial Governments know how to spend money in order to produce the best effects from the point of view of the people.

18,907. You have practically anticipated in your evidence the point which had attracted my attention. In an earlier part of what you told us to-day, you criticised the increase of expenditure in the Civil Departments, remarking that this expenditure on services which are of direct benefit to the people—education, post office, medical services, police, and roads—shows but a moderate increase. The chief part of the Civil Department increase, I observe, to which your criticism appears to apply, lies with the Provincial Governments, viz., Rx. 3,566,000 against Rx. 1,951,000, the Imperial share?—Yes.

18,908. Those figures look rather as if the increase of expenditure under the Provincial Government was open to a certain extent to your criticism?—Yes.

18,909. Because, if I understand you rightly, that increase lies outside education, medical services, and those services which you rightly describe as beneficial to the people?—Yes.

18,910. Have you any explanation to give of that increase, because, if I am right, it looks as if the provincial expenditure, far from being economical, is the reverse, and not in the direction which you describe as beneficial to the people?—I do not quite understand the point.

18,911. Well, if you look back to page 2 of the note which you gave me you will see "Civil Departments, 1884–5 and 1894–5"?—Yes.

18,912. The total net increase is Rx. 5,517,000?—Yes.

18,913. And the Imperial share is Rx. 1,951,000?—Yes.

18,914. And the provincial, Rx. 3,566,000?—Yes.

18,915. Those are the figures I have just quoted to you?—Yes.

18,916. You said: "The expenditure in the Civil Departments has also grown, a chief feature of this growth being "that the expenditure on services which are of direct "benefit to the people, such as education, post office, "medical service, police, roads, &c., shows but a moderate "increase"?—Yes.

18,917. Now, I should gather from that, that the increase which you criticise does not include expenditure on education and these services; and, therefore, that the increase in provincial expenditure, which is very large, is open to your criticism as not being altogether economical?—But the provincial share has increased, because Provincial Governments have more departments to deal with under civil expenditure. We do not object to the growth of expenditure altogether; but in those departments the growth has been moderate, whereas in other departments with which the Imperial Government is more directly concerned the growth has been more rapid.

18,918. Yes, but, you see, at this time you are pointing out as defects in the financial government of India the large growth of expenditure; and, in the first instance, you point out the growth of military expenditure?—Yes.

18,919. And then you pass on to point out the growth in civil expenditure?—Yes.

18,920. In both, I think you will see, if you read it, your tone is that of a critic?—Yes.

18,921. And you criticise the growth in civil expenditure, remarking that comparatively little of that has gone to the services which are of direct benefit to the people, as you have described it; and, when I come to look at your figures, I see that under Provincial Expenditure there is a large increase, and therefore I would put it to you, does not that look as if the expenditure of Provincial Governments on services which are not specially of direct benefit to the people, as you define it, has increased very largely; and does it not therefore seem as if the financial effect of provincial government was not economical?—In bulk the expenditure has increased, no doubt; but in proportion to the expenditure of the Imperial Government, the increase has been less rapid, more moderate; that is the point.

18,922. But look at the civil expenditure which you mentioned; the growth of the Imperial civil expenditure is under Rx. 2,000,000, while the growth of the provincial civil expenditure is over Rx. 3,500,000?—Yes, because the Provincial Governments have more to do with civil expenditure.

18,923. That is it. You see, you do not make any distinction between them?—Oh no.

18,924. And your criticism appears on your evidence to apply to the whole of the civil expenditure?—To the whole of it.

18,925. And that led me to ask you whether, if that is the case, the Provincial expenditure does not show signs of being uneconomical?—I will not call it uneconomical; anyhow the expenditure has to be incurred, and it grows from year to year.

18,926. Then in that case ought you not to except that increase which arises on the provincial objects, because, you see, you include it in the same line of criticism as the increase in the army and the increase in the Imperial civil expenditure?—I am willing to put it in any way your Lordship suggests; but the point I want to make out is that, while the civil expenditure has increased, still the increase in such departments as those with which the Provincial Governments are more directly concerned has been less rapid and more moderate than the increase in those departments in which the Imperial Government alone is concerned.

18,927. The way in which you put it produced in my mind the impression which, I think, is not what you wanted to convey, viz., that the Provincial Governments were not economical?—That is not the impression that I wanted to convey.

18,928. I did not think you meant to convey that?—No.

18,929. You say that the Government of India in taking 44 crores and giving to the provinces 20 crores takes too much?—Yes.

18,930. Is not this another way of saying that the expenditure on the army is too great?—Oh yes; that means that to that extent.

18,931. Would not your remedy be to reduce the army and give the surplus to the provinces?—Well, I will not put it that way exactly; it might go on gradually from year to year restricting the expenditure of the Imperial Government, placing it under very strict restrictions, while giving more latitude to the Provincial Governments, so that in course of time the disparity might decrease. What I mean is this, my Lord. Now it is 44 crores, and the Provincial Government is 20 crores; perhaps this 44 crores might be kept as it is for some years, and the growth in the Provincial revenues might be given to the Provincial Governments to their exclusive advantage or to a greater degree than it is allowed now; while the proportion would increase on the side of Provincial Governments the increase on the side of the Imperial Government would, more or less, be stationary. In course of time the revenues might become to be divided equally between the Provincial and the Imperial Governments.

18,932. If you are advocating a diminution of the sum now paid to the Imperial Government, 44 crores, and if you give the difference to the Provincial Governments; if further you are not able to reduce the army, the only alternative left to you would be increase of taxation, and I want to get it understood between us that that is not your object?—I will not put it that way; I will not advocate any reduction in the 44 crores, or whatever it may be, to the Imperial Government, but I would certainly put a restriction on this sum being increased in subsequent years.

18,933. I quite understand. You consider that the Imperial expenditure at present is excessive; but, when you are dealing with practical remedies, you do not say that that Imperial expenditure can be reduced all at once, but you say that you can at all events keep it stationary?—Exactly.

18,934. And, if you do that, you can give the whole increase that arises on the revenue to the Provincial Governments?—The most part of it—a much larger proportion than is now allowed.

18,935. I think you remonstrate against the well-to-do provinces having to contribute to the backward provinces?—Yes.

Mr. G. Subramania Iyer.

13 May 1897.

18,936. How would you meet the case of the backward provinces for which expenditure is needed?—I beg your pardon.

18,937. As I understood you, you objected to the provinces that are in a flourishing financial condition having to contribute towards the provinces that were not paying their way?—That were backward, yes.

18,938. In what way would you deal with the provinces that are not paying their way, because it is clear that from some quarter or other they must have assistance?—They can develop their own resources just as Native States do. Nobody helps the Native States; most of them, when they are well administered, show a very steady progress. These backward provinces might be content with such amount of progress as their resources would allow.

18,939. You would reduce their expenditure within their means?—Within their means.

18,940. But would you not look upon India as a whole, and, if a province is for the time being in a poor condition, is it not fair that it should look to its flourishing neighbours to assist it?—It may be fair within a certain limit, but they are going beyond that. It is not possible to treat all the constituent parts of the Indian Empire on the same basis. They go on adding frontier tracts from time to time. If the most advanced provinces are to wait until the backward provinces are in line with them, they would have to wait too long; their progress would be obstructed.

18,941. I do not want to take provinces which you hold ought not to fall within what I may call the Empire of India proper, such as Burma, which I think has been spoken of as more properly forming a separate government altogether; but I confine myself simply to a province in the centre of India?—Say the Central Provinces.

18,942. Supposing there to be a province in the centre of India which is in a very backward condition, I presume you would admit the principle that it ought to be assisted out of the general revenues of India?—I will not admit that; the Central Provinces are in a more favourable position than Burma.

18,943. I am assuming, for the purpose of our argument, that there is a province within the limits of the Empire of India, which you admit is in a backward condition?—I follow your Lordship. Then in the case of such a province, though it may be a little more backward than the more advanced provinces, still I would certainly make them content with their resources—with what development is possible with the help of their own resources.

18,944. And you would not assist it from the general revenues of India?—Except in special circumstances; if any calamity takes place, such as famine.

18,945. Now, you have taken such a case as education, which you speak of as most important and on which you would like to stimulate expenditure. Take the case of such a province as I have named; supposing that your wish were carried out and that there was a general increase in expenditure on education, would you exclude the backward province from sharing in that increase, and say: "No, you must go uneducated until you can find the "money within your own limits"?—I would confine the education to the resources of the province itself, because I am of opinion that, if properly administered, these provinces have sufficient resources to help them in their advance in education.

18,946. And, therefore, except in the case of famine, which, we all agree, is a purely exceptional case, or some visitation of that kind, you would confine each province to its own resources?—Certainly.

18,947. (*Sir James Peile.*) What would you do about railways? Supposing a railway is wanted across a backward province, would you leave a hiatus in the middle?—No. The Imperial Government might do it, or money might be borrowed on the security of the revenues of the province.

18,948. The revenues of the backward province?—Yes, in fact the system has to be looked at as a whole; if the Provincial Finances system were developed further, it would be quite possible to meet all those cases.

18,949. (*Chairman.*) You advocate loans, I think, to municipalities? I presume, therefore, you draw a distinction between Muncipal loans and loans for railways; am I right in thinking that you would encourage the former and discourage the latter?—I would certainly encourage the former, I cannot say I would discourage the latter altogether. Within certain limits certainly I would be willing to encourage them, but my impression is that they are going faster than is necessary.

18,950. But municipal wants, you think, are so great that you do not grudge loans being made?—Not at all.

18,951. In order to enable them to carry out their reforms?—I do not grudge them, there is great scope for improvement in that way. We want money for drainage, for water supply, for sanitary improvements; and the municipal state of our big cities is so backward that there would be scope for the expenditure of a good deal of money most beneficially.

18,952. And for these purposes you would not even object to borrowing in England?—I would rather object to borrowing in England even for that purpose. I think for the purposes of loans to these municipalities the local markets can be resorted to.

18,953. Of course you confine yourself in saying that to the condition that the local loan must be raised on equally good terms with the terms upon which the loan would be raised in England?—Certainly.

18,594. Supposing that a loan in the neighbourhood of a municipality would be raised at 7 or 8 per cent. and a loan could be obtained from England at 3 per cent., you would not advocate the Indian taxpayer having to pay 7 per cent. instead of three or four?—I would rather prefer higher interest paid on local loans to smaller interest being paid on English and foreign loans, for the great fact that the interest paid on local loans really comes back to the pockets of the people, whereas the interest, although smaller in rate, paid on foreign loans, goes back to the foreign country out of the pockets of the people.

18,955. But if the country is, as you say, being bled, can you justify adding to its wounds inasmuch as the difference between those sums is taken out of the pockets of the taxpayers?—It goes only from one pocket to another; it remains in the country. If the taxpayers grow poorer, other people grow richer, and what is in the pockets of the people is available for subsequent years.

18,956. Do you press that to an extreme; I want to see how far your views go; would you tax the Indian taxpayer in order to pay 20 per cent. to prevent the money going out of the country?—I would put it down as a general policy to be adopted within reasonable limits.

18,957. Exactly; there comes a point when you would not add to the wounds of a bleeding country?—Certainly not.

18,958. Before you pass on; you say that the improvement in exchange in 1896, 1897, and 1898 amounts to very nearly 4 crores, but that of this improvement no portion was utilised for the remission of taxation, though the Government has repeatedly promised a reduction in the salt duties. Do you know that in view of the famine any prospect of reduction of taxation was almost impossible?—Famine is only an accident; famine has no connection with the improvement in exchange.

18,959. Oh no; but you say the improvement in exchange is a saving of expenditure?—Yes.

18,960. And you think that that saving under ordinary circumstances should have been utilised in remitting taxation?—Yes.

18,961. You make it a criticism on the Government that they did not remit taxation, although the famine was immediately impending, and it was almost impossible to remit taxation?—I merely mentioned it as an indication of the policy of Government.

18,962. What you mean to say is, that, had it not been for the famine, it ought to have gone in remission of taxation. Perhaps you mean that you doubt whether it would?—In the previous year they did not remit taxation; there was an improvement in exchange, and there was an improvement in expenditure, and it was not utilised for the remission of taxation.

18,963. Would you now pass on to the growth of expenditure?—It is only natural that in a country like India the cost of Government should grow from year to year, and if the growth of expenditure be marked by due economy, by a due regard to the tax-paying capacity of the people, by a sympathetic examination of the wants of the people, there would be no complaint. But what are the facts? A system of foreign domination, by depriving the people of all substantial voice and share in the administration of their own country, is bleeding it to exhaustion. Enormous military expenditure is allowed to encroach on the resources available for administrative progress; not only has military expenditure increased, the

expenditure under Civil Departments has also increased. The home charges and the indebtedness of the Government are rising. Railway construction is being pushed forward too rapidly with borrowed funds, and compensation allowances are granted to European employés. On the other hand, the famine grant has been reduced. Departments in which people are more directly interested show but a moderate growth of expenditure. The expenditure on education shows but very slight increase. The vast number of clerks and ministerial officers employed in the various departments have had no increase in their salaries within the last 20 years. Sir David Barbour's opinion is that in the construction of railways "we ought to pro- "ceed more slowly when there is apparent prosperity, and "try and avoid those sudden checks which are very "mischevious." The same opinion was expressed by certain non-official members in the Viceregal Council both last year and in the present. In 1881 the amount to be borrowed for railway construction in every year was limited to 2,500,000*l.*, independently of any sums provided out of revenue or by companies. The result of the 1884 Committee was to raise the limit to 2,950,000*l.*, and Mr. S. Jacob said that in some subsequent years the frontier railway policy caused this limit to be exceeded, and in particular years also there were some exceptional charges. This policy has further been pushed on recently. Sir James Westland says, in the last financial statement: "At the "beginning of the year, the Secretary of State gave formal "approval to a programme of railway construction, either "direct by Government or by companies acting under "guarantees of the Government, which covered about "Rx. 28,000,000 of railway expenditure to be spread over "three years, of which 1896–97 was the first. For this "28 crores of expenditure we were to raise in India as much "money as we thought we could conveniently borrow, and "the rest was to be raised in England, either directly by the "Secretary of State or by companies acting under agree- "ments with him. But the amount of 28 crores thus "arranged for does not include the transactions of certain "companies whose relations with Governments do not "involve a direct guarantee by the latter, and which work "under special terms (like the Bengal and North-Western "Railway) or under what are known as branch line terms. "Nor does it include certain small transactions on "provincial account which are charged to revenue." Thus, virtually, much more than the 28 crores that are to be borrowed is proposed to be spent on railway construction during the three years 1896–97, 1897–98, and 1898–99. The revised estimate of the past year shows Rx. 11,228,500, and the Budget of 1897–98 shows an expenditure of Rx. 13,413,800. The Finance Minister thinks that all this expenditure is fully justified. Last year in the Legislative Council, he said: "Taking the "whole of them (Railway transactions), the charge to "Government is only two crores of rupees. I would ask, "simply as a question of policy, whether the possession of "these 20,000 miles of railways is not worth to the people "of India, two crores of rupees. There is not a soul in "the room who would not admit that India would be "better for these railways, even if the people had to pay "ten crores a year instead of two. With reference to "these two crores of rupees, I have also to state that the "loss which we have to bear mostly arises upon railways "constructed on the guaranteed system. The loss a few "years ago was only 70 lakhs of rupees. It has since "mounted to two crores (the amount is now two- "and-three-quarters crores*) mainly because we have to "bear a heavy loss of exchange upon the sterling debt "connected with the older railways. But it is obvious "that this heavy loss has nothing to do with the present "construction of railways. We would have to bear this "loss even if we were not constructing any railways during "the last ten or twenty years. The later construction "and expansion of railways has therefore been, on the "whole, a financial gain." This tone of unqualified confidence is apparently not in accord with the figures which Mr. Stephen Jacob gave to the Committee. He pointed out that a large portion of the capital expenditure on which interest is charged, is not producing any revenue at all. "During nine years ending 1894–5 the accounts of capital "expenditure on lines under construction or surveyed and "unopened lines show a large amount yielding no revenue "at all. The balance remaining at the end of the year on "such lines in 1886–87 was Rx. 3,000,000; in 1887–88 "Rx. 1,500,000; in 1888–89 Rx. 1,000,000; in 1889–90 "Rx. 500,000; in 1890–91 Rx. 1,500,000; in 1891–92 "Rx. 4,000,000; in 1892–93 Rx. 6,500,000; in 1893–94 "Rx. 9,000,000; and in 1894–95 Rx. 11,000,000; so that "there is a burden of Rx. 11,000.000 of capital which at "present is producing either no revenue at all or very little "revenue." This sum is no doubt accumulating, and yet the Government continues to borrow and is constructing some large railways. The Government of course satisfies itself, after due inquiry, that every new line of railway has a reasonable prospect of producing a nett return of at least four per cent. upon the capital expenditure. But the accumulating balance at the end of each year produces no interest and the new railway for some years after construction does not pay. In 1884, three millions of Rx. borrowed were deemed enough to spend annually on the construction of railways. But this sum has now been increased fourfold. Railways, no doubt, confer great benefits on the people, but the question is whether they are worth having at the present price. I am in entire accord with Sir David Barbour in thinking that we should proceed more slowly, and considering how already the sterling debt has increased it is wise not to proceed too rapidly. Almost all the railways recommended by the Famine Commission as protection against famine have been constructed; and for that reason the famine grant has been reduced. I do not see, therefore, the urgency justifying the taxing of the people, who already groan under the weight of taxation, in the construction of railways. The extension of railway communication can afford no consolation to the ryots afflicted by famine and disease, and railways cannot transport grain when there is no grain to be transported. It is time that the Government thought of affording relief to the taxpayer and of devising means by which he can be enabled to increase his earnings. It is said that railways tend to raise the value of produce. As a fact, however, the rupee price of raw produce has not increased in any appreciable manner. There is no natural or healthy rise of price signifying increase of prosperity. Including abnormal years such as famine and drought there is apparent rise, but it does not show the prosperity of the people. If there is a healthy rise due to the prosperity of the people, why are millions of people at the present moment victims of starvation and disease? But after all, an increase in the rupee price is not an unmixed blessing to the mass of the people, for the bulk of the landholders own extremely small properties. In the Presidency of Madras nearly two-thirds of these pay a tax of under ten rupees a year, and it may be taken that these petty properties yield annually less than Rs. 20. To such people a rise in the rupee price of raw produce cannot altogether be a blessing. They sell off a portion of the produce to meet Government dues and most of the remainder goes to satisfy the demands of their creditors. These railways can be worked with considerable economy if they would employ Indians largely in their service. But they do not do so; and consequently the large number of Europeans employed constitute an additional source of drain on the wealth of the people. The railway enterprise in India gives more employment to Europeans than to Indians. There were according to a Parliamentary return of 1892, in all railways 2,448 Europeans* earning salaries of Rs. 1,000 and upwards per annum, the total salaries coming up to Rx. 806,284. There were, however, only 895 Indians who earned salaries of Rs. 1,000 and upwards, their total being Rx. 136,735. Thus not only are the funds for the construction of railways borrowed in a foreign country, but their earnings are appropriated to the extent of nearly a crore of rupees towards the payment of foreigners. India's indebtedness has increased. The increase of debt in England is a serious evil. This latter has increased from 89,008,200*l.* in 1879 to 112,949,546*l.* on the 31st of March 1896. The annual charge on this debt has increased during the same period from 2,532,328*l.* to 3,684,872*l.* For the year 1897–8 "the "requirements of the Secretary of State" (to quote the words of Sir James Westland) "are considerably "enhanced, as he has now to meet heavy charge of the "railway companies against the capital accumulated in

* The actual figures are:—

—	Account 1894-95.	Revised Estimate, 1895-96.	Budget 1896-97.
	Rx.	Rx.	Rx.
Receipts - -	21,244,160	21,674,300	21,583,200
Expenditure -	23,592,649	23,458,000	23,857,500
Net charge -	2,348,489	1,783,700	2,274,300

This result is arrived at after charging in the Railway Revenue Account the following sums on account of exchange:—

	Rx.
Account, 1894–95 - - -	4,774,565
Revised estimate, 1895–96 - - -	4,333,700
Budget, 1896–97 - - - -	4,303,100

(Secretary of State's Financial Statement page 15.)

* This does not include 180 Europeans, with salaries, &c., amounting to 54,522*l.*, not resident in India.

Mr. G. Subramania Iyer.

13 May 1897.

"1896–97. On the other hand our means of meeting his "drawings in India are greatly limited, both by reason of "the adverse circumstances of the year in respect of famine "expenditure and by reason of the heavy railway "programme of expenditure." The Government of India intend to supplement their resources by borrowing four million Rx., but even with this loan it is estimated that the Government will not be able to meet more than 13,000,000*l.* of drawings during the year. The Secretary of State is therefore obliged to have recourse to borrowing, and intends to raise 3,500,000*l.* of permanent debt, besides restoring 1,000,000*l.* by which in the current year (that is 1896–97) he has diminished the temporary debt. These debts go on accumulating, and the Government is regardless of the fact that, besides a large amount having to be paid for interest every year, the amount is paid in a foreign country and does not go to add to the capital of the taxpayers. It is exceedingly deplorable that the gravity of the drain on India's means of living caused by these sterling payments, besides the drain of the salaries paid to European employes in the service of the State and of the railway companies, is not realised, or, if realised the Government is callous to the disastrous results it is producing on the condition of the people. Perhaps I may quote here the opinions expressed by some very competent persons regarding the economical evil of these growing home charges.* The Currency Association that was formed in Calcutta in the year 1894, and of which Sir James Mackay, now a Member of the Secretary of State's Council, was the President, in a communication to the Government of India, made these remarks: "The "burden of home charges has become intolerable, "absorbing, as they do, fully one-third of the total exports "of the country, and there is little evidence of that "compensation which opponents of the currency reform "have sought for in the alleged higher rupee price of the "raw produce and the consequent profit to the cultivator. "India pays her home charges with exports of produce, of "which wheat generally forms an important item; yet "each million pounds sterling of home charges now "absorbs 295,000 tons of wheat against 185,000 tons in "the shipping season of 1885, when the rupee price was "about the same as it was a month ago. In other words "the wheat cultivator of India must now devote 60 per "cent. more labour than formerly to the discharge of the "proportion of the country's foreign indebtedness." Sir David Barbour, writing in the "National Review" of April 1895, remarks: "A very simple calculation will "show that, in order to meet payments fixed in gold, "India has now to give (following Mr. Sauerbeck's "figures) 66 per cent. more produce than would have "been required 20 or 30 years ago. It may be argued "that, if India has to give more produce in order to "discharge her gold debts, she has received compensation "in the form of improvements in production and reduced "cost of carriage. This contention is sound to a certain "extent. I do not think that improved methods of "production come to much in India, but the reduction in "the cost of carriage is considerable. On the whole the "considerations afford compensation for only a fraction of "the additional burden." The reduction in the cost of carriage, I may add, is more beneficial to the foreign capitalists and middlemen than to the ryot, who is not a free agent in the disposal of his produce.

18,964. I think that finishes your remarks on the increase of expenditure?—No, it goes on; only about railways and debt, and the home charges, that I have finished.

18,965. I have been anxious not to interrupt you; this is, however, a convenient point to ask you one or two questions upon what you have been stating to us. Can you tell us on the whole over a long period, say, 30 or 35 years—say since the Mutiny—has taxation increased very much?—It has increased by about 8 crores, I think.

18,966. The taxation, not the increase of consumption?—Taxation, fresh taxation.

18,967. And that would be upon an income of about?—Net income of about 60,000,000, I think.

18,968. A tax revenue of 60,000,000, you mean?—The whole net revenue of the Indian Government is about 64,000,000*l.*

18,969. At the present moment?—At the present moment.

18,970. But if you were to go back to the beginning of the sixties it was considerably less?—Yes, of course.

18,971. Your criticism upon the extension of railways is really more a remonstrance against the outlay of Rx. 10,000,000 a year than against a moderate outlay. May I gather from what you say that you would not be opposed to the laying out of, we will say, the sum formerly attributed to railways, Rx. 2,500,000 a year, or is that too much, do you think?—What I urge is that you must recognise some definite limit and stick to it, the limit being fixed out of due regard to the revenue of the country. I would certainly deprecate an indefinite policy of borrowing constantly in England—in a foreign country.

18,972. With reference to the difference that has taken place in the sums allotted to railways, you mentioned that some time ago Rx. 2,500,000 a year was fixed?—Yes.

18,973. You then criticised the change which has taken place recently, by which, at all events, for a certain number of years the expenditure seems likely to be Rx. 10,000,000, and probably more?—Yes.

18,974. I wanted to gather from you whether, in saying so, your criticism was confined to this increase of railway expenditure, and whether you are satisfied that the sum of Rx. 2,500,000 was reasonable, or whether you objected not only to the Rx. 10,000,000, but to the Rx. 2,500,000?—Well, I cannot say exactly that I object to the Rx. 2,500,000 proposed. It might be a moderate expenditure, but what I objected to was this constant increase and want of definite policy in regard to the maximum expenditure upon railways.

18,975. Would you explain a little more fully what you mean by "the extension of railway communication can "afford no consolation to the ryots afflicted by famine and "disease, and railways cannot transport grain when "there is no grain to be transported"?—What I meant was that the advantages of railway communication to the cultivators are rather exaggerated. They are of use, no doubt, in transporting produce from a fertile and prosperous district to another district which is not so fertile and prosperous; but, after all, railways can only transport grain when we have good harvests in the country, they cannot form an absolute protection against famine.

18,976. But would not one assume from that that you were under the impression at the present moment that the whole of India is suffering under famine, because you say that "the extension of railway communication can "afford no consolation to the ryots afflicted by famine "and disease, and railways cannot transport grain when "there is no grain to be transported." The only meaning that you can put upon that that I can see is that the whole of India is afflicted by famine and disease, and that there is no surplus in any part of India which can be transported to a district which is in need of such grain?—That is not my meaning.

18,977. Your meaning would go further; your words really would come to this, that there is famine all over the world, and that there is no surplus of grain in the world. We must assume that famines will be restricted to certain districts, that they will not be common to either all India or to all the world. If that be so, there would be a surplus of grain somewhere, and surely improved means of transport will, in that case, be the means of saving life, which I suppose is what we all have in view?—Certainly, to that extent, railways are beneficial.

18,978. (*Sir James Peile.*) Have you ever heard of a railway to transport grain and no grain to be transported?—No, people are under the impression that railways are a great protection to famine-stricken people apart from their condition. That is what I want to bring out, merely because railways are constructed from year to year, they will not give an absolute guarantee against famine occurring in the country, famine being due to other causes.

18,979. Not against famine certainly, but they are a guarantee against one province being in want of food and not being able to get it from another province?—But, if both provinces did not produce sufficient grain for the wants of both, railways would not help much.

18,980. Has that case ever arisen; in the present year has India had to import grain from America to feed the people, or has there been sufficient to feed the people in India?—I think some grain came from Burmah.

18,981. Burmah is part of India?—Yes.

18,982. (*Chairman.*) Take this terrible famine which is now prevalent, does it affect the Presidency with which

you are acquainted ?—To some extent, three districts in my Province are affected, those bordering on the Southern limit of the Bombay Presidency.

18,983. Then I suppose there is probably a fair surplus of grain in Madras, is there not, which might be taken to the afflicted districts ?—Yes.

18,984. Supposing you were to go back 50 years, when there were no railways, the people who will be kept alive by that surplus produce from Madras would in that case have died ?—Let me make my meaning clear. I do not at all deny the advantages of railways in regard to their being able to transport grain from a fertile and prosperous district to another which is not so fertile and prosperous. Certainly in that way railways have been of great advantage, and the difference between the famine now and the famine of the past—20 years ago—is due to that fact, and it has been a great help to the Government and to the people; but what I say is, where there is no produce in the country, unless there is surplus produce, railways cannot be of much help.

18,985. Yes, but then there is always surplus produce ?—Not always. I do not believe any definite opinion has been arrived at on that.

18,986. There must be surplus produce unless the whole of India is affected at one time by famine; and even then your argument, if I may put it to you, fails unless the whole of the world is affected by famine, because, supposing the whole of India were afflicted by famine, there would be the means of transporting grain, we will say, from Argentina. But, if there were no railroads in India, that surplus of grain from Argentina would be useless ?—I quite admit that.

18,987. And, therefore, when you say that the extension of railway communication is useless, because railways cannot transport grain when there is no grain to be transported, you are putting an impossible case, a case that could not possibly occur, are you not ?—I cannot quite follow that.

18,988. That is to say that we are to assume that one of these days the whole of India will be afflicted by famine, the whole of Argentina and South America, the whole of North America, and every exporting country; there is no grain to transport. As long as there is a surplus of grain to transport, clearly railroads will be of use ?—Confining our view to India, I think it is quite possible that a very large portion of the country might produce less grain than is required for the consumption of the whole population.

18,989. And then India would draw upon other countries, where there was a surplus of grain ?—Oh, yes.

18,990. And therefore the case which you put, namely, that railways cannot transport grain when there is no grain to be transported, is an impossible case ?—If you include the whole world, of course.

18,991. Quite so. Now you say that it is time the Government thought of affording relief to the taxpayer, and of devising means by which he can be enabled to increase his earnings; have you any view as to the manner in which Government might enable the taxpayer to increase his earnings ?—Well, what I had in my mind was to encourage other occupations than agriculture. Industrial education might be given to them, and they might be made fit to pursue other occupations than agriculture, which unfortunately is the sole occupation of the great bulk of the population.

18,992. You have put considerable stress upon the opening up of new sources of employment ?—Oh, yes.

18,993. Would you grudge the borrowing of money if it effected that object ?—Well, I object to the borrowing of money in sterling in a foreign country.

18,994. And therefore, India not being able to find this money herself, you confine yourself to a pious wish, that is to say, you impose upon the Government a task which could not be performed, inasmuch as it would not be able to get the money ?—No, not exactly so. If more latitude were given to Provincial Governments or expenditure in other directions were brought under effective control, then perhaps there would be more funds available for a purpose of this kind.

18,995. That assumes—it is a perfectly legitimate argument—that the expenditure can be reduced ?—Oh, yes.

18,996. On the other hand, authorities to which weight must be attached do not think it could be reduced ?—No, they do not think so.

18,997. Therefore, it is relying upon very uncertain resources if the only method by which this can be done is by reducing expenditure, because I gather it is only military expenditure and the expenditure of foreign employés that you would reduce; in the other services I see you contemplate a considerable increase, education and so forth ?—Yes. I am not sure that all authorities are unanimous in thinking that expenditure on the Army cannot be reduced.

18,998. No, I do not mean that; what I mean is that there is a very great division of opinion upon it ?—Yes.

18,999. And highly expert opinion doubts it ?—Yes.

19,000. Civilians, though they are quite at liberty to say the country cannot bear such taxation for military purposes, must be rather modest about saying in the presence of a competent military authority that what military authority thinks necessary is unnecessary, must they not ?—Certainly, one should be modest about expressing one's opinions on a question of that kind, but still due weight must be given to opinions coming from those quarters.

19,001. Oh, certainly ?—Nor am I sure that all expenditure in the Provincial Department is satisfactory; there are directions in which more moderate expenditure would suffice.

19,002. But you, yourself, on the other hand, would considerably increase the expenditure on those services which you say would be of benefit to the people ?—Yes, certainly.

19,003. So that that, therefore, narrows the economy which you think might be effected ?—Yes, it does.

19,004. Are you correct when you say that the price of produce has not increased in any appreciable manner ?—I think so.

19,005. Well, I have here the prices ranging from 1861 to 1895 ?—Yes.

19,006. And I take as an article of produce which is largely sold for transport abroad, and therefore not so much used by the people—wheat. I look down the return. It states the price between 1871 and 1875 as a hundred, and it compares the prices in the other series of years with that hundred. Now, it is not worked up to a percentage of the whole of India, and therefore I can only give you the result of different districts ?—What years does your Lordship take ?

19,007. Between 1861 and 1865 there are very few instances indeed in which the price comes up to a hundred. Of course, from 1871 to 1875 it is a hundred all the way down; when we come on to 1891 to 1895 there is hardly a case in which the price is not very considerably over a hundred. As in the sixties, the price was very much below 100, so it is now very much above ?—Yes.

19,008. That appears to me to establish a very notable increase in the value of wheat; in fact, it comes to something very near double. Perhaps it is not so striking, but it is very nearly as striking, in rice ?—Yes.

19,009. And this is a very extensive return. I think, if you were to look at it, you would admit that prices have increased; look at it; you can comment upon it another day ?—In the first place I say it has not increased in an appreciable manner.

19,010. I call double, appreciable ?—Yes. These figures, I am afraid, are rather misleading, somewhat misleading. They do not make due allowance for the fact that the prices in out of the way places and villages are not the same that they are in big towns and in the places where great public works are in progress; therefore, I think, if we take the places where the bulk of the population live, it will be found that the prices have not there much increased, that is the point.

19,011. Quite so; and your policy of stopping railways, no doubt, is eminently calculated to make that perpetual. Directly you bring a railway into a district you establish a community of price, or very nearly a community of price, throughout the district served by it. To stop the railroads is to keep prices low in out-of-the-way districts ?—Yes, but I must take the liberty of altering an impression in your Lordship's breast; I am not against the policy of increasing the railways at all.

(*Chairman.*) You come very near it.

19,012. (*Sir James Peile.*) I would put it the other way. I dispute entirely your statement that the prices in the villages have not risen. I say since the construction of railways, say from 1850 onwards, the prices of produce in the country towns and in the country districts have risen enormously. In every revision of settlement that we undertake, the principal factor is whether there has been an increase of prices or not since the previous settlement, and the prices are most carefully ascertained in the Taluka towns, and compared with those of the villages; and we

Mr. G. Subramania Iyer.

13 May 1897.

arrive at the result that there has been a very great increase, and this has been found to be due to the opening out of the country by railways in every direction. It brings into the market produce which formerly used to rot on the ground, because it could not be sold?—Yes, exactly, but you must permit me to observe that we have not much faith in the calculation of prices that settlement officers make.

19,013. They are taken from the records of the Taluka towns which are regularly compiled?—They do not make due allowance for abnormal seasons.

(*Sir James Peile.*) Oh, pardon me, we always specially note the famine years, of course, and take them out in getting an average. We are not so stupid as to go on the prices of a famine year.

19,014. (*Chairman.*) When you look at that return, you will see the great number of districts over which it extends. The prices in these districts, at all events, have risen very much?—I admit the rise in prices, but I would qualify it by the fact that much of the rise is due to abnormal seasons, drought and famine, and big cities where large public works are being carried out.

(*Sir James Peile.*) And railways are constructed.

19,015. (*Chairman.*) Now, you say an increase in the rupee price is not an unmixed blessing to the mass of the people. Is it not the case that at all events for a fixed term the tax is fixed in rupees?—Yes.

19,016. Then, if during that term the prices of produce increased, supposing that it is doubled, the producer may get, or would get, a considerably enhanced price in rupees, while he was only paying in taxes the same number of rupees as before. Consequently, in that case, surely the rise in the price of his produce must be a benefit to him?—Yes, but the great fact is in the economical condition of these petty landholders, such as I refer to: they have hardly any grain to sell, what little they get they sell away for the purpose of paying the Government due, and the portion they give away to their sowkar, perhaps they keep a little for their own consumption, but they have little to sell—unless they sell their produce they cannot benefit much by increased prices.

19,017. (*Sir James Peile.*) Well, they take enough to support themselves, and the balance they sell?—They have hardly any balance.

19,018. They must have a balance to pay their land assessment?—That does not go to their benefit.

19,019. Does it not?—No.

19,020. (*Chairman.*) Suppose a man raises 20 bushels a year, and supposing 10 bushels are necessary for his own support, and the remaining 10 bushels are available to pay his land tax of, say, one rupee. If at the beginning of the time the 10 bushels are worth five rupees, while at the end of the time these 10 bushels are worth 10 rupees, since his tax remains only the same he is so much the better by the difference?—I can follow the difference, but the result is he trenches on the balance for his subsistence; unless the produce increases from year to year, it gives him no benefit.

19,021. Still, if he has only to pay the same taxes, and if the price of the produce rises, the taxes remaining the same, he clearly has benefited by the difference?—In that way he is benefited, no doubt; so far as he has to sell a less quantity to meet the Government demand, he benefits.

19,022. You use later, perfectly legitimately, the argument in the contrary sense. You say what Sir David Barbour says, that the taxpayer in India has to produce now so many more bushels of wheat than he did formerly in order to pay the sterling charges over here?—Yes.

19,023. Of course, if that is good in the one case, it must equally apply in the converse?—There is also the fact, my Lord, that meanwhile the indebtedness of the ryot increases; he has to pay more interest to the *sowkar*.

19,024. The indebtedness of the ryot is increasing to the middle-man?—He has constantly to borrow money for the payment of Government taxes; much of the balance is taken up by the payment to his creditor.

19,025. (*Sir James Peile.*) But what is the proof that that happens? What proof do you offer that his indebtedness is always increasing?—I do not know whether I said always increasing, but it seems to be generally admitted, even by Government, that the ryots are a good deal indebted.

19,026. Yes, they always have been, I think, from the beginning of history?—If a man does not pay debt, every debt has a quality of increasing its burden from year to year. He pays interest and compound interest, and goes on adding to his burden; that is an essential factor, I think.

19,027. (*Chairman.*) I think now you would wish to offer some remarks on the exchange compensation allowance?—Yes. I entirely agree with Mr. Wacha and Mr. Gokhale in the remarks they have made regarding the exchange compensation allowance. There was absolutely no justification whatever for diverting more than a crore of rupees of the taxpayers' money for the benefit of a class of officials who were already paid on an exceedingly liberal scale, such as is known in no other country. There was some hardship, no doubt, caused by dear exchange; but the hardship was greatly exaggerated, and no regard was paid to the fact that the Indian taxpayers, through Government, were suffering far more from the depreciation of the silver currency than the officials themselves. Even the Uncovenanted Civil Servants, whose pay and pension are fixed in rupees, were paid this compensation. Professor Gokhale points out that the concession in regard to those whose salaries are fixed by statute in rupees is illegal, and the question of their legality or otherwise is under consideration. If the English official suffered loss in his remittances to England, the taxpayers, who had to meet the sterling charges of the Government, had to suffer even a more serious loss. The Indian taxpayer is an exceedingly poor person, whereas the English official is an exceedingly well remunerated person for his service. The considerations which prevailed when the present salaries were fixed more than 120 years ago, do not possess the same weight now. The English official in India is no longer an exile, and India is not for him a land of woes. I believe it is also a fact that living in England has within the last 20 years become cheaper, so that that portion of the Anglo-Indian official's family remaining in England can now live on reduced amounts. The payment of these allowances rendered the imposition of import duties necessary. In the Budget estimates of 1894–95 they amounted to Rx. 1,113,300, and the new taxation imposed was expected to bring in Rx. 1,140,000. In fact the whole transaction looks like one prompted by selfishness, and, looking to the special circumstances of the time then, shows an extreme want of sympathy with suffering people. Since they became a regular item of public expenditure the Provincial Governments have been badly handicapped, a good deal of the margin between their revenue and expenditure being absorbed by these allowances. The amount borne by the local governments on this account was, in 1894–95, Rx. 423,700.

19,028. (*Sir James Peile.*) I think you said just now that the salaries of the civil servants have not been altered for a hundred years, did you not?—Yes.

19,029. That is to say, they have had no increase all the time in the rate of pay?—Yes.

19,030. Now, if, in the course of 20 years, or say 25 years from 1873, the value of those salaries falls very largely, do you not think there is some propriety in bringing the salaries up to, at any rate, what they were a hundred years ago?—It will all depend upon circumstances; if you can increase their salaries without injury to other people, perhaps you might; but it cannot be said you might increase it from any absolute standard.

19,031. Suppose it is just to increase the salaries?—Whether it is just or not.

19,032. And that that involves larger expenditure from public revenues; do you not think it is right, notwithstanding, to spend the money?—No, I do not think so; if it involves injustice to other people, whose case is more hard, I cannot say that it is just.

19,033. Is it not the case that the salaries of the natives, the subordinate officials, have been very considerably increased in the last 30 or 40 years?—I do not know to what class of native officials you refer.

19,034. I would take the whole of them, take them in the different departments. One with another, there have been immense revisions and increases of pay; the pay is much higher than it used to be?—I think it was admitted in evidence that the pay of sub-ministerial officials, such as clerks and so on, have not been increased.

19,035. I was looking more to subordinate judges, tahsildars and the like?—I am not sure that their salaries have been increased, individual men have been appointed no doubt. This ought to be borne in mind with regard to the English officials and native gentlemen. When the salaries of English officials were fixed, they were fixed at maximum rates in order to attract the best gentlemen possible to the service of the country; on the other hand, when the native gentlemen were admitted to the service,

the salaries of native officials were fixed at the minimum rates, the minimum salaries that would attract native gentlemen of the class that was desirable to introduce, and, if a slight increase has taken place in their salaries which were at the outset fixed at minimum rates, it does not follow that an increase should take place in the salaries of the English officials whose salaries were fixed at the maximum rates, proportionately or otherwise.

19,036. You would admit that the native salaries have been increased in order to attract the right men?—I am not sure that they have been increased.

19,037. Perhaps you have not looked into it, because I could very easily bring a great deal of evidence before you of that fact?—The impression that has been left upon my mind after reading the evidence before the Commission was that the increase under salaries and so forth was rather due to the additional hands employed than to the increase of salaries. There might have been an increase of salaries in a few isolated cases.

19,038. Not isolated cases, but in many departments the whole of them?—Perhaps the increase was made at the time when there was no hardship in making an increase, but it does not follow at all, having regard to the circumstances of the time, that those increases should be given to those officials. I do not admit the two can go together.

19,039. Do you not admit then that, if you allow the emoluments of any service to fall greatly below their former value, you very soon get an inferior class of men offering to take these appointments?—It may follow or it may not follow; it all depends upon the market from which you draw your officials.

19,040. Then you would have to give the market price, would you not?—Certainly.

19,041. I suppose that you are aware that barrister judges and other gentlemen who are engaged in India, are paid at a higher rate than the Civil Service men?—It may be so, but I thought that the Civil Service had always more attraction than the other professions you were referring to. Young men in England prefer to enter the Civil Service of India rather than take up the Bar or other professions.

19,042. Still, when you want a man out there, say a judge for the High Court, you pay him better than you pay the Civilian?—Judges I should treat exceptionally. I do not believe their case is on a parallel with the body of English officials in India. They have got so many advantages and facilities which afford more than a recompense.

19,043. What is the advantage? The pension?—Their allowances and pensions, and the power which they enjoy, and other things.

19,044. Well, the barrister-judge gets a higher pension for less service than a civilian does?—I said I would rather treat the judges of the High Court as an exceptional case.

19,045. (*Chairman.*) I think your next point is increase of taxation?—Yes, since the year 1884–85 there has been an increase of Rx. 5,500,000 in the Imperial Revenues due to additional taxation. If the Provincial Revenues were taken into account the total increase would be more than Rx. 7,000,000. This does not include Land Revenue, which has increased within the last ten years from Rx. 21,832,211 to Rx. 25,408,272 excluding the revenue due to irrigation.

19,046. May I ask there, does that include any fresh land that may come into assessment?—To a very small extent it may be so, but the bulk of the increase is due to increased assessment.

19,047. Revision?—A portion of the increase is due no doubt to the annexation of Burma. But Upper Burma brings no addition to the revenues of the State. Including its military charges, it is unable to meet all its expenditure. The annexation of that province has brought no good to the Indian people. They did not want it and they have not been profited by it. The annexation was made for purposes connected with Imperial interests, and the Indian people would be very glad to see the two Burmas taken away from the Indian Government altogether and constituted into a protected Crown Colony.*

19,048. Is the deficiency charged upon other provinces of India, upon the general revenue of India?—Upon the general revenue of India. Though the money and the men that were needed for the conquest and pacification of Burma were supplied by the Indian taxpayers, the Indians are excluded from the public service, the higher appointments being exclusively held by Europeans. To add insult to injury, it is seriously said that the Burmese have contempt for Indians, and would dislike their employment in the services of their country. Burma has appropriated a good portion of the increased proceeds of taxation, and the rest has been mostly spent for military purposes and for compensation allowance to European *employés;* whereas the increase of expenditure has been very moderate on the education of the people, on the protection of life and property, on the extension of communication in rural areas, on irrigation works, and on the cheapening and rendering more accessible of the administration of justice—which are services, I need hardly add, more appreciated by the people.

19,049. You say the Burmese have a contempt for Indians; has that been put forward by any responsible persons?—Yes, I think the present Lieutenant-Governor of the Burmese province said so in his note on the simultaneous examination question. I am not sure that the present Lieutenant-Governor said so, my memory is that somebody holding a very important position said it.

19,050. (*Sir James Peile.*) A good many Indians are employed in Burma as armed police, are they not?—I referred to higher appointments, I say so in my note. The Indians are excluded from the public service, the higher appointments being exclusively held by Europeans. There are only two native civilians in Burma. I think Sir Frederick Fryer recommended that these two civilians should be withdrawn.

19,051. (*Chairman.*) Well now, does not Lower Burma pay its way?—I think it does.

19,052. And is it not also anticipated by officials that gradually this large charge which Upper Burma imposes upon the revenues of India will be diminished as the country becomes settled?—It will be diminished, no doubt, but it will take a long time, and, as Government think backward provinces should be advanced at the expense of the advanced provinces, they will be always a source of drain on the other provinces.

19,053. You have not got any figures, I suppose, to show what has been the increase of expenditure on those services that you say are beneficial and appreciated by the people?—I have got some figures about the education and the police. I have not made up my figures about other Departments, but I have some notes upon the Education Department and the police of my province.

19,053A. You speak of the expenditure on the extension of communication in rural areas?—Yes.

19,054. The value of them is what you have been rather minimizing I think before, have you not?—I do not think so.

19,055. I thought you had not been laying any stress on the importance of carrying railway communication up into the rural districts?—The importance of railways, my Lord, here I refer more to roads.

19,056. You advocate the extension of roads, but you do not lay so much stress upon the opening up of the country by railroads?—Not so much stress.

19,057. I am aware that you are in favour of the gradual extension of railways?—Yes.

19,058. And therefore, I say you do not lay so much stress on the rapid opening up of the country by railways?—So rapid as is now pursued by the Government.

* Net expenditure of Upper Burma:—

	Rx.
1886-87	2,068,700
1887-88	2,618,300
1888-89	1,695,600
1889-90	1,333,900
Revised Estimate of 1890-91	1,156,800
Budget Estimate of 1891-92	1,189,300
Total in 6 years	Rx. 10,062,600

The witness withdrew.

(Adjourned till Monday next at 11 a.m.)

At the India Office, S.W.

FORTY-SIXTH DAY.

Monday, 17th May, 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Mr. SURENDRANATH BANERJEA called in and examined.

Mr. Surendranath Banerjea.

17 May 1897.

19,059. (*Chairman.*) Mr. Banerjea, in what capacity do you come before the Commission?—I am Honorary Secretary of the Indian Association, and have been so for the last ten years. The Indian Association is a political body which has in view the promotion of the political advancement of the people by every legitimate and constitutional means. It was founded in Calcutta in 1876, and has branch and affiliated associations in different parts of the country. I am also a member of the Bengal Legislative Council, and have been so for the last four years, having been twice elected by the Calcutta Corporation, of which I am a member. I am also Honorary Presidency Magistrate and Justice of the Peace for the town of Calcutta, and Honorary Magistrate of Barrackpur. I am Chairman of the North Barrackpur Municipality, am editor of the "Bengalee," a weekly newspaper in English published in Calcutta, and am proprietor of the Ripon College (which is an unaided independent college, teaching up to the B.A. and B.L. Standards), and its branches. I was President of the Indian National Congress in December 1895.

19,060. Do you consider the existing financial control adequate?—No, and my reasons are these: Sir Auckland Colvin observes in the course of the evidence given by him before the Royal Commission, that Government do not pay sufficient attention to what may be the financial results of the measures they adopt (Q. 2909, Vol. I., Final Report. page 119); and both Sir Auckland Colvin and Sir David Barbour are agreed that heads of departments do not take sufficient note of the financial aspects of questions. The Finance Member, who is responsible for the financial well-being of the country, often finds himself as one against all his colleagues.

19,061. May I ask you on this point, whether you think the evidence which has been given before us entirely bears out that statement? I think some of the witnesses who appeared gave us to understand that it could hardly be said that the Finance Minister was often left alone?—The witnesses to whom your Lordship refers came before Sir Auckland Colvin and Sir David Barbour.

19,062. As a matter of fact I think some of them came after?—I thought your Lordship was referring to Lord Ripon's evidence.

19,063. No, Lord Ripon's evidence came very much after?—Having regard to the quarter from which that evidence has come, the highest finance authority in the Government of India—I am speaking as a representative of the people of India—we are bound to give the utmost possible weight and importance to that evidence.

19,064. That is to say, you take Sir Auckland Colvin's evidence, but you must remember that equally high financial authorities have not gone quite so far?—May I inquire if they were Finance Members?

19,065. Yes, I think they were; I have not the reference at the present moment, but my recollection is that some of those have been Finance Members?—I should like to know the exact details before I should make any qualification of that statement.

19,066. (*Sir Andrew Scoble.*) Might we not take it that Mr. Banerjea is merely giving the impression he has derived from the evidence of Sir Auckland Colvin and Sir David Barbour; he does not put it higher than that?—Precisely so. The situation is complicated by the fact that military expenditure is the most disturbing element in the problem, that such expenditure is too often governed by political considerations, and that his Excellency the Viceroy is personally in charge of the Political Department.

19,067. (*Chairman.*) What do you mean by political considerations; foreign relations?—Military considerations; that is to say, those considerations which guide the policy of the Government in regard to foreign matters.

19,068. That being so, is not expenditure on defence in every country governed greatly by considerations of foreign relations?—Certainly so, and in India it is so; that is what I wish to state. The Secretary of State, no doubt, may be found to be on the side of economy, though he may take a different view when the Viceroy is opposed to the Finance Member. But when the Secretary of State himself sanctions expenditure which is open to objection, whether on the ground of equity or law, there is no constituted authority to act as a check.

19,069. Has not the Indian Council a check on the Secretary of State in questions of finance?—The Secretary of State, I understand, can act independently of the Indian Council in matters of finance, can he not?

19,070. (*Sir James Peile.*) How do you make that out?—I want to ask that question.

19,071. We want to know from you?—If the Secretary of State and the Indian Council are together with reference to any matter, then there is absolutely nothing to check or control them—for instance, with reference to the Suakin expedition.

19,072. (*Sir Andrew Scoble.*) Allow me to interpose one question. Suppose the Secretary of State and the Indian Council were agreed upon a foreign policy, might they not be overruled by the Cabinet or by Parliament?—Certainly.

19,073. Then there is some control?—In theory there is, but that control in practice is not enforced; that is what we say.

19,074. Are you able to show from historical study that that has never been enforced?—No.

19,075. That is your impression again? — Yes; generally speaking, no control is enforced.

19,076. But that is only your impression?—That is not only my impression, but it is an impression which I should like to say is largely shared by my countrymen; I do not know that there are instances to the contrary which are inconsistent with that impression.

19,077. (*Sir James Peile.*) The Secretary of State must have a majority of the Council with him before he can spend a rupee of the revenues of India?—That is so.

19,078. (*Chairman.*) Therefore there is a check on the Secretary of State?—If the Secretary of State and the majority of the Council are at one in regard to any particular matter, there is no check except the check and control of Parliament, and the control of Parliament is a check which is not generally enforced; and very often when the Secretary of State and the Council are at one, he carries out the policy of the Government.

19,079. (*Sir Andrew Scoble.*) What would you suggest in the place of that check?—I am coming to that presently; I develope that as I go on.

19,080. (*Chairman.*) You say, "when the Secretary "himself sanctions expenditure which is open to "objection, whether on the ground of equity or law, "there is no constituted authority to act as a check"?—With the concurrence of the Council, of course; the majority of the Council.

19,081. That is a very important qualification, is it not?—What I mean to say is this: if the Secretary of State takes a decided and pronounced view with regard to any matter, the probability is that the Council would follow his lead. As a matter of fact the Council generally follows; therefore, practically, the power is vested in the Secretary of State. That is all I want to say.

19,082. Are you able to say that the Secretary of State invariably carries the majority of the Council with him?—I cannot say invariably; I do not think I should be justified in saying it, but in the large majority of cases, the voice of the Secretary of State would be the voice of the Council.

19,083. (*Sir Andrew Scoble,*) Is it not the presumption that, if the Secretary of State carries the majority of the Council with him, he is taking the right view of the position of affairs; is not that a fair presumption?—I do not know that we should be justified in making that presumption, having regard to the constitution of the Council of the Secretary of State.

19,084. Do you think you would be justified in forming a presumption to the contrary?—Not at all; I would go upon the facts as they appear in each case. I would form no presumption. The 55th Section of the Government of India Act lays down that, "except "for preventing or repelling an actual invasion of "Her Majesty's Indian Possessions, or under other "sudden or urgent necessity, the revenues of India "shall not without the consent of both Houses of "Parliament be applicable to defray the expenses "of any military operation carried on beyond the "external frontiers of such possessions by Her Majesty's "forces charged upon such revenues." The object of this enactment, as stated by Lord Derby, who was in charge of the Bill in the House of Lords, is "to protect "the Indian revenues." There have, however, been instances in which the spirit, if not the letter, of the Government of India Act has been departed from, and with the full "concurrence of the Secretary of State."

19,085. (*Chairman.*) Would you name one of the instances to which you allude?—Suakim is certainly one in which the spirit of the Parliamentary enactment was departed from. In England, if any irregular expenditure is incurred, it is at once reported to the House of Commons. The prospect of Parliamentary interference, and of the criticisms of the opposition, would act as a check upon irregular expenditure. As regards Indian finance, however, no machinery is provided for independent and effective control. A private member may indeed bring up any question of Indian finance before the House; but it is one thing for a private member to act upon his own independent and personal responsibility, and quite a different thing for a duly constituted Parliamentary Committee to look regularly into the accounts of the Indian Government. The so-called Parliamentary control over Indian expenditure is regarded by Indian public opinion as being practically without any value. The Indian Budget is discussed towards the fag end of the Session before empty benches. As the late Mr. George Yule observed in his own felicitous language: "The 650 "odd members who were to be the palladium of India's "rights and liberties have thrown 'the great and "'solemn trust of an inscrutable Providence back "'upon the hands of Providence to be looked after as "'Providence itself thinks best.' The affairs of India, "especially in the Financial Department, have passed "with no kind of check whatever into the hands of the "Secretary of State."

19,086. After the conversation which has taken place, do you still put that in that unqualified manner—"with no kind of check whatever"; you have admitted, to a certain extent, that that is not quite correct?—Theoretically I admit there is a certain check.

19,087. And it has been pointed out to you that the Secretary of State cannot, without a majority of the Council, order a rupee of expenditure. With these facts before you, to which I do not think you have demurred——?—Certainly not, because they are facts.

19,088. Are you prepared to use those words in that unqualified manner?—I am quoting Mr. George Yule, who says that the affairs of India, especially in the Financial Department, have passed with no kind of check whatever into the hands of the Secretary of State.

(*Chairman.*) Oh, I beg your pardon.

19,089. (*Sir Andrew Scoble.*) Who is Mr. Yule?—He was President of the Bengal Chamber of Commerce, Sheriff of Calcutta, Member of the Viceregal Council, and he became in 1888——

19,090. I do not think he was a Member of the Viceroy's Council?—Not at the time, perhaps, when you were there, but he certainly, so far as I know, was a Member of the Viceregal Council, and he was Sheriff of Calcutta, and he was senior partner in the firm of Andrew Yule & Co.; he was a most respected European resident of Calcutta. He says:—"I do "not blame the present members of the House of "Commons for thus abdicating the functions that "their predecessors of 30 years ago assumed. The "truth is they have no time to attend to the details "of the trust (page 74, Congress Report of 1888)." But, though Parliament might pay but little attention to Indian affairs, a Committee of the House charged with the particular duty would do justice to it. Under the enlarged Councils Act of 1892, the Legislative Council of India discusses the Indian Budget, and the Provincial Councils discuss the Provincial Budgets, but they are precluded from moving any resolution or dividing the Council in respect of any financial question. Even official experts are of opinion (*vide* evidence of Sir Auckland Colvin) that not much benefit is derived either to the people or the Government from these Budget debates. The utility of the discussion of the Budget in the Provincial Councils is considerably diminished when it is borne in mind that the Budget is discussed under the orders of the Government of India only after it has received the sanction of the Government.

19,091. (*Chairman.*) I can quite understand your holding that the right to propose amendments is of great importance, but do you not somewhat underrate the value of the independent action of members who have the power to bring questions before the Council?—I do not mean to say it does no good whatsoever. We certainly exercise—I am speaking as an independent member of the Council myself—we certainly exercise some kind of moral pressure, but, if we could move amendments with regard to items of expenditure, it would be a great improvement. Take the question of education, for instance, about which we feel so strongly. If the Government put down, say, 24 lakhs of rupees as the educational expenditure of the year, and we say that it should not be 24, but 28 lakhs which should be budgeted for, and we point out details which would justify that expenditure, it would be a great advantage—at the present moment all we can do is to make speeches.

19,092. (*Sir Andrew Scoble.*) Then you want more power than the House of Commons possesses in regard to the English Budget?—I do not know exactly what the constitution of the House of Commons is in this respect; I am speaking of the Indian Councils.

19,093. The House of Commons can only reduce, and cannot increase expenditure—It can only reduce?

19,094. (*Chairman.*) The House of Commons cannot propose a vote increasing expenditure?—In that case

Mr. Surendranath Banerjea.

17 May 1897.

it would be, I am afraid, in excess of the power of the House of Commons.

19,095. Therefore, you are pleading for power in excess of that possessed by the House of Commons?—I should not like to appeal for power which the House of Commons does not possess, but we might limit it to that only; that we might not move amendments which would add to the expenditure, but that we might move amendments which would reduce expenditure. I think we might do that. I should not have the slightest objection to qualify my statement in that way; but at the present moment all I complain of, and what the Members of Council complain of, is this, that we make speeches upon the Budget, but that we are not permitted to move the smallest amendment with regard to the most insignificant item in the Budget. I do not see any reason why this should not be granted to us, having regard to the fact that Government has a standing majority in the Councils.

19,096. Do you not think that the expression of opinion by the non-official members, if they are unanimous on the point, is an indication of popular opinion which the Government would certainly take into consideration?—Certainly it is an indication, but what we want is to appeal to the public as well as to Government. If we had a definite amendment to move—they have not the time to read all our speeches; but, if we had the right to move a definite amendment with regard to any particular matter, that amendment would catch the eye of the public, and the public attention would be drawn to it. It would focus the opinions of the non-official members in such a practical form as to attract public attention at once. That is the view that we desire to put forward.

19,097. With regard to the Provincial Budget, do you mean that, the Goverment of India having sanctioned the Provincial Budget, there is practically no means of amending that Budget, even if the most convincing proofs of the necessity for so doing are brought forward?—That is our conviction. I have the question and answer here before me with respect to the matter; I asked a question with regard to this matter in the Provincial Council, and here is the answer which was given. The Budget is sent about the 10th March to the Supreme Government, and we discuss the Budget towards the end of March. Why should not the debates be sent forward too, and the Government of India would be placed in possession of the official view of the matter as well as the non-official view; and to that the reply was that the orders of the Government of India were that these Budgets should be laid before the Government of India, and the sanction taken of the Government of India, and then the Budget was to he discussed. In fact, complaint has been made that our discussion was academic. I had ventured to suggest, by a question which I had put in Council, that the Budget might be submitted to the Government of India, together with the record of the discussions in connexion with it, when I was informed in reply that the procedure followed was in accordance with the orders of the Government. For the more effective discussion of the Indian Budget, as bearing upon the question of Indian expenditure, the Budgets should be laid before the Councils at least a fortnight before the discussion takes place. The Honourable Mr. Sayani, the Member representing the Bombay Presidency in the Viceroy's Council, complained that they had only a week's time to consider the Budget, and ao time to get instructions from their constituents. In the Bengal Council the Budget is laid on the table only a week before the discussion. The practice involves a serious encroachment upon the right of interpellation, in connexion with the Budget, for, under the Rules of Council, at least six clear days' notice has to be given before a question can be put. If this rule is strictly interpreted, no questions can be put upon the Budget if it is presented only a week before the discussion; for the questions will have to be put on the very day that the Budget is presented, which, of course, is impracticable. I understand that, in connexion with the Bombay Legislative Council, the Budget is introduced at least a fortnight before the discussion.

19,098. Is that rule strictly enforced?—It is. I was the victim of it last time in connexion with certain questions which I desired to put in connexion with the Bengal Budget, and then it was pointed out to me that under the rules no questions could be put,

19,099. (*Sir Andrew Scoble.*) I think the rule is "except with the permission of the President"?—Yes, the President can exercise his discretion in the matter.

19,100. And, if the President considers that the question is of sufficient importance, he would allow it to be put?—I may just mention that under Sir Charles Elliott's régime we used to put questions on the Budget, and those questions were allowed to be put in the exercise of the discretion to which you have referred, if we gave notice of them on the Wednesday preceding; the discussion used to come on the Saturday; but this rule, I am sorry to say, has not been observed under the régime of Sir Alexander Mackenzie. The same sort of questions are put. I put the same sort of questions on both occasions, and it was pointed out that under the rules I had got beyond the limitation of time.

19,101. (*Mr. Caine.*) Is it not the case that questions are put by Members of both the Provincial and the Viceroy's Councils, answers to which are refused, which are subsequently put in the House of Commons, and answers obtained from the Secretary of State?—Yes; I know of one case that has happened. Some very important questions in connexion with the Accounts Department were put before the Supreme Legislative Council, and those questions were disallowed; but the selfsame questions, practically the same questions, were subsequently put by Mr. Roberts before the House of Commons.

19,102. And answered?—Yes.

19,103. Do you think it is very desirable that there should be some change by which you could obtain the answers in India itself, rather than adopt that roundabout course of getting them from England?—Certainly it would be most desirable, because we should be in a position to check the answers which are given.

19,104. (*Chairman.*) In such cases as that, though it is quite arguable that it might be desirable that you should have the power of putting questions in the local Legislative Council, at the same time, the case cited shows there is an appeal to Parliament, and that that appeal is not altogether inefficient as it stands at present?—I do not mean to question that at all. I think the appeal to Parliament is very useful. If I may be permitted to make one suggestion, there is this one power which Members of Parliament possess which we do not possess in India; if an unsatisfactory or evasive reply is given, or portions of questions are left unanswered, we are not allowed on the spot then and there to correct that; in Parliament that can be done, as far as I understand the practice to be here.

19,105. (*Mr. Caine.*) Do you think the rules with regard to interpellation in the Viceroy's Council, and in the Provincial Council, should be assimilated to the rules which prevail in regard to questions in the House of Commons?—I certainly think so; and with the greatest possible advantage both to the interests of Government and to the people alike.

19,106. (*Mr. Courtney.*) But the rules of the House of Commons are not held to be perfect?—Ours are still more imperfect.

19,107. It is said that ours are too redundant?—I am not familiar with the rules; but there is one rule which I know, or which I have gathered from reading the newspapers, and that is, that if questions are put and answers are given, and portions of the questions are left unanswered, members can at once call attention to the portions which are left unanswered. We cannot do that; under our rules we are at once stopped.

19,108. (*Sir Andrew Scoble.*) Can you point out the rule under which you cannot exercise the power which you have just expressed a desire to exercise, in regard to getting a complete answer? Which is the rule which prevents that?—I have got the rules here; shall I read them out?

19,109. Yes?—These are the Rules for the Council of the Governor General of India. Shall I read the rules for the Provincial Councils?

19,110. No, read the one on which you rely. That will be enough?—"Any question may be asked by any mem-
" ber, subject to the following conditions and restrictions.
" A member who wishes to ask a question shall give at
" least six clear days' notice in writing to the Secretary
" to the Government of India in the Legislative
" Department, submitting in full the question which
" he wishes to ask. Questions must be so framed as

" to be merely requests for information, and must not " be in an argumentative or hypothetical form, or " defamatory of any person or section of the com- " munity. The President may disallow any question " without giving any reason therefor other than that, " in his opinion, it cannot be answered consistently " with the public interests, and in such case the " question shall not be entered in the proceedings of " the Council." This is the rule to which I call your attention. " The President may, if he thinks fit, " allow a question to be asked with shorter notice than " six days; and may in any case require longer notice " if he thinks fit, or extend, if necessary, the time for " answering a question. When the President has " permitted a question to be asked, it shall be entered " in the notice paper for the day, and questions shall " be put in the order in which they stand in the notice " paper before any other business is entered upon at " the meeting. A question shall be read by the " member by whom it was framed, or, in his absence, " if he so desires, by some other Member in his behalf, " and the answer shall be given by the member in " charge of the department concerned, or by some " other member whom the President may designate " for the purpose. The President may also rule, at his " discretion, that an answer to a question on the " notice paper, even though the question be not put, " shall be given on the ground of public interest. No " discussion shall be permitted in respect of an answer " given to a question asked under these rules. The " question asked and the answer given to it shall be " entered in the proceedings of the Council."

19,111. Will you point out in those rules where there is anything to prevent your asking for an answer to a portion of a question that has been left unanswered?—We cannot do it at the time.

19,112. Where is there anything to prevent it?—We are not permitted to do it.

19,113. There is nothing in the rules to prevent it?—There may not be anything in the rules to prevent it, but there is nothing to allow it either.

19,114. But where is it forbidden?—This being a power given for the first time to the Government, we are not allowed to traverse beyond the limitations which are laid down here.

19,115. I can understand that you are confined within the limitations of the original questions; but you say that, if you do not get an answer to a question, you are not allowed to press for it?—As a matter of fact, we are not allowed to do so.

19,116. There is nothing in the rules—that is what I contend—to prevent it?—I want to point out this; that these rules give a certain power to the Government of India, and, in giving that power, powers which are not specifically given in those rules must be presumed not to exist.

19,117. I want you to answer my simple question; do you find anything in the rules which prevents your getting a complete answer?—Not as I have read those rules.

19,118. (*Mr. Caine.*) But it is the case that you frequently are refused?—Certainly.

19,119. That the President of the Council interprets the rules in that way?—Certainly.

19,120. (*Mr. Courtney.*) Does he give a reason for refusal?—He is not bound to do so.

19,121. Does he?—No.

19,122. Can you refer to any case in which this has happened, that you or any other Member have put a question which involved two or three questions, and an answer is given to two out of the three, and you have observed that number three is not answered; has that ever happened?—I cannot recall to mind an instance of that kind at the present moment.

19,123. The complaint you made was that that question number three was not answered, and that you could not get an answer?—Such a complaint is frequently made in the newspapers. Here is one which I quote from the "Bengalee" of the 17th April, which reproduces an extract from the "Advocate" of Lucknow regarding the employment of civil assistant-surgeons, about which a question was asked in the Council of the North-Western Provinces. This is the comment: " To the first part of the question no reply was given." There are two parts to the question; a reply was given to the second part but not to the first.

19,124. Did the questioner go on to say, " You have not answered question number one"?—I do not think he did. I cannot recall to my mind at the present moment an instance in which, the first part of a question not having been answered, the Member called the attention of the Government that it was so; I cannot recall an instance.

19,125. That is the practice followed in the House of Commons; unless a member whose question is not answered takes that step, he cannot complain of an answer not being given, because he has not exhausted his powers of getting an answer?—The practice with us is that a question is put, and an answer given, and the matter ends there; that is the practice.

19,126. That may be the fault of the questioner?—Now that we have got this expression of opinion, we shall test it; but I am afraid we shall not succeed.

19,127. (*Chairman.*) At all events, that point which has been raised has not, according to the evidence that you are able to give us, ever been brought to issue?—That can easily be done; and, with this expression of opinion, I have no doubt it will be done.

19,128. (*Sir James Peile.*) What is the date of those rules?—These are the latest.

19,129. What is the date?—1893, I think.

19,130. Five years ago?—2nd February, 1893.

19,131. Four years ago. At that time a great extension was given to the powers and privileges of the Members of the Legislative Council, was it not?—Yes.

19,132. That was an experiment?—Yes.

19,133. It does not follow that no further extension shall be given?—No, in fact we are hopeful of further extension, and it is because we are hopeful of that, that we are pressing the matter here.

19,134. (*Chairman.*) Will you proceed?—There is indeed no reason for the restriction imposed, in connexion with the moving of amendments upon the Budget, having regard to the fact that there is a standing official majority in the legislative councils in India. No non-official member has the smallest chance of carrying an amendment if the Government was firmly determined to resist it. There is no sort of check upon expenditure from the taxpayer's point of view; and this check has been found most useful, even in India in connexion with the administration of our self-governing local bodies.

19,135. (*Sir Andrew Scoble.*) When you say that there is no check upon expenditure from the taxpayer's point of view, if additional taxation is imposed in order to meet the necessities of the Budget, you have a mode of dissenting from that additional taxation, have you not?—Exactly; that is to say, we may dissent, but we are bound to be in a minority.

19,136. You may be in a minority, but still you have a power of dividing the Council and recording your vote against that additional taxation?—Only in a question of taxation.

19,137. From the taxpayer's point of view is not the question of taxation the important question?—All items in connexion with the Budget are questions in which the taxpayers are very intimately concerned. Taxation is only one matter affecting them; but if there is no question of taxation the whole Budget is laid before the Council, and in regard to the items in the Budget we may make speeches, but we have no right of moving amendments.

19,138. But you have every opportunity to comment upon any item of expenditure which you consider unadvisable?—That is the whole point at issue between Government and ourselves; we have the right to comment, but no right to focus our views in the definite form of an amendment.

19,139. You cannot move an amendment and divide the Council, but if you are always in a minority what is the use of dividing?—It would be of the greatest possible benefit if we could divide. Let me give you an instance. We were in a minority with reference to the Drainage Bill, and the Bill was passed in the teeth of the opposition of the non-official minority, and that Bill has become a dead letter. In not a single instance has that Bill been given effect to, because of the unanimous expression of opinion on the part of the non-official members of the Council.

19,140. That shows that your opposition is very effective?—That is so; our opposition was effective, because

Mr. Surendranath Banerjea.

17 May 1897.

we had the opportunity of moving an amendment. We moved an amendment that this Bill be not given effect to, or something to that effect, and the result was that the Bill has not been given effect to.

19,141. (*Sir Ralph Knox.*) Was there a division upon it?—Yes; and all the non-official members in a body voted against the Bill, but the Government passed the Bill in the teeth of the opposition of the non-official members, and since 1894, and it is now 1897, in not a single instance has that Bill been given effect to.

19,142. (*Chairman.*) I think you have restricted your statement, have you not, to this point, that there is no sort of check upon expenditure?—Quite so; that is so. This check has been found most useful even in India in connexion with the administration of our self-governing local bodies. Finance is their strong point, and the most notable instance in this connexion is afforded by the Calcutta Municipality. The financial position of the Municipality has been strengthened under the government of the Elected Commissioners, and its credit has greatly improved. The Municipality now borrows at the rate of 3½ per cent. Before 1891, the rate of interest was 5 per cent. It has gone down to 3½ per cent.

19,143. Without in any way questioning your view of the position of the Calcutta Municipality, is it not the fact that the rate of interest has fallen generally, you may say throughout the world, and that all borrowing bodies have profited by that fall?—That is so.

19,144. So far, therefore, the proof that you bring forward is not a proof peculiar to the Calcutta Municipality; and, inasmuch as it is common to all borrowing bodies, it is not a distinct proof of the ability of the Calcutta Municipality?—I want to point out that, if the Calcutta Municipality was a bankrupt body, and had not good credit, it would not borrow at 3½ per cent.; there are two factors in it, the growth of capital, and the credit of the Corporation.

19,145. I am not questioning your view of the position of the Calcutta Municipality in the least; it was only your instance which struck me as applying to all borrowing bodies?—I quite accept that.

(*Mr. Caine.*) The witness's point was that the Calcutta Municipality borrowed at 5 per cent. in 1891, and now it borrows at 3½ per cent.: I think it shows, certainly, a very great improvement in the borrowing powers of the Calcutta Municipality.

(*Chairman.*) Very possibly.

(*Mr. Caine.*) One and a half per cent. is much more than the fall of the market; there has been an improvement in the credit as well as a fall in the rate of nterest.

19,146. (*Mr. Courtney.*) Did they borrow in 1891 at 5 per cent.?—Yes.

19,147. They actually borrowed?—I cannot remember the date exactly, but in 1890 they might.

19,148. (*Sir Andrew Scoble.*) But did they?—They are constantly borrowing for large works and expenditure.

19,149. (*Chairman.*) Have they a large debt?—Yes, about two crores, I think.

19,150. Where do they borrow?—They borrow in Calcutta.

19,151. And they find people who will advance them money at 3½ per cent.?—Certainly; twice over. We reduced the debt before the Government undertook this operation; the Government began the reduction in 1891.

(*Chairman.*) Mr. Caine will recollect that between 1891 and 1897, with the Imperial Government and other Governments, the fall in interest has been very considerable; and I am not quite certain that we should invariably put that down to the credit of the Chancellor of the Exchequer for the time being.

19,152. (*Mr. Caine.*) You can find out what the fall in the market has been. Portsmouth borrowed at 3½ per cent., and got 96*l.* in 1890; that has risen to 110. There has only been a difference of ½ per cent. in Portsmouth, and 1½ per cent. in Calcutta shows that the borrowing powers there have greatly improved?—What is true of the Calcutta Municipality is true of most other municipalities in Bengal, where the representatives of the ratepayers control the expenditure. It is perfectly true that, even if the Members of Council had the right of moving resolutions in respect of financial matters, they would be in a minority under the existing constitution of the Council. But a unanimous or a nearly unanimous vote of the non-official members on a financial question would be an index of popular feeling which the Government of India would not ignore. I do not regard this duty of controlling the expenditure in any sense as a radical proposal, or one calculated to weaken the authority of the Executive Government. On the contrary, by focussing the views of the popular representatives, it will afford the Government a valuable index of popular feeling. It is my impression, though I have not been able to verify it, and I state it for what it is worth, that in the Ceylon Legislative Council, if the non-official members are unanimous with regard to any item of expenditure in opposition to the views of the official majority, all action is suspended until the sanction of the Colonial Secretary has been obtained.

19,153. (*Chairman.*) In speaking of your impression as to the practice in Ceylon, do you mean that there is an unofficial rule to that effect?—I remember to have read this in the proceedings of the Ceylon Legislature, and I have been hunting over the proceedings, but have not been able to lay my hands on them; I would not like to make the statement without proof.

19,154. That is not the case, I think?—Is it not? Possibly.

19,155. I do not speak positively; I asked a question on the point, and I was told that it is not the case; but I do not say you are wrong, because I do not know it positively; but, if there is not an official rule, does not this really resolve itself into this, that it is within the discretion of the Governor of Ceylon, if there is a very strong non-official expression of opinion against an Act of the Government, to refer the Act to the Colonial Secretary before giving effect to it?—Yes.

19,156. And does it not lie within the discretion of the Governor-General to do the same thing with the Secretary of State for India?—Certainly.

19,157. Therefore, unless there is an actual rule, would you not admit that there is no great difference between the powers of the two Governors?—That is so; I do not know exactly what the state of things is; that is to say, if there is a rule, that when there is a difference of opinion about finance between the non-official members and the Government—if there is a rule to that effect, of course, that would be of great advantage; but, if it is a matter of discretion, the Viceroy certainly might exercise the same discretion.

19,158. I only want to bring us to an understanding on the point?—It would depend on the Viceroy.

19,159. If there is a rule, there is considerable force in your argument; but, if there is not a rule, it appears to me that the discretion of the Governor in Ceylon, and that of the Governor-General in India, are precisely the same?—I was under the impression that there was a rule, and I was arguing under that impression. In my evidence I allude to nothing more than what is my impression. Some sort of control on the part of the taxpayers has become all the more necessary, when it is borne in mind that since 1885 the power of the Finance Minister in checking expenditure has been considerably weakened, owing to the military policy which has been followed in recent years.

19,160. Here, again, you are aware that the evidence before us shows a difference of opinion?—There is a difference of opinion. As a further check upon expenditure, I would recommend that one Member of the India Council for each of the three Presidencies of Bengal, Bombay, and Madras should be elected by the non-official members of the Supreme Legislative Council.

19,161. That is to say, three Presidency members should be added to the Indian Council here, who should be native gentlemen?—Not necessarily native gentlemen; they could be European gentlemen for the matter of that; if they had a sympathetic feeling for the people, why should not European gentlemen be elected; there is not the smallest objection.

19,162. (*Sir Andrew Scoble.*) Why would you limit it to the three Presidencies?—I should be very glad to have five. I only bring it forward as a tentative proposal, but it seems to me that three is the minimum that we should have to begin with.

19,163. Leaving out the North-West Provinces and the Punjab?—I think the others could look after the North-Western Provinces and the Punjab. If

you will give us the North-West Provinces and the Punjab, we shall be delighted; but for the present, at any rate, that is what I venture to suggest. Periodical inquiry (once in every 10 or 20 years) into Indian Affairs by a Royal Commission or a Parliamentary Committee would also ensure the same result. The Indian public look back upon the Parliamentary inquiries of the past with mixed feelings. They regret that these inquiries should have been discontinued; they are grateful for the results which they led to. At the Parliamentary inquiry held in 1832, Raja Ram Mohan Roy, the most illustrious name in modern India, gave his evidence, and he suggested reforms, one of which, at any rate, the separation of judicial and executive functions, has come within the range of practical politics. The inquiry led to the enactment of the Charter Act of 1833, the 87th Section of which removed a grave disability from natives of India. The subsequent Parliamentary inquiry threw open the Indian Civil Service to general competition, from which natives of India were not excluded. Since then no Parliamentary Committee has been appointed which has borne any fruit. The people of India regard the stoppage of these inquiries as seriously interfering with their progress in obtaining a due share in the administration of their own country.

19,164. (*Chairman.*) What do you mean by these inquiries? Were they not inquiries which took place at each renewal of the Charter?—Precisely so.

19,165. They were at intervals of 20 years?—Twenty years.

19,166. Can you say that since the last question of the renewal of the Charter, which I think was in 1853——?—The last one was in 1853.

19,167. Can you say that there has been a stoppage altogether of such inquiries?—I do not say that they have been stopped, but they have borne no fruit. There have been inquiries about minor matters, but no inquiries of a general character. There was the Committee of Mr. Fawcett, and the committee of Lord Randolph Churchill, but those Committees I do not think reported; Parliament was dissolved before those committees could submit their reports, therefore they did not lead to any substantial results; but the Parliamentary Committees I have referred to have always been productive, from the Indian point of view, of most beneficial results.

19,168. You do not refer to any other inquiries except those that took place on the renewal of the Charters?—Yes; I refer to those.

19,169. You will observe that in your evidence you speak of the stoppage of those inquiries—"that the "people of India regard the stoppage of those "inquiries"?—Perhaps "stoppage" is not the exact word; "the people of India regard the stoppage of "these inquiries as seriously interfering with their "progress," that is to say, no inquiries of a general character have been held and with definite results; there have been two inquiries, one by Mr. Fawcett's Committee, and the other by Lord Randolph Churchill's Committee; there have been these inquiries, but they have not been productive of definite results.

19,170. If you saw a list of the Parliamentary inquiries that have taken place since India came under the rule of the Queen, I think you would find that the number of Parliamentary inquiries has considerably exceeded the number that took place before?—They have been about small matters, railways, and things of that kind; but there have been no inquiries upon the scale I have suggested, general inquiries into Indian Affairs.

19,171. You think that there is no use in an inquiry unless it extends to everything connected with Indian Affairs?—I will not put it so strongly as that. Of course, there is use in inquiries; they are always useful, but there would be greater use in having larger inquiries than inquiries referring to smaller matters.

19,172. Do you not think it possible that, if you have very extensive inquiries, the field of investigation may become too great?—We judge a tree by its fruits. The comprehensive inquiries of 1833 and 1853 have been productive of the most beneficent results.

19,173. You leave us under the impression that there have been no very beneficial results for India, except those which followed each of those inquiries. May I ask, with reference to the very subject of your evidence on the Legislative Council, and on decentralisation, has not a very considerable advance been made in those 40 years in admitting native opinion to power and, further than that, the different Provinces to manage their own affairs; are they not considerable results?—Very considerable indeed.

19,174. I observe that in your evidence you would give people to understand that there has been a perfect stoppage of beneficent legislation since India came under the Crown?—I do not mean to suggest that; I should be false to myself, and false to my countrymen, if I said that the expansion of the Councils has not been productive of good results. What I want to say is this—that the Charter Act of 1833, we regard as perhaps the most beneficent piece of legislation that has ever been put upon the statute book, barring the Queen's Proclamation, and therefore we are justified in holding that those earlier inquiries have been fraught with the most beneficent results.

19,175. (*Mr. Courtney.*) Has not the situation entirely changed? Those earlier inquiries were inquiries by Parliament into the administration of a separate, if not an adverse, power?—I quite recognize that fact, that it was the Crown and the East India Company that were concerned, and the Crown instituted those inquiries in order to see whether Government under the East India Company had been properly conducted or not. It seems to me that, if the Crown were to institute inquiries as to whether Government under its own immediate control had been properly conducted or not, the results would be very much the same.

19,176. Surely the thing is entirely different, not only in the scope, but in the motive principle of the inquiries. In one case Parliament is inquiring into something being done by a body, temporarily at least, outside and independent of itself; in the other case Parliament is asked to inquire into something which is always subordinate to itself?—If you will permit me to say so, although practically the Government is subordinate to Parliament, Parliament does not exercise that control which the people of India have some right to expect it to exercise.

19,177. As suggested by our Chairman, Parliament does at short intervals exercise control in a certain degree, so that there is not an accumulation of change awaiting a decennial inquiry; change is constantly going on?—I would point out that the changes in the conditions and circumstances of Indian life, since the assumption of the Government by the Crown, have been far deeper and more rapidly effected than the changes which took place under the East India Company, and therefore it seems to me that there is greater need on that ground for these inquiries than before.

19,178. Have not the changes made by the Government of India since the assumption of the government of India by the Crown been greater than the changes made before?—I quite admit that the changes have been very great. I am not in a position to institute an inquiry; but it seems to me that greater changes are required, and I am perfectly certain that, if these committees of inquiry were appointed, these changes would be indicated by those Committees.

19,179. The inquiry of 1833, to which you refer, was exceptional also in this regard, that it was an inquiry by an entirely reconstituted authority at home; it was almost a new parliament?—Yes, under the Reform Bill.

19,180. Yes?—In 1853 we had an inquiry, and it led to very important results.

19,181. (*Mr. Buchanan.*) Between 1833 and 1853, there was practically no legislation for India in the Parliament here?—I have not studied that subject; I am not in a position to say so.

19,182. Whereas, from the time of the assumption of the Government of India by the Crown to this present time, we have had constant and continuous legislation for what we believe to be the improvement of Indian Government?—Legislation made by the Government of India?

19,183. And also by the Parliament here?—I do not know that there have been many enactments passed by Parliament affecting India.

19,184. Look at the statute book; you will see that there are a considerable number?—The Council of the Governor General came into existence in 1861. Naturally enough, there would be many more enactments in connexion with India by the Government of India.

Mr. Surendranath Banerjea.

17 May 1897.

19,185. Is it not a fact that you have had progressive and continuous legislation upon Indian subjects during the past 40 years, which you had not in the previous period?—I admit the force of that statement, that the Government is essentially a progressive Government, but what I say is this, that progress would receive a larger and more adequate impetus if you had these inquiries; that is what I venture to submit.

19,186. You would not have any inquiry unless it extends over the full field of Indian Government?—We should be more pleased if we had these inquiries extending over a wide area; every inquiry would do good, but the more comprehensive they are, the better for us, we think. The remedies therefore that I would suggest may briefly be summarized as follows:—(1.) Members of the Legislative Councils should have the right of moving amendments and dividing the Council with regard to items in the Budget; and the Budgets should be laid sufficiently early before the Councils to facilitate discussion; (2.) A Committee of the House of Commons should be appointed to look into Indian accounts and control Indian expenditure.

19,187. (*Chairman.*) Those are two separate functions; do you mean that the same Committee of the House, which you wish should be appointed, should look into Indian accounts and control Indian expenditure?—Should look into Indian accounts and report the matter to the House; that is what I want to say.

19,188. But you also say "control Indian expenditure." I point out that the control of Indian expenditure and the examination of accounts are two very separate functions?—I admit that; quite so. Look into Indian accounts; I would stop there, and report the matter to the House.

19,189. You do not lay stress upon the suggestion that they should control Indian expenditure?—No; that is to say, they should report the matter to the House.

19,190. As far as the examination of accounts is concerned, that, of course, is a function that could be discharged by a committee, though under certain difficulties which would have to be considered; but do you feel quite certain about the good effect of calling a Committee of the House of Commons into existence, with powers of control over the details of Indian administration?—I do, certainly; I would trust a great deal to the business experience of a dozen Englishmen, conversant with public affairs, in regard to these matters. We have official control, and we should like to have non-official popular control; I certainly think it would produce satisfactory results.

19,191. And you would have no fear that the views of English constituents, which are not in accord with Indian views, would have any effect upon the Committee?—We take the good with the evil, and we believe that on the whole it would produce better results than otherwise.

19,192. (*Mr. Courtney.*) Have you any warrant in fact for that belief?—In this way, that these Committees of inquiry in the past—I fall back on them—I presume, were appointed on parliamentary party lines. Those Committees made their reports, and those reports have been productive of good results.

19,193. The essential thing to which I called your attention is that they have not inquired into the administration of the Government of the day?—They inquired into the administration of Indian affairs.

19,194. The administration of the East India Company?—It was the Indian Government that they inquired into, and the affairs of the Indian Government that they reported upon.

19,195. (*Sir Andrew Scoble.*) I should like to ask you with regard to the functions of this Committee, would they inquire into expenditure before or after it has been incurred?—Not in that way. Here is the Budget—the Indian Budget—which is laid before the Council of the Governor-General. That Budget will be sent on to the House of Commons, and the Select Committee will look into the Budget and the accounts, and make a report to the House of Commons before the debate takes place in the House of Commons.

19,196. Is there to be no expenditure under the Budget arrangements of the year until this Committee has reported?—Certainly it is to go on. The effect will be moral; that is to say, they will not say, "You must not spend this, or that, or the other," but they will say, "This item of expenditure ought to be this, and that item ought to be that." They will be a sort of consultative body, reporting to the House of Commons, and exercising moral influence, moral pressure upon the Government.

19,197. You want 12 members of the House of Commons to discharge a duty which is now left to 670?—I think what is everybody's business is nobody's business, and, if 12 men are entrusted with the duty, they would do it better than 670. I speak from my own experience of a corporation having 72 members; when we sit down with 72 present, we talk; but, when there are but 12 of us, we do the business.

19,198. (*Mr. Courtney.*) I do not want to disturb your faith, but you are worshipping a blind and a deaf god?—That is the conviction of a whole community, and I am here to give expression to it.

19,199. Just consider the difference; if we have a committee here to examine into the administration of any branch of the Government at home, be it army, navy, or civil administration, the members of the committee appointed for the purpose are cognisant of the facts of the administration themselves; they are in touch with the electors, who feel and write to them what they think about all that is going on, and they are representatives of the nation affected directly by the administration, looking into that administration; but in the case of India, if you had this Select Committee formed out of the nucleus of the House of Commons here, with the exception of two or three they would know nothing about India; they would not be in touch with the electors; there would be no electors to be in touch with; and the result which you may expect with some confidence from the one body, you cannot look for from the other, because the latter have neither knowledge or thought proper for it?—Possibly the same results would not be obtained in the one case as would be obtained in the other, but we have confidence in the impartial judgment of a number of Englishmen of business habits conversant with public affairs dealing with Indian considerations. Of course, the two things do not stand on the same footing, but, if we cannot obtain those large results which English constituents are accustomed to obtain, I hope we shall be able to obtain some good results. At any rate there is no harm in trying the experiment, and silencing us if we are wrong, by showing that the scheme will not work. The further remedies that I would suggest are, one member of the India Council in London should be elected by the non-official members of the Supreme Legislative Council for each of the three Presidencies of Bengal, Bombay, and Madras. Periodical inquiries by Royal Commissions or Parliamentary Committees would promote the ends of economy and good government.

19,200. (*Chairman.*) Now, I think that concludes the opinions you wish to express to us on the subject of the machinery of expenditure, and the next branch you wish to take up is that of the provincial contracts?—Yes. There is no question in the whole range of Indian finance of more vital importance to administrative progress or more deserving of serious consideration than the question relating to the working of the provincial decentralisation system. It was initiated by Lord Mayo chiefly with a view to definitely "limit for "the present the expenditure from the general ex- "chequer on certain important branches of Civil "expenditure, the very branches, indeed, where, from "the progressive spirit of the age, the demands for "increased outlay have most arisen and would most "arise, and in which, from the nature of the case, "the Supreme Central Authority is least able to check "the requirements of the local authorities." (Extract from Sir Richard Temple's speech in introducing the Financial Statement in the Supreme Council, on the 9th March 1871.) The hope was also expressed at the time, by the same high authority whom I have just quoted, that the new system thus inaugurated "will teach the people to take a practical share in "provincial finance, and lead them gradually towards "a degree of local self-government, and will thus "conduce to administrative as well as financial im- "provement." The system underwent a further development in 1877, and a still more remarkable development in 1882, under the auspices of Lord Ripon's government. The principle was adopted that, "instead of "giving Provincial Governments a fixed sum of money "to make good any excess of provincialized expen- "diture over provincialized receipts, a certain pro- "portion of the Imperial revenue of each province "was to be devoted to this object. Certain headings

" were wholly, or with minute local exceptions only, " reserved as Imperial; others were divided, in pro- " portions for the most part equal, between Imperial " and provincial; the rest were wholly, or with minute " local exceptions only, made provincial. The balance of " transfers, being against the Provincial Governments, " was rectified for each province by a fixed percentage " on its land revenue (otherwise reserved as Imperial), " except in Burma, where the percentage was extended " to the Imperial rice export duty and salt revenue " also." (Resolution of the Government of India, No. 3353, dated Simla, the 30th September 1881.)

19,201. What do you mean by the balance of transfers being against the Provincial Governments?—That is to say, the expenditure was more than the receipts. The expenditure which they were placed in charge of was more than the receipts that were made over to them; therefore, there being a balance against them, a certain percentage of the land revenue was given.

19,202. Quite so?—The declaration was also made, that, while on the one hand Provincial Governments must look for no special aid from the Imperial Government, except in case of severe famine, the Imperial Government would make no demand on them " except in the " case of a disaster so abnormal as to exhaust the " Imperial reserves and to necessitate a suspension " of the entire machinery of public improvement " throughout the empire." This reservation was partly modified by the subsequent orders of the Secretary of State, who empowered the Imperial Government to demand contributions from the Provincial Governments upon ordinary emergencies.

19,203. Can you tell us what those orders were?—I could not tell you the exact words of the order, but the orders were " ordinary emergencies." Deficit, and things of that kind were included in that category.

19,204. And there was no definition of " ordinary emergencies "?—I do not think so.

19,205. But you are sure that the term " ordinary emergencies " was used?—Certainly. Subsequent contracts have proceeded upon the lines of Lord Ripon's scheme, subject to modifications as to the apportionment of shares between the Imperial and the Provincial Governments. Great stress was laid upon the progress of self-government as forming a part of the scheme of decentralization in finance, which was referred to as affording an opportunity " for the " association of natives and Europeans to a greater " extent than heretofore in the administration of " affairs." Provincial Governments were instructed to hand over " to local self-government considerable " revenues at present kept in their hands." This has not been done to the extent contemplated.

19,206. That is to say, as the Central Government handed over large powers to the Provincial Governments, so the Provincial Governments in their turn were to delegate powers to subordinate authorities?—Precisely; and I have some figures of the receipts made over to local bodies. These are certain local receipts of the Provincial Government of Bengal. One-third of the ferries, which are purely local receipts, go to the provincial funds, and two-thirds are made over to the local bodies.

19,207. What local bodies?—District boards and municipalities.

19,208. Do you yourself favour that policy of further delegation?—Certainly, most certainly. Public attention in India has been prominently drawn to this question within the last two or three years in view of the contracts which have just been concluded. The matter has been discussed in our Conferences and in the Congress which sat at Calcutta in December last, and the general opinion is (and it is an opinion largely shared by Provincial Governments and local officials) that the system, as judged by its practical working for the last 25 years, is essentially faulty, and that it needs revision. The term is too short, the resources placed at the disposal of the Provincial Governments meagre, and, in many cases, inadequate to meet the urgent needs of domestic improvement. The re-adjustments are followed by curtailment of domestic expenditure, and, by the time the former level is reached, the contract period expires and a fresh adjustment takes place, leading to a fresh curtailment of expenditure. The process continues to the detriment of the domestic interests of the country, and it leads to considerable irritation between the Imperial and the Provincial Governments. A system which is attended with results such as these must be pronounced to be faulty and to stand in need of revision. What strikes one is the very large proportion of national income which the Central Government reserves to itself, as compared with what it allows to local administrations.

19,209. Is your remedy to be an increase of the provincial revenue at the expense of the Imperial revenue?—No; the remedy I suggest is very much on the lines laid down by Sir Charles Elliott. Keep the existing state of things as they are, so far as practicable, but at the same time give one-half of the increase or the normal expansion of the provincial revenue to the Imperial Government and one-half to the Provincial Government. For instance, in the last two settlements the Imperial Government has been taking three-fourths —I have given the figures later on—the Imperial Government has been taking three-fourths, and giving us one-fourth, with the result that the most urgent domestic improvements have had to be postponed or starved. In fact, I may just mention one instance; the Financial Secretary to the Government of Bengal provided this time for an increase of pay to the ministerial establishment to the extent of 3½ lakhs; that was provided for in the local budget, but the Government of India cut it out in consequence of the pressure on Imperial finance. That is what we complain of; that is the burden of my whole statement.

19,210. You confine the Imperial Government to only a certain proportion of the increase; if the charges of the Imperial Government for the great needs of the Government increase, and if the Government are not able to ask in that case for some reduction of the expenditure on the part of provincial governments, what you are really advocating is an increase of taxation?—No, the first charge of the Imperial Government would be on the provincial funds. If the Imperial Government is not able to meet the necessary expenditure, then, over and above the 50 per cent. which I advocate, the first demand upon the provincial revenues would be the charges of the Imperial Government. But my idea is not increase of taxation so much as reduction of expenditure.

19,211. Your argument is for reduction of expenditure; you think that reduction of expenditure is possible?—Not immediately.

19,212. But gradually?—Gradually, exactly.

19,213. And if that is done there would be a larger sum available for the domestic wants of India?—Yes.

19,214. That is an intelligible argument to hold; but, on the other hand, that must be held in connexion with the view of what is necessary for the Imperial expenditure?—No.

19,215. What I want to bring before you is this: I think I understand your meaning; but if you were to increase the provincial expenditure without reference to the needs of the Imperial Government you would really be arguing for an increase of taxation?—It would come to that—either reduction of expenditure or increase of taxation.

19,216. But your view is—I quite understand—that a gradual reduction of expenditure is possible, and you would give the benefit derived from that to the Provincial Government?—Yes.

19,217. I am not opposing that view at all, because it is a perfectly legitimate view to hold; but I only point out that, in the event of the Imperial Government finding larger expenditure necessary, or not being able to reduce expenditure, you must face the fact that it means increase of taxation?—It may mean increase of taxation; I would endeavour to reduce first, but if that is not possible it would mean increase of taxation.

19,218. (*Mr. Courtney.*) You said that you have been pressing for increasing certain expenditure?—Yes.

19,219. And it has been provided for?—Not to the extent we have been pressing for.

19,220. But to a certain extent?—Yes, to some extent it has.

19,221. So that your action has been efficacious?—Yes.

19,222. Although you could not move for an increase, you have got it as far as the Government of Bengal is concerned?—As far as the Government of Bengal is concerned. I may say at once that Provincial Governments are in sympathy with the interests of

Mr. Surendranath Banerjea.

17 May 1897.

domestic improvements, and they would do much more if they had the means.

19,223. (*Sir Andrew Scoble.*) Would not the Imperial Government do the same?—I know nothing at all about the Imperial Government; I can only speak for my own Government.

19,224. (*Mr. Courtney.*) But your own experience and knowledge point to the necessity for increased expenditure?—Yes.

19,225. Which might have been made if the Government of India had not come down for a larger percentage?—Precisely.

19,226. The Government of India, perhaps, had an experience which pointed to increased expenditure on their part?—It is possible, but we looked at the matter from our point of view; and, if you will allow me to go on, Sir Alexander Mackenzie distinctly said in 1896 that more expenditure on education was necessary, but he had to cut down the Education Budget.

19,227. (*Sir Ralph Knox.*) You mean really by that that the expenditure which is under your control you think ought to be increased, and the expenditure which is under the control of other people ought to be decreased?—I cannot speak for other people; I can only speak for myself. Taking the accounts for 1895-6, we find it is no less than full two-thirds of the total revenues of the country as under:—Total revenues—98·370 crores — 21·8 crores (or in Rx. millions) railway receipts = 76·511 crores. Imperial share, 51·541 crores, or 68 per cent. Provincial and local, 20·8 crores + 4·0 crores = 24·870 crores, or 32 per cent.

19,228. (*Chairman.*) What are those 4 crores that you add to the provincial and local share?—That is the local.

19,229. As distinct from provincial?—Yes; educational cesses are levied that do not form part of the machinery of the Provincial Government. Under our present arrangements the Imperial Government has share of *debt, army, foreign relations, railways, irrigation works, post, telegraph, mint, &c.*, while almost the entire work of internal ordinary administration is left to the Provincial Governments, a division of services, as between the central and local administrations, much the same as we have in Federal States, and yet in none of these do we find such a large portion of national income appropriated to the work of the Central Government. In the German Empire it is no more than 35 per cent. of the total revenues; in Switzerland and the United States the national revenue is, roughly speaking, divided half and half between the central and local administrations.

19,230. How do you make that calculation in the case of Germany?—I have got this from Mr. Sayani's speech, a member of the Viceregal Council in Calcutta; those figures are from a speech he delivered. I think these figures are correct, because I am perfectly certain that Mr. Sayani would not have quoted them if they were not correct.

19,231. Do you know how he built them up, because I see in your note you speak of the revenue of Germany—which, I suppose, means the whole of the Empire—as £185,000,000?—That is from the "Statesman's Year-book of Facts"; these other figures are taken from Mr. Sayani's speech, and they are in the "Gazette of India."

19,232. (*Mr. Caine.*) Have you verified them?—They cannot be verified from the "Statesman's Year-book of Facts."

19,233. (*Chairman.*) You are dealing with Germany, Switzerland, and the United States, which are Federal Governments, in which are a number of States bound together for federal purposes. This is not the case in India?—The object of the decentralisation system was certainly that.

19,234. Not necessarily to that extent?—Oh! no; not to that extent; but I do say it was to associate the people to a greater extent in the administration of the country, and I think the interests of finance, and the interests of the Government, would improve if that were done to the extent contemplated by Lord Mayo. Surely in a country so circumstanced as India is, and where internal improvement is an object of such paramount and transcending importance, a financial system which leaves so little for local requirements cannot be regarded otherwise than as fundamentally wrong. Our Imperial expenditure is too high, and our army, according to the evidence of Lord Lansdowne and Sir Henry Brackenbury, is admittedly on a strength beyond our necessities and in accordance with the requirements of Imperial policy. The army costs, exclusive of exchange, 23·46 crores, which exceeds the cost of the army of the United Kingdom by close on 6 crores, and which is equal to the whole army expenditure of the Russian Empire, and amounts to 32 per cent. of our revenues.

19,235. You have looked, I suppose, at the Army Report of 1879, was it not?—I cannot say that I have.

19,236. In that case, if I remember, the Report divided the Army into two portions, and those gentlemen who made the Report distinctly stated that for the defence of India and of its frontiers, reckoning the Powers with whom India might have to deal, India ought, in its own self-defence, to have a body of from 50,000 to 60,000 men movable and available for that purpose, apart from what I may call the garrison of order. That proportion, I think, has been more or less kept up, and as far as they went I do not think they put it down so strongly as you put it down here, that this was not required for Indian purposes?—Our contention is, and it is supported by these high authorities whom I quote, that we have an Army in excess of what would be required for purposes of internal peace, and, that being so, it being required for Imperial purposes, there ought to be an adjustment of charges between the Imperial Exchequer and our own Exchequer.

19,237. Your contention, therefore, is that it is nothing to you India being overrun by a foreign power?—It is a matter of the greatest possible importance.

19,238. That is the point of this Committee's Report, as I read it?—And it is because it is a matter of the greatest possible importance that we say that there should be this adjustment of charges. If it was nothing to us, we should say that England should pay the whole.

19,239. Your contention would then be that you would not require one man to protect you against an invasion, the position of this Committee's Report being that such and such a force, say, 50,000 or 60,000, was necessary in order to provide for the defence of India against external enemies? I put it to you that the inhabitants of India are deeply interested in it; it is not primarily an Imperial question; it is first of all an Indian question; every inhabitant of a country is primarily interested in being free from the risk of being overrun and annexed by his neighbour, and you can hardly say that it is the concern of another country, even though the Government of that other country may be responsible for the machinery of defence?—So far as the purposes of the maintenance of internal peace are concerned, India ought to pay for everything; but over and above that, whatever army was required for Imperial purposes for keeping off external aggression, against a common enemy, the enemy of England as well as of India, I think there ought to be an apportionment of charges. That is the point I venture to submit for your consideration.

19,240. You give a table there in which you compare the proportions?—Yes.

19,241. Perhaps you will read it?—Russia, 115,000,000.

19,242. That is revenue?—Yes.

—	Revenue.	Army Expenditure.	Ratio of Army Expenditure to Revenue.
	In Million Sterling.		Per Cent.
Russia - -	115	23·9	21
United Kingdom -	91·3	17·8	19
France - -	138	25·9	19
Germany - -	185	24	13
Italy - -	72·4	9·4	13

19,243. It is rather important that we should be clear that those figures have been carefully worked out. I will take one or two of them and test them. Would you tell me how you arrive at the 24 millions of Army expenditure for Germany?—I took that figure from the

"Statesman's Year Book of Facts," and the Revenue also, and I took the Army Expenditure which is given there, and I draw a percentage.

19,244. Very odd; from that very same book I arrived at quite a different figure. The Army Expenditure for 1895–96 and 1896–97 is put down at 27 millions sterling?—I took 1895–96.

19,245. The figures do not vary much, excepting only in this, that these figures for 1895–96 and 1896–97 are estimates, and that in the actual accounts of earlier years you will find the expenditure invariably higher. But I am content to take the latest year. For 1896–97 the Expenditure I make out to be not 24,000,000 but 27,000,000. Further than that, did you convince yourself that that 27,000,000 included all the expenditure?—I went upon that assumption.

19,246. If you had looked a little bit further, you would have found that there are two-and-a-half millions of Army expenditure which are kept quite separate, namely, the military pensions, so that in reality upon those very figures you get not 24,000,000 but 30,000,000?—I will look over that once again.

19,247. Then there is another point, which is most important in this case. If we take these figures as a comparison of the expenditure in the different countries, we get on very dangerous ground. Unless really one has made a study of the accounts, one is very apt to omit certain portions. Foreign countries invariably keep their non-effective charge quite apart from the Army estimates. You have applied the same method of calculation to France, have you not?—Yes.

19,248. For this same year the French Army expenditure is very close upon 28,000,000*l.* sterling, in addition to which there comes a large charge for pensions, which, I think, carries it up to considerably over 30,000,000*l.*?—Oh.

19,249. Those are figures which you can look over for yourself. Perhaps I might suggest that in order to follow me in the matter there are two books which are very easily referred to; one the "Statesman's Year Book," and the other the "Almanac de Gotha," they supplement one another?—I will look over the figures.

19,250. And also look over the figures of the revenue of Germany; I should find it extremely difficult to make the revenue of Germany higher, at the outside, than 120,000,000*l.*, instead of the 185,000,000*l.* in your table; but I have not taken all the smaller States?—I think my figures include those.

19,251. Your figures, to be worth anything, must include the small States?—Yes.

19,252. I would remind you about one thing; in the "Statesman's Year Book" you must look carefully to one point, otherwise you count revenue twice over; there is the matricular contribution made by the different States, which appears in the revenue of the different States, and also in the revenue of the German Empire?—Yes.

(*Chairman.*) And that adds over 20,000,000*l.* to the revenue; those are points which, before we arrive at those percentages, require very careful consideration.

19,253. (*Sir Ralph Knox.*) Is it not also the case that the military forces of India are paid?—Yes.

19,254. They are not a conscribed force, which is practically an unpaid force?—But we are prepared to be volunteers if you will allow us.

19,255. The Army is necessarily costly when it is raised voluntarily, and not by conscription?—If you had a reserve of Indians unpaid, I am perfectly certain you would not need all that expenditure.

(*Mr. Caine.*) I might point out that, taking into account the figures which you have amended, taking the extreme figures, it does not touch the witness's argument; it does touch the figures upon which the argument is based, but it still leaves India with the highest percentage of all, so that the argument would still hold good.

19,256. (*Chairman.*) Really my object in putting the question was this: I did not ask the witness to accept my figures, but to look again at them with the view of verifying them?—This book, the "Almanac de Gotha," I had not got, and I did not consult it. I went upon the "Statesman's Year Book."

19,257. If you look through them, you will no doubt be willing to modify your figures?—I am much obliged.

19,258. (*Sir Ralph Knox.*) You think that the native forces in India could be obtained without paying them, by some method of conscription?—To some extent; not entirely.

(*Mr. Caine.*) Could Sir Ralph Knox obtain for us some accurate statement of these figures from the War Office without much trouble; we should have some more authority then.

(*Sir Ralph Knox.*) The War Office is not an authority on expenditure in foreign countries.

(*Mr. Caine.*) But you have figures, no doubt.

19,259. (*Sir Ralph Knox.*) I will see if some figures can be obtained?—The next point that arrests attention in connexion with these decentralisation measures is that while our national revenues are increasing, though largely through additional taxation, the Provincial Governments hardly get their fair share of the increase, and with the necessary result that the internal progress of the country is seriously retarded, as shown in the following table:—

Years.	Imperial Share.	Provincial.	Total of Imperial and Provincial.
	In crores or Rx. millions.		
1882–83 - -	40·37	16·334	56·70
1895–96 - -	51·64	20·805	72·44

Thus:—

Increase during 14 years:—

	Crores.
Imperial share of general revenues -	11·27
Provincial - - - -	4·472
	15·70

From the foregoing table it will be seen that, while our revenues, exclusive of railway receipts and local rates, have increased by 15·7 crores during the past 14 years, the provincial share of the *Increase* is even less than 5 crores, barely 4½ crores; over 11 crores going into the coffers of the Central Government.

19,260. (*Chairman.*) I see that you do not include on this occasion the four millions of local revenue which you included on the former occasion, which made the provincial and local up to 24 crores. No doubt you are right in so doing, but you put in that four millions in the former case?—I include only the provincial here.

19,261. And you omit, advisedly, that four millions?—Yes.

19,262. (*Sir James Peile.*) The Imperial Government does not deal with the local revenue?—Quite so. The result is, that while the Imperial Government has been able to add largely to its general expenditure, especially on military account, even in excess of the country's requirements, the provincial administrations have had to be content during the past 14 years with but restricted increases, even under the most useful and necessary heads of charge. It will be seen from the following table that, while military expenditure has increased by over six crores from 1882–83 to 1895–96, the expenditure on some of the most important departments intimately bearing upon the improvement of the people increased only by three crores.

IMPERIAL EXPENDITURE.

——	1882–83.	1895–96.	Increase.
	Crores.	Crores.	Crores.
Army expenditure - -	17·100	23·460	6·36

PROVINCIAL EXPENDITURE.

——	1882–83.	1895–96.	Increase.
	Crores.	Crores.	Crores.
Law and justice - -	3·255	4·047	·792
Police - -	2·642	4·040	1·398
Education - - -	1·145	1·536	·391
Medical relief - - -	·692	1·030	·338
Total - -	7·734	10·653	2·919

Mr. Surendranath Banerjea.

17 May 1897.

19,263. (*Chairman.*) Do you observe that the percentage of increase is, curiously enough, almost exactly the same in both cases?—Possibly; it is the sum that differs.

19,264. For the Imperial expenditure the increase is 37 per cent. on Army expenditure, and the increase in provincial expenditure is exactly the same, 37 per cent.?—Yes.

19,265. But you will observe, for whatever it is worth, that the percentage of the ratio has been maintained?—Yes. The main principles guiding the revision of the provincial contracts are, as stated by Sir A. Colvin in his Financial Statement, 1887:—"(1.) "That the amount of the funds assigned to provincial "governments need not exceed, or equal, the amount "of the expenditure assigned at the time when the "contracts were made; provincial governments being "expected to provide by their own resources the "difference between the assigned revenue and expen- "diture. (2.) That the growth of provincial expendi- "ture during the term of a contract must be met from "growth of provincial revenue; except in cases where "considerable expenditure is incurred by local govern- "ments to meet the wishes of the Government of India, "and to carry into execution projects which are "pressed upon it by that Government. (3.) That the "Imperial Government reserves its claim at the ex- "piry of a term of contract, to such share as the "circumstances of the time may make necessary in "the increase of revenues which have accrued to the "province during the term of the contract, but which "were reserved to the provincial government during "such term. (4.) That the power of enforcing reduc- "tion, on the occasion of a new contract, of assign- "ments of revenue made at the previous contract, is "a condition implied in the system of provincial "contracts, and has been uniformly acted on." Revisions conducted upon these lines necessarily introduce an element of uncertainty into provincial finance which must interfere with the interests of domestic progress; and it is to be borne in mind that "financial certainty" was one of the aims which the scheme of Lord Mayo had in view. Nor does it appear that Lord Mayo's scheme contemplates periodical revisions of the contracts. When the Imperial and Provincial Governments both fairly start together, each with sufficiently elastic revenues, it is only right that, for all future increase of resources to meet expanding wants, they should rely, except under circumstances of abnormal pressure, on the development of their own respective sources of income. Nothing but harm could result from a periodically recurring attempt, on the part of the Imperial Government in normal conditions, to revise its financial relations with the dependent governments, and resume for its own purposes in the whole or in part any increase of revenue which might have accrued to them. When each has to rely on its own resources, there is the strongest motive to economy and careful management all round.

19,266. I take that to be the point upon which you lay your greatest stress?—Yes.

19,267. That, if each province had to rely upon its own resources, it is most likely to lay out its money to the best advantage?—Precisely.

19,268. But I also understand your view to be that in order to carry out that arrangement you will allow the Imperial Central Government and the provincial governments to take an equal share of the increase?—Precisely.

19,269. But you modify that, if I clearly understand your view, in the case of what have been called "ordinary emergencies;" if the Central Government finds it necessary to spend more than that share, you would still leave it open to the Central Government to draw upon the provincial governments — am I right — rather than increase taxation?—That is to say, the Central Government would have the first claim upon the provincial funds. The financial difficulties of the Indian Government are urged in justification of the present arrangement. They are difficulties which no responsible financial critic could ignore. But these difficulties are either temporary or permanent. If temporary, they can be met by contributions from the Provincial Governments; if permanent, they can be provided for by permanent adjustments which would take note of such difficulties. The five years' term does not permit of any large schemes of permanent improvement being projected or taken in hand, and an uncertainty and a sense of insecurity hang over every effort of the kind; and both Sir Auckland Colvin and Sir David Barbour are in favour of longer terms being allowed for these settlements.

19,270. I take it that you would have no revisions; it would be a standing arrangement that one half of the increase of revenue would go to the Central Government, and one half to the provincial?—Of the increase. But I suggest later on that, if for any reasons with which I am unacquainted it should be found impossible to give effect to this proposal—I do not know what those reasons may be, they may be administrative reasons with which I am unacquainted—then I would raise the term of the contract from five to ten years. I will go on with my suggestions later on. What is still worse, each time the contracts are revised, a reduced scale of expenditure is adopted on which to base quinquennial assignments, and only moderate increases above the scale are permitted. Thus, every fifth year the provincial resources are cut down and provincial progress is sensibly thrown back. The original scheme of the Mayo Government started with a considerable reduction of grants for the services transferred (cut down almost to the level of 1863–64), and for six years afterwards very little increase of expenditure on the provincial account occurred. Next, in 1877–78, this almost stationary level of charges (during 1871–76) was taken, with further reductions as a basis on which to regulate assignments for the following quinquennium, room being allowed only for restricted growth; the revision of 1882 was an exception, when no curtailment was effected of provincial income. But the readjustments of 1887, 1891, and now of 1897, have all gone on the old principle, starting with reductions.

19,271. One would gather it to be your opinion that the Provincial Government, since the introduction of decentralisation, have not been quite fairly treated at the close of each quinquennial year?—Precisely.

19,272. Have you got any figures to show us what was the amount of the provincial revenue as originally given over, and what it is now? You were quoting figures of the increase of the Army and the increase of the provincial expenditure. I pointed out to you that the ratio is the same, and I want to draw your attention to the point, so that you may show us, if you have the figures at hand, whether the ratio has been maintained, and whether we will say your own government —the Bengal Government—at the present moment is enjoying a considerably increased revenue compared with that which was originally handed over to it. And, further, I should like to know the sum that has been taken from the Bengal Government by the Imperial Government, omitting those amounts which have been taken for the moment and repaid last year?—Some have not been repaid.

19,273. Only taking those that have been repaid, can you show that the Imperial Government has taken over the whole period much more than what you think ought to be its share?—I can give some figures to show that at each quinquennium the expenditure increases up to the time of the expiry of the quinquennium, and then it suddenly falls, and then it increases again, and then it again falls. That is to say, at the commencement of the quinquennium the expenditure goes down, towards the end it rises, and this process is repeated.

19,274. Is not this rather a fault of the quinquennial system which you condemn, namely, that the Provincial Government begins with an estimate of the revenue; in the first year of the quinquennium the revenue rises, and during that quinquennium the Provincial Government gets the full benefit of that increase; consequently it is tempted into increased expenditure, and in the last year of the quinquennium its expenditure will probably be in excess of what it was in the first year, in fact, the Provincial Government may have gone on spending up to the hilt of its increase, unmindful of the fact that at the end of the quinquennium it will have a settling with the Imperial Government, which will want its share in the increase up to this time enjoyed by the Provincial Government?—The fact of the matter is that it leads to a dissipation of the revenue of the Provincial Government; there is always a temptation to spend as much as possible towards the end of the quinquennial period, in order that the Imperial Government should not annex anything. Therefore, if we had a fixed system instead of periodical revisions, the effect would be to prevent the dissipation and waste which takes place now.

19,275. I quite understand that in the revision the Provincial Government, having spent up to the full

sum that it was receiving in the last year of the quinquennium, is naturally irritated that the Imperial Government should ask for a share of its increase in the following year, since it has to cut down its expenditure in consequence. Your principle seems to me a very reasonable one, namely, the giving to the Imperial Government and to the Provincial Government half-and-half; but do you think that, if during the time that the decentralisation policy has been in force, that rule had also been in force, the provincial government would at the present moment be getting much more than it is now getting?—I could not give the figures, but I think that they would be getting much more, because they would be getting 50 per cent. of the increase, and the increase has been very considerable.

19,276. But at the end of the quinquennium the Imperial Government does not take the whole of the increase, does it?—No, it does not take the whole of it.

19,277. It shares it?—It shares it.

19,278. Do you think you would find, if you looked at the figures, that under the somewhat clumsy quinquennial arrangement of which you have very clearly shown us the inconvenience, the Provincial Government has got much less than it would have got if your suggestion was adopted?—That is certainly my impression; but if your Lordship wishes I will look into the figures.

19,279. I wish you would?—That view did not strike me, or I would have looked up the figures. There is yet a further liability imposed upon the Provincial Governments, which is, however, a common incident of the system. In cases of abnormal pressure, such as war, the Central Government has the power to demand special contributions from the provinces. But the reservation goes much further, and contemplates special contributions even in cases of ordinary emergency. In the Mayo scheme the reservation was explicitly made of power to modify the resources granted to Provincial Governments, in the event "of "some fiscal misfortune, such as a heavy loss in the "*opium* revenue, or national disaster, such as war or "severe famine." In 1881–82, Lord Ripon's Government repeated the reservation and in much more explicit terms, and declared "*That the Imperial Govern-*"*ment will make no demand on them,*" (*i.e.*, Provincial Governments), "*except in the case of disaster so abnormal* "*as to exhaust the Imperial reserves and resources and* "*necessitate a suspension of the entire machinery of* "*public improvement throughout the Empire.*" The reservation so made was one to which no exception could be taken. The Secretary of State, however, considered such qualified reservation inexpedient, and suggested that in all cases of emergency the Provincial Governments should be liable to be called upon to contribute towards meeting the necessities of the Empire. In 1886 the India Office repeated the suggestion. The reservation as it is now in force is in the sense of this suggestion of the Secretary of State, and largely in modification of the declarations of Lord Ripon's Government in this regard. Accordingly, on three distinct occasions since then, such contributions have been levied (1886–87, 1890–91, 1894–95), but they have been levied in view of ordinary deficits, and under circumstances which did not amount to any such "abnormal disaster" as was contemplated in Lord Ripon's resolutions.

19,280. How do you show that those were not as much as Lord Ripon gave?—They do not come under his reservation; they were years of deficit.

19,281. You say that Lord Ripon excluded abnormal disaster?—Lord Ripon's reservation was that when the revenues and reserves were so exhausted as to suspend entirely the machinery of public improvement—that went much further.

19,282. You do not consider that a deficit of income below expenditure came within that reservation?—No, I do not think so. The liability of the Provincial Governments to give special assistance in cases of emergency when so interpreted and defined, goes beyond what is right and necessary, and furnishes to the Central Government a financial reserve to which, rather than enforce economy and avoid a policy of adventure, it could securely resort in case even of ordinary embarrassments. Such is our existing system of provincial finance. Its main features may be thus summarized:—(1) The proportion of National revenues allotted to provincial uses is too small and utterly inadequate for local requirements. (2) While the revenues of the country are expanding, the provincial governments do not get an adequate share of such increase for purposes of local improvement. (3) The provincial assignments, already so meagre, are further liable to curtailments on revision in favour of the Imperial revenues every five years. Financially these settlements have all the evil effects of short-term settlements, taking away all certainty and stability from provincial administration, and seriously interfering with the even progress of provincial improvements. (4) The provincial governments are besides liable to make special contributions, even during the currency of these short-term contracts, and that too in cases of ordinary emergency, a feature of the present arrangements which imports a further element of uncertainty into provincial finance. The theory underlying the whole system has thus been laid down by Sir James Westland, from his place in the Supreme Legislative Council, in connexion with the recent Budget debate. "The revenues of India," said he, "are the revenues of the Government "of India—its constitutional possession. The Govern-"ment of India is a body created by Act of Parliament, "and, if reference is made to that Act of Parliament, it "will be seen that the revenues of India are the "revenues of the Government of India, and of that "body alone." It is not for me to enter into the legal or constitutional aspect of this question. But the obvious inference which these remarks suggest is that the Provincial Governments, representing the people who contribute the taxes which make up the revenue, have no part or share in the revenues of the country, which are at the absolute disposal of the Supreme Government, and that the Supreme Government may dole out these revenues in any way it pleases. No wonder that the working of the system has been so arbitrary and has often led to considerable friction between the Supreme and Provincial Governments.

19,283. Can you exactly say that it is arbitrary that this proportion of increase has been maintained?—That is what Sir Rivers Thompson says. I think I quote him later on. In Bengal the working of the provincial system has given rise to much dissatisfaction, and every Lieutenant-governor since the days of Sir Rivers Thompson has had occasion to protest against it. The contract of 1877 was very favourable to Bengal, as it made over to the Provincial Government three principal resources of improvable revenue, viz., excise, stamps, and registration, subject to the payment of certain progressive sums every year to the Imperial Exchequer. These three heads of improvable revenue, made over to the management of the Provincial Government with an income of 165¼ lakhs in 1876–77, showed an income of not less than 213 lakhs in 1881–82. The whole of the increase belonged to the Provincial Government, subject to the reservation to which I have referred. The result was that the Provincial Government, besides making a special contribution to the Imperial revenue of 20 lakhs in time of need, increased the staff of executive and judicial officers, provided increased facilities for the administration of justice, increased the grant on education, built schools, colleges, and hospitals, &c. (*vide* page 22 of the Honourable Mr. Risley's speech in the Bengal Council, on the 1st April, 1893). Along with these terms, provincial responsibility in respect of public works was enforced, and Provincial Governments were made responsible for great public works constructed for the benefit of the provinces. Bengal was the only province, however, which was then considered able to bear the whole of its own burden (page 16, Mr. Risley's Budget speech of 1st April, 1893). The public works cess was accordingly levied, now yielding about 40 lakhs of rupees a year, for the maintenance and the payment of the cost and interest charges of certain public works, such as the Orissa Canal, the Midnapur Canal, &c. Then came the contract of 1882, which withdrew from the Bengal Government its full share in excise, stamps, and registration. Favourable as this contract was to the rest of India, it was disastrous to Bengal. Sir Rivers Thompson, who was Lieutenant-Governor of Bengal when the provincial contract for 1882–87 was in force, thus observed in his review of his five years, administration:—"Sir Ashley Eden enjoyed the advan-"tage of a provincial financial contract with the "Supreme Government which secured to the province "under his control the entire benefit accruing from "improved administration, and which, in the event, "yielded financial results surpassing all anticipation. "During the last five years the financial history of "Bengal has been altogether different. The contract "of 1877 was succeeded by a settlement which left

Mr. Surendranath Banerjea.

17 May 1897.

"little scope for the development of the provincial "revenues, and which speedily necessitated a serious "contraction in the scale of provincial expenditure. "It has often been difficult to provide adequately for "the ordinary requirements of the public service, and "it has been necessary rather to seek for opportunities "of effecting economies, than of introducing adminis-"trative reforms." Those were the words of Sir Rivers Thompson. The result of the provincial contract of 1882-87 was that some important measures which Sir Rivers Thompson intended could not be carried out, owing to want of means. "In September "1884, before Sir Rivers Thompson could fully realize "the financial results of the provincial contract for "1882-87, the Government of Bengal, in reporting to "the Government of India upon the proposal of the "Education Commission, admitted its responsibility "for increased expenditure on education to the amount "finally of 14 lakhs a year (over and above the amount "of 34 lakhs, which it was then annually expending) "if the recommendation of the Commission were to "be carried out to anything like completeness. Of the "total increase, 10 lakhs were to be devoted to the "direct improvement of primary schools. After a "review of the ways and means at his disposal, the "Lieutenant-Governor estimated that at the then "existing rate of development of the revenue he would "be able to work up to the total additional grant "required in nine years, by a continuous enhancement "of the educational allotment to the amount, approxi-"mately, of Rs. 1,50,000 a year. The progress of "events quickly falsified his anticipations. The Excise "Commission was then sitting, and, after it had "finished its labours, several of its recommendations "were partially adopted; the result was that the "average annual yield of the excise revenue from "1883-88, was about 4 lakhs less than the revenue "yield of 1883-84. The result was that the allotment "for education in the sanctioned estimates for 1885-86, "instead of being increased by one and a half lakhs, "was reduced by a lakh."

19,284. The upshot of the quotation is to show that the Lieutenant-Governor wished to have a perfectly free hand in spending as much as he pleased, upon, no doubt, very useful services, without much reference to what other people wanted?—This was a recommendation made by the Education Commission that the expenditure upon education was to be increased, and he thought that under the provincial contract in 1882, as compared with what it was in 1877, he would be in a position to make that expenditure, but he was precluded from doing so. This is not what the Lieutenant-Governor himself said; the quotation is from Sir Alfred Croft, and in these remarks he might be considered as a perfectly independent witness.

19,285. I am talking rather of the quotation which you have been giving us. I see that you sum up what the Lieutenant-Governor of Bengal did—increased the grant under Education, and increased the staff of the executive?—That was in 1877, when the contract of 1877 was in force. But then came the contract of 1882, which was disastrous to us, and these were the results, namely, that we wanted to increase the grant on education, and could not.

19,286. That is to say, he had eaten his cake, and wanted to have it. I presume the reduction on Excise, of which you speak as diminishing his means, was a reduction of taxation which was thought beneficial to the country?—A very proper reduction, for the reason they had increased the number of the out-stills which had demoralised and ruined our rural population, and the reduction took place in consequence of an agitation, in which Mr. Caine took part. Let us take another case. It is a notorious fact that in Bengal the salaries of ministerial servants attached to the Revenue and Magisterial courts are very low, and it has long been felt that their salaries should be raised, with a view to their efficiency. Sir Rivers Thompson appointed a Salaries Commission in 1885, consisting of some high officers of Government. In appointing the Commission the Lieutenant-Governor observed:—"The rise in prices and the cost of living, "which was anticipated by Mr. Strachey in 1865, has "continued at a constantly accelerating speed, and "for some time past signs have been apparent that "the effects of the reforms introduced in 1868 have "been exhausted, and that a further advance must be "made if the ministerial service is to be maintained "in a condition of efficiency." The Commission, of which the Hon. Mr. Grimley, now one of the members of the Board of Revenue, was a member, found that the purchasing power of the rupee had gone down by 75 per cent. since 1868, and they recommended that the salaries of ministerial officers ought to be increased, not only in the interests of the officers concerned, but also in the interests of the services and the public at large. But the recommendations of the Commission were not eventually given effect to. They have not yet been carried out. This year a sum of three and a half lakhs of rupees were provided for in the local budget, with a view to give them an increment; but the Government of India would not sanction the amount.

19,287. I think what you say about the rise in price is in accordance, at all events, with figures given by the Government in India?—Those are the figures of the Government.

19,288. But you are aware that it has been represented to us in this Commission that there has been a considerable rise?—In the towns there has been a rise, but I do not think that there has been any considerable rise in the interior. In the towns, certainly, there has been a rise.

12,289. (*Sir Andrew Scoble.*) Do they not give compensation for dearness of provisions in times of scarcity?—That is quite a different matter.

12,290. If they have not got a permanent increase in salaries, yet in this year of famine they have got compensation for the dearness of provisions?—That is so, if the price of rice is less than 12 seers to the rupee.

19,291. Then they get compensation?—Yes, but this is not the compensation to which I refer. I refer to increase of salaries.

19,292. This year is a year of famine?—Yes.

19,293. All these ministerial servants, if they did not get the increase in their pay which was contemplated, nevertheless, in consequence of the rise in prices, got the regular rate of compensation?—I want to make a qualification; it is only those who get a salary of 12 rupees a month and under who get this compensation. All that class of ministerial servants who draw salaries from 12 rupees to 100 rupees a month and upwards do not get this compensation; it is only those who get salaries of 12 rupees and under who are entitled to compensation. I was the first to bring this matter before the Government by questions in Council, and it was owing to my appeals that this was done. Sir Charles Elliott, late Lieutenant-Governor of Bengal, similarly complained of the manner in which the provincial contracts were worked in his time (and he was familiar with two provincial contracts, the fourth and the fifth). Thus he wrote in a Resolution dated the 5th November 1895 in making a retrospect of the provincial revenues during his administration of five years:—"On a review of the "entire period, it will be seen that, besides the "extraordinary benevolence of 10 lakhs levied at the "commencement of the period, Bengal has contributed "within the last five years no less than Rs. 67,46,000, "to meet the necessities of the Empire, over and "above the heads of receipts ordinarily classed as "Imperial, and in addition to this there has been a "steady growth in the receipts divided in varying "proportions between Imperial and provincial "revenues, which, while it swelled the provincial "revenues in the manner described above, yielded to "the Supreme Government an increase of nearly "51 lakhs."

15,294. (*Chairman.*) What is the meaning of that statement that 67 lacs have been given to meet the necessities of the Empire—are those contributions under "ordinary emergencies"?—Under ordinary emergencies.

19,295. Has not the larger part of that been repaid?—A considerable portion of that has been repaid.

19,296. Therefore that is a damage which the Province of Bengal suffers in common with all the rest of the Indian Empire in years of pressure and deficit; yet, at the same time, it may not have to suffer very much in the long run, because it will only take the form of postponed expenditure?—Yes, that is so.

19,297. Therefore we must not lay too much stress upon that point. They have got it back, even though it was after an interval of two or three years?—They did not get it all back. 10 or 12 lakhs they have not yet got back. Sir Alexander Mackenzie, the present Lieutenant-Governor of Bengal, thus spoke from his place in the Supreme Legislative Council on the occasion of the debate on the Budget in the year 1896:—"I must say

"I deprecate the way in which these quinquennial "revisions have too frequently been carried out. The "provincial sheep is summarily thrown on the back, "close clipped, and shorn of its wool, and turned out "to shiver till the fleece grows again. The normal "history of a provincial contract is this, two years of "screwing and saving, and postponement of works; "two years of resumed energy on a normal scale; and "one year of dissipation of balances in the fear that, "if not spent, they will be annexed by the Supreme "Government, directly or indirectly, at the time of "revision. Now, all this is wrong, not to say de-"moralising. I say that the Supreme Government "ought not to sheer too closely each quinquennium." Sir Alexander Mackenzie was equally emphatic in his condemnation of the manner in which the provincial contracts have recently been concluded with the Provincial Governments. He thus observed:—"I must, however, be allowed to throw out one "general suggestion with reference to the policy "of provincial contracts as at present worked. I do "not entirely accept Mr. Sayani's views of these con-"tracts, but there is much force in some of his "trenchant criticism. We have, as he has pointed "out, the authority of Sir David Barbour in his "evidence before Lord Welby's Commission for the "statement that the present practice is not in accord-"ance with the original intention. He says: I must "say that, when the provincial system was started, I "do not really think it was intended that the Pro-"vincial Government should have a portion of their "resources taken away periodically. If you take all "the surplus, you, to a certain extent, remove all "the inducements to the Provincial Governments to "economies. It is a weakness; the periodical revi-"sion may be necessary under present conditions, but "it diminishes the value of the system."

19,298. But I do not understand that the Central Government has ever taken all the surplus, has it? I quite understand that you make a quotation?—It is a quotation.

19,299. I am asking you as a matter of fact?—No, they have not.

19,300. (*Mr. Courtney.*) Does that mean all the growth?—They have not taken all the growth, half-and-half they generally take. In the case of Bengal, they took away half the Excise, Stamps, and Registration. Sir Alexander Mackenzie goes on to observe:—"Take the province of Bengal, with a population "of between 70 and 80 millions of people; well, that "province is big enough to have an independent "financial system." He goes on to explain that, owing to financial exigencies, the Government of India takes at revision, not only its own share of the increase in the divided revenues, but also a portion of the increase that has accrued to the Provincial Government. "I do "not know that I agree with Sir David Barbour when "he says he 'would rather see the Central Government "'embarrassed than the Provincial Governments "'starved,' but he is certainly dissatisfied with the "existing system."

19,301. (*Chairman.*) Is not the statement of Sir David Barbour what everybody would like; everybody would like an independent financial system without having to think of a Central Government, would they not?—Certainly.

19,302. It is incompatible with any kind of orderly finance, is it not, to have a number of people spending in the provinces how they please, without any regard to the Central Government's finance; you, yourself, have put that most clearly before us?—That is my view; it cannot be done. Sir Alexander Mackenzie thus proceeds; "He is evidently dissatisfied with the "existing system. Again, my predecessor, Sir Charles "Elliott, speaking with all the authority of the Pre-"sident of the Financial Committee of 1885-86, and an "ex-Member of the Supreme Council when the Bengal "Contract of 1892-97 was under consideration, strongly "urged a modification of the present system, 'so that the "'contract should be a continuing one not subject to "'sudden ruptures and renewals, but that its leading "'principle should be that all the revenues of the "'province should be provincial, the Government of "'India receiving a certain percentage on the entire "'sum, which should be the contribution of the pro-"'vince to Imperial Government and defence.' He "also represented 'the unreasonableness and the hard-"'ship of requiring every province to give up a con-"'stantly increasing share of its revenues whenever "'a new contract is framed.' I am not now concerned "with defending or advocating Sir Charles Elliott's "particular proposals. I take, perhaps, a stronger view "than he did of the claims and responsibilities of the "Imperial Government. But I quote him as being, with "all his unique experience, profoundly dissatisfied with "the present system. Sir J. Westland will probably "tell us, as he told us last year, and has quite recently "told me that Provincial Governments do not under-"stand the system or its *raison d'être*. My Lord, I think "we do understand it; at any rate we have learnt by "suffering what we have to accept as the authorita-"tive interpretation of it. But what I venture to urge "is this, that the Government of India should, with "the consent of the Secretary of State, refer the "whole question to a Conference at which the pro-"vincial governments should be adequately repre-"sented, and endeavour to lay down the lines of a "system which would be satisfactory to the Provincial "Governments, while meeting fairly the undoubted "exigencies of Imperial finance. No system can "be sound, which, with all its admitted advantages "of diminishing Imperial interference in petty de-"tails, leads to so much quinquennial bickering and "heart-burning, and involves so much uncertainty "and haphazard in provincial administration. My "Lord, I wish to do nothing to diminish the power "or prestige of the Imperial Government. My "instincts and experience are all in favour of a "strong central administration. But I do not think "that the present system is favourable to strong "administration. It places the Imperial Government "in what seems to me a false position, a position of "apparent antagonism to its own local agents." The Honorable Mr. Stevens, Senior Member of the Board of Revenue, and, if I may be permitted to add, one of the most respected members of the Indian Civil Service, thus referred, in the course of the recent debate in the Supreme Council, to the many urgent reforms, including the increase of the salaries of the ministerial servants, which, in consequence of the recent provincial contract, had to be post-poned:—"But it will not have escaped notice that, "during the first three years of the quinquennial "period, the balances were but little in excess of the "amount which is taken to represent the minimum "compatible with the convenience of the administra-"tion, and there could be no greater error than to "suppose that there are not highly important improve-"ments, necessary to good government, for which "money is urgently needed. I do not propose to "enumerate these—still less to support their claims "to consideration — by elaborate arguments which "could have no immediate practical effect. I will "mention but one or two. In the first rank I would "place the reconstitution of the General Hospital "(that is a hospital for Europeans), and the improve-"ment, to something approaching an European "standard, of the other large hospitals in Calcutta. "The condition of these most important institutions is "notoriously very unsatisfactory; yet they are not of "mere provincial utility, as regards the patients who "resort to them, or as regards their educational func-"tions; and it is not too much to say that, situated as "they are in the metropolis of India, and manned, as "they are, by officers selected for their efficiency by "a central authority, they ought to be models for "the Empire. That they should be thoroughly "adapted for their purpose demands, not merely a "preliminary outlay, but a persistent and recurrent "expenditure."

19,303. You are quoting Mr. Stevens, are you not?—Yes, my Lord.

19,304. But you have praised the administration of the municipality of Calcutta; is not the hospital of Calcutta rather a matter which should come under that administration?—The General Hospital is not under the control of the municipality of Calcutta.

19,305. Would you say that it ought to be placed under the control of the municipality of Calcutta?—The state of things is this: the hospitals are, for the most part, under the control of the Government, but there are one or two to whose expenses the municipality of Calcutta contributes. Mr. Stevens goes on to observe: "The case of the ministerial officers "has always seemed to me to be, in the main, very hard "for them, and injurious to the interests of Government. "Salaries were, for the most part, fixed long ago, but, "while these have remained practically constant, the "expense of living has been gradually and steadily

Mr. Surendranath Banerjea.

17 May 1897.

" rising, so that the standard either of living or of " honest service must have of necessity fallen. I do " not attach much weight to the argument that when a " post of even trifling value is vacant a host of appli- " cants at once appears. For this there may be more " than one reason; but the obligation remains on " Government to pay its servants enough for them to " live on with sufficient comfort in their several stations. " In this direction, then, there is ample and urgent " need of improvement; and here, too, the necessary " expenditure is not spasmodic and occasional, but " continuous. I am confident that the personal recol- " lections of the Financial Member of his own ex- " periences as a magistrate in Bengal will support me " in my assertion that, considering the dangers, the " responsibilities, the powers, and the temptations " which are inseparable from police work, the officers " of that department, especially those in the lowest " grades, are most inadequately paid. Here, too, it is " constant expenditure that is required. Another " serious want is money for the assistance of local " bodies for sanitary improvement, especially for the " provision of drinking water. I listened with interest " to the remarks of the Finance Minister on this subject, " but he has failed to convince me. It does not follow " that a grant in aid of the supply of drinking water in " one province comes from the tax-payer of another. " If aid is given in Bombay, there are taxpayers in " Bombay. If aid is given in Bengal, there are tax- " payers in Bengal, many more of them than in any " other province. The commissionership of Patna " alone contains nearly as many inhabitants as the " whole Presidency of Bombay. The requirements of " modern sanitation are growing more rapidly than " the resources of these local authorities, and, if they " are to be met at all, demand the assistance of the " Government. Such assistance, spread over the " whole area of this great province, calls again for " increased and continuous expenditure." Sir Anthony MacDonnell, Lieutenant-Governor of the North-Western Provinces, made a similar complaint last year from his place as President of the Legislative Council of the North-West Provinces, thus, observed Mr. Risley, in his Budget speech in 1893, contrasting the system of decentralisation of finance in Bengal with similar systems in other countries: " In India, on the other " hand, no attempt is made to set apart certain kinds " of taxation as exclusively Imperial, and the division " is effected by assigning arbitrary fractional shares " to the provincial governments. Similarly, the " amount of contributions levied from time to time by " the Imperial Government is not regulated by any " intelligible principle, but varies, like the medieval " benevolences, according to the necessities of the " case." That these complaints on the part of high official authorities are not unfounded will appear from the following table, which, on my requisition, was supplied to me by the Bengal office.

The following table shows the results of the two contracts:—

	1897-98.		1892-93.	
	Imperial.	Provincial.	Imperial.	Provincial.
	(000's omitted.)			
Principal heads of Service.	12,79,17	3,72,41	13,10,21	3,03,43
Interest - -	16,24	3,09	15,46	1,62
Civil Departments -	—	39,33	—	41,05
Miscellaneous -	2,87	11,29	3,79	9,71
Railways - -	2,23,50	—	1,51,00	32,00
Irrigation -	—	24,16	—	24,14
Civil Works	—	4,45	—	4,56
Total -	15,21,78	4,54,83	14,80,46	4,16,51
Gross Total -	19,76,61		18,96,97	
Percentage on Total	77	23	78	22

It will be seen from that table that the Government, by the contract of 1897-98, took 77 per cent. on the revision, and only gave us 23; on the contract of 1892-93 the Government took 78 per cent. and gave us only 22.

19,306. I have here a table for the whole of the Provincial Governments of India, which I will hand over to you to look at, with reference to those questions I put to you about what had really been the effect of the working of the system. I will first give you these figures. The average of the whole provincial net expenditure of the first quinquennium ending 1881–82 was 10,325,000 Rx., the next one, ending 1886–87, was 11,570,000 Rx., the next one, 1891–92, was 12,846,000 Rx., and the last one, 1896–97, 13,780,000 Rx.; therefore you will see from those figures, upon which I should like to get your view when you have considered them, that the Provincial Governments, where they got an average of 10,325,000 Rx. in the first period, get 13,700,000 Rx. in the last quinquennium, which was after an interval of 15 years. That is, they had an increase of 33 per cent., from 10,000,000 to 13,000,000. You were just mentioning the progress in Bengal?—We find that the general share is two-thirds to one-third; in Bengal it is three-fourths to one-fourth, and I think these figures bear out that view, that is, whereas in the other parts of the country the share of the Imperial Government is two-thirds as against one-third to the provincial governments, in Bengal it is three-fourths to one-fourth.

19,307. I think in most States the authorities would think it a very great bargain if they could, at the end of 15 years, know that they would be getting 33 per cent. more than they were getting at that time?—I look at the question from the point of view of domestic improvement. Domestic improvements cannot be adequately carried out in consequence of the manner in which the provincial contracts are being worked, and if we had more to spend we could certainly spend it for better purposes.

19,308. Is not that the wish of every person and of everybody throughout the world? What an immense deal we could do if our income were doubled?—I am sorry to say that the Imperial Government looks upon the matter exclusively from the Imperial point of view; the Provincial Governments look at the matter from the point of view of the benefit of the taxpayers with whom the provincial governments are brought into contact.

19,309. Can you say quite fairly that the Imperial Government only looks at it from the Imperial point of view?—Very largely, if not entirely.

19,310. Remember the Imperial Government has initiated this policy of decentralisation?—But your Lordship will understand with what object; in order that those branches of expenditure which are likely to increase may not increase; and what are those branches of expenditure? One of them is education.

19,311. Is that quite fair, because these figures which I put before you, if they are correct, show that so far from there not being a margin provided, there is an increased margin?—It is only 1,000,000 in each quinquennium.

19,312. Wait a moment, it is 1 in 10 or 10 per cent. Sometimes we hear of India as a poor country; if you could get every five years an increase of 10 per cent. I do not think that would characterise even a poor country; it is a very well-to-do country?—I do not know whether your Lordship has taken that view of the matter. For instance, when the first contract was entered into the expenditure was actually cut down to the level of the expenditure which had been incurred 10 years ago, 1863-64; the expenditure under those heads which were made over to the Provincial Governments came up to 6,000,000 in 1868, and in 1864 they came up to only 5,000,000; in 1871, when the contract was entered into, they were cut down to the tune of 5,000,000; and then, again, a further reduction was made to the extent of one-third of a million.

19,313. If these figures are correct, what you get is that in the third quinquennial period, you have an increased amount to the Provincial Governments equal to 33 per cent. upon the whole period?—Yes.

19,314. And what I call your attention to is that there has been such an increase, which it may be quite possible for you to show is utterly inadequate, but still there is that increase?—I do not dispute the fact of the increase; even in Bengal, in 1892–93, the provincial share was 4 crores 16 lakhs, it is now 4 crores 54 lakhs. I do not dispute the fact of the increase, but what I do contend for is that the increase has not been adequate to the wants of the province.

19,315. (*Mr. Courtney.*) What was the produce of the share when it was first assigned?—No share was

assigned in the first instance; in 1871–72, certain heads of expenditure were made over—six in number—to the provincial governments; a certain sum of money was given over to the Provincial Governments to meet that expenditure. That was in 1871, and then, in 1877, certain heads of receipts for the first time were made over.

19,316. What was the amount of money handed over in 1871–72?—I could not tell you off-hand.

19,317. (*Chairman.*) You are going to look into that to see what was the amount?—Shall I look just now?

19,318. No?—I will look afterwards. From the foregoing table it will be seen that, under the contracts of 1897–98 and 1892–93, more than three-fourths of the revenues of the province were absorbed by the Imperial Exchequer, and were devoted to Imperial purposes, and that less than one-fourth was only left for the most urgent needs of domestic improvement. The provincial share practically remains the same for 10 years, although Bengal is the most progressive of the Indian provinces. In consequence of the inadequacy of funds for provincial purposes, the interests of education and of the administration of justice have not received the measure of attention which they deserve. The sums provided for under the head of Education were for 1895–96, Rs. 26,07,890; for 1896–97, Rs. 26,75,000; for 1897–98, Rs. 27,46,000. I may here remark that the Budget estimate for 1896–97 provided an expenditure on education of Rs. 27,76,000, but the amount actually spent was nearly a lakh less, and the estimate for 1897–98, although in excess of the revised estimate for 1896–97, is nearly 30,000 rupees less than the Budget estimate for 1896–97. His honour the Lieutenant-Governor remarked in his Budget speech, from his place in the Bengal Legislative Council, on the 4th April 1896:—"I admit that Bengal could usefully spend a "much larger sum upon education, and if our finances "continue to prosper I hope to increase the grant "considerably." (Council Proceedings for 4th April 1896, page 184). Here we have what I take it is an admission, though undoubtedly a guarded admission, as to the inadequacy of the grant upon education, coming from the highest authority in the province. "Bengal could usefully spend a much larger sum" than what has been provided for in the year 1896–97, and yet the whole of the sum provided for that year was not spent. The Budget estimate for 1896–97 provided for Rs. 27,76,000; the revised estimates came up to Rs. 26,75,000, just a lakh of rupees less than the Budget estimates. The interests of education in Bengal have suffered in another way, owing to the strain upon provincial funds. Hitherto, a part of the cost of education in the interior used to be borne in some districts by the Road Cess Fund. Under recent orders of Government, the Road Cess Fund is to be devoted exclusively to the maintenance of communications, tanks, bridges, &c. The local schools have thus to be entirely maintained out of the proceeds of pounds and ferries and a practically fixed grant which the Goverment makes. The result has been that in some districts schools which had been in existence for a long time had to be closed. It is a complaint which the Indian public have more than once repeated, that, in consequence of the pressure upon provincial funds, roads and communications which used to be maintained out of provincial funds have been thrown as a charge upon local funds, and this source of revenue available for local purposes has thus been diverted from the maintenance of village tanks and roads to the maintenance of communications previously maintained from the provincial revenues. There can be no question but that the expenditure on education, per head of the population, is the lowest in India, as compared with other parts of Her Majesty's possessions, as will be seen from the following table:—

Name of Country.	Population.	State Expenditure on Education.	Expenditure per Head.
United Kingdom -	39,134,116	£10,032,335	5*s.* 1½*d.*
Ceylon - -	3,002,466	Rs. 604,199	3a. 2½p.
India - -	221,172,952	Rs. 91,09,723	7·9p.
Natal - -	46,788*	£40,680	17*s.* 4½*d.*
Cape Colony -	1,527,224†	£176,190	2*s.* 3*d.*

* Only white population.
† Including Kaffirs, who are four-fifths of the population, on whose education, however, very little is spent.

Name of Country.	Population.	State Expenditure on Education.	Expenditure per Head.
Canada - -	4,833,239	$8,008,967	$1·6.
New South Wales -	1,132,234	£733,810	13*s.*
Victoria - -	1,140,405	£665,394	11*s.* 8*d.*
Austria - -	23,707,906	14,821,621 florins.	·6 of a florin.
France - -	38,343,192	192,986,340 francs.	5 francs.
Germany - -	51,758,264	69,305,000 marks.*	1·3 marks.
Russia - -	129,545,000	22,145,000 roubles.	·17 of a rouble.

* On elementary education only.

The expenditure under the Courts of Law in Bengal has been Rs. 88,26,340 for 1895–96, Rs. 88,90,000 (revised estimates) for 1896–97, and Rs. 89,42,000 (Budget estimates) for 1897–98. There has been some increase, though part of it, no doubt, has been due to Exchange Compensation allowance. Yet there is nothing about which there have been such frequent complaints as the law's delays, owing to the inadequate number of civil judges dealing with petty civil cases. That the number of these munsifs, as we call them (civil judges of the first instance), is inadequate to the growing demands of litigation will appear from the following table, which was laid before the Bengal Legislative Council, in reply to a question put by me:—

1. Year.	2. Number of Munsifs.	3. Original Suits disposed of under ordinary Procedure. Contested.	3. Uncontested.	4. Original Suits disposed of under Small Cause Court Procedure. Contested.	4. Uncontested.	5. Total.	6. Average Number of Cases disposed of per Munsif.
1890	262	77,060	244,673	11,168	74,908	407,809	1,556
1891	275	76,815	252,339	12,660	91,075	432,889	1,574
1892	285	84,729	267,647	18,988	137,804	509,168	1,786
1893	289	82,170	268,210	21,610	151,835	523,825	1,812

The gist of the table is this, that the number of munsifs has increased from 262 to 289, whereas the number of cases has increased from 407,000 to 523,000. From the above table it will been seen that, while the number of cases increased by nearly 28 per cent., the number of munsifs increased by 10 per cent., and yet, according to Mr. Justice Prinsep, there was a surplus of nearly 14 lakhs of rupees out of court fee stamps (page 123, "Gazette of India," March 27, 1897). In this connexion I would observe that the European Chamber of Commerce in Calcutta, a highly influential body, has recently memorialised the Government, with a view of raising the pay of the judges of the High Court. The remarks which I have made above, with regard to education and to law and justice, apply with greater or less force to all departments of civil administration. The lower grades of police in Bengal, and the ministerial officers, get virtually the pay which was fixed 30 or 60 years ago, though the price of food has increased 75 to 100 per cent. And administration is starved in a variety of ways, and all domestic improvements retarded, while at each quinquennial settlement the Imperial Government demands and obtains from the provincial government a larger share of the revenues of the country.

The proposals which I would venture to submit in connexion with the provincial contracts are these:—(1.) That Sir Charles Elliott's suggestion, which has been laid before the Commission by Mr. Gokhale, should, if possible, be adopted. It is a proposal which would avoid revision, afford fiscal certainty, place the local administrations in possession of adequate funds to carry on domestic improvements, and at the same time the provincial revenues would be available for Imperial purposes, which would be the first charge upon those

Mr. Surendranath Banerjea.

17 May 1897.

revenues. (2.) If, however, it should be found impracticable to accept this suggestion, for reasons with which I am unacquainted, I would say that the period of contract should be raised from five to ten years, that the terms of the contract on the occasion of each revision should be laid before the provincial councils for discussion before final submission to the Supreme Government, the Council being empowered to move amendments in connexion with the proposals submitted, and that, if the Government of India should be unable to accept the terms to any serious extent (say within 50,000 rupees), the matter should be referred to the Secretary of State for final decision. As for allotments, they should be made with due regard for provincial needs and wants, and not with reference to past expenditure or past allotments.

19,319. That, I think, concludes what you wish to say to us on the subject of provincial contracts?—Yes.

19,320. You are going to proceed to give us your opinion on the growth of expenditure?—Yes. The question of the wider employment of the people of India in the public service of their own country, is more or less a financial problem. The expenditure has gone on increasing, especially in the military department; and Indian public opinion regards the growth of military expenditure as utterly beyond what the country can bear, and as seriously interfering with legitimate expenditure on the most necessary domestic improvements. The people of India who are capable of forming a judgment on the subject are at one with Sir H. Brackenbury in the opinion that the cost of the portion of the Indian Army in excess of what is necessary for maintaining the internal peace of the country should be met from the British Exchequer, and the expenses of the salaries of the European portion of the Army ought to be fairly apportioned between England and India. Until this is done, the resources of India will not be found equal for the purposes of good and progressive government, and no improvement is possible in the condition of the masses. 'By the wider employment of the people of India in the public service economy would be introduced, and an impetus imparted to the intellectual and moral elevation of the people. Ten years ago, the Public Service Commission, presided over by the late Sir Charles Aitchison, at that time Lieutenant-Governor of the Punjab, and consisting of some of the most distinguished officials and non-official representatives of the day, reported upon the question of public employment in India. The gist of their recommendations may be summarized as follows:—That indigenous agency should be more largely employed in the public service, that the recruitment of the official staff in England should be curtailed, and advantage taken of qualified agency obtainable in India. In other words, the provincial service recruited in India should be the backbone of the administrative agency, subject to European supervision and control. "Considerations of "policy and economy alike require," observed the Commission in their Report, "that, so far as is con- "sistent with the ends of good government, the "recruitment of the official staff in England should be "curtailed, and advantage taken of qualified agency "obtainable in India." As a matter of fact, however, the higher appointments in almost all branches of the public service are held by Europeans, although more than 10 years has elapsed since the Commission have submitted their Report. The Public Service Commission found, in 1886, that out of 1,015 officers in the superior engineer establishment, so many as 810 were non-domiciled Europeans, 119 Europeans domiciled in India, including Eurasians, and only 86 were natives of India (page 122, Public Service Commission Report). The Commission observed, to use their own words, recruitment from Cooper's Hill College as being "at present excessive." We find, however, that at present there are 800 engineers of the superior establisnment, of whom only 96 are Indians.

19,321. What is that Public Service Commission?—It was a Commission which was appointed in Lord Dufferin's time, with a view to inquiring into the question of public employment in India.

19,322. Who was the chairman?—Sir Charles Aitchison. The Public Service Commission recommended that one-third of the judgeships should be held by members of the provincial service; the total number of district and sessions judges is 126, out of these five only are Indians, according to Mr. Jacob's table. This cannot be correct; Mr. Jacob's table gave the minimum number, and, therefore, I ought to state that it is the minimum number. As a matter of fact, the number is more than five; for in Bengal alone we have seven district and sessions judgeships held by members of the statutory service.

19,323. Would you define what you mean by the provincial service and the statutory service?—The statutory service was the service which was created in Lord Lytton's time, and the object of the service was to give effect to the rules which had been framed under the statute of 1870, to give appointments hitherto reserved for the covenanted service to the natives of India. An examination was held, and certain gentlemen were appointed to the statutory service. The Public Service Commission recommended that the Statutory Service should be abolished, and that a Provincial Service should be organised. The Provincial Service is a kind of subordinate service in relation to the Covenanted Service, and the Public Service Commission recommended that certain appointments should be withdrawn from the covenanted service; they recommended that 108 appointments should be withdrawn, but the Government of India sanctioned about 93 or 94. But even in Bengal, which is considered to be the most advanced province in the matter of the employment of natives of India in the public service, the percentage recommended by the Public Service Commission has not been attained in regard to a class of appointments for which natives of India are considered to be especially qualified; for out of 30 district and session judgeships, only seven are held by members of the statutory service. It ought to be 10. According to the recommendation of the Public Service Commission, 10 of these appointments should be held by them. Further, according to the recommendations of the Public Service Commission, one membership of the Board of Revenue, one Commissionership of Division, one Under Secretaryship to Government, one Secretaryship to the Board of Revenue, should be excluded from the list of reserved appointments, and should be held by members of the provincial service. With one exception, nowhere are these appointments held by members of the provincial service. In the North-West Provinces the Secretaryship to the Board of Revenue is held by a member of the provincial service. As members of the statutory and provincial services draw two-thirds of the salary attached to the reserved posts, when they hold such posts, there would be considerable saving by giving fuller effect to the recommendation of the Public Service Commission. On the Bengal establishment there are 267 civilians, including members of the statutory and provincial service, holding civil service appointments, of whom 24 are Indians, and 243 are Europeans. The monthly salaries, including allowances, drawn by the Indians, come up to Rs. 30,000; those drawn by the Europeans come up to Rs. 4,00,000 in round numbers. In the same way in the Police Department the higher appointments in Bengal are practically monopolised by Europeans, though the Public Service Commission distinctly recommended (page 120 of the Report) "that "endeavours should be made to introduce a reasonable "proportion of native officers, due regard being always "had to the efficiency of the service." Including the Calcutta Police, there are 108 of these appointments, from the post of superintendents and upwards. Of these, 101 appointments are held by Europeans, and seven only by natives of India. The monthly salaries, including allowances, of the European employés, come up to 60,000 Rs. in round numbers; the monthly salaries of the native employés come up to Rs. 3,000 in round numbers. In this connexion I may mention that a competitive examination is held in Calcutta, and another in London, for recruitment to the higher offices in the police. From these examinations natives of India are excluded, although there is nothing to prevent their appearing at the open competitive examinations for the Indian Civil Service, provided, of course, they complied with the necessary terms and conditions.

19,324. Are they absolutely forbidden?—Absolutely excluded; and I asked a question in Council, and they said that those were the orders of the Government of India.

19,325. (*Sir James Peile.*) But these examinations are to obtain the number of Englishmen required for that service. When you invite tenders for one article, you do not expect to have another?—But why should natives of India be excluded from these appointments; it is contrary to the terms of the Queen's proclamation, and the promise of equality we received in regard to other appointments.

19,326. They cannot hold the appointments which Englishmen are holding, but they may hold other similar appointments; no order has been passed that they are not to be superintendents of police?—These are appointments relating to district and assistant superintendents of Police. Natives of India are permitted to be district and assistant superintendents, and I ask why should they be excluded from the examination for recruitment to these offices?

19,327. Because you are holding the examination to obtain that proportion of Englishmen whom you want; you do not give the whole of those appointments to natives; they are partly held by Europeans and partly by natives, and to obtain the English proportion you hold the examination?—That means that a racial qualification is introduced into these appointments.

19,328. You want a certain proportion of Englishmen in those appointments, and to get that proportion you hold a competitive examination for Englishmen?—There is nothing which says that a certain proportion of these appointments should be held by natives; it is only a question of qualification. There is nothing said either by the Public Service Commission or by the Government of India to the effect that a certain proportion must be held by Europeans; I am not aware of any rule which would justify any order of that kind.

19,329. It must be obvious that Europeans are wanted for those appointments?—They might be nominated the same way as natives of India are nominated.

19,330. What is your injury? If we want certain Englishmen to hold certain posts, and if the Government chooses to hold a competitive examination to obtain those Englishmen for those posts, where is your injury?—My objection is a two-fold one. In the first place, the bulk of the appointments are held by Europeans, and then you appoint effete, worn-out, dilapidated inspectors of police to be district and assistant superintendents of police.

19,331. Effete natives?—Yes, that is an absolute fact.

19,332. Is not that a very good reason for having some Englishmen among them?—That is a very good reason why they should be admitted to these examinations, so that young men might come forward and show that they possessed the necessary qualifications.

19,333. Then you should recommend the Government to have a separate examination for natives?—I would have an examination both for natives and for Englishmen. Have what intellectual and moral qualifications you please, but let there be absolute equality, and no racial disability.

19,334. (*Mr. Caine.*) You mean, have the examinations simultaneously in the two countries?—Exactly, simultaneously.

19,335. (*Chairman.*) Your contention is that there ought to be no bar put between the Europeans and the natives?—Precisely so, my Lord.

19,336. And you are opposed to keeping certain qualities of employment for Europeans?—I am opposed.

19,337. (*Mr. Courtney.*) You would not object so much, perhaps, to a certain proportion, say one-third of the officials being required to be Europeans, or one-half, as the case may be?—I would not object if there was reasonable adjustment; I would not object to that; but, at the present moment, it is practical exclusion, and that is what I strongly object to, and what my countrymen object to.

19,338. (*Mr. Naoroji.*) And all the highest appointments are reserved to Europeans?—Just so.

19,339. (*Mr. Courtney.*) You were speaking of these special appointments—superintendents of police—are they intermixed, Europeans and natives?—There are seven natives and 101 Europeans, as I have said, and the result of that is that cases of burglary, cases of theft, and cases of murder, are constantly taking place, and the absence of detective ability is notorious, simply because there are these heads of police who are Europeans unacquainted with the language, manners, and institutions of the country. There seems to be no reason for this exclusion on the ground of race, for the district and assistant superintendents of police have done their work admirably, and one of them recently distinguished himself by the capture of a number of dacoits, as will be seen from the following report in the newspapers:—

"Babu Girindra Chunder Mukerji, Assistant Super-
" intendent of the Bengal Police, had an encounter
" with five dacoits on the road connecting Ichhapore
" and Shamnagar on Saturday night. The dacoits
" attacked the coachman of the hackney carriage in
" which the police officer was driving from Naihatty
" to Barrackpore at midnight. Hearing the noise, he
" jumped out of the carriage, and caught the men.
" They were then placed inside the carriage and
" brought to the Barrackpore police station. They
" will be tried by the Deputy Magistrate of Baraset."
Further, the exclusion of natives of India from the examinations to which I have referred, is in direct conflict with the terms of the Proclamation of Her Majesty of the 1st November 1858, which, in clear and emphatic terms, laid down that merit was to be the sole test of qualification for office in India, and that Indian subjects, of whatever race or creed, were to be freely admitted to all offices, the duties of which they were qualified by their ability, education, and integrity duly to discharge. In Bengal, burglaries and other offences against property are believed to be on the increase, and the people of Bengal attribute this partly to the want of detective power in the European heads of the District Police, and to their want of familiarity with our customs and language. It is a notorious fact that a district superintendent of police is unable, through his ignorance of the language of the people, to inquire into the ordinary cases of theft and burglary, and the larger employment of Indians in the police would, therefore, add to the efficiency of the force, while reducing the total expenditure.

19,340. (*Sir W. Wedderburn.*) It leads to the Europeans being very much in the hands of their subordinates?—Entirely, and that accounts for the corruption which prevails in the police department.

19,341. (*Chairman.*) I do not quite follow. If these appointments were in the hands of natives, why should they make the subordinate officers pure?—For the simple reason that they would exercise a most vigorous control over them—far more vigorous than could be exercised by Europeans. A native head of a department would know much more about the subordinates than a European head would be expected to know; he would know their language, and would come into contact with the people, would be intimate with their habits, and so forth; he would exercise a much more vigorous control—other things being equal—over native subordinates than a European could be expected to do. In the Public Works Department we find the same thing. There are 69 appointments in the superior establishment in Bengal, of which 53 are held by Europeans, and 16 are held by Indians. The total monthly salaries, including allowances, drawn by the Europeans, come up to Rs. 49,000, in round numbers, the monthly salaries paid to the Indians come up to Rs. 6,000 in round numbers. In the Opium Department, excluding the opium agents and factory superintendents, who are covenanted civil and medical officers belonging to the Indian Medical and Indian Civil Service, we find there are 27 sub-deputy opium agents classified under five grades in the civil list of the Bengal Presidency, corrected up to 1st January 1897. Together their salaries come up to Rs. 17,600; not a single native of India has a place in these grades, although the Public Service Commission recommended "equality of treatment of all classes of Her Majesty's subjects" in regard to their appointment to offices in this department. Out of 44 Assistant Sub-Deputy Agents, there are only nine who are natives of India. Their monthly salaries come up to Rs. 2,250. The monthly salaries paid to the European employés come up to Rs. 10,400. With regard to the employment of natives of India in the Customs Department, it may not be out of place to quote the remarks of Sir Charles Trevelyan:—"There are whole classes of employment", said Sir Charles Trevelyan, "for which the natives are "specially qualified. The natives are specially "qualified for revenue functions. The whole of the "appointments in the Customs might be filled by "natives." But what are the facts? With one exception, the superior appointments in the Customs Department in Calcutta are filled by Europeans. Their total monthly salaries come up to Rs. 12,360. There is not a single Hindoo or Mohammedan name to be found among the officers of the Preventive Service, although the Public Service Commission recommended that "there is no ground for the exclusion of qualified "candidates of any race from the appraiser's or the "preventive branches of the department." The Public Service Commission point out that "native Christians "in Bombay have been employed in the Preventive

Mr. Surendranath Banerjea.

17 May 1897.

"Service, while a Bramin Preventive Officer in Madras "is admittedly efficient, and in discharging his duties "has experienced no difficulty owing to his race" (page 97, Public Service Commission Report). I have been informed that a Parsi gentleman so efficiently performed his duties as an appraiser in the Bombay Customs Department, that he was asked by the authorities after he had retired on pension to *re-join* his appointment on the passing of the recent Tariff Act imposing duties on imported goods.

With regard to the medical services (Bengal), in 1877 there were 67 commissioned medical officers, of whom five were Indians. There were, in addition to the above, 28 uncovenanted medical officers; of these seven were apothecaries (all Europeans), and three were Indians. In 1887 there were 62 commissioned medical officers, of whom only six were Indians. There were 29 uncovenanted medical officers, of whom only four were natives of India, the other 25 were Europeans and Eurasians (13 apothecaries and 12 non-military medical men). There were 142 assistant surgeons. In 1897 there were 66 commissioned medical officers, of whom only four were Indians. Thus practically the number of commissioned officers on the Bengal establishment who were natives of India remained stationary for a period extending over 20 years, from 1877 to 1897; in fact, the number in 1897 was slightly less. In 1897 there were 36 uncovenanted civil medical officers, of whom only four were Indians; the rest were Europeans and Eurasians; 25 were apothecaries, and seven non-military Europeans. The total amount of monthly pay drawn by the commissioned officers in 1897 was Rs. 66,024, out of which the four Indians get Rs. 3,870 per month. There are 138 assistant surgeons, all Indians, drawing a salary of Rs. 26,296 among them. Thus it will be seen that the 62 European commissioned officers draw more than double the salary of all the assistant surgeons in Bengal put together, whose number, it should be remarked, is double the number of the commissioned officers. Roughly speaking, the European establishment, superior and subordinate, costs about Rs. 75,000 a month; the native subordinate establishment, consisting of 138 assistant surgeons, costs about Rs. 26,000 a month. The European establishment thus costs about 75 per cent., the native 25 per cent. It will also be seen that, while the number of apothecaries holding the higher appointments has increased by over 300 per cent., the number of natives of India employed has actually decreased. There is a distinct tendency to put the apothecaries, who are now called assistant military surgeons, over the heads of Indian assistant surgeons, although their medical training is inferior to that of the Indian assistant surgeons. Appointments have been taken away from the Indian assistant surgeons and given to the military assistant surgeons. Their status has been improved. They begin on a salary of 75 rupees a month. The assistant surgeons begin on 50 rupees a month as supernumeraries. The pay of the assistant surgeons was fixed about 60 years ago as follows:—Third grade. Rs. 100; second grade Rs. 150; and first grade, Rs. 200. There are, besides, a few prize appointments which carry a higher salary. The scale of pay remains unchanged after 60 years, notwithstanding the petitions presented to the Government on their behalf, notwithstanding that the pay of the subordinate judicial and executive services has been raised, and notwithstanding the fact that the price of food has more than doubled itself within the last 60 years. While the highly paid officers of Government receive exchange compensation allowance, it is remarkable that this deserving class of Indian public servants should continue to draw a scale of pay which was fixed for them 60 years ago.

19,342. Now you are going to deal with the reorganisation of the Medical Department?—Yes. The medical service may be so organised as to lead to considerable economy without interfering with efficiency. There are at present (July 1896) about 375 commissioned medical officers in Bengal, besides 25 military assistant surgeons who have received honorary commissions. Of the medical officers who have received their commissions in England about one-half are employed on military duties, mainly in military charge of native regiments. The remainder are in civil employ. The medical charge of a native regiment may, with advantage, be held by a native military assistant surgeon, instead of the more expensive commissioned European medical officer. At present, to each native regiment (as well as to each detached wing or squadron), besides one commissioned medical officer, one or generally two hospital assistants are attached for duty. These last receive a medical training in vernacular for three years—commence their duties on Rs. 20 a month—reaching the maximum of Rs. 80 during their service of 32 years. The commissioned (European) medical officer, when in charge of a regiment, commences with a minimum of Rs. 386 per month, plus on the average 12 per cent. on his pay as exchange compensation allowance. In a cavalry regiment he draws Rs. 65 in addition for horse allowance. The pay increases according to the length of service, and there is nothing to prevent him from holding the medical charge of a regiment for the entire period of his service. Thus, after 20 years' service, he draws Rs. 1000 per month, exclusive of allowances, for doing the same work for which he received Rs. 386, plus allowance, when he joined the service. I submit there is no necessity for keeping up such an expensive system for the following reasons:—The duties of a military medical officer are of two kinds, first, such as those that devolve upon him in cantonments, and those that he is called upon to perform in war time. In cantonments the average daily sick in a regimental hospital is under 4 per cent. of the strength. That is, in a regiment of between 800 or 900 men, the number of sick sepoys present in hospital rarely exceeds 20 or 25. In a cavalry regiment the number is considerably less. The cases, as a rule, are mostly of a trivial nature, and can be easily treated by a properly qualified native assistant surgeon. I consider it as unnecessary waste of money to pay 800 or 1,000 Rs. a month to look after 20 sick sepoys, most of whom are in hospital for very trifling complaints. As for the British officers attached to a native regiment, I would suggest that they and their families may be looked after by an officer of the Army Medical Staff. Excepting in the Punjab frontier and Assam there is always a detachment of British troops wherever native regiments are stationed. The Army Medical Staff officer in medical charge of the British troops can, for a small additional consideration, look after the British officers and their families. On the Punjab frontiers there are generally two native regiments with a battery of artillery stationed at one place. The senior medical officer also performs the duties of the civil surgeon of the station. I would say that one Army Medical Staff officer, with a sufficient number of native assistant surgeons, can perform all the duties just as well and far more inexpensively than what obtains at present. As for the medical service in war time, it is admitted that the present arrangement is unsatisfactory. The greatest difficulty is experienced to obtain a sufficient number of medical officers. The only alternative is to engage a large number of commissioned medical officers, for whom, as I have shown above, there is hardly any work during peace time. The remedy I would suggest is that a sufficient number of native military assistant surgeons may be trained in the country, paid on the scale of civil assistant surgeons, and who will perform all the professional duties, the administrative portion of them being left to experienced officers of the Army Medical Staff. In place of the present system of imperfectly qualified hospital assistants, and a limited number of very highly paid commissioned medical officers, there will be a large number of properly qualified men who will, for all practical purposes, be quite equal to their duties during peace or war. The present civil medical system is open to greater objection. A civil surgeon of a district is supposed to look after one or two hospitals at the head-quarters of a district. Generally speaking he is in charge of the district jail, not only as a medical officer but as its superintendent. He is the superintendent of vaccination for the district as well as sanitary adviser to the head of the district. This by no means finishes the category of his duties. A lunatic asylum, a leper asylum, or a blind asylum—sometimes all three—are thrown in the lot. He is also responsible for the meteorological returns of his district. First, as to hospital work. At places like Benares, Agra, Lucknow, the civil surgeon is supposed to look after over 125 beds in the different hospitals scattered through the town; while at Jessore, Faridpur, Noakhaly, the number of beds varies between 10 and 12. It will strike most people that 125 patients are more than what can be properly attended to by a single medical officer, and that looking after five or six patients in hospital is hardly exhaustive work for one medical man. But such is the curious anomaly of the system that not only the same emoluments are received by the two medical officers so differently situated, but the one who has almost nominal work to do can, by the present

arrangement, draw more pay than his infinitely more hard-worked *confrère*. To do away with all these anomalies, and for the better management of hospitals, I would suggest, and I believe the time has arrived to carry out the suggestion, that the system which, I understand, obtains in England may be partially adopted in India. There is a large number of properly qualified independent medical men trained in India as well as in Europe, who will accept the post of honorary surgeons and physicians in the large hospitals at the head-quarters of the provinces and districts. As to the fitness of the Indians to hold such appointments I would point to the Campbell Hospital, Calcutta, to the comparative list of surgical operations performed by commissioned European medical officers and Indian civil assistant surgeons, as well as to the few Indian commissioned medical officers who have been permitted to hold civil appointments. In large towns there is generally a hospital for Europeans exclusively. At all these places there are highly qualified independent European medical practitioners, who, I am sure, will be only too glad to offer their services gratuitously to such institutions. As for the hospitals for Indians, I would suggest the appointment of honorary physicians and surgeons may be left in the hands of the municipalities or other local bodies. All the hospitals suffer for want of funds. The Inspector-General of Civil Hospitals, North-Western Provinces, observes, in his triennial report, ending 31st December 1895 (page 20): "As a consequence of the want of means, many civil "surgeons not only find the greatest difficulty in "meeting the demands for the most ordinary and "inexpensive medicines, but have also to defer or "abandon the purchase of necessary instruments." Proper diet, which is such an important factor in the treatment of diseases, is supposed to be adequately supplied at the average cost of 1 anna per diet (page 55, North-Western Province Triennial Report, and page 93. Annual Report of the Dispensaries in the Punjab, for 1895). At some places, such as Jhelum and Pind Dadan Khan, that modest amount is supposed to be quite large enough to meet the expenses of even two diets. When it is considered that the average famine diet costs about 2 annas per head, the sum expended in the nourishment of sick patients in the Indian hospitals cannot be open to the accusation of wanton waste. At the Ramsay Hospital, at Naini Tal, which is a hospital for Europeans, the average cost of each diet is Rs. 3. 0. 9. (page 75, Triennial Report of the Dispensaries of North-Western Province, ending 1895), which shows what is supposed to be the proper expense for a sick diet; and the contrast between this diet and that allowed to the sick native of India is striking.

19,343-5. (*Sir D. Stewart.*) You say that there is only an anna expended on the diet of patients in an hospital which you quote?—Yes, I have got the figures and the returns too.

19,346. Are you aware that those patients are allowed to have their own meals, with the sanction of the doctor—anything they like?—I am not aware of that. I am not aware of such a rule; but at any rate that would be a charge which the hospital would incur on that account.

19,347. But are you aware that the patients are allowed to have any meals that they like, with the approval and sanction of the medical officer in charge?—I was not aware of that.

19,348. It is the fact?—That would apply to Europeans too?

(*Sir D. Stewart.*) No; Europeans are dieted by regulation; natives have any food that they like, provided that the doctor does not oppose it. If the doctor prescribes a particular diet for them, they get it, whatever it is; medical officers have the power to give their patients what they like.

(*Mr. Naoroji.*) What he has is paid for by the patient himself.

19,349. (*Sir D. Stewart.*) Yes, but Europeans are subjected to hospital stoppages?—(*Witness continuing his statement.*) Such being the state of things, it is highly uneconomical to keep up a large number of military medical officers at an enormous cost. In some hospitals the pay alone of the commissioned medical officer comes up to more than the combined expenses of assistants, menial establishment, medicines, surgical instruments, and dieting, of all the hospitals and dispensaries of the entire district. As, for instance, the total expenditure during 1895 stood thus in the following districts in the North Western Provinces:—

	Rs.	a.	p.		
Almora -	5082	2	5, page 51	}	Triennial Report ending 1895.
Dehra Dun -	6582	1	3, page 59		
Etwah - -	5806	14	11, page 63		

If the above were in charge of a surgeon-captain, his pay would come up to Rs. 6,600 a year, exclusive of exchange compensation allowance. By adopting the method here suggested there would be a considerable saving of expense.

There are 23 superior appointments in the Forest Department. With a single exception they are all held by Europeans. The monthly salaries drawn by the European members of the Forest Service come up to Rs. 12,100; the salary drawn by the single Indian member of the service is Rs. 300 a month. The public service recommended "that the staff should be "divided into an Imperial and provincial branches, "and that as in the Imperial Civil Service the Imperial "branch of the Forest Service should be a *corps d'élite* "limited to the number of officers necessary to fill the "superior controlling appointments, and such a "proportion of the Assistant Conservator's posts as "will ensure a complete training of the junior officers." They further recommended "that the Government "should keep in view the policy of training in India "men qualified to take charge of the higher adminis-"trative appointments, so as to avoid, as far as "possible, the necessity for expanding the Imperial "branch of the service." From the facts stated above, it does not appear that any serious effort has been made to train natives of India so that they might take charge of the higher appointments; for, with one exception, these appointments are filled by Europeans.

19,350. (*Sir James Peile.*) You could not all at once substitute natives for Europeans; before the native could be trained, some time must elapse?—But that was 10 years ago. The Public Service Commission reported in 1886, and now it is 1897.

(*Sir James Peile.*) The report may have been 10 years ago, but when were the orders issued?—I suppose in the course of a year's time.

19,351. They would take a little more time than that, I am afraid?—I was looking over these appointments. The appointment held by the Indian is that of extra Assistant Conservator; extra Assistant Conservator is not one of the covenanted appointments.

19,352. He may not have been fit for any thing more at the time?—But there may be other native extra Assistant Conservators; what was there to prevent other natives being appointed to the position of extra Assistant Conservators?

19,353. You must give time for a rule of that character to be introduced?—10 years have elapsed, and there is only one native employed in the department. Ten years seems to be a sufficient time.

19,354. (*Mr. Naoroji.*) Is any arrangement made to train natives to occupy the higher posts?—There are native rangers, and appointments of that kind, but the recommendation of the Public Service Committee had reference to the higher appointments.

19,355. Are they trained for it?—I do not think they are trained for it.

19,356. (*Chairman.*) Do you know that they are not being trained?—I am not aware that anybody is being trained for that office of a conservator.

19,357. What is the method by which the Europeans are obtained; where are they obtained?—By competitive examinations held in this country.

19,358. And there is no competitive examination held in India?—None.

19,359. And you do not know, if I understand you, of any means by which access is given to the natives to those higher employments?—None, that I know of.

19,360. (*Sir James Peile.*) Are they not trained at Cooper's Hill College?—After an examination, as I understand.

19,361. After a preliminary examination they are trained there?—Yes.

19,362. Are natives excluded?—I think so, but I do not venture to put it forward, for this reason: the latest rules are that all natural-born British subjects of Her Majesty are to be appointed to these offices. I asked

Mr. Surendranath Banerjea.

17 May 1897.

Sir Romesh Chunder Mitter, late officiating Chief Justice, as to what was meant by "natural-born British subjects," and he thought the examination was confined only to Europeans. But I should not like to make that statement until I feel more sure about it; but that is the new rule, and I have commented upon that rule upon those lines—that it seems very likely that the natives of India are excluded. The words of the Regulations regarding the Indian Civil Service were, "any natural born subject;" here it is "all natural born *British* subjects," therefore, the inference seems to be that we are to be excluded. But I want to take more advice about it before I put forward a statement like that.

19,363. (*Mr. Mowbray.*) By whom were these regulations drawn up by?—By the India Office, I suppose.

19,364. Do they come from the Government of India?—This appeared in the Gazette of India.

19,365. In India itself—not issuing from the India Office?—I read it in India itself, in the Gazette of India.

19,366. (*Chairman.*) We pass on now to the Educational Service?—Yes. The Educational Service in Bengal, which has recently been re-organised, has given rise to much dissatisfaction. Under the orders of the Secretary of State "the Department is to be "divided broadly into (*a*) the superior service, and (*b*) "the subordinate service. The former will consist of "two branches, one including all posts to be filled by "persons appointed in England, which will be called "'the Indian Educational Service,' and the other "including all posts to be filled by recruitment in "India, which will be known as 'the Provincial "Educational Service.' The Indian Educational Ser"vice will consist of 27 officers. The Provincial "Service is to consist of 104 officers." The recruitment for the Indian Educational Service taking place in England, it need hardly be observed that natives of India will have little or no chance of appointment to the superior grade. Indeed, it would seem, from the orders of Government, that natives of India, with degrees from the universities of England, Scotland, and Ireland, are now to be admitted only to the Provincial Service, for we find the following laid down in the scheme as sanctioned by the Secretary of State: The Provincial Educational Service is to consist of 104 officers, as follows:—

5	Inspectors of schools.
10	Assistant inspectors.
7	Principals, and
51	Professors of colleges.
24	Head masters of collegiate and training schools.
7	Others, including the (1) assistant superintendent, and the (2) head master of the school of art, (3) the personal assistant to the Director of Public Instruction, and (4) supernumerary appointments (professorships) to be filled by Indian gentlemen with degrees from the universities of England, Scotland, and Ireland, or by Premchand Roychand students.
Total 104	

The concluding words of the extract which I have quoted support the view which I have put forward, viz., that it appears to be the intention of the resolution to confine the employment of Indians practically to the Provincial Service.

19,367. Does that follow? You say, first of all, that it will be seen from the orders of the Government that natives are now to be admitted only to the Provincial Service, and then you follow by giving the Provincial Educational Service "to be filled by Indian gentlemen "with degrees from the universities of England, Scot"land, and Ireland, or by Premchand Roychand "students?"—That is an Indian degree.

19,368. Are they Indians?—They are all Indians.

19,369. The students?—That is so; the whole resolution is that appointments in the Provincial Service are to be given to Indian gentlemen possessing degrees from the universities of England, Scotland, and Ireland

19,370. The whole of the 104 are?—If your Lordship will take the members of the Provincial Service, they would, for the most part, be Indians, I expect.

19,371. I do not see that there is anything there?—That is the point to which I want to call your Lordship's attention, viz., that these professorships in the Provincial Service are to be filled by Indian gentlemen with degrees from the universities of England; that is the point.

19,372. (*Mr. Naoroji.*) They are all included in the seven?—Yes, they are all included in the seven. There is absolutely no reason for this exclusion, when it is borne in mind that Indian gentlemen in the Educational Service, with degrees from the English universities, have attained to the distinction which has been achieved by men like Dr. Bose and Dr. P. C. Roy. They are able to hold their own against any Englishman in the particular departments in which they have won distinction; but in future, under the operation of the new scheme, men like them will be relegated to the Provincial Service.

19,373. (*Sir James Peile.*) What would be the particular disadvantage of their being in the Provincial Service?—It is an inferior service, with inferior pay.

19,374. You mean the pay is lower?—Yes, and the distinction too.

19,375. That is to say, they are cheaper?—The Provincial Service is cheaper.

19,376. That is one of the great advantages that Mr. Naoroji has been impressing upon us as to be obtained by the employment of natives?—Precisely.

19,377. Why do you object?—I do not object to the Provincial Service as a service, but we say why should the elite and the best of our men be sent to this inferior service, while you have a superior service practically exclusively for Europeans?

19,378. It is not a question of inferior or superior service, but a question of pay?—It is a question of pay and distinction.

19,379. It has been impressed upon us that the great advantage of employing natives would be the saving of pay?—I entirely accept that view, but in this matter I say that up till now we had an educational service in the superior grade of which natives of India had a place; now you make rules the effect of which would be practically to exclude them. I think that is a grievance.

19,380. (*Chairman.*) How do you arrive at that?—I will explain that presently. In the first place, it is laid down that the recruitment to the superior grade shall ordinarily be made in England for the superior service; secondly, that the Indian gentlemen who may obtain degrees from English universities will be appointed to the Provincial Service. Putting the two things together, the conclusion is irresistible that we are to be relegated to the Provincial Service, and to that service alone.

19,381. (*Sir James Peile.*) I think that is perfectly correct. I should like to ask you this also. Have you read the report of the Commission?—Very carefully.

19,382. They distinguished between the two classes of professors, or rather between the subjects which they taught The native gentlemen on the Commission quite agreed that Englishmen are quite indispensable for such subjects as English literature, and things of that kind, whereas they pointed out that for mathematics and science, and one or two other matters, it was quite possible to find natives who were sufficiently efficient?—Yes.

19,383. A division was therefore made, namely, that the Englishmen, who were indispensable for teaching English literature and the like, should be appointed in England to the Indian educational service, while natives, who are competent to teach mathematics and so on, should be appointed to the Provincial Service in India?—I have not the smallest objection to the employment of a considerable element of Englishmen in the higher Educational Service; but what I complain of is this, that the effect of this rule would be completely to exclude my countrymen who are properly qualified from that grade.

19,384. I should rather put it, that temporarily your countrymen are excluded from professor's chairs, which they are not competent to fill at present?—Is there any professional chair connected with electrical science which Dr. J. C. Bose is not qualified to fill?

19,385. That is one of the Chairs which was considered by the Commission as being one which natives were competent to fill?—I understand the Government of Bombay has laid down the principle that a professor in science ought to be brought out from England.

19,386. I am not aware of that?—Yes; my friend, Mr. Gokhale, has given me this information.

19,387. I think you are mistaken?—At any rate, that is my information.

19,388. We have got Mr. Naigamvala in Bombay at the present time?—Under these rules, or under the old rules?

19,389. You informed me of the rule, otherwise I am not aware of it?—My complaint is that here are these orders laid down, the effect of which orders would be, in practical operation, to exclude the most qualified Indians from appointments to which they are entitled under the existing rules.

19,390. I have explained to you that you misunderstand it?—Your suggestion was that the Public Service Commission made that recommendation.

19,391. It was adopted by the Secretary of State?—If I had the book before me I could read the recommendation, but I do not know——

19,392. That is the principle which has been adopted by the Secretary of State?—The Lieutenant-Governor of Bengal strongly protested against the whole thing, and he must have had the regulations before him.

19,393. (*Sir William Wedderburn.*) I understand that you wish each case to be decided on its own merits, and that there should be no arbitrary rules based on racial grounds?—Entirely.

19,394. (*Sir James Peile.*) Then you go against the recommendation of the Public Service Commission, upon which some most eminent native gentlemen served?—But I may differ from them in regard to small matters, if I do differ.

(*Sir James Peile.*) Certainly.

19,395. (*Sir William Wedderburn.*) Is it not the case that a considerable majority of that Commission were officials, and the majority of that Commission were Europeans?—That is so.

19,396. (*Sir James Peile.*) The native members concurred in the recommendations?—Exactly; on the distinct understanding that the whole of their recommendations should be given effect to, and they regret that they ever did concur.

19,397. And this was one of them?—I have not seen it.

19,398. (*Mr. Naoroji.*) If some particular subjects were confined to Englishmen, that is no reason why a distinction should be made, for a number of Educational Services to be entirely given to them by rule and a number of natives excluded from them by it?—The objection is that it is based on racial considerations; it means that natives are to be excluded.

19,399. (*Sir James Peile.*) Excluded from certain chairs which they are not yet competent to fill?—I should like to know what position Dr. J. C. Bose is not competent to fill in electrical science.

19,400. What rules of exclusion are you referring to?—I am referring to those two quotations, namely, that the recruitment shall ordinarily take place in England; and secondly, that Indian gentlemen with university degrees obtained in England are to be admitted only to the Provincial Service.

19,401. But these science chairs now belong to the Provincial Service; the mathematical chairs have been handed over to the Provincial Service?—I am talking of the Imperial Service. I say that a man like Dr. Bose, if he had the degrees which he had, when appointed to the superior service, would now be appointed to the Provincial Service, and I think that would involve very great unfairness.

19,402. He would not be appointed to a professorship of English literature, because an Englishman is more suitable?—It is not the particular office, but the particular grade.

(*Sir James Peile.*) The offices were divided between the Imperial and the Provincial Services on that principle; those which specially required Englishmen were made Imperial, and those which native men are found competent to fill were put in the Provincial Service.

(*Mr. Naoroji.*) Why should it be decided first of all that certain offices are entirely suitable to Englishmen only?

(*Sir James Peile.*) I refer you to the report of the Commission.

19,403. (*Mr. Naoroji.*) But the report of the Commission is not altogether an infallible one; there has been a great deal in the Commission which was very considerably criticised?—My contention is that our status is distinctly lowered.

19,404. (*Mr. Mowbray.*) What is the date of these rules which you have been quoting?—They are very recent; this year. This is quoted from the "Calcutta Gazette" of the 27th March last.

19,405. Your contention is that these rules have modified the existing rules to your disadvantage?—Precisely.

19,406. (*Chairman.*) Do I gather that your chief objection to them is that a distinction is made, inasmuch as Europeans are appointed to the superior educational service while the native gentlemen are appointed to this Provincial Service, which you look upon as being of a lower grade?—Precisely so: that is exactly the point.

19,407. And you are objecting to what you think is a racial distinction which marks the native gentleman as of an inferior class?—Certainly, my lord.

19,408. (*Mr. Mowbray.*) Are any Englishmen employed in these educational positions in the Provincial Service?—There are not many Englishmen, but Eurasians. There may be one or two Englishmen who have graduated in India, but not many; there are Englishmen and Eurasians. It is indeed the case that the Government of Bengal itself is not satisfied with the scheme, inasmuch as the prospects of the officers in the lower grades are very discouraging, and the scheme fixes the pay of the lower grade of the Provincial Service at Rs. 150 a month, while the pay of the lowest grade in the other provinces appears to be higher. This is what Sir Alexander Mackenzie, the Lieutenant-Governor of Bengal, observed in this connexion, in his resolution dated the 26th March 1897: "His Honour "observes that, owing to the narrowness of the scale "of the Provincial Service, as compared with existing "salaries, the prospects of officers in the lower classes "are very discouraging. For instance, officers now "placed in Class VI., on Rs. 250, of the service, are all "in Class III. (Rs. 200–21–300) of the existing service, "and before they can receive any increase of pay they "must rise to the top of Class VI., and then move "slowly to the top of Class V. He also observes that "the Provincial Services of other provinces are practically devoid of Class III. on Rs. 150. Sir Alexander "Mackenzie regrets this state of things, and, with a "view to improving the prospects of the Provincial "Service, he proposes at an early date to consider "whether something may not be done by assigning a "greater number of officers to some of the intermediate "classes."

19,409. (*Chairman.*) Next you propose to take the Survey Department?—Yes. The Public Service Commission in their Report observe that the admission to the junior division should not be confined to special classes of Her Majesty's subjects (evidently referring to the practical exclusion of Indians from the Provincial Service of the Department), but that it should be recruited by competition from among selected candidates (page 152, Public Service Commission's Report). In this Department there has always been considerable objection to the employment of Indians, as will be seen from the following memorandum written by Colonel De Prée, late head of the Survey Department, which was laid before the Public Service Commission:—"I may here remark incidentally that my "numerous late inspections show me that the tendency "of the European surveyors is to stand and look on, "while the natives are made to do the drawing and "hand-printing, as if they thought themselves quite "above that sort of thing. This is a mistake, and "cannot be permitted for the future. Besides, it is "suicidal for the Europeans to admit that natives can "do any one thing better than themselves. They should "claim to be superior *in everything*, and only allow "natives to take a secondary or subordinate part. In "my old parties, I never permitted a native to touch a "theodolite or an original computation, on the principle "that the triangulation or scientific work was the "prerogative of the highly paid European, and this "reservation of the scientific work was the only way by "which I could keep a distinction so as to justify the "different figures respectively drawn by the two classes "between the European in office-time and the native "who ran him so close in all the office duties as well as "on field duties. Yet I see that natives commonly do "the computation work, and the Europeans some other "inferior duties." The Public Service Commission also noted the objection to the employment of natives of India in their Report, and they observe:—"The Junior

Mr. Surendranath Banerjea

17 May 1897.

"Division has been hitherto officered for the most "part by Europeans domiciled in India, and Eurasians, "of whom many have passed the Matriculation "Examination of the Indian Universities. In the "year 1884 the Government of India determined "that natives should be employed in the Junior "Division, believing that educated or trained Natives "could be found who were competent to perform all "the duties of the subordinate staff, and that, as the "competence of such natives had not been made the "subject of trial, the presumption of incompetence could "not be admitted" (page 132). The fact, indeed, seems to be forgotten that at one time the head of the Computing Department of the great Trigonometrical Survey was a Bengali gentleman (Baboo Radhanath Sikdar), who performed his duties with remarkable ability and efficiency. As it is, we find that in the Survey Department, out of 119 appointments in the Provincial Service, only 10 are held by Indians. The monthly salaries and allowances paid to European employés come up to Rs. 35,715, while the monthly salaries paid to Indian employés come up to Rs. 2,012. There is not a single Indian in the six grades of extra assistant superintendents, comprising appointments the salaries of which vary from Rs. 300 to Rs. 500 a month.

19,410. Now, you will perhaps take the Telegraph Department?—Yes. There are in the Indian Telegraph Department 82 superior appointments, exclusive of the Examiner and Deputy Examiner of Accounts. All these appointments, with two exceptions, are held by Europeans, and by students passing from Cooper's Hill College. The monthly salaries drawn by the European employés come up to Rs. 56,025; the Indian member of the Telegraph Department, who is also a passed student of Cooper's Hill College, draws a monthly salary of Rs. 300. There is one other Indian member of the Department who is appointed on the Provincial scale of pay and gets Rs. 150 a month. The Government of India resolved, on the recommendation of the Public Service Commission, to make some appointments to the Telegraph Service on the Provincial scale of pay, which is about 66 per cent. of the scale of English pay, from among the native students of the Thomason College, Roorkee (*vide* Government of India Resolution, No. 156, P.E., of 25th August 1892, P.W.D.) Since the publication of this Resolution 21 appointments have been made, out of which four have been made in India, and of the four only one has been given to an Indian, the other three have been conferred on Eurasians. If the Government had exercised the powers which it assumed by the resolution referred to above more largely, and the terms of which are quoted below,* there would have been a saving of expenditure and a proportionate relief to the finances. The Thomason Engineering College is equipped for the purpose of turning out duly qualified candidates for the Telegraph Service. There seems to be little doubt that some of the Indian Colleges are turning out students whose services might with advantage be utilised for the Telegraph and other scientific Departments, with considerable relief to the public exchequer. Dr. J. C. Bose, Professor of Science in the Government Presidency College in Calcutta, who has acquired a European reputation by his discoveries in connexion with electrical science, thus observed in a paper that he read in this country on the progress of science teaching in India:—"The advanced students "whom we hope to train in our laboratories, will form "the best material for recruitment to the various "scientific departments under the State. The students "who now work in electric science in our Presidency "College Laboratory, acquire a very high efficiency in "it, and it would be an advantage to the Telegraph "Department to utilise their services. Indeed, this "was at one time contemplated, and Sir Alfred Croft, "the retiring Director of Public Instruction, interested "himself in it. It is to be hoped that something will "be done in this direction." If the hope expressed by Dr. Bose is fulfilled, a considerable impetus would be imparted to the teaching of science in India, and the interests of economy would also be ensured. The Public Service Commission practically made the same recommendation. They recommended the gradual reduction of the staff recruited in England, and that a superior local telegraph service should be recruited in India from classes to be established at one or more of the Indian Engineering Colleges (pages 139). There are 85 sub-assistant superintendents divided into two grades, 41 being in the first grade, and 44 in the second grade. The maximum pay allowed in the first grade is Rs. 350 per mensem; in the second the maximum is Rs. 275 per mensem. There are only two Indians in these two grades. If the Department were re-organised and the native Indians employed more largely, it would be possible to place it upon a more economical footing. It would seem that all telegraph masters and signallers receive in addition to their substantive pay an allowance in the shape of house rent of Rs. 15 and Rs. 10 per month respectively when posted to Presidency towns, and Rs. 10 and Rs. 5 respectively when employed in out-stations. But this rule does not apply to natives of India. In other words, it is only the European and Eurasian telegraph masters and signallers who are entitled to this privilege. In 1882 the Government of India in the Public Works Department issued the orders granting house allowance to all telegraph masters and signallers, with the exception, of course, of such as were provided with quarters. In 1883, orders were issued that native telegraph masters and signallers were not entitled to the allowance. Some native Christian signallers who had adopted the European mode of living prayed for this house allowance, when they received the following letter in reply:—

From the Director-General of Telegraph to the Superintendent, Calcutta Office, No. 3375T, dated 26th September 1890.

SIMLA,

SIR,—With reference to your letter, No. 2596T, dated the 16th of September 1890, I have the honour to inform you that under the orders of the Government of India native signallers, as distinguished from the European and Eurasian signallers, are not entitled to house allowance when not provided with quarters. By natives must be understood pure Asiatics, and the details of religion and dress that may be adopted by natives are questions which do not enter into the matter.

2. I am unaware of any special exceptions to this rule that may have been made in former years, but, if such exceptions exist, they afford no grounds for any further additions to them being made.—I have, &c. (signed) C. H. REYNOLDS, Director Traffic Branch.

The house allowance granted to telegraph masters and signallers comes up to the sum of Rs. 7,661.2 ans. a month, or nearly a lakh of rupees a year. The details are given in the following statement:—

GOVERNMENT TELEGRAPH DEPARTMENT.

House allowance drawn by the Europeans and the Eurasians signallers serving in the following telegraph divisions,

	Rs.	as.	p.
1. Bellary Division	37	8	0
2. East Coast	35	0	0
3. Madras	919	13	9
4. Bombay	4,485	6	8
5. Nagpur	53	8	0
6. Rajputana	392	1	1
7. Sind and Beluchistan	418	6	4
8. Punjab	416	0	0
9. Kashmere	342	5	8
10. Bengal	280	15	0
11. Arrakan	143	0	0
12. Lower Burmah	374	0	0
13. Upper Burmah	279	0	0
14. Calcutta	1,422	1	6
15. Oudh and Rohilkhund Division	62	0	0
16. Assam and Dacca Divisions (because the signallers and the telegraph masters in these two divisions are provided with quarters).	Nil		
	9,661	2	0
1. Number of European and Eurasian telegraph masters	157		
2. Number of European and Eurasian signallers	1,145		
Total	1,302		1,302
Number of Native telegraph masters	15		
Number of Native signallers	324		
Total	339		339
Grand total			1,641

* "The number of appointments shall ordinarily be two and one in alternate years, but these numbers may be varied according to the requirements of the Department, due notice whereof will be given."

No. 1 draw Rs. 15 and Rs. 7½ when posted to Presidency towns and muffusil respectively when not provided with quarters.

No. 2 draw Rs. 10 and Rs. 5 when posted to Presidency towns and muffusil respectively when not provided with quarters.

If all telegraph masters and signallers were natives, it is very obvious that under the existing rules the whole of this amount would be saved, and the saving would be in proportion to the employment of natives as telegraph masters and signallers. The distinction is invidious and causes bitterness and ill-feeling between persons working in the same department, and to the prejudice of public business.

19,411. You would, perhaps, like to take the Post Office now?—Yes. The all but practical exclusion of Indians from the higher appointments in the Post Office is felt as a grievance. The "Amrita Bazar Patrika," one of the leading organs of public opinion in Bengal, refers to the subject in a leading article in its issue of the 7th April last, headed "European Monopoly of Post Office." The facts stated are remarkable, and I desire to submit them for the consideration of the Commission. "The state of things in "1886 stood as follows:—

	European.	Native.
Chief Officers - - -	23	2
Superintendents - -	85	35
Sea Postal Officers - -	5	7
Miscellaneous Officers - -	18	22
Postmasters - - -	42	23
Total - -	173	89

"Since then there has been no appreciable improvement, as will be seen from the following facts "mentioned by the "Amrita Bazar Patrika," from an "official statement containing the names of Chief Officers "and First Grade Superintendents corrected up to the "1st May 1896. The Director-General of the Post Office "is a European, and he draws Rs. 3,000 a month. The "Postmasters-General of Bengal, Madras, Bombay, "Burmah, and the Punjab, are all Europeans, and their "respective salaries per month are 2,000, 1,750, 1,750, "1,500, and 1,400 rupees. The Postmaster-General of "the North-Western Provinces is only an Indian, "Mr. K. J. Badshah, his salary being Rs. 1,750. He "holds a different office now; but he is a civilian, and "he has access to the highest post in any department "under the State. Let it also be borne in mind that "the Postmaster-Generalship of the North-Western "Provinces was reserved especially for an uncovenanted "officer of Asiatic race. The postal authorities in their "evidence before the Service Commission admitted "this fact. As regards the other chief officers, the "Deputy Director-General, pay Rs. 1,750; the In-"spector-General, railway mail service, pay Rs. 1,400; "Assistant Inspector-General, railway mail service, "pay Rs. 500; three Assistant Directors-General, pay "Rs. 1,000, Rs. 700, and Rs. 700, respectively; First "Grade Deputy Postmaster-General, pay Rs. 1,400; "two Second Grade Deputy Postmasters-General, pay "Rs. 1,000 each; three Third Grade Deputy Post-"masters-General, pay Rs. 700 each; and one Deputy "Postmaster-General, pay Rs. 500, are all Europeans. "There is only one Indian amongst these officers, "namely, Mr. C. J. Lalkaka, who officiates as Inspector-"General, railway mail service, on Rs. 800 a month. "The other Chief Officers are, one Comptroller, pay "Rs. 1,200; one Deputy Comptroller, pay Rs. 700; two "Assistant Comptrollers, pay Rs. 600 and 500 respec-"tively. With the exception of the Deputy Comp-"troller, Babu Woma Charan Dass, all others are "Europeans. We now come to the lowest class of "chief officers, namely, Presidency Postmasters. There "are three of them, namely, Postmaster, Bombay, pay "Rs. 900; Postmaster, Calcutta, pay Rs. 800; and "Postmaster, Madras, pay Rs. 750. Every one of them "belongs to the Europeans. Next to Chief Officers are "First Class Superintendents, pay Rs. 400–500 per "mensem. We find in the statement before us the "names of 21 such superintendents. It was expected "that, at least, in this class of officers, the Indian "element would prevail over the European. For it is "essential that these superintendents should have a "thorough and intimate knowledge of the vernaculars "of the country to carry on their duties with village "postmasters. But what do we find? Only *four* are "Indians, and the remaining 18 Europeans. So, out "of 46 Chief Officers and First Grade Superintendents, "there are only *six* pure Indians, the two Indian Chief "Officers being almost in the lowest grade!" Yet the Post Office was one of those departments in respect of which no one who was not a native of India could hold any appointment carrying a salary of Rs. 200 a month and upwards, without the previous sanction of the Governor-General.

19,412. Will you take the Services next?—Yes.

19,413. And then Exchange Compensation?—Yes.

19,414. (*Mr. Mowbray.*) You said, "He used to be"; to whom were you referring?—Mr. Badshah has just been appointed Comptroller; but at the time to which this report refers he was Postmaster-General, but now he has been appointed Comptroller of Postal Accounts. With reference to the Services, I may here observe that the Indian public view with grave disappointment the fact that effect has not been given to the resolution of the House of Commons of the 2nd June 1893 on the question of Simultaneous Examinations. In the opinion of the educated community in India, Her Majesty's Proclamation of the 1st November 1858, declaring merit and not race as the sole test of qualification, will remain unfulfilled, so long as simultaneous examinations in connexion with the Indian Civil Services are not held in India as well as in England. This was, indeed, the view put forward with special reference to the Open Competitive Examinations for the Indian Civil Service by a Committee of the India Office, which reported on this matter in 1860. They observed:—"It is obvious, therefore, that, when "the competitive system was adopted, it could not "have been intended to exclude natives of India from "the Civil Service of India. Practically, however, "they are excluded. The law declares them eligible, "but the difficulties opposed to a native leaving India "and residing in England for a time are so great, "that, as a general rule, it is almost impossible for a "native successfully to compete at the periodical "examinations held in England. Were this inequality "removed, we should no longer be exposed to the "charge of keeping promise to the ear and breaking "it to the hope. Two modes have been suggested by "which the object in view might be attained. The "first is, by allotting a certain portion of the total "number of appointments declared in each year to be "competed for in India by natives and by all other "natural-born subjects of Her Majesty resident in "India. The second is, to hold simultaneously two "examinations, one in England and one in India, both "being, as far as practicable, identical in their nature, "and those who compete in both countries being finally "classified in one list, according to merit, by the Civil "Service Commissioners. The Committee have no "hesitation in giving the preference to the second "scheme, as being the fairest, and the most in accor-"dance with the principles of a general competition "for a common object." Numerous petitions have been presented to the House of Commons from all parts of India for effect being given to the Resolution of the House. But the Resolution remains a dead letter. It may generally be stated that, if the great departments were recruited upon the principle that, wherever a native of India was qualified for an office, he should be appointed to it, and if the pay was adjusted with reference to the local marketable value of the qualifications required, a considerable saving in public expenditure would follow.

19,415. (*Chairman.*) Now will you take Exchange Compensation Allowance?—The employment of a costly European agency in the administration to a larger extent than what the financial condition of the country justifies has a financial bearing which is not to be overlooked. Exchange Compensation Allowance has been granted to the non-domiciled European employés of the Government. In 1893–94 Exchange Compensation Allowance came up to Rx. 624,411; in 1894–95 it rose to Rx. 1,249,591; and in 1895–96 it rose to a still higher figure, viz., Rx. 1,338,163. The Indian Association, of which I am the Secretary, protested against the grant of exchange compensation allowance, and addressed a communication to the Government of India on the subject. The Government admitted that the servants of Government to whom Exchange Compensation Allowance had been granted had no legal claim to it. A member of the Bengal Civil Service, Mr. Lea, refused to draw the allowance, on the ground that he was not legally or morally entitled to it.

Mr. Surendranath Banerjea.

17 May 1897.

19,416. What do you mean by "not legally entitled to it"? Was it not within the power of the Government of India to grant it?—Not in that sense, my Lord; not according to the covenant. They have no legal right, but, of course, the Government of India can give it; but from that point they have no legal right.

19,417. The civil servant himself had no claim to it?—Just so. If Exchange Compensation Allowance had been granted upon the actual remittances sent home for family purposes, no matter whether by Indian or European servants of the Government, one of its most objectionable features would have been withdrawn, though Indian opinion would still have condemned it. As a matter of fact, there are at present in England members belonging to the families of Indian gentlemen in the Civil and Medical Services, for whose maintenance and education those gentlemen make regular remittances. They draw no Exchange Compensation Allowance. On the other hand a large proportion of European gentlemen in the Civil Service, who are unmarried and have no remittances to make for their families, get Exchange Compensation Allowance. As it is, Exchange Compensation Allowance is granted to all non-domiciled European servants of the Government, no matter whether they joined the service before or after the depreciation in the value of the rupee had begun. It is granted to those whose salaries are fixed by statute, and a question has been raised as to whether they are entitled to it, but all the same they continue to draw it. Sometimes it is difficult to explain the principle upon which the allowance is granted.

19,418. You say that it is granted to those whose salaries are fixed by statute; are there many officers whose salaries are fixed by statute?—The judges' salaries are, I think, fixed by statute.

19,419. Is it not the case that, as a rule, the salaries now given to civil servants in India were fixed a long time ago?—Certainly (*continuing statement*). I will give an instance. Mr. Chackerbarty, Deputy Accountant-General, Bombay, does not draw any Exchange Compensation Allowance, but his brother in the Revenue Department of the Bombay Government gets the allowance. But, while Exchange Compensation is thus granted to the highly paid European servants of the Government at an annual charge of over a crore of rupees, the Government is obliged to refuse an addition to the pay of ministerial servants on the Bengal Establishment, who draw small salaries and are exposed to great temptations, although a Commission, appointed to inquire into this matter, and consisting of some distinguished Government servants, recommended, so far back as 1886, on the ground of the rise in the price of provisions, that their pay should be increased by 75 per cent. More than a crore of rupees is spent to provide Exchange Compensation, while so important a question of domestic reform as the separation of judicial and executive functions in the administration of criminal justice cannot be taken up for the alleged want of funds. Salaries should be fixed according to the importance of the duties to be performed and the market price of the labour of men competent to discharge those duties. This was practically the recommendation of the Public Service Commission: they say (page 85 of the Report):—"The Commission would adjust the conditions of the "provincial service by the consideration of the terms "which are necessary to secure locally in India the "desired qualifications." Formerly this principle was recognised, and the scale of pay was not varied according to the nationality of incumbents. If the same principle is re-affirmed and the salaries of appointments which, on political grounds, need not be reserved for Europeans, be fixed with reference to the plentiful supply of competent Indian labour, a very much lower scale of pay would be sufficient, and if a European were to be appointed to any of these offices he should not get more than the pay so fixed, in the shape of Exchange Compensation Allowance or otherwise. A large saving could be effected in this way. In case of appointments reserved for Europeans on political grounds, or for British interests mainly, it is only right and proper that there should be an apportionment of charge between England and India.

19,420. I think that only leaves us the question of the apportionment of charges?—Yes.

19,421. (*Sir James Peile.*) You have been pressing very strongly the small amount of employment of natives of India?—Yes.

19,422. And you have been pointing out, especially, the particular departments in which a great number of Europeans are employed, to illustrate your doctrine. I should like to ask you this question: Do you, or do you not, admit that, on the whole, the policy of the English Government has been in the direction of giving increased employment to natives of India in the public service?—Certainly, but we would wish that the policy was more progressive.

19,423. You want them to go faster?—Yes, you have not gone sufficiently fast.

19,424. For you?—I think for all of us; for you too.

19,425. Do you mean, to satisfy us?—You have been giving, I mean, the English people have been giving, us up to this moment promises and pledges, and so forth, and our contention is that those pledges have been inadequately redeemed; they can only be adequately redeemed by a larger employment of the people of India.

19,426. Let me call your attention to one fact, that is, that in every engagement, and in every proclamation and statute, there has been one condition laid down, and that is the condition of fitness?—Our contention is that we are fit, more so than you choose to employ us; we are handicapped by your holding these examinations in England, and not simultaneously in India and in England.

19,427. The Government of India, of course, has to judge in every case whether a sufficient standard of fitness has been attained, and I think that its conclusions must be accepted, must they not? You are quite right to agitate, no doubt?—I think, if you will permit me to say so—and I will speak with the utmost candour—the Government of India and ourselves stand in a somewhat conflicting position in regard to this matter. The Government of India is government by the civil servants of the country, and, naturally enough, the civil servants of the country would like to keep their own preserves.

19,428. Has not the Government always been admitting natives more and more freely?—Slowly, very slowly; much more slowly than the progress of the country would justify.

19,429. That is for them to decide?—It is for us also to have something to say about the matter.

19,430. You are quite entitled to your opinion?—That is what we say; and what possible objection could there be to holding this simultaneous examination in India and England, except the belief that there would be such a number of successful natives that the English candidates would be swamped.

19,431. I see the greatest objection?—There we are not likely to agree.

19,432. (*Chairman.*) That leaves us now the question of the apportionment of charges?—With regard to the second part of the reference, viz., the apportionment of charges for purposes in which both countries are interested, I beg to observe that Indian public opinion supports the view that India should be chargeable with the cost of the Native Army necessary for the maintenance of internal peace, but that, the European Army and the European officers in the Native Army being quite as much necessary for British as for Indian interests, the British Exchequer should in justice pay a fair share towards their maintenance. With regard to the North-Western frontier wars, much has already been said, and I shall only repeat that, as these wars concern the interests of both countries, the expenses connected therewith should be equitably adjusted between them. If in this adjustment there should arise differences of opinion as to the proportion to be paid between the two countries, some machinery for arbitration should be devised.

19,433. With reference to that point I will only ask you one question. Do you admit that India is interested in keeping a sufficient force to maintain her own frontier from invasion?—She is interested, but England is also interested—that is what we say—for the maintenance of British supremacy.

19,434. Supposing that India were not dependent upon England, India would still be interested in keeping her own frontier from invasion?—Certainly.

19,435. And, therefore, to whatever extent India keeps up a reasonable force for the purpose of safety from invasion, would you go so far as to say that for that purpose India should pay?—Not exclusively, because

keeping out a foreign enemy from Indian soil at the present moment, under existing circumstances, is as much the interest of England as it is the interest of India, having regard to the relations between the two countries, and the maintenance of British supremacy.

19,436. In the Army Commission report of 1879—I am not quite sure of the year, but I think it was 1879—they classed the countries from which danger might be apprehended. Naturally speaking, there is Afghanistan, Russia, and Nepaul. Take Nepaul; do you think we sitting here in England are very much interested, or interested to any extent you can speak of, compared with what the Indians are, who live in the neighbourhood of Nepaul; is not the matter much more important to them that the Nepaulese, if they choose to quarrel with us, should not be able to overrun the country?—We are more interested than you are, but at the same time, inasmuch as you are interested, we want that you should pay according to the measure of your interest.

19,437. And, of course, in return, inasmuch as the two empires are connected, you are interested—I should not have otherwise put forward this point—you are interested in our being safe from invasion, and *per contra*, you should be at once ready to subscribe to keep us free from being invaded by France?—Is that within the range of practical politics, that India should come to the assistance of England?

19,438. Very much so; they are two relative obligations. If we are interested in saving the plains of India from being devastated by the Nepaulese, Indians are interested in keeping the plains of England from being devastated by the French?—I certainly accept the principle which your Lordship has suggested, subject to practical limitations and consequences.

19,439. (*Sir William Wedderburn.*) I would refer you to the report of the Public Service Commission, paragraph 58. I think that that seems to restrict certain appointments; it is with reference to what Sir James Peile has referred to. That recommendation seems to restrict certain appointments, not to Englishmen, but to the condition of their being recruited in England?—Yes, that is so—that the recruitment should be made in England only; that is to say, it does not refer to the race, but to the place where the recruitment is to be made.

19,440. So that, according to that, we might suppose that an Indian might equally be recruited in England as an Englishman?—Certainly.

19,441. (*Sir James Peile.*) Will you read the second qualification; there are three, A, B, and C?—That recruitment should be made in England only for principalships of colleges, professorships in those branches of knowledge in which the European standard of advancement has not been attained in India. When the Indian has attained to that standard of advancement, he would not be excluded by this.

19,442. I do not think he is?—But, as it is, he would be under the new system.

19,443. No?—If you will allow me to read the last portion restricting Indian gentlemen with English University degrees to the Provincial Service.

19,444. I should say that, if the Secretary of State chose to appoint Professor Bose, and certainly no man could be more worthy to be appointed than he, to a professorship on the terms on which professors are recruited from England, there is nothing, as far as I know, to prevent that being done. The question has not come up, as far as I know, and it may hereafter have to be decided; but, as the matter stands, I should say that there certainly is nothing in anything the Secretary of State has said, in his orders on the Public Service Commissioners' Report, which would exclude Professor Bose from ranking as an educational officer appointed in England by the Secretary of State, and with the conditions which attach to such appointment?—As I read the scheme, I have given my interpretation; but I should be very glad, indeed, if the Secretary of State would appoint in the way you have suggested; that would be certainly relaxing it.

19,445. I do not say that he would, except in very exceptional cases, that is to say such a case as that of Professor Bose?—So that practically the higher service is closed to us; it comes to that.

19,446. No; but the recruitment should be in England?—The recruitment shall ordinarily take place in England, and those Indian gentlemen who take degrees in the universities of England, Scotland, and Ireland, shall ordinarily be appointed to the Provincial Service. Putting the two things together it comes to this, that we are excluded from the higher grade service.

19,447. Native gentlemen are ordinarily to be recruited in India for the Provincial Service?—Even those who take degrees in this country are to be relegated to the Provincial Service. That seems to exclude us from the higher service.

19,448. (*Chairman.*) I only wish to ask this in conclusion. The impression left upon my mind, from the evidence you have been so good as to give us, has been this. You have pointed out—as it appeared to me, very reasonably—a great many defects; and, further than that, you have brought very clearly before us the directions in which you would impress upon the Commission improvements in the methods of Indian administration ought to be sought. At the same time you have spoken of there being a stoppage of Parliamentary inquiries into Indian affairs, and you appear to be under the impression that a great deal of consideration is wanted on the part of those responsible for the Government of India in the way of granting further rights to the Indian community. Taking these 40 years, since the Crown took over the Government of India, has there not been a very steady progress in the direction of admitting Indians to a greater share in their Government, and in decentralization; that is to say, giving the provinces a greater power over their own finance, all of which is progress in the direction which you advocate? Is not the real difference between you and the Indian Government rather in the rate of progress than in the fact that the policies are much opposed?—Our policies are not opposed. I, and those whom I represent, regard the Indian Government as a progessive Government; if we did not, we should not be here giving our evidence. But we think, having regard to the wonderful progress which the country has made since the assumption of the Government by the Crown, in the words of a great writer "the India of Lord Ripon "is no more like the India of Lord Ellenborough than "the England of Queen Victoria is like the England "of Queen Anne"—having regard to the wonderful progress of the country, we do not consider that the progress made by the Government has been adequate to meet the requirements of the country. That is the whole of our case; it ought to be much faster.

The witness withdrew.

(Adjourned till Friday next at 11 a.m.)

At the India Office, Downing Street, S.W.

FORTY-SEVENTH DAY.

Friday, 21st May 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN), PRESIDING.

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.
Mr. COLIN G. CAMPBELL, *Secretary*.

Mr. G. Subramania Iyer.

21 May 1897.

Mr. G. SUBRAMANIA IYER recalled and further examined.

19,449. (*Chairman.*) I think, Mr. Iyer, that we have dealt with the different points upon which you wish to give evidence up to the Famine Insurance grant, have we not?—Yes.

19,450–3. Then perhaps you would tell us what you wish to say upon that subject, would you?—A good deal has been said and written about Famine Insurance grant; while Indian public opinion maintains that the original licence tax and certain local cesses, now known collectively as the assessed taxes, were imposed specially for this purpose, and that the 1½ millions which this additional taxation yielded is an amount of revenue to be assigned under the most distinct pledge of the Government to the construction of railways to protect the people against famine, the Government has of late contended that no such pledge was intended to be given. Taking the 15 years from 1877–78 to 1895-96, and according to Government account, the Government has set aside during this period Rx. 17,644,185 of its revenues for the purposes of famine relief and insurance.

19,454. (*Sir James Peile.*) What is the first item?—Rx. 17,664,185 of its revenues have been set apart for the purposes of famine relief and insurance, and has, over and above this, realised a surplus of revenue of Rx. 7,180,275.

19,455 A surplus of revenue besides?—Yes, I quote this from the financial statement, 1896–97. This surplus does not include Rx. 3,632,435 charged under railway revenue account; that is, this amount has been paid for interest on account of the Bengal-Nagpore and the Indian Midland Railways. To these two amounts, that is, to Rx. 10,812,710, the taxpayers have a claim, and they should be restored to famine protection purposes.

If the Budget figures of 1896–97 and 1897–98 were added, the amount paid as charge for Indian Midland and Bengal-Nagpore Railways would be nearly Rx. 4½ millions; and this represents a totally unwarranted diversion of the fund towards an object for which it was originally never intended to be utilised. In fact, in the earlier years, when a reference was made by the Government of India to the Secretary of State whether the fund could be appropriated for payment of interest on loans, the Secretary of State distinctly ruled that such appropriation would be an inversion of the original objects of the funds. The original grant was Rx. 1,500,000. But this amount has not always been maintained (*see* Mr. Jacob's figures, page 314, Vol. I. of the Report). Financial pressure has compelled the Government to withhold the grant from some years, so that the average assignment since the year 1881–82 is only Rx. 1,165,261. During the last three years the assignment has been only a million, and the present Finance Minister has said distinctly that this would be the amount of the Grant hereafter, because all the chief protective works recommended by the Famine Commission have been executed. In other words, 50 lakhs of rupees out of the fund originally raised for special purposes of protection, which the Government said "would be religiously set apart" for this purpose, and for this purpose alone, would be absorbed in the general expenditure, that is to say, in meeting the demands of the military department or general administration or in the construction of commercial railways which benefit the merchants and manufacturers of England more than they benefit the ryots. It is the middlemen and European merchants who reap the benefit of any improvement in the facilities of transport.

In my opinion it would be more just to the taxpayers if, besides giving back the 10 millions or so otherwise appropriated, the Rx. 500,000, no longer wanted for protective railways, were utilised for the benefit of the ryots in the construction of wells and tanks, in opening roads in rural areas, in advances for agricultural improvements, or in the stimulation of industrial education; or there should be remission of taxation to this amount.

19,456. (*Sir Andrew Scoble.*) Would you allow me to ask you this; you say the taxpayers have a claim?—Yes.

19,457. Have they not had that claim satisfied by these two systems of railways to protect them against famine?—I understand these are not strictly protective railways.

19,458. You know the territory which the Indian Midland Railway serves, do you not?—I suppose the Central Provinces.

19,459. But the Bengal and Nagpore Railway runs through the Central Provinces?—The Central Provinces, yes.

19,460. The Midland Railway runs through certain portions of Central India, Bundelkund, and part of the North-West Provinces?—Yes.

19,461. Are not those regions which I have just mentioned precisely the regions that formerly suffered most from famine, and which actually in this present year are suffering from famine?—Yes.

19,462. And is it not the fact that, but for the existence of those railways, the food could not have been carried so speedily, so economically, and so effectually to those districts as it has been carried during the past eight or ten months?—Yes, but that could be said about any railway constructed.

19,463. But is not that the fact?—I do not know whether that is included in the number of railways recommended by the Famine Commission.

19,464. But is it not a fact that, but for these railways, supplies could not have been carried into the affected districts in the effective way they have been carried during the recent famine?—Oh no.

19,465. Then do you not consider that the taxpayers have had the benefit of that expenditure as a preventative and alleviation of famine?—I understand that they have not had the benefit of it in this sense, that these railways are not considered strictly famine protective railways.

19,466. Will you kindly answer my question? Have they not had the benefit of the construction of those railways by the alleviation of the famine which has occurred in consequence of the assistance given by those railways to carry food supplies to the affected districts? —That goes too far.

19,467. Would you kindly answer that question?—Of course they have had the benefit of it, in that sense.

19,468. (*Sir James Peile.*) I do not quite understand your 10 millions. You say that the people of India ought to have the credit of that 10 millions you mentioned as part of the famine insurance grant?—The proceeds of the assessed taxes.

19,469. And what were the proceeds?—One-and-a-half millions, calculated to be the proceeds of the assessed taxes.

(*Sir James Peile.*) It was shown in evidence given here a few days ago that they were not 1½ millions. The chairman explained exactly how it was.

19,470. (*Chairman.*) I proposed to ask Mr. Iyer some questions upon that point; but may I ask with regard to the surplus, has not it been applied in various ways —in preventing borrowing, or in other forms of relief? —I think the amount utilised for preventing borrowing is included in the Rx. 17,644,185.

19,471. That is your impression?—Well, I understand about 6½ millions have been utilised for the prevention of borrowing, and about that amount on the construction of protective railways: that is what I gather from the financial statement of 1896-97.

19,472. I do not quite understand from your answer to Sir Andrew Scoble what you mean by the claim that the taxpayer has to relief on account of that 10 millions?—You see railways have been divided into different kinds, some called commercial railways the others I suppose famine protective railways, and the Famine Commission recommended certain railways to be constructed for the purpose of famine protection. My impression is these two railways did not come under that particular class of railway, but were more or less commercial railways, which have to be constructed from other sources than those derived from special taxes.

19,473. (*Sir Andrew Scoble.*) They have a commercial value as well as a protective value, no doubt; but the existence of the commercial value does not exclude the protective value, does it?—But, if commercial railways are to be classified under famine protective railways, I think that argument would go too far. All railways can be claimed as such, and this distinction of famine protective railways will cease to exist.

19,474. (*Sir James Peile.*) I should like to ask you one question about that, do you know what it is that is debited to the famine grant?—The sum spent upon the construction of railways.

19,475. But with regard to these two lines?—I think, according to the statement to which I referred, the amount spent on interest for these railways is put down in a separate column as a distinct item of expenditure; it is not included under the amount spent on famine relief.

19,476. The whole of the interest on the capital of those companies?—Yes, what is classified under railway revenue account. That is the heading. If you look at that statement given at the beginning of the financial statement of 1896-97, you will see that is put in as a separate item. You have got a number of headings, irrigation, direct famine relief, famine protective railways; and then this comes under a separate heading—the amount spent on account of interest on these railways.

19,477. You say they are commercial lines?—I believe so.

19,478. Very well; their profits are taken as commercial lines, and, if there is any deficit in paying the interest, that is debited to the famine insurance grant —that is, on their famine protection side as it were? —Yes.

19,479. But as commercial lines they make profits, and those profits are set off first. If there is any deficit remaining, that is paid from the famine insurance grant?—But these railways do not pay.

19,480. That is exactly the point I am putting?—They are a constant charge upon the revenues.

19,481. Exactly: because they are protective lines as well as commercial. *Quâ* commercial, they realise a certain amount of income which is used towards paying interest; and then any deficit is supplied from the famine insurance grant, the deficit being caused by their being also protective?—Anyhow, I believe I am right in understanding that these railways were not intended by the Government of India as famine protective railways, and the proof of that fact is, that they are stated under a separate heading.

19,482. (*Chairman.*) Their cost is not charged under the 17 millions, which, you say, was laid out on famine relief?—No; and, if they had been regarded as famine protective railways, the amount spent upon them should be included as an amount spent on protective railways classified distinctly.

19,483. Can I put that statement in this form, that, according to figures published by the Government, in these 15 years Rx. 17,500,000, in round figures, have been spent actually on famine relief; in addition to that, apart from famine relief, and not charged under that head, a certain amount of money, which, I think, you said was something like three or four millions, has been spent on railways which are not strictly famine relief railways, but which are, in part, commercial railways?—Yes.

19,484. And I think you are generally in agreement with Sir Andrew Scoble, that, so far as those railways are protective, and not remunerative, they are fairly to be taken into consideration in connexion with famine relief, though the Government have not brought them to charge under the head of famine relief?—Yes; but that would obviate the distinction entirely between protective railways and commercial railways, because I understand all commercial railways are of service in that way.

19,485. (*Sir James Peile.*) Might not a railway be partly the one and partly the other?—Why should that distinction be applied to these two railways and not to all railways?

19,486. (*Sir Andrew Scoble.*) Are you not aware that both those railways were recommended as famine works by the Famine Commission?—I am not aware.

19,487. You are not aware?—No.

19,488. Do you not think you ought to have ascertained that?—Perhaps I might have ascertained that.

19,489. Let me ask you this, the money spent on the construction of these railways has not been debited to the famine fund, has it?—No.

19,490. If it had been debited to the famine fund, then the total expenditure against the famine fund would have very far exceeded the amount of revenue which was to be provided by the original scheme?—Yes, of course.

19,491. As a matter of fact, only this is debited to the famine fund—the difference between the net earnings of these two railways, and the interest to be paid on the funds raised for their construction?—Yes.

19,492. Now let me ask you, as a fair-minded man, do you not think that that is letting the famine fund off very cheaply, not charging it for construction, and only charging it for the difference between the earnings and the interest which has to be paid upon the money raised for construction?—Certainly that would be so, and it would be letting our famine fund off far more cheaply if you would take into account all other railways; but the Government of India has not intended these to be protective railways apparently from the fact that they are entered under a separate heading.

19,493. (*Chairman.*) What you want to bring before us, I think, is that the Government themselves have not charged any part of the expenditure on these railways as coming under famine relief?—That is one point; there is another I want to show. I understood from the correspondence relating to the expenditure on famine railways, that formerly the question of appropriating the receipts of the famine fund for the purposes of paying interest on loans raised was considered by the Secretary of State and by special committees, and they came to the conclusion that any such appropriation of the money raised from these special taxes for the purpose of paying interest upon the loans raised for railway construction would be an inversion of the original object of the famine grant.

19,494. (*Sir James Peile.*) That was not said with reference to these particular railways?—No, generally.

Mr. G. Subramania Iyer.

21 May 1897.

The Government of India asked the permission of the Secretary of State for applying the famine insurance grant fund for the purpose of paying the interest on loans borrowed, and that was the decision he gave; and this particular application of the famine grant for interest on these particular railways seems to be against the rule and the decision of the Secretary of State and of those Committees.

19,495. May I call your attention to a passage in the financial statement for 1897-8; Sir James Westland there describes the effect of the expenditure under headings 2, 3, and 4. Now, 4 is that sum you have mentioned, interest upon the Indian Midland and Bengal and Nagpore railways, and he says the effect is that for the present and all future famines we are so much better equipped with the means of meeting the distress arising out of scarcity, that we may reasonably hope to pass through the period of distress with far less expenditure than otherwise would have fallen upon us?—Exactly.

19,496. You see Sir James Westland distinctly says those two lines are one of the means?—Exactly; but is there any railway of which that cannot be said?

19,497. All averting results of famine?—Of every railway in the country that can be said, because every railway facilitates the transport of food. For instance, the Madras Railway or the Southern Mahratta Railway, all those help by the transport of food, but they have not been classified under famine protective railways.

19,498. (*Sir Andrew Scoble.*) But is there not this difference that some of the railways that you have mentioned were undertaken distinctly for commercial purposes?—Yes.

19,499. These two railways were undertaken mainly because they passed through districts subject to famine; and they would scarcely have been constructed unless they had been intended to save those districts and protect them against famine?—Exactly; but, if these railways had been constructed out of the funds of the famine grant or the ordinary revenues, as other famine protective railways have been constructed, there would be nothing to be said against the policy of the Government. They borrowed the amount spent and applied the proceeds of the famine grant to the payment of interest; and this is against the decision I have referred to.

19,500. Yes; your objection is that the Government is not charging enough interest on these railways against the famine fund?—I think the Government had their own reasons for not charging them against the famine grant.

19,501. Would you have preferred that they should charge the whole cost of construction?—Oh, certainly not.

19,502. What is your complaint?—That they applied the famine grant to payment of interest.

19,503. (*Chairman.*) That they applied the famine grant to payment of interest upon the whole of these railroads?—Upon these two railroads.

19,504. They only charge the deficit?—They are now charging the deficit.

19,505. They would only charge the deficit on these two lines, would they, against the famine fund? They would not charge the whole interest?—That is the amount. That amount is charged on account of interest.

19,506. That would be the deficit, would it not?—Yes, I would suppose so.

19,507. Well, if that is the case, is it not reasonable, as, I think, Sir James Peile put it, that the proceeds of the railway should be divided into two parts; there was one part of the cost of the working of the railway which showed a commercial return, and one part which brought no return whatever; and the part which brought no return whatever might fairly be considered as spent for the relief of famine. Would you object from your point of view to charge against famine relief that part which is simply the deficit?—I would object to that, because it would be too much temptation to Government; they would be tempted to apply the famine grant fund to the construction of other railways, and pay interest out of the fund. It has been laid down as a policy not to incur expenditure for interest out of those funds.

19,508. The only charge you make is that you believe that in this famine relief expenditure there is a certain sum for interest upon these two railways, which you think ought not to have been so charged?—Yes.

19,509. Now with regard to the surplus, you say you think a portion of the surplus appears in the famine relief expenditure?—No, my Lord.

19,510. I thought I gathered that. I asked you a question when you spoke of the surpluses?—This 17 millions includes direct expenditure on famine relief, and it also includes expenditure on irrigation; it includes expenditure on protective railways, and I think it includes also expenditure for the avoidance of debt.

19,511. I think I asked you whether those surpluses amounting to 7,100,000*l.* had not been applied practically in the prevention of debt, and, therefore, might not, to a certain extent, be considered as spent in the direction of the objects for which the famine relief system was established, and you said that you thought that a portion of those surpluses appeared, if I understood you rightly, in the Rx. 17,644,000?—No; if I said that, my Lord, I was wrong, because, if you would allow me to draw your attention to the statement in the Financial Statement of 1896-97, you will see this surplus put down under a separate heading altogether—this seven millions odd.

19,512. Well, so far as that surplus was applied to prevent the accumulation of debt, would you not allow that it was being spent upon one of the objects for which famine relief moneys were appropriated?—I beg your Lordship's pardon; these seven millions have not been applied for the prevention of debt.

19,513. You have ascertained that?—I believe so.

19,514. If you have ascertained it, I have no figures to put against it?—If your Lordship will send for the Financial Statement of the Government of India of 1896-97, I shall at once put my finger upon it.

19,515. I think you told us that the original licence tax, imposed specially for the purpose of famine insurance, yielded 1½ millions, did you not?—Yes.

19,516. This question has really been brought before the Commission before, but I think it necessary to go through one or two points connected with it again, in order to clear up the question; and I would refer you to Sir John Strachey's Financial Statement of 1880-81, in which at the outset he was explaining the working of these famine relief arrangements?—Yes.

19,517. He said: "taking together the measures "adopted in the two years 1877 and 1878, the first "new taxation put on for the purpose was the public "works cess imposed on the land in Bengal; this "yielded in 1878-79, 355,590*l.* In 1878 new cesses "were also imposed on the land in the North-West "Provinces, Oudh, the Punjab, and the Central Pro-"vinces, yielding about 170,000*l.* The total amount "of new taxation on the land was, therefore, about "525,000*l.*" After that the licence tax on traders was imposed; that was in 1878, and it was supposed to produce Rx. 820,000; making a total of taxation levied for the purpose of famine relief of Rx. 1,345,000. But shortly after that there was an exemption from the Licence Acts extended to persons whose earnings didn ot exceed 500 rupees a year; and that was reckoned to diminish, as I understand it, the produce of the licence tax by about Rx. 34,000, leaving, as near as possible, and quite sufficient for our purpose, a clear million—it is really a little below—on those figures, but we may call it a million, as the produce of the taxes imposed?—Yes, I follow your Lordship.

19,518. That was Sir John Strachey's statement at the time?—In what year was it, my Lord, 1878?

19,519. No; his financial statement in 1881?—Yes.

19,520. Do you controvert that statement? Or, having heard it, do you still adhere to your statement that 1½ millions was the taxation yielded?—I do not certainly controvert what Sir John Strachey has said.

19,521. Then, if that is the case, we may take it that the extra taxation raised was one million. Now, I ask you if that is the case as far as the taxation is concerned, have not the figures that you have given us, without entering upon these subsidiary questions of surpluses, and the expenditure on the two railways which have been under discussion—I think you gave us Rx. 17,644,000 as the expenditure from the Famine Insurance Grant in the 15 years?—Yes.

19,522. That would be more than a million a year, would it not?—I believe so.

19,523. Then, so far, would you agree that the extra taxation levied, according to Sir John Strachey's estimate in 1881, has practically been applied in famine relief during those 15 years?—I do not know. I think a slight modification applies to that fact. I believe it is notorious that 1½ millions was the amount set apart for this purpose. It used to be said, year after year, and time after time. But I think that one million was the calculation for that year. I am not sure whether that amount has not increased since that year.

19,524. Well, of course, so far as the elasticity of taxation goes, that would be a legitimate ground to take?—I think the Government reckoned upon that increase, and expected that these assessed taxes would yield nearly that amount, and might be applied for this purpose.

19,525. I will now recall to your mind a statement made in the House of Commons this year by Sir Henry Fowler, who quoted a paper which had been given him for the purpose by Sir John Strachey. He said, "The policy of insurance against famine was "simple in its nature, but it has been constantly "misunderstood. It has often been supposed that a "separate fund was constituted, into which certain "revenues were to be paid, and which could only be "drawn on for a specified purpose. No such impracti-"cable notion was ever entertained, and every idea of "the kind was from the first repudiated by the Govern-"ment and myself, who was responsible for the original "scheme. The famine insurance fund, of which people "often talk, never existed. The intention was nothing "more than the annual application of Rx. 1,500,000 to "the purposes I have described. Financial pressure "has sometimes made it impossible to make the full "annual grant under the famine insurance scheme, but "substantially the system has been successfully main-"tained." Now, if the full amount which has been alluded to, and which, you see, is alluded to by Sir John Strachey in that statement, had been applied over the 15 years, it would have amounted to about 22 millions, would it not?—For 15 years, yes.

19,526. It has actually amounted to about 17½ millions?—Yes.

19,527. Well, if, subject to the reservation which you have suggested, namely, that there may have been an increase in the yield of the tax, we take Sir John Strachey's statement of a million a year as the produce of the tax, do we not come to this, that not only has the extra taxation been applied to famine relief, but a further sum, which must have come out of the ordinary revenue of India, not out of the increased taxation, amounting to something like 2½ millions?—It would be so, my Lord, if each year the amount yielded was only a million.

19,528. Quite so?—But, I think, if I remember correctly, the Financial Statement of 1896-97 gives the yield, the proceeds of the assessed taxes from year to year; and it is upon the total aggregate of those proceeds that these figures are made out, which I quoted from Sir James Westland's Financial Statement; and, therefore, I do not believe that it would be quite correct to assume that these assessed taxes yielded only one million year after year.

19,529. Well, you think that the elasticity of the revenue has been such as to add 50 per cent. in those 15 years to those two taxes?—It is a question of fact; it can be verified from the statement I refer to.

19,530. (*Sir Andrew Scoble.*) Do you know how long the licence tax was continued?—For about 17 years, I think.

19,531. Not the licence tax?—I do not know.

19,532. It was dropped after a year or two, was it not?—I suppose income tax superseded it; it was converted into income tax.

19,533. It was converted into income tax?—Yes.

19,534. About 1885 or 1886, was it not?—Yes, about that time.

19,535. (*Chairman.*) Then, Mr. Iyer, if the licence tax was turned into an income tax, and under the income tax a larger amount of taxation was imposed than under the licence tax, we cannot credit that addition to the famine relief fund, because it was not imposed for that purpose?—Exactly; 1½ millions was laid down only as the standard amount, because the Government had always the policy of reckoning upon the natural increase of the assessed taxes. Therefore, I think, Government, instead of saying that exactly the strict amount of the proceeds of these taxes would be applied for famine protection purposes, repeatedly laid down, in a general way, 1½ millions as the standard expenditure.

19,536. (*Sir James Peile.*) But do you recollect that Rx. 400,000 of the 1½ millions was obtained by reducing the grants to the Provincial Governments?—I do not follow you.

19,537. Rx. 400,000 out of the 1½ millions devoted to Famine Insurance at the beginning was obtained by withdrawing grants from Provincial Governments—by an economy?—I do not know whether the withdrawal was for that purpose; but I remember that in a number of years Provincial Governments were indented upon for help by the Government of India; and the grants to Provincial Governments were reduced, but I cannot say that in that particular year the reduction was for this particular purpose.

19,538. But you do not know that it was not?—I do not know. I cannot say for certain.

19,539. You have said that these taxes were imposed in order to establish a famine fund?—Yes.

19,540. They were?—Yes.

19,541. Have you looked at the legislation which imposed those taxes?—No, I have not seen the law.

19,542. Would you be surprised to hear that they were each and all of them imposed for the purpose of effecting a permanent increase of the revenue, without any statement as to the purpose for which they were imposed?—That makes no difference.

19,543. That makes no difference?—Certainly not.

19,544. Does that devote them to the special purpose of establishing a famine fund?—No; so far as the words of the law go, perhaps they did not.

19,545. So far as the words of the law go?—But it is notorious that, when the Bill was introduced into the Legislative Council, and in subsequent speeches and official publications, it was repeatedly said that the proceeds of this special tax should be set apart for this purpose; there can be no doubt about that.

19,546. My question was whether the special legislation by which these taxes were imposed specifically devoted them to the establishment of a famine fund, and you said "yes"?—But it makes no difference at all.

19,547. (*Mr. Buchanan.*) Your contention is that the Indian Government repeatedly declared that they intended to devote Rx. 1,500,000 for the purpose of the famine fund?—They did most assuredly; they left no shadow of a doubt in the public mind.

19,548. (*Sir James Peile.*) But did not Sir John Strachey say that any engagement made by him at that date was not to be binding on the Government of the future?—He said so subsequently.

19,549-50. Also that he never assumed or supposed that the Government of India would be bound to keep up the whole amount of the 1½ millions, if they found a smaller sum sufficient?—He said so, no doubt, but his earlier pronouncements were to the contrary effect; but the point is not affected at all by what he said afterwards, because there is no doubt that the Government of India pledged themselves morally, at all events, so far as their declarations to the public went, that they would most scrupulously and strictly spend 1½ millions for this purpose; and I remember the sensation that was created over the country when Lord Lytton rebuked the British Indian Association of Calcutta for casting a doubt on the Government always fulfilling their pledges.

19,551. Let me put a case to you for illustration; supposing that in time of prosperity the Government of India were in a position to spend 90 millions a year, and laid plans for doing so; and supposing at a later date, through some calamity, the revenue had been so decreased that it was not safe for the Government of India to spend more than 70 millions; would it be

Mr. G. Subramania Iyer.

21 May 1897.

bound in honour by its duty to the people to continue to spend 90 millions, although it could only afford to spend 70?—I am sorry I cannot admit that to be a parallel case at all. In this case this fund was created by special taxation for a special purpose, a purpose which involved the life and death of millions of people, and it anticipated a contingency of which the Government of India and everybody else were absolutely certain; and, therefore, when they created this fund for this special purpose, and gave all these pledges that they did give, they were bound to expend that amount from year to year. I cannot admit for a moment that that stands on a parallel with the case you mentioned just now.

19,552. (*Chairman*) Now consider how far you are in agreement with the Government, and how far you are not. As I understand it, there is agreement upon this point, that during the 15 years to which your statement alludes, 17½ millions have been spent on famine relief?—Yes; famine relief and insurance, yes.

19,553. In addition to that, I have brought before you the reasons which make me think that the extra taxation imposed did not exceed a million; that you would qualify by expressing your belief that the two taxes in question have been elastic, that their produce has, in consequence, been greater than a million, and, so far as these taxes have been elastic, you consider that the excess ought to be added to the million?—Yes, I base all these figures upon the statement which I take from Sir James Westland's financial statement; and these are his figures, and his figures are calculated upon the gross proceeds of the assessed taxes.

19,554. I think it is perfectly legitimate for you to argue that, if these taxes produced more, that increase should be contributed to this arrangement?—Exactly so.

19,555. I did not, however, understand you to go so far as to say that that Rx. 1,500,000 has entirely been raised by increased taxation?—It is a question of fact, my Lord. I will not say anything one way or the other, until we see that statement itself.

19,556. But at all events you maintain, contrary to the Government, that it is binding on the Government to spend that Rx. 1,500,000, whether it considers it necessary or not? You maintain that it is a binding agreement for ever?—So far as the cause continues, this agreement would continue; that is obvious.

19,557. But you do not say whether you agree, or do not agree with the present view of the Government that a million is enough; and you still maintain, although I brought before you a statement of the Government at the time that that Rx. 1,500,000 was never intended to be a binding arrangement of the kind that you have described, that Rx. 1,500,000 is due. Therefore, that is the real point upon which you are at issue. With regard to what you said just now, I think, when Sir James Peile asked you about the statement of Sir John Strachey that he could not bind the Government for ever, namely, that he said that some time after, my recollection is that he said it at the time, at the very inception of the arrangement?—Yes.

19,558. (*Mr. Buchanan.*) But may I ask you one question. Do you really hold to that last point? Do you consider that, supposing the Government of India thought that Rx. 1,500,000 could not be usefully spent for famine protective purposes, they would still be bound to spend it?—No, not at all; they should either remit the taxes to that extent, or, if that is not possible, apply the balance to such purposes as would benefit the classes of people for whose benefit the original fund was raised. I certainly object to the amount being appropriated for military expenditure, or for compensation allowance, or for railways of a commercial nature.

19,559. (*Chairman.*) Then, perhaps, you will now pass on to your next head, which I think is Famine, is it not?—Yes. Two great famines have occurred within the last 20 years, besides other famines confined to smaller areas. They involve the Government in immense expenditure while they last. Not only have large amounts to be spent directly on famine relief, but indirectly the loss of revenue is immense. The following figures, taken from the last financial statement, show the expenditure and loss of revenue attributed to the effects of famine and scarcity during the years 1896-97:—

	Rx.
Direct cost of famine relief -	1,876,200*
Rise in prices in Army expenditure - - -	196,000
Loss of revenue:—	
Land revenue - - -	2,394,100
Salt revenue - - -	261,800
Other revenues in North-West Provinces and Bombay (excluding stamp revenue) -	373,600
Loss of railway revenue (net) -	1,234,200
Total - -	6,066,400
Gain under irrigation revenue -	269,500
Net result - Rx.	5,066,400

This represents the financial results of the famine to the State. But the direct consequences to the people are frightful. The amount of physical and moral deterioration which these famines bring upon the people is simply incalculable. The recurrence of famines from time to time points with irresistible force to the necessity of reducing the burden of taxation on the people, more especially the land revenue, by the adoption of a more reasonable and less oppressive system of raising it. The drain of the country's money and military expenditure should be reduced.

19,560. You say the amount of physical and moral deterioration which these famines bring upon the people is simply incalculable; yet, to a certain extent, you appear to me to deprecate the extension of railways, which are of the first consequence in alleviating and preventing famine?—I beg your Lordship's pardon. I do not deprecate them at all. I only plead for a more moderate speed in the construction of railways. I hold that the construction of railways is only one means of alleviating the effects of famine and improving the condition of the people. There are other means equally efficacious in bringing about that result. Therefore, I say that the available revenues of Government should not be exclusively utilised for this one special purpose, but more equitably distributed among different improvements, especially in view of the fact that these railways have to be constructed by money raised in England, and that money has to be sent away to a foreign country; therefore, if money were more proportionately spent on different purposes, you could gain the same result, better.

19,561. I gathered from your answer to a previous question that you would check the extension of railways, and divert the borrowing to other matters, such as irrigation, we will say, leaving the railways to be supplied out of surplus revenue? But, as your surplus is hardly existent now, and as in another part of your evidence you have come to the conclusion that there is no surplus, does not that really mean that you would now stop all railways? That is what I alluded to when I said that you appeared to me to deprecate the extension of railways, although they must be of such importance, according to my view, in preventing those terrible evils which you have so forcibly pointed out?—Yes, but I would not stop all railways. I would certainly allow their construction to go on within certain reasonable, moderate limits, especially so far as any amount may be made available from the revenues of the country; certainly, I should be the last person to object to that.

19,562. I think your evidence shows that in your view there is no such available revenue; there is no surplus?—As a fact, there is some amount being spent on railways from revenue from year to year.

19,563. You pointed out at the same time, I think, that you thought that such available sums might be better spent in other directions, did you not? You dwelt upon irrigation, I think, for instance, as preferable to railways?—No; I do not think so.

19,564. I beg your pardon, I thought I remembered that you pointed out that there were other objects of public expenditure, which you thought came before railways?—I think it is better to clear up that point, my Lord. I do not object to railways at all. My chief objection is to the fact that most of the funds available for that purpose have to be borrowed in a

* Beside Rx. 14,500 for English expenditure and exchange thereon.

foreign country. If all the money necessary to be spent upon railways could be raised in India, or could be got from the revenues, I should be certainly glad to allow the construction of railways to proceed.

19,565. (*Sir Ralph Knox.*) But you would leave the construction of railways to the available surplus of revenue year by year; that is practically what it comes to?—Not to surplus of revenue, but to such amounts as might be made available from the revenues.

19,566. But you would limit it to the surplus of revenue available, or to money available out of the revenues of the year?—Yes; and to such amounts as can be borrowed in India.

19,567. (*Chairman.*) Even though you might pay 7 per cent. or 8 per cent. in India, against 3½ per cent. here?—I do not believe you would have to pay that high interest in India; but I certainly admit that, even though there may be a difference in the rates of interest, the Indian rate of interest being higher than that in England, I would prefer that higher rate of interest, if it meant borrowing in India.

19,568. (*Mr. Buchanan.*) Even though it might bring all railway construction to a standstill, you would still hold to that?—I cannot admit that it would bring railway construction to a standstill; certainly there would be less mileage constructed, but we would be satisfied with that.

19,569. Is there any district in India at the present moment in which too many railways have been constructed?—Oh, no.

19,570. You cannot point to any railways in regard to which you consider that it would have been better for India if they had not been constructed?—I do not believe there have been too many railways, no.

19,571. But what you are advocating really practically puts a stop to the further construction of railways?—I should demur to that statement. I do not believe it would put a practical stop to the construction of railways. There will be still progressive construction, but it will be much less rapid than it is now, than it has been for some time.

19,572. (*Chairman.*) Now, taking the action of Government over a long period of years, do you consider that an advance has been made by Government in preventing and averting famine?—Certainly.

19,573. And would you allow that there has been a great step in advance since the Government of India came under the Queen?—Does your Lordship ask me whether there has been an improvement so far as steps to prevent famine are concerned? Certainly there has been.

19,574. One of the results obtained since the assumption of the Government by the Queen has been that effective measures—we are not now arguing whether they are the most effective measures—have been taken which have diminished those terrible effects of famine?—I should think so, certainly.

19,575. So far you would allow credit to the Government of the Queen?—Most certainly, gladly.

19,576. Do you know that the famine of 1770, which, I believe, was one of the great famines quoted, is said to have destroyed about 10 millions of people?—I have read that, my Lord.

(*Sir Ralph Knox.*) Out of how many?

(*Sir James Peile.*) It destroyed about one-third of the population.

19,577. (*Chairman.*). Then the famine of 1867. That is said, I read, to have swept away one-fourth of the population in the districts affected?—Very likely.

19,578. That was before the extension of the railway system?—Yes.

19,579. There were no means at that time of carrying food aid to the people when one of these fearful calamities occurred?—No.

19,580. Then, again, is it not said that the famine of 1876–78, which affected 36 millions of inhabitants, destroyed between five and six millions of people?—Yes, it did; but I do not see the point.

19,581. Would you admit that the means that are now, in the case of the present famine, being taken will prove more effective in averting this fearful loss of life than those which were taken at that time and in the previous cases that I have referred to?—What means does your Lordship refer to?

19,582. Do you think that the lessons which have been learned by the Government as to the best means of averting famine, have been so far effectual in the interval that we may hope that in this, and in future famines, the loss of life will not be so great?—I do not know about the future. I think it would be rather bold to predict anything about the future; but about the present and past famines, your Lordship will excuse my saying that, while probably no reliable accounts have been yet made out of famines in the past, it is a fact that in former years there was more intense suffering from famine, which was, in former years, confined to smaller areas, but now, perhaps, the suffering is not so intense; certainly it looks as if famine would affect larger areas whenever it occurs, although the suffering might not be equally deep.

19,583. Do you call an area that affects 36 millions of inhabitants a small one?—Comparatively. It committed greater havoc; no doubt the suffering was greater because food could not be transported.

19,584. But you say that at present larger areas are affected, and in former famines small areas were affected. I ask you whether you think an area containing 36 millions of inhabitants is a small area?—Compared with the area now affected, I believe it is.

19,585. Do you think the areas now affected contain more than 36 million people?—Oh, certainly.

19,586. That you have ascertained?—I think so.

19,587. (*Mr. Naoroji.*) In 1770 the famine was in Behar and Lower Bengal, was it not, and it was while the district was in the hands of the British Administrators for several years?—It had just come into their hands, I think.

19,588. (*Sir James Peile.*) Had the British the executive administration at that time?—Practically, I think they had.

19,589. Will you kindly look it up and see, or will you take it from me that they had not?—I will certainly take it from you.

19,590. (*Mr. Naoroji.*) Is it then not on record that in 1765 the people were very badly oppressed by the Executive of the day?—Yes.

19,591. That the Executive were most corrupt, most oppressive, at the time during and before this famine came on?—Certainly, it is a notorious fact; every schoolboy knows how Bengal suffered from the fact that the administration was corrupt.

19,592. I think the Court of Directors have used words to the effect that it was the most tyrannical and oppressive conduct that ever was known in any age or country?—I believe so.

19,593. The oppression, rapacity, and corruption of the time?—I believe so.

19,594. (*Sir James Peile.*) As to the area of a famine, I suppose the failure of the rainfall has something to do with that?—I think a famine has always been caused more or less by that fact; that is the great cause.

19,595. Then the area would be regulated by the extent of the failure of rain, would it not?—I do not quite follow you.

19,596. The area of the famine would be regulated by the extent of the failure of the rain?—I do not know, but it looks as if the failure of rain affects larger areas now than it did formerly.

19,597. Is that the fault of the Government?—I do not say whose fault it is, but there is the fact; let us first recognise that.

19,598. (*Mr. Naoroji.*) Is there not an impression—I am not at present prepared to verify it—that famines since the introduction of railways have destroyed more people in 20 years than the famines of 20 years before the railways? I am under that impression, that 20 or 30 years after the commencement of the railways there have been more famines, or more lives lost, than the 20 or 30 years before the construction of railways. Have you come across any such expression?—Well, I cannot point to any reliable source from which I can derive information of that fact: but the impression certainly is that the famines cause more loss of life now than they did formerly.

19,599. Mr. William Digby has given some figures and an estimate of the lives lost before the railway construction, and lost after the existence of railways?—Yes, I remember having read his book.

Mr. G. Subramania Iyer.

21 May 1897.

19,600. (*Sir Ralph Knox.*) There are many more lives to lose now, are there not; the population has enormously increased?—I do not think so; but lives do not come into existence to be lost in famine.

19,601. (*Chairman.*) I do not know whether you have mentioned it, but one of the Indian gentlemen who appeared before us dwelt, I think, upon the point that the population did not increase so fast in India as in England?—I said something to that effect.

19,602. Looking back, I make out that the Indian population increases faster; that within recent decades it has increased at the rate of 10 per cent., while the English increased during that period only 8 with a decimal?—10 per cent. a year?

19,603. No, no, in the decade?—Yes.

(*Mr. Naoroji.*) I think I said something to the effect that during those 10 years the English population increased at a higher percentage than the Indian population.

(*Chairman.*) My researches lead me to an opposite result.

(*Mr. Naoroji.*) My researches also are from statistics—not my own creation—so we can compare the figures.

19,604. (*Chairman.*) Yes. Before we pass away from this, I want to go back for a moment to the increase of the produce from the assessed taxes. I find in the Finance and Revenue Accounts that the assessed taxes for the years 1877–78 and 1884–85—— ?—Does your Lordship refer to the financial statement of 1896–97?

19,605. I am referring to the Finance and Revenue Accounts of India from 1st April 1877 to 31st March 1885?—Yes.

19,606. I want to see the yield of the licence tax?—I could more easily verify my facts by a reference to the financial statement of 1896–97.

19,607. Well, I will just give you from this account the yield of the assessed taxes, which include this licence tax. In 1877–78, before the licence duty was put on, the receipts were Rx. 101,000. In 1878–79, the duty having been put on, the receipt was Rx. 900,000; in 1879–80 it was Rx. 785,000; in 1880–81 it was Rx. 558,000; in 1881–82 it was Rx. 536,000; in 1882–83 it was Rx. 517,000; and in 1883–84 it was Rx. 526,000, being a larger diminution than that which Sir John Strachey foreshadowed when he was speaking of the remissions he had made. In 1884–85 it was Rx. 511,000. I think it was mentioned that about 1884–85 this tax was turned into an income tax?—I think it was in 1886.

19,608. That brings up a fresh question; but during that period it does not look as if that revenue was a very elastic one; those figures do not lead up, I mean, to the idea that more than a million a year was being realised?—No.

19,609. (*Sir William Wedderburn.*) Might I ask, before we pass from this subject, whether you think that the extension of railways is being pushed more rapidly than the country can afford?—Yes, I do.

19,610–1. It has been suggested that the Government of India consider that one million is now enough to spend, instead of 1½ millions, for famine preventive works?—Yes.

19,612. Does not that rather point to the conclusion that this great pushing forward of railways has nothing specially to do with the saving of the lives of the people from famine?—Of course it does.

19,613–4. And another question, you mention that it is the general belief that the famine extends over larger areas than formerly?—Yes.

19,615. I think the popular idea is not so much that there is greater failure of rain, as that there is less power in the people to resist the effects of that failure?—That is exactly the reason; they have less staying power.

19,616. It is the diminished power of resistance on the part of the people that makes the failure of rain cause starvation over larger areas than in former times?—Certainly, there have been failures of rain in former times as there are now, and I think people are less capable of resisting the effects of the failure of rain now than they were in former years.

19,617. And that accounts for the famine extending over large areas?—Yes, I think so.

19,618. (*Sir Ralph Knox.*) Is it the case then that they now subsist on a lower physical minimum of subsistence—They do now.

19,619. (*Chairman.*) Now do you think the figures I have given you point to that? When we are told that the famine of 1770 destroyed 10 millions of people, is that proof to you of greater stamina in the people at that time?—Yes; but I wanted to impress on your Lordship this fact. From information which is available regarding famines of past years—I do not admit that the information is altogether reliable—I am prepared to admit that in former years, perhaps, there was more suffering on account of want of facilities to transport food from one part of the country to another, but the distress was confined to a smaller area; now it extends to a larger area, and I am not sure that modern famines do not cause the loss of a larger number of lives than a famine did in former years.

19,620. That does not quite answer my question, which arose out of Sir William Wedderburn's question, but I will meet you on both points. Do you think that the sweeping away of 10 millions in 1770 looks like a small area being affected?—It does not look at all like that, no.

19,621. And do you think that the sweeping away of 10 millions of people—just consider what that means—is a proof that the people of that time had greater stamina than they have now?—So far as that particular confined area is concerned, perhaps, they had not at that particular time.

19,622. Now I pass on further. It is said that the famine of 1866 swept away two-thirds of the population; do you think that this two-thirds of the population unhappily swept away had better stamina than the people have now? Or would you think that the sweeping away of this two-thirds of the population at that time is a proof that they had better stamina then than now?—What I want to urge is that at that particular time, in that particular tract, perhaps there were special causes that brought about the death of those people; but it does not follow that the population as a whole, or that the population in other parts of the country, had less stamina.

19,623. But when the trial comes upon them, and you find two-thirds of the population swept away, do you consider that two-thirds of the population being swept away is a proof that the people were of good stamina compared with those of the present day?—If they had had the railways, if food could have been transported, perhaps they might have resisted the famine better.

19,624. I am only confining myself to that statement, which is a very difficult one to substantiate, namely, that the people in former days had better stamina. Now, in the presence of the fact that when a trial came, you find this fearful devastation, it seems to me impossible to maintain that the people of that day had better stamina than they have now?—But I think it could be shown that the trial in modern days produces more loss of life; I do not think your point can be maintained, unless it can be shown that modern famines do not produce the same loss of life over a larger area.

(*Chairman.*) Well, when you come to the next famine which affected an area containing 36 million people, namely, the famine of 1877–78, even the very wide calculation which included the stoppage of reproduction as part of the loss, only puts the loss of life at six millions. That looks to me as if the stamina is rather improving than diminishing.

19,625. (*Sir William Wedderburn.*) With regard to the power of resistance, the comparison was not so much with the middle of last century as with the earlier portions of the period of British rule in this century, I think?—I cannot clear up the matter, but the popular feeling is that the people are now less able to resist than they were before.

19,625A. The comparison is made with the earlier portion of this century, I think, rather than with the last century?—I do not quite follow you.

(*Mr. Naoroji.*) Is it not the case that Government now, by imposing this famine relief fund, actually has better means of saving lives, and that it is not owing to better means of the people; it does not prove at all that the people have better stamina or better power of resistance; it simply is that the Government is actually now exacting money from the people in order to save them at the time of the famine, taking from the starving to try to save the dying; but it does not prove that there is greater stamina or means?

19,626. (*Chairman.*) And, therefore, the conclusion that Mr. Naoroji would come to is this, that when the people had not the means of getting food they had better stamina than they have now when they have means of getting food?—When a great calamity is confined to a small area, it can be very well conceived that a proportionately larger number of people die.

19,627. Is not that rather an assumption on your part? I have asked you once or twice about the famine of 1877, which affected 36 millions of people; is that a small area? The famine of Orissa, too, I have always heard spoken of as affecting a large area?—It was a very little area compared with the area now affected.

19,628. Do you know at all what the area now affected is?—I think three provinces are affected now, more or less.

19,629. Oh, more or less; but with regard to the real famine?—There is a good deal of scarcity.

19,630. You have considered the point?—I am not prepared to say what exactly is the area now affected, but I think it is larger than in former famines.

19,631. (*Sir Ralph Knox.*) May not the extension of the area be, to some extent, due to the increase in population in those districts? There are more people living in the districts than there were on the former occasions when there was a scarcity of rain?—I mean that larger tracts of country are affected, apart from the population.

19,632. The population may have increased in certain districts, in which the want of rain would not have affected them when the population was smaller, but it does affect them now that the population is larger?—Yes, I suppose it follows; but at the same time the obligation must be borne in mind, that, as population increases, means of subsistence should also increase.

19,633. Quite so, but that increase of population would account for the extension of the area affected by scarcity, would it not?—I beg your pardon.

19,634. What I have stated would tend to increase the area of famine?—Oh, certainly.

(*Mr. Naoroji.*) About population, my lord, my figures, which I have given before, show in England and Wales between 1881 and 1891 an increase of 11·6 per cent. and a population per square mile of 500; in British India an increase of 9·7 per cent. and a population per square mile of 230. Those are the figures that I have given in one of my statements of the 9th January 1896, p. 54.

(*Chairman.*) I cannot say, at present, from memory, the year to which I referred.

19,635. (*Sir Ralph Knox.*) As regards that question of capital being raised in India, do you think it is the case that in other countries the capital which is raised for the construction of railways and such works is always raised in the country?—Yes.

19,636. You think it is a disadvantage that the capital should be raised out of the country, as compared with the absence of the construction of the works at all?—Certainly, and that fact should be taken along with other facts that affect the economical condition of the country. India is in this peculiar condition, which no other country is in, namely, that owing to the employment of foreign agency and foreign enterprise flourishing in the country, a large amount of money is being taken out of the country. Therefore, every means by which this drain could be reduced is a distinct advantage in any case.

19,637. That is the case in regard to all other countries, is it not?—I do not believe that any other country is in the same position as India.

19,638. Not to the same extent?—Not to the same extent.

19,639. It is only a question of degree?—Certainly.

19,640. (*Chairman.*) I doubt whether it is a question of degree. Take Australia, your argument would mean that Australia has been ruined by its railways. Everybody knows that practically the whole of the capital they have spent there on railways has been raised here, causing this foreign drain which you deprecate so much, and I should think that nobody, looking at Australia could doubt that the benefit of the railways has been great to the country?—No doubt, but Australia does not employ such a large civil and military agency, belonging to a foreign country, and paid out of local revenues.

19,641. The drain is to this country; they borrowed money over here, and they have to send the interest and principal back again here, and that is what you deprecate in India?—They can do so, because they have not to lose money in other ways which India has unfortunately.

19,642. (*Sir William Wedderburn.*) They are self-governing?—They are self-governing.

(*Chairman.*) Oh, quite so.

19,643. (*Mr. Naoroji.*) There are no other countries where you have the first initial drain of the foreign agency, which has nothing to do with the commercial drain?—Certainly.

19,644. First comes the political drain; India is a country which is subject to a heavy political drain, and that is the cause of all the further mischief which it is subjected to?—That is the great fact which it is my utmost endeavour to urge upon this Commission, and which I feel it is rather difficult for them to realise.

(*Mr. Naoroji.*) That is the great fact. India being subject to this political drain alters the economical situation in so many ways.

19,645. (*Chairman.*) Now, I think, you wish to offer some remarks upon the Education Department of Madras?—I shall now request the permission of the Commission to go into the figures of a few departments of Madras to illustrate my point. The Educational Department has suffered most by the extravagance of other departments. It is the budget of this Department that is cut short first, whenever money is needed for any extraordinary item of expenditure, so that we may say that this Department is starved.

19,646. What proof do you offer in support of your statement that the Education Budget is the first that is cut short?—That is not perhaps exactly accurate; I will certainly say that it is cut short among the first—perhaps it is not the first—but it is one of the Departments to which resort is had almost at the beginning whenever any difficulty arises.

19,647. Does it mean more than what, I think, you have expressed to us before, namely, that the great demands of the Central Government prevent the outlay of money which, you think, might be usefully expended on what we may call the administrative services, or the domestic services?—Yes. The peculiar feature of public instruction in Madras Presidency is, that Government maintains very few institutions of its own. There are only three first-grade arts colleges, one second-grade college, four professional colleges, one high school, and a few training schools, maintained by Government; and the total expenditure on Government institutions was Rs. 9,12,539, which is far less than the amount spent in some other provinces by Government on its own institutions. But even this expenditure can be diminished (1) if the fees in Government colleges, &c., are not so high; (2) if a larger proportion of qualified natives are employed in the staff.

19,648. What do you mean by saying that the fees in Government colleges should not be so high? Would not that increase the net expenditure?—They diminish the income, because high fees drive the students away to other colleges where the rates of fees are lower.

19,649. But I do not quite understand your saying that there is not sufficient outlay, when one of your remedies is to reduce the income; that is not providing means to enable expenditure to be increased, is it?—Oh no, I merely want to bring out the point that by raising the fees the income is reduced.

19,650. How does raising the fees reduce the income?—Keeping the standard of expenditure at the same point, if the fees were not raised, there would be more income; and in that way the expenditure might be diminished with the same efficiency of work.

19,651. But I want to clearly understand the case. Raising the fees may be bad policy, but, if you raise the fees, you get a larger income, do you not?—I am sorry that I have not very clearly expressed my meaning, my Lord.

19,652. I only want you to explain, in order that we may understand your meaning?—What I want to say is that, supposing the Government wanted to produce a certain standard of efficiency and for that purpose spent a certain amount, if they got more income in the way of fees, their direct expenditure might be reduced, because the fees go towards making up the balance.

Mr. G. Subramania Iyer.

21 May 1897.

19,653-4. (*Mr. Mowbray.*) But, then, do you mean that you are in favour of raising the fees?—No, I am not in favour of raising the fees; I am against it. But the income might be increased, and there might be more money spent on education.

19,655. I do not understand how the income is to be increased unless the fees are raised?—In India there are private colleges, side by side with the Government colleges, and, whenever rates and fees are increased, students go to other institutions.

19,656. (*Sir Ralph Knox.*) You mean that by reducing the fees you would have a larger number of pupils, and that that larger number at a lower rate would produce a larger revenue than a smaller number at a higher rate?—Yes.

19,657. (*Mr. Mowbray.*) You would attract students who now go to other colleges to the Government colleges?—Yes; for many reasons the Government colleges are always more efficient than private colleges; they are also more popular, being non-sectarian institutions. The new Educational Service, divided into two branches, the Imperial or European Educational Service and the Provincial Service, is the outcome of the Public Service Commission, and is supposed to introduce greater economy by giving a larger share in the higher grades of the service to natives. The appointments hitherto monopolised, more or less, by Europeans have been nine professorships, four inspectorships, and three principalships, and one vice-principalship. According to the new scheme, only three professorships and two inspectorships are thrown open to natives. This is anything but adequate. There are an increasing number of qualified natives who have secured the highest University honours in Great Britain. (One of the recommendations of the Educational Commission is to the effect that natives who have received an English training should be given appointments in the Educational Service.) These men are perfectly qualified to fill professorships and inspectorships. It is noteworthy that the only science professors in India who have achieved European fame by their original researches in science are natives of India, Dr. Bose and Dr. Roy, and yet, strange to say, in the new scheme, no professorship of science is to be held by a native of India, and the only professorships that they are considered competent to fill are the professorships of Mathematics, Sanskrit, and History or Philosophy. Even these are not given always to Indians. The professorship of Sanskrit in the Presidency College of Madras was about to be given away to a German, but the Secretary of State vetoed the proposal and appointed a Hindu. Lord Kimberley earned the gratitude of the people of Southern India by his just and wise action in this matter. The money spent on building the Law College is sheer waste when we take into consideration the other educational needs. The aided schools and colleges are being starved. A paltry sum of 1,50,000 rupees is spent on results grants. The total grants from provincial funds amounted to Rs. 6,19,780 in 1895-6, when the total number of institutions in the Presidency was 26,066, and pupils 791,634. In 1890-1 the total amount spent on grants from provincial funds was Rs. 6,40,341, and yet in that year the number of institutions was only 22,028, and pupils 644,164. Thus, when the number of institutions and pupils was smaller, more money was spent. Aided institutions are starved.

19,658. (*Chairman.*) Would you let me ask on that point where we are to find those figures, because I understand that they are not traceable in the accounts? Where do you get that figure of Rs. 6,40,341 from?—From the Director of Public Instruction's Report.

19,659. Thank you. Would you go on, please?—The payment by results has become more or less a farce. For years past the schools have not been getting the actual amounts earned, but only a fraction of that amount, on account of want of funds. The Director of Public Instruction, in accounting for the distinct falling-off in kindergarten and object-lessons in all the standards (p. 106, D.P.I. report for 1895-6) gives as one of the reasons "the paltry rate of results grants provided for them in the grant-in-aid-code."

19,660. Now you say that the schools have not been getting the actual amounts assigned, but only a fraction?—Yes.

19,661. Is there any document which shows the reason for that, or how it has come about?—Want of funds. Supposing the school earns about 100 rupees by passing a certain number of pupils, then the whole is not paid; this 100 rupees is reduced according to circumstances to 60, 70, or 80 rupees.

19,692. That is to say, the Government, having only a certain amount which it can pay away in payment by results, is obliged to give it *pro ratâ;* for instance, a good school might earn 100 rupees, but the amount the Government have to spare for that purpose will only permit 70 to be paid?—According to the rules it is entitled to a larger amount, but owing to want of funds smaller amounts are paid. The report adds: "A third and a very formidable "reason, indeed, is the want of monetary inducement "to managers to teach these subjects, the assignment "we are able to make to schools annually as results "grants being small and such as can be earned by "passing pupils in the compulsory subjects alone." The assignment for salary grants amounts to Rs. 2,70,000, and a large number of high schools do not receive any assistance from Government.

19,663. That is a rising amount, is it not?—I just now pointed out that, taken altogether, the total grants have not increased in proportion to the increase in the schools and the pupils.

19,664. For instance, that figure that you give in 1895-96 is 2,71,000 rupees?—Yes.

19,665. And in 1896-7, it is 2,83,000, I think?—The total grants from provincial funds amounted to six lakhs in 1895-96.

19,666. I am talking of the Science and Art grants?—There is some increase, no doubt.

19,667. There are increased sums being given, are there not?—My impression is that there is some increase, but the increase is so slight. As regards furniture grants the Director himself says (p. 107), "only about Rs. 12,000 a year from public funds "are given as grants-in-aid to managers for the "better equipment of their schools. Managers of "primary schools in outlying villages are often quite "unable to do anything to provide their schools with "even the simplest articles" (p. 106). Female education, of which the importance cannot be exaggerated in India, makes but slow progress owing to want of funds. The increase in the number of girls in girls' schools for a whole year was only 211, which the Director of Public Instruction remarks "is insignificant, and lends support "to my statement in the last report that no appreciable "advance will be made in the number of girls' schools "unless additional funds are provided, which would "allow of assignment to such schools being raised. It "is somewhat different in regard to girls in boys' "schools, the managers of such schools being in-"terested in admitting as many girls as possible with "the certainty of earning the full amount of assign-"ment easily, each girl earning for them a larger "amount than each boy." According to the last Administration Report 76 per cent. of the boys of the primary school age, that is, three boys out of every four are not in school, and only 37 per cent. of the net cost could be assigned to schools in 1895-96.

19,668. Would you explain what you mean by that 37 per cent.; do you mean to say that, if a school costs, we will say, 1,000 rupees, the Government could only afford to give 370?—37 rupees out of 100 only; the 37 rupees the Government is only able to give as help; 37 rupees out of 100 which the school may cost.

19,668A. But the Government does not undertake to pay the whole; a part of the schools are paid from local cesses?—No, they are girls' schools. As a policy they do not charge the cost of girls' schools on local revenues and municipal local revenues.

19,669. How is the difference between the 37 which the Government can give, and the 100 rupees which a school costs, provided?—I think from fees and grants.

19,670. (*Sir James Peile.*) Endowment?—Endowments in some cases of course.

19,671. (*Chairman.*) Grants would be from Government, would they not?—Yes, if they are aided schools maintained by missionaries and Provincial Governments.

19,672. But that, you say, could only be 37 per cent.?—Yes.

19,673. Therefore they must look to fees and endowments for the balance?—Yes, I think so.

(*Continuing Statement*) 13,702 villages with 200 or more inhabitants, and 20,215 villages or village groups with less than 200 inhabitants, are yet unprovided with any

means of educating their children. The above figures indicate the extent of the work to be done before three-fourths or even one-half of the boys of school age are brought under the civilising influence of education. The charge for the lower primary education of boys, except in municipalities and the agency tracts, is a liability on local funds.

19,674. May I ask what an agency tract is?—There is a district called Vizagapatam, of which a part is under an agent of the Madras Government, administered by him.

Unless, therefore, local boards are able to assign an annually increasing allotment for education, it is futile to expect any large extension of the sphere of primary education. But local boards cannot conveniently do this, their resources being limited, and there being other demands on them. "Missionary and "philanthropic societies and public-spirited citizens "cannot be expected to open new schools," the Director of Public Instruction remarks, "when owing to dimi- "nished grants they find a yearly increasing difficulty "in supporting the schools already opened; and "parents, even if they have the means, cannot be "depended on to pay fees sufficiently high to cover the "cost of a school."

19,675. Well now, that district local fund rate has risen considerably over a period of years, has it not; has not the rate risen from Rx. 396,000 in 1884–85 to Rx. 529,000 in 1894–95?—In the course of how many years?

19,676. Between 1884–85 and 1894–95—ten years?—Then it will depend upon the increase in the assessment of land revenue.

19,677. I only say that the receipts from the local funds are rising in very considerable proportion?—Pardon me, I think I shall refer to that fact subsequently. The fact is that those cesses are raised on land revenues, and land revenues are fixed for a considerable time, and during the duration of that period these local cesses cannot increase.

19,678. But they have increased considerably during this period, have they not?—Because fresh revisions of assessment have been made.

19,679. (*Sir James Peile.*) And extensions of cultivation. They would increase with an extension of cultivation, if fresh land came into cultivation?—I would rather put it that it would depend on the revision of assessments.

19,680. Certainly; but also on the other?—Every time a land assessment is increased, the local cesses increase. But I want to bring out this point: that during the period for which the revision lasts, these local cesses will not increase, because they are a percentage on the land revenue collected. Far from being able to assign annually increasing sums for education, several local boards have, as a matter of fact, been led to reduce the allotment for education for 1896–97, with a view to give effect to the express orders of Government to assign 50 per cent. of the land cess collections to "communications." The allotment for results-grants in the local budgets for 1896–97 is, in consequence, Rs. 2,25,060 as against Rs. 2,31,750 in the budget for 1895–96; and I apprehend that the boards will make further reductions under this head in the ensuing year's Budget, in order to give full effect to the orders of Government. "If the provision for "primary education is thus to be left to the tender "mercies of local boards, without any definite under- "standing"—I again quote the Director of Public Instruction—"I foresee that its progress will be "checked and impeded. How different is the spectacle "presented by other civilised countries in this respect! "In Great Britain sufficient school accommodation "has by law to be provided in every district for all "the resident children between the ages of 5 and 14, "and the minimum age for exemption from school "attendance is fixed at 11. In France primary "instruction was made obligatory in 1882 for children "from 6 to 13 years of age. Education is general and "compulsory throughout Germany, and the school age "is fixed from 6 to 14. In Belgium each commune is "required by law to have at least one primary school, "and Government pays one-sixth of the charge. In "Denmark elementary education is compulsory, and "the school age is from 7 to 14 years. In Greece all "children between the ages of 5 and 12 years are "required to attend school. In Switzerland elementary "education was made compulsory in 1874, the school "age varying in the different cantons. In Japan—an "Asiatic empire of very recent growth—elementary "education is compulsory for all children of school "age (6 to 14)." The list need not be multiplied.

19,681–2. (*Mr. Naoroji.*) You might as well finish the quotation from the Director?—"There are those who "think that elementary education should be made "compulsory and free in this country; but it seems "to me that such a proposal is not at present within "the sphere of practical politics, seeing that we are "hardly able to carry on efficiently the number of "primary schools necessary to accommodate only one- "fourth of the children of primary school age. One "of two courses appears to me as of practical moment, "viz., either that a special allotment from provincial "funds for elementary education should be made to "supplement the local board allotments, or that a "special educational cess of some kind should be "imposed, local unions being organised for the "purpose. If the former course commends itself to "Government, the subject might advantageously be "considered in connexion with the renewal of the "provincial contract."

19,683. (*Chairman.*) Now I would ask you, do you happen to have anywhere the figures for India, similar to those which the Director gives for those European and Asiatic countries?—According to the last Administration Report, 76 per cent. of the boys of the primary school age, that is, three boys out of every four, are not at school: That is the only figure I have got on that point.

(*Sir James Peile.*) It is 22 per cent. of the male population of school-going age.

19,684. (*Chairman*) And there is no general or compulsory law of education?—Oh no. Of course in the renewal of the provincial contracts no such thing was done as the Director had suggested. Such is the condition of elementary education which the Government has repeatedly expressed its wish to advance. The Commission might well consider whether the education of the people has not the same, if not greater, claim on the revenues of the State as the extension of railway communication or war in foreign lands. The extension of education is as much a means of improving the condition of the people as the extension of railways.

19,685. (*Sir James Peile.*) Would you have compulsory education in India?—I would have it in some of the leading cities. I cannot say that I have considered the subject thoroughly, but, so far as I have been able to think about that subject and form any conclusion about it, I think that in large cities such as Bombay, Madras, and Calcutta, perhaps in a few other cities also, some such system might be experimentally tried, and it has sometimes been urged upon Government to do so.

19,686. (*Chairman.*) Would you increase taxation in order to find means for education?—If the increased taxation was intended solely for education, I would certainly advocate it. Increase of taxation would be to a certain extent borne with, if it was to be applied for the purposes of that kind, but the case becomes different when it is to be appropriated for other purposes which are not so popular.

19,687. If the choice lay between the making of railways which would have the effect of averting famine, and the appropriation of larger sums to education, which would you prefer?—I cannot say that I would prefer the one to the other; but I would certainly spend money upon both the objects in a more equitable proportion than is observed at present.

19,687*a*. You observed that the education of the people had the same, if not a greater, claim upon the revenues of the State as the extension of railway communication?—Yes, I do.

19,688. (*Sir William Wedderburn.*) But I understand that you do not mean railways for the averting of famine, because those are not now in question, I think?—Generally, I mean. I have not referred to any particular class of railways, I had the whole system of railway construction, as at present pursued, in my mind when I made that remark.

19,689. (*Chairman.*) Now, I think, you wish to pass on to the Police Department?—Yes. There is no branch of the administration which is more unpopular than the police. The rank and file of the force come into close and constant contact with the people, and,

Mr. G. Subramania Iyer.

21 May 1897.

these men being ignorant and drawn from a low class of people as a rule, they are often guilty of a gross abuse of power. Out of the 22,233 men constituting the force, only 84·8 per cent. could read and write in 1895. Knowing how to read and write is not a high educational qualification; yet so many as 3,379 men could not read and write, and 18,222 had not passed any university examination.

19,690. What force is that which consists of 23,000 men?—The police force.

19,691. In Madras?—In Madras; I am speaking of the Presidency of Madras.

19,692. (*Mr. Naoroji.*) That is the whole police force without the village constables?—The whole Presidency.

19,693. The Madras Presidency?—The Madras Presidency.

19,694. With a population of 30,000,000?—32,000,000. Of course this includes Native States; I do not believe that they have got any separate system of village police in Madras.

19,695. (*Chairman.*) But besides these police, are there not village constables that keep order in the villages themselves?—No, I do not think there is any such system of village police in the Madras Presidency.

19,696. That is, you mean that this is the whole force that maintains order?—Yes.

19,697. (*Sir William Wedderburn.*) There are village servants, watchmen, and others?—Yes, there are village servants who look after the irrigation of the fields, and so on.

19,698. Watchmen?—Yes, watchmen.

19,699. (*Chairman.*) It has been brought before us, when speaking of the police force in India generally, that, in addition to the regularly constituted force, there are the village police, whom I understood to be constables or guardians appointed by the village, and paid partly by a grant of a bit of land and partly by contributions from the inhabitants?—There is no such thing in my Presidency. I think that system obtains in Bengal.

19,700. (*Sir James Peile.*) No police *patels*?—No, there are only these village servants; they are not even called police. That can be easily verified by referring to the Police Administration Report.

19,701. (*Mr. Naoroji.*) They have not anything like the police powers which a policeman has?—Oh, no; we know of no such thing as village police in my Presidency. Knowing how to read and write is not a high educational qualification, yet so many as 3,379 men could not read and write, and 18,222 had not passed any university examination.

19,702. (*Chairman.*) Are you really urging that a university education is desirable for a police constable?—For the higher classes.

19,703. But you see you are applying it to the whole force?—My remark applies to what we call inspectors, men paid more than these constables.

19,704. But I mean you are laying stress upon the circumstance that 18,000 out of the whole body have not passed a university examination?—Yes.

19,705. And anybody reading that, I think, would come to the conclusion that you thought an university education was a desirable thing for a constable?—For what they call the rank and file of the whole force.

19,706. Surely you only mean for the inspectors?—They are included in this number.

19,707. But, I think, you would admit that the person who heard you would be under the impression that you were bringing forward as a proof of incompetency in the force the fact that 18,000 of them had not been through the university. How many constables are there, do you suppose, in the London Metropolitan Police Force that have been through the university?—I do not know; when I made that statement I referred to the whole police below the superintendents.

19,708. But would you not confine your remark, if you think so, to the number of inspectors—that so many of them had not been through the university?—I will come to that point, my lord.

10,709. (*Mr. Naoroji.*) You mean by a university education the lowest standard that the university has—a matriculation examination?—Yes.

19,710. (*Sir James Peile.*) You mean the entrance examination?—We call that a university examination; I do not mean necessarily graduates. It is very difficult to get men of any education worth the name for the salaries paid to the constables. New occupations for men of this stamp are coming into existence, and, in order to attract proper men, it is necessary to give the constables better pay, and to offer them better prospects of promotion. The cost of the police in the Madras Presidency was, in 1895-96, Rx. 422,660, which shows an increase of nearly Rx. 24,000 over that of 1893-94. But in Madras, as well as throughout the country, the increase is due more largely to increased force than to increased pay (Police Administration Report, 1895, page 7). I may quote here what Mr. Jacob said in his evidence before this Commission: "I do not think that "the pay of clerical establishments has generally risen. "I may add that even now the pay of constables is "extraordinarily low; in some parts of India it is almost "less than an ordinary day labourer can earn." . . . "There has been an increase in the wages of domestic "servants in India." Pension is no inducement to these men, because, I believe, they do not get pensions. The inducement is mainly the illegitimate perquisites they get by an abuse of their powers. Already the Department complains of difficulty in obtaining recruits. The following extract from the Inspector-General's report for 1895 throws light on this point: "There "were 1,890 enlistments during the year, compared "with 2,761 in 1894." In Bellary, the superintendent was specially enjoined to maintain the district up to as near full strength as possible. He reports again the great difficulty in enlistments, and remarks that the abundance of local labour with higher rates of wages is the chief cause of the difficulty. The district magistrate remarks that the administration of the force in that district is uphill work, with the strength 39 short, and with only 414 out of 720 able to read and write.

19,711. (*Chairman.*) Four hundred and fourteen out of 720?—414 out of 720 were able to read and write.

19,712. But when you come to the whole force in Madras, you say that out of 23,000, 3,379 men could not read or write; that means that the remainder of the men could read and write, which is a very large proportion?—It may be so, but I am speaking of only one district—the Bellary District.

19,713. That would not apply to the whole country?—No.

19,714. Because, on the whole, when you are speaking of a country in which you represent the education to be so poor, to get a class of police constables of whom something like 19,000 men are able to read and write out of 23,000, does not mean a very low standard of primary education?—How does your lordship make out 19,000.

18,715. You said there were 3,000 men out of 22,233 constituting the force who could not read and write; and that only 84·5 per cent. could read and write in 1894-95. For a country in which education is so poor as you represent, that does not show a bad result; you will find a great many countries in which the proportion is lower than that?—But every effort is made to obtain men who can read and write; after all that effort which is made to obtain such men, that percentage only can be reached of men solely knowing how to read and write, which is not any education worth the name.

19,716. At the same time you observe that the pay of the men is such as not to tempt these men to come forward; therefore, you could hardly say that means are taken to obtain educated men for the post, inasmuch as the pay is not sufficient for that purpose?—I think we must carefully distinguish between the mere constables and the higher classes, the people who draw higher salaries, and to whose ranks it is possible to attract men of tolerably good education.

19,717. (*Sir Ralph Knox.*) Are there no duties in the constabulary which a man can perform without being able to read and write?—I think it would be very difficult; because, I suppose, he has has to keep a diary and report cases—some such thing.

19,718. In every case of the constables?—I believe so; I am not conversant with the details of the work, but I believe it is a great advantage to the constable to know how to read and write.

19,719. (*Chairman.*) Your argument is, is it not, that the pay of the police is too small?—Yes.

19,720. In fact, it is one of the services that you think has been rather starved?—Yes.

19,721. It does not at all follow that, because there has been an increase, that increase has been sufficient; but I want to call your attention to these figures. The expenditure on police in Madras was, in 1884–85, Rx. 385,000, it remained almost stationary till 1889–90, when it was Rx. 386,000. In the following years it has risen every year till, in 1894–95, it is Rx. 440,000, and in 1895–96, Rx. 458,000, while the revised estimate for 1896–97 is Rx. 465,500. Now, that is a considerable increase?—I refer to that fact elsewhere. I admit there has been an increase, but I add that this increase of expenditure is due not to any increase of pay, it is only to increase of the force. The superintendent and deputy inspector-general consider that an increase of pay to the rank and file is the only solution of the difficulty. During the year, attention has been given to the grant of rewards where special detective ability has been shown, and arrangements are now made to keep recruits as near as possible to their homes; recruiting parties were sent to all neighbouring districts where recruits were likely to be found. The result of these efforts has not been encouraging. Out of the 57 men enlisted during the year in one district, 19 were under chest measurement, and 6 over age and under size, and 24 were illiterate. The result of this is, no doubt, to make police work specially difficult in the district. In Chingleput, the superintendent reports on the difficulty of getting full-sized, healthy men. Head constables are of four grades, on Rs. 25, 20, 15, and 12, respectively. They are station house officers, entrusted with responsible powers. They are promoted from the rank of constables, and in point of social position or education they do not differ much from them. It is dangerous that such men should be invested with the power of investigating and prosecuting cases, searching houses, and so on. These should be men of better social position and education, and should receive higher salaries. The inspectors are, no doubt, a better class of men, but are hardly up to the mark. Their salaries range from Rs. 75 to 200, but it is quite possible to obtain young men of decent education to fill their places. Out of a total of 408 inspectors, 134 have not passed any public examinations; out of the remaining 274 inspectors, 4 have passed the B.L., 28 B.A., 33 F.A., and 144 matriculation. There can be no doubt that the police administration is very inefficient, and this inefficiency is mostly due to the fact of more or less incompetent Europeans being pitchforked into these appointments.

19,722. Could you tell us the number of Europeans in the police force in Madras?—Yes, I have appended a statement—Police, total number of appointments on Rx. 250 per month 66. Europeans, 64, with salaries amounting to 465,000 rupees, and Indians 2, with salaries amounting to 72,000 rupees.

19,723. And would the 64 include all Europeans employed?—Yes; perhaps, with the exception of European constables in the city of Madras—I refer to those receiving salaries above 250 rupees per mensem.

19,724. (*Mr. Mowbray.*) This simply refers to the Madras Presidency?—Yes.

19,725. (*Chairman.*) If you get a force of 23,000 men and 64 are Europeans, it seems pretty clear that the Europeans can only be the highest authorities?—The superintendents, as they are called.

19,726. Therefore, the administration throughout the country must really lie in the hands of native inspectors and native superintendents?—There are no such officers as native superintendents, but there are inspectors, of course.

19,727. Very well, the real administration of the police throughout the country, and the responsibility of putting the law into force, must lie under the direction of native inspectors?—Yes, if you would exclude the superintending work; the executive details are in the hands of the natives.

19,728. And yet you say that the result is very bad?—Yes.

19,729. Is that an argument in favour of the superiority of the native over the European?—That result is due to two factors: because inefficient Europeans are superintendents, and because, in the subordinate grades, proper men are not employed; I do not think I say that the inefficiency is the result only of inefficient Europeans being employed.

19,730. You say "mostly due to the fact of more or "less incompetent Europeans being pitchforked into "these appointments"?—Yes, "mostly due," of course.

19,731. Will you go on, and I will point out what I mean?—The internal administration is bad; the percentage of detection is very low; and the recovery of property is not better. In the last Administration Report, the Inspector-General remarks: "I remarked "in last year's report that I considered men had been "treated with undue leniency in this district (Krishna) "by Mr. Prendergast, and the visits of inspection paid "to the districts by myself and the Deputy Inspector-"General confirmed the view then taken. Both "Mr. Young and I found that discipline was unsatis-"factory, and that far too little work was exacted "from the men . . . In Bellary the number of "punishments increased, and here also there are "grounds for thinking that Colonel Hodgson, the "previous superintendent, had allowed matters to slide "too much." Of Malabar, the superintendent writes: "Much care has been exercised, the assistant superin-"tendent aiding me well in controlling the morale of "the force. 'It will yet take some time to produce "what is needed badly.' The falling off in the number "of men punished in North Arcot is not satisfactory "... I remarked then, in my inspection notes, "'that detection was falling off, and that the former "'strictness in the matter of drill and dress was not "'maintained. I feel certain that Mr. Thomas might "'have punished very properly in many more instances "'than was the case.' The police in the Ceded districts "are, as a body, inferior to the police in any other part "of the Presidency. The percentage (of conviction) "was on a lower level all through, and the low per-"centage of persons convicted to persons arrested "shows either a great want of intelligence on the part "of the police in judging of the value of evidence, or "a want of acumen on the part of the magistracy, or a "low standard of intelligence on the part of witnesses." The percentage of conviction in cases prosecuted was 37·7; this is the average; in some districts it was below 25 per cent. It is not uncommon for the police to shelve on other shoulders their own responsibility for the detection and punishment of crime. The District Magistrate and the Police Superintendent of Kristna say that, the district being rich, it invites criminal gangs. Other causes which obstruct the successful work of the police are, in the opinion of these officers, an indifferent public who do not reprobate crime, magistrates who take perverse views in the administration of the law, and incompetent jury. The Malabar Superintendent of Police falls foul of the jury, and says: "The system of trial by jury has been "the means of restoring many a housebreaker to his "family . . . The failure to obtain conviction by "juries will be seen in the increased crimes." An official circular has recently been issued in some districts that no complaint against a police constable should be entertained by a magistrate without a previous reference to the Superintendent of Police—a circular which I understand is illegal, and which, a few days ago, the Chief Justice of the Madras High Court condemned in severe terms in open court. Torture is frequently practised by the police. In concluding a protracted trial of a case of torture against the police the Sessions Judge of Calicut said in his judgment: "In my opinion torture is much more "prevalent among the police than it is generally "supposed to be." Such is the state of the police in this Presidency. It is inefficient and corrupt, and is officered by men who are often found fault with by the head of the Department and by Government for incompetency. The opinion is general that from the district superintendent to the constable, in every grade, there is much room for the introduction of educated men. The salaries of the force must be increased, and more Indians should be employed in the superintending grades.

19,732. Now I will take the evidence as you have put it forward. Of course, the indictment which you quote against the system of jury is a separate question; it does not concern the police, but you bring forward evidence which shows, as you have stated it, that the police is inefficient and corrupt, and officered by men who are often found fault with. Now that must extend, and with very great force, to the inspectors throughout?—Certainly.

19,733. And here you have a proo of a certain amount of incompetency in a force, officered by natives, a small number at the top excepted?—Yes.

Mr. G. Subramania Iyer.

21 May 1897.

19,734. You met that by saying that these men are not paid high enough?—Yes, that very inferior men are appointed.

19,735. And you consider that, if the inspectors were paid higher, that would be a remedy?—That would attract a better type of men, and efficiency of that character would improve.

19,736. Observe that that is a different argument from that which you put forward at the beginning of your statement, namely, that "there can be no doubt that "the police administration is very inefficient, and this "inefficiency is mostly due to the fact"—mostly?—Yes.

19,737. "Mostly due to the fact of more or less "incompetent Europeans being pitchforked into these "appointments"?—Yes.

19,738. It may be the case that better Europeans might be appointed?—Yes.

19,739. But that would not account for the inefficiency and corruptness of the native officers?—But that could be a good deal changed if the superintendents were a better class of men. If they had closer control over these men, greater touch with them, if they were men of greater efficiency and knowledge, they would exercise more close control, andthe subordinates would be made to work better.

19,740. I want to elicit your answer to this fact. Here you have a force throughout the country of great importance, of which the whole administration, you may say, is in the hands of natives, apart from superintendents?—Apart from superintendents.

19,741. I admit that argument that, if the superintendents were thoroughly effective, the *morale* of the force might be better—I am not wishing to put that aside; but the practical administration of the service is in the hands of the natives, and you are describing a service which is entirely in the hands of the natives, as inefficient and corrupt?—The real administration is in the hands of the natives in this sense, that they execute the subordinate duties strictly under the control of superintendents, who have got in many instances assistant superintendents.

19,742. But the inefficiency of the superintendents does not make the force corrupt; you point out that the police are not only inefficient, but they are corrupt. The superintendents do not make them corrupt. I have to point out to you that this is the result with a service that is carried on and administered by native officers, that it is described by you as inefficient and corrupt. You have been putting—I do not say in any unfair degree—the competency of the native element against the European. When we come to a service in which the native dominates, and in which the administration really lies in the hands of the native, you are obliged to say it is corrupt and inefficient?—I daresay a good deal of corruption in the subordinate ranks can be prevented by a more efficient control, my Lord; and I say that the result is due to two causes; certainly mostly to the superintendents being inefficient, but to a considerable extent to the subordinate men being of an inferior type.

19,743. Therefore, the real remedy to which you are pointing is not so much the efficiency of the European as that you should get a better type of men by paying them better?—I am not sure that that is so. I certainly attach great importance to the superintendents being a better type of men; and, if I had the option, I should certainly spend more money in improving the superintendents.

19,744. Would you improve the administration if you promoted some of these corrupt inspectors to be superintendents?—Oh no.

19,745. (*Sir William Wedderburn.*) But does not the promotion of these corrupt and inefficient men arise from the ignorance of the superintendent who makes the promotion, and does not know a good man from a bad man? Is not that the reason why there are not satisfactory men among the subordinate officials of the police?—I will refer to that point later on. Certainly it is the case that inspectors are promoted from the ranks of constables, and oftentimes these inspectors are very unworthy men; and, if the superintendents were men of more information and more familiarity with the people than they are, as a rule, they would prevent the promotion of many of these unfit men.

19,746. (*Chairman.*) But in the management of 22,000 men, however efficient and excellent these 64 Europeans superintendents at the head may be, they must depend to a very great extent upon the reports made to them by the native officers who are under them?—Exactly.

19,747. If these native officers, who are in actual touch with the men, select and recommend bad men, the responsibility to my mind rests with the inefficient native officers?—Certainly, that is the argument in favour of improving the subordinates also.

19,748. It appears to me, in this case, that the real weight of the argument lies in the point that you do not get a sufficiently good type of man into the force?—That is also an argument, no doubt; but I would lay more stress on the desirability of the superintendents being better men. If only in one direction improvement is possible, I should certainly go for improvement in the ranks of superintendents.

19,749. (*Sir Ralph Knox.*) Are any of the superintendents natives?—In the Madras Presidency, none.

19,750. You do not know as regards the other Presidencies?—I think in Bengal, perhaps, there are one or two, but in my Presidency there are none.

19,751. (*Chairman.*) Who are the two native gentlemen who receive over 200 rupees per month?—There is the Deputy Commissioner of Police in Madras, in the city of Madras, he is one; I think both of them are in Madras, but I am not sure, my Lord. I am sure there are no native superintendents.

19,752. (*Sir William Wedderburn.*) The promotions are all made by the superintendent, are they not?—They are; yes.

19,753. And there are good men and bad men in the ranks, and owing to ignorance the European superintendent is very apt to promote the bad men who flatter him rather than the good men whose merits he does not know?—He is apt, no doubt, but I must qualify that statement by saying that the majority of men in the inspectors' ranks and the subordinate ranks are very incompetent men.

19,754. (*Mr. Naoroji.*) And therefore his choice of anything like good men is very limited?—Yes, exactly.

19,755. (*Sir Ralph Knox.*) From whom are the superintendents selected, who are they?—They used to be appointed formerly by the Provincial Government. Now they hold some examination in London, and the appointment is made by the Secretary of State.

19,756. (*Sir James Peile.*) Some of them are officers in the Army?—They used to be; not many of them; there are a few.

19,757. (*Sir Ralph Knox.*) Do you object to that system of selection; do you think that it fails to secure good men?—The system hitherto pursued has decidedly failed. Now they have a competitive examination for certain superintendent grades. I think, perhaps, that might bring better men.

19,758. (*Mr. Naoroji.*) But does that examination include the natives?—No; I will mention that presently.

19,759. You cannot draw from the better class of natives in any way for that?—Oh, no.

19,760. Otherwise; but it would be economical and also efficient?—Yes; I will refer to that later on.

19,761. (*Sir Ralph Knox.*) But you really think that the reformation which is required is to appoint natives to be superintendents, and to give more pay to the force generally?—To appoint competent natives to be superintendents, and a better class of men to the subordinate ranks; certainly that is so.

19,762. You mean that you would wish to appoint native superintendents, and to give more pay to the force?—Yes.

19,763. In order to obtain better men for the force generally?—Yes.

19,764. (*Chairman.*) Would you proceed?—The competitive examination which is held in London for the selection of men to fill assistant superintendents' places should be held in India also. If natives were largely employed, there would be, of course, a saving in the salaries and in compensation allowances. Less money would, of course, leave the country, and the Police Department would show increased efficiency. I have read the debate in the Viceregal Legislative Council, and have observed that inefficiency of the police is a complaint not confined to the Presidency of Madras.

19,765. (*Sir James Peile.*) You have been giving us your view about the police in Madras?—Yes.

19,766. I see in the financial statement for 1897-98, Sir James Westland gives figures of the charge for all India of the police. The charge in 1893-94 was Rx. 3,919,785, and in the Budget estimate for 1897-98 the charge is Rx. 4,184,300?—Yes.

19,767. Showing, as appears throughout, that there is a steady increase in the total charge for police in India; and he says: "And it is also necessary to "continue the progress already begun in costly "schemes of improvement in police administration"?—Yes.

19,768. That shows that the Government of India has in view an improvement of the police by increasing the cost?—Probably it has.

19,769. And the turn of Madras will come presently, I suppose?—It may come, certainly I hope so; but I anticipated that point by observing in a previous portion of my evidence that the increase—I quoted Mr. Jacob's opinion—is due rather to additions in the force than to increase of salaries. The increase of expenditure to which you refer is due rather to increase in the force than to increase of salaries.

19,770. (*Chairman.*) Has the force of Madras been largely increased lately?—Not much.

19,771. Well, but then I gave you the figures of the expenditure, which show a very large increase. If the force has not increased, I do not quite see how your argument applies. I gave you the figures which rose from 1889-90 when there were Rx. 386,000, to 1896-7, when the revised estimate gave Rx. 465,000. If during that time the police force has not been largely increased, I do not quite follow your argument that there has not been an increase of pay?—I could give the exact figures if I had the Police Administration Report of Madras, page 7. There details are given as to the increase.

19,772. Over what period?—For three years, 1893-4, 1894-5, 1895-6. I could have quoted the increase, but I thought it was unnecessary to refer to the details. There details are given as to the items of increase, and my impression is that the increase was due certainly to additions to the force.

19,773. (*Sir James Peile.*) Well, I have got a figure here which I can give you. It is a comparison of the police force in 1876-7, and the present time. In 1876-7 in Madras the total force was 20,032, in 1895-6 the total force was 20,926; the increase is not very large?—No.

19,774. (*Chairman.*) And yet the increase in the sum provided has been considerable?—The charge has been increased.

19,775. (*Sir Ralph Knox.*) Do the men in the police get increase of pay by length of service?—I think they have got grades of service. After certain lengths of service, and I think having regard to efficiency also, they get some increase of pay.

19,776. Therefore, the older the force, the greater would be the relative cost of the force under such a system as that?—I should think so.

19,777. On the average, they will be in receipt of a higher rate of pay than a force which was more or less newly constituted. If the men had longer service in that force, they would be in receipt of a higher rate of pay. If there is a gradually increasing rate of pay for the force, and the force is differently constituted by reason of the fact of men having longer service, that would tend to increase the cost of the force?—The cost would tend to increase if long service necessarily gave them a claim for promotion.

19,778. Or increase of pay?—I do not believe it is the fact that mere length of service gives the lower class of men a claim for higher pay. It would more or less depend upon the discretion of the superintendents and the heads of departments, I believe.

19,779. (*Mr. Naoroji.*) Have you any idea of the details of the increase of expenditure on the European portion of the police, and the native portion of the police?—I have. The increase is altogether on the European portion. I am sorry I have not brought the Administration Report with me, but on page 7 the details are given as to the increased charges.

19,780. (*Chairman.*) Has the number of European superintendents been increasing lately?—I think one or two superintendents have been newly appointed, but I cannot say anything with certainty.

19,781. If they have not been increasing in numbers, I presume that the only head of expenditure in which the increase of charge could take place would be the compensation allowance?—I daresay the compensation allowance goes to make a portion of the increase.

19,782. I mean the increase so far as it occurred upon Europeans. If the number of Europeans employed has not been increasing to any extent, the only increase that could affect the Europeans would be the compensation allowance, would it not?—But I have a firm impression, if my memory does not mislead me, that the increase is due to additional clothing allowance and to rewards for special services—a certain proportion is accounted for in that way.

19,783. But is clothing given to the superintendents?—I mean to the constables.

19,784. But I am talking about the Europeans employed; do they actually give clothing to the Europeans?—No, I do not think so.

19,785. But I want to recall your attention to this; the evidence before us generally shows that the salaries of the Europeans have not been very much increased of late?—No, I do not believe they have.

19,786. But what has been increased, and what you have very legitimately called attention to, is the charge for compensation allowance. If, as far as the Europeans are concerned, the numbers have not been very much increased, perhaps the only increase that has taken place in respect of Europeans would be in consequence of the compensation allowance?—The compensation allowance, to some extent.

19,787. What else could it be, if you have not increased the numbers, and if you have not increased the pay? Where is there room otherwise for the increase?—A portion of the increase might come in this way, my Lord; without any increase of force, rank and file, some increase is paid to give them clothing. Mr. Naoroji has indicated an opinion that this increase of charge is attributable to the Europeans who are employed. Mr. Naoroji comes forward on his own account, I did not mean to say that it was a fact. I only asked——

19,788. What I wanted to see was this; if they had been increasing the number of Europeans employed, Mr. Naoroji's argument would be a very fair one to call attention to. You rather doubt whether they have been. You do not believe either one way or the other; and then I say if the number of Europeans had not been increased, the only increase that could be expected to be found as against the Europeans would be the compensation allowance?—I believe so. So far as my recollection goes, the salaries of Europeans do not come in for any large share of increase.

19,789. Now, I think, we come to the Public Works Department?—A reference to the Appendix O 14, of the report of the Public Service Commission, will give an idea of the effort that has been made for the last 95 years to bring about a larger employment of Indians in the Public Works Department. Still, at the time that the Public Service Commission reported (1886-87) the number of Europeans and natives drawing salaries over Rs. 100 a month, employed in the superior engineer establishment, was as follows. Out of a total of 1,015,

Europeans not domiciled in India (or about 80 per cent. of the whole) - - -	810
Europeans domiciled in India and Eurasians	119
Natives of India - - - -	86
Total - - -	1,015

The Public Service Commission recommended that there should be an Imperial branch and a Provincial branch; that the strength of the Imperial branch should not be greater than is necessary for purposes of control and direction, and for the execution and repair of works calling for high engineering skill; and that the recruitment from the Cooper's Hill Royal Indian Engineering College, which appeared to the Commission excessive, should be regulated accordingly; that the provincial branches should be of a strength adequate for the construction and maintenance in the several provinces of works not ordinarily calling for high engineering skill; that the recruitment for the provincial branches should be made by the direct appointment to the lowest grades of qualified engineers from the Indian engineering colleges, and, in exceptional cases, by promotion from the upper subordinate grades; and that the number of professional engineers and

Mr. G. Subramania Iyer.
21 May 1897.

military officers employed in the Superior Accounts Branch is excessive, and should be reduced. Full effect has not yet been given to these recommendations. In the statement I have prepared showing the excessive employment of European agency in the various branches of the service, the number of Europeans and Indians employed in the Department of Public Works is shown. Of a total of 141, Europeans are 118, drawing an aggregate salary of Rx. 106,890, whereas the Indians are only 23, drawing Rx. 10,700, and the highest appointment held by an Indian is that of an executive engineer, on Rs. 700. The history of the employment of natives in this Department, as in the case of the Civil Service generally, is one of alternate promise and disappointment. So long ago as in 1871, a committee appointed by the Madras Government reported that *three* appointments as probationary assistant engineers should be annually given to those students who might attain the most distinguished positions in the list of Bachelors of Civil Engineering. But this recommendation was not fully adopted by the Government, who decided that only one appointment should be made annually instead of three. Subsequently, however, when the appointment was claimed by a distinguished Bachelor of Engineering, the Government denied that this was an absolute guarantee. Again, the Government of India, in a resolution in 1882, guaranteed one appointment as assistant engineer every year; I think it is under this guarantee that the Indian strength in the engineer establishment is even so much as it is now. Indian engineers do not receive proper encouragement. They are frequently superseded by European subordinates (*vide* Report of the Public Service Commission, Abstract of Evidence). Not only in the general service, but in the local service also, are the claims of Indian graduates superseded. The kind of public works which district boards in Madras have to execute, do not require a high engineering skill. Still, the engineers of these district boards are Europeans, receiving compensation allowance.

19,790. I gather that your view is, that the employment of European agency is excessive, and that, in spite of the reports of competent persons, effect is not being given to the recommendations which would increase the number of natives employed on those works, and reduce the number of Europeans?—Yes.

19,791. I should like to ask you whether this is not the case—that a provincial Engineer branch has been established, and that it has been already ordered that a certain number of appointments every year shall be made otherwise than by appointment in England: As far as civil, as distinguished from Royal Engineer, officers are concerned, the department will eventually be composed in equal proportions of men sent out from England and of men recruited in India. I have here what will be the result of that. In Madras, for instance, the total strength will be 84, of whom 16 will be Royal Engineers, European civil engineers 34, and Indian civil engineers 34. And for the grand total of India the number is 730 engineers, of whom 130 will be Royal Engineers, 300 European civil engineers, and 300 Indian civil engineers?—Yes.

19,792. And, as I understand it, that has been ordered, and that is being gradually carried out?—Yes.

19,793. Do you know that that is the case?—Yes. I have just ascertained it—of course in Madras effect is being given to the provincial branch, but the figures I quote are up to date. The provincial service is being constituted, and the result at the present moment—the figures I have taken from the latest Civil List—the figures I have quoted are what I have stated. Out of 141 only 23 are natives, even though effect is being given to this provincial branch; which is not a satisfactory proportion.

19,794. Of course the standard aimed at will only be attained after some years. Is there any indication of the period of time when full effect will be given to the system?—I do not believe that anything is said as to the number of years by which these maximum figures which your Lordship has just quoted will be reached.

19,795. Well, apparently, it is being carried out, although, as I mentioned, it will take some time. Twelve appointments are being made now annually in order to bring up the number of native engineers to 300. That must take some time before it can amount to 300. I am not in the least questioning the figures you give for the present moment; I am calling your attention to the fact, in order to see whether you agree with me that measures are being taken to meet this complaint to some extent, at any rate for the future?—But the point is that it will take an indefinite length of time.

(*Mr. Naoroji.*) May I ask the date of this scheme, please?

19,796. (*Chairman.*) July—letter of the Government of India, presented to Parliament April 1890. That is the letter from which I have been quoting in 1890. There is another one, rather later, 1892—1890–1892?—The point to be borne in mind is this, my Lord: at the present moment, when it is supposed that effect is being given to the recommendations of the Public Service Commission by the establishment of the Provincial Branch, we have got only 23 out of 141, 23 Indians out of a total of 141, and when the maximum will be reached is not said. It may be any length of time; and even then, when the full maximum is arrived at, there will be only half native and the other half European engineers, and still there is another proportion left for Royal Engineers. I think that would be a state of things which even then would be open to criticism.

19,797. I think you have the total of Europeans and Indians employed in various departments in the Madras Presidency?—Yes.

19,798. Will you put that in?—Yes. (*Paper handed in.*)

19,799. Are there any remarks that you would like to make upon it?—I would draw your Lordship's attention to the fact of the preponderance of Europeans and the very small proportion of natives in the various services, and the consequent unnecessary expenditure of money both in the way of higher salaries being paid and compensation allowance having to be paid; and I may also add that I am of opinion that the increased employment of Indians would improve the efficiency of the services also.

19,800. Would you wish to express any opinion upon the apportionment of expenditure?—Yes. I have not much to say under this heading. Regarding those items of payment which have been under constant dispute between the two countries, all that can be said has been said by witnesses representing the Government of India. I do not think that the Indian taxpayers' point of view can be put more strongly than was done by Lieutenant-General Sir Henry Brackenbury, the late Military Member of the Government of India. Perhaps I may quote the words with which he concluded his evidence. He said: "I should like to "express my opinion that, if this Royal Commission "could see its way to recommending the abolition of "all these accounts for military and naval services, "for the Secretary of State's salary and the expenses "of the India Office, for diplomatic and consular "charges in Persia, China, and elsewhere, and to "substitute for them a fixed contribution from India, "as her return for the advantages she derives from "Her Majesty's Government and Her Majesty's Navy, "treating India more generously than she is at present "treated in these accounts, the acceptance of such a "recommendation would remove many constant causes "of irritation, and would do much to convince all "classes in India of the desire of this country, which "rules India, to treat India justly and generously." General Brackenbury very truly pointed out that Great Britain rules India not for the exclusive benefit of India, but for her own benefit also. He said: "Look "at the hundreds and thousands of people that we "know, whose sons have gone out to India and got "employment there, and the great commerce which "we have with India; and with regard to that, what "I would point out is that, if India, for instance, were "to fall into the hands of Russia, we know perfectly "well that our commerce there would become practically extinct, because, if she did not practically "prohibit the importation of British goods, Russia "would put on such differential duties on them that "she would make it practically impossible for them "to be imported, as she does in Central Asia and "elsewhere." Well, then, if the possession of India is so important for the commerce of the United Kingdom, for the livelihood of hundreds and thousands of her people, for her prestige and influence in the world, and, I may add, for her very existence as a great power, is she not bound to pay a portion at least of the cost of that possession? The possession is secured not only by the army only but by the costly European agency employed to control and direct the civil administration. The cost of this whole European agency—the military as well

as the civil European agency—is now entirely borne by the Indian taxpayers: This alien agency is kept in India avowedly with the view of maintaining British supremacy. In reply to the representations of the Indian people that their claim for employment in the higher branches of the services is persistently ignored, British statesmen have repeatedly said that a certain minimum would be indispensable in order to maintain British rule in India. The money drain is not the sole evil of India's foreign domination, but the moral deterioration of the people is its worst evil. Under the existing system of Government, the Indian people must be hewers of wood and drawers of water. British rule provides no opening for the ambition of individuals or for the aspiration of the nation. No Indian can hope to become a great statesman, a diplomatist, a general, an administrator, not to speak of the nation being allowed its right to govern itself. This pecuniary drain and this moral deterioration give my country a claim on the sympathy and generosity of the British people. I do not in the least mean to under-estimate the benefits that India has derived and is deriving from British rule—far from it. But my position is, that if India has benefited from that rule, to Britain the Indian possession has been much more beneficial, and the ruling country, while paying in some measure for these benefits, should afford adequate compensation for the evils it necessarily inflicts on the dependent country. I would therefore say that England should pay for all that portion of the military charges which are incurred, not for the purpose of maintaining peace and order within the boundaries of India, but for the purpose of upholding her supremacy in Asia and indirectly in the world. She should also pay a moiety of the charges incurred for the salaries of European employés in the military and civil services. All charges incurred, since the time of, and including, the second Afghan War, on the North-West Frontier should be equally divided between the two countries. The entire cost of the conquest and subsequent administration of Upper Burmah should be refunded to India. Whenever any Indian troops are sent outside of Indian frontiers at the instance of the British Government, the whole cost should be borne by the British Exchequer. The frontiers of India should be defined by statute, and they should not be extended at the expense of her taxpayers. Whenever any difference may arise between the Government of India and Her Majesty's Government regarding the apportionment of charges, the decision should be vested in the Judicial Committee of the Privy Council, which is a tribunal already in existence and which would obviate the necessity of finding arbitrators in whom both the parties would have confidence. The Judicial Committee of the Privy Council is well known in India and commands universal confidence as an impartial and unbiassed tribunal.

19,801. I think we quite understand the view that you, Mr. Iyer, and other gentlemen coming from India have taken as to the desirability, from your point of view, of increasing the number of native Indian gentlemen in the higher positions in India; but you quote Sir Henry Brackenury when he speaks of: "look at the "hundreds and thousands of people." Well, you see that implies a very large number. Literally, it is true, because there are, as we all know, a great number of people passing the thousand, and, therefore, passing the hundred, and, therefore, it is strictly true. You can say hundreds and thousands, only that is rather a misleading description of the matter. I want to ask you in reference to that, do you know what the strength of the Civil Service in India is—the Covenanted Civil Service?—I think that is 1,000 and odd; about 1,000, I think.

19,802. Well, I believe it is about 1,000. And do you know what the Uncovenanted Service is?—A very much larger number, I suppose.

19,803. It is smaller, the Uncovenanted, is it not?—It is much larger, the Uncovenanted.

19,804. You are including all?—Yes.

19,805. But what is called the Uncovenanted Civil Service establishment is a small number, is it not?—That term has ceased to be used now.

19,806. I have read that the Covenanted Service is 1,000, and the Uncovenanted Service, properly so called, is 300?—English gentlemen employed in the Uncovenanted?

19,807. Yes?—Very likely.

19,808. I admit at once that a great number of Europeans are employed in more or less subordinate capacities in various services, such as telegraphs, post office, and railways, and so forth, but they are not the governing body. But just confine yourself to the actual governing body of India; do you think such a number as 1,300 men to be sent from here is excessive, as long as we rule India?—I understand your Lordship to refer only to the civil and judicial services.

19,809. For the moment. I do not want to ignore in the least the fact of there being a great number of Europeans employed, but I am taking only the governing body?—I want to understand your Lordship. Does your Lordship only refer to what is called the Civil Service?

19,810. I include all regular Government officers. I throw in the Uncovenanted Service?—Yes.

19,811. I wish to ask you whether you think that that is a very large number for the country charged with the responsibility of governing India to send out?—"Very large" is rather a relative term; but I should certainly think that there is scope for reduction in the number.

19,812. To me, as an independent person, it does not sound a particularly large number to be entrusted with government; it can hardly be fairly said that, if we, as the country charged with the responsibility for the Government of India, send out for this purpose as many and not more than 1,300 we can be considered to be very grasping of the employment, can we?—I cannot realise the point. Your Lordship says it does not sound a very large number in your ears, but I think certainly, from the point of view of the wants and capacities of the country, that the number, though not absolutely large, is a fact which is very material and which deserves serious consideration.

19,813. That is a point upon which, I take it, you are here to express such a view to us?—Yes.

19,814. (*Mr. Naoroji.*) It is not only the number, but the amount paid to them, which is very large, which economically is very injurious to the country, is it not so?—I was just going to refer to that, but his Lordship only referred to the number. I did not refer to the economical effect, but to the number. Though not actually large, still relatively to the condition of the country it is susceptible of reduction.

19,815. (*Mr. Buchanan.*) Do you think there is an excessive number of British officers in India?—I beg your pardon, "excessive number" is a relative term; when you consider it in relation to the requirements of the Empire and the requirements of the country, I certainly think it excessive.

19,816. In the civil employ?—In the civil employ.

19,817. Considering that British India contains a population of 250 millions, and there is a civil staff of 1,500 of European-born British subjects, you think that that is an excessive number?—I do not believe that the comparison is exactly fair. When we refer to the Civil Service, we only refer to the controlling and directing body. If you take the whole of the administration of the country, including the subordinate officers, relatively the proportion may not be large, but, when we take all the Civil Service, about which we complain that it is excessively manned, we refer to the directing body, the controlling body, and certainly there is much scope for a reduction of the British agency, and for a further employment of the native agency.

19,818. I quite understand your pressing for a larger number of natives being employed?—In the directing body.

19,819. But do you contend that the existing number of European-born British subjects in the civil employ is excessive?—I beg of you to consider it from this point of view, from the point of view of the salaries they carry, and from the point of view of the scope they shut out for the employment of native talent, and the effect that that large number has on the training and the aspirations and the gradual bringing-up of the educated people of the country. When we consider that number from those aspects, it is certainly excessive. It shuts out all scope for the employment of native talent in the higher and more responsible posts, and it involves a large payment of salaries, I think, amounting to a very large sum, and

Mr. G. Subramania Iyer.

21 May 1897.

then it also has the effect of making the people morally deteriorate. They have to be content with employment in subordinate ranks. Looked at from these points of view, I think I may safely say that the number is certainly excessive.

19,820. (*Chairman.*) On the other hand, you must take into consideration this, that at the present moment England is responsible for the government of the country?—It is, certainly.

19,821. While England is responsible, you must expect that she will keep a directing voice; she could not hand over the government to the native element. She must keep the directing power as long as she is responsible; and, while she is responsible, would you say that that number, 1,000 or 1,500 as the governing and directing body, is too large a number for the purpose?—My Lord, that depends upon the policy which British statesmen adopt. They are responsible for the security of the Empire; but even within the limits of the security of the British Empire in India I am not sure that I can say that there is no scope for the employment of further native talent; even granting that the ultimate controlling power is to rest with the nation that is responsible for the government of the country, even granting that, I am not prepared to say that there is not scope for further native employment. All I ask is, not that the British agency should be altogether superseded, but that there should be a further introduction of indigenous service.

19,822. If you speak of what is a possible request on your part, you must acknowledge that for any practical purpose you have to consider that England is responsible for the Government of India?—I do, most certainly.

19,823. And, that being the case, do you think that she could discharge the responsibility which she has undertaken by employing a smaller number of people? And do you think it very unreasonable, if she continues to discharge that responsibility, that she should keep such a force of men as will make England the directing power in India—that is what it comes to?—Well, I have not the slightest doubt that her responsibility will not be in the least compromised by employing more natives in the posts which are now exclusively occupied by Englishmen.

19,824. (*Sir W. Wedderburn.*) Will not the hold of this country over India be very much strengthened, if the whole of the service, the native service, were rendered more devoted to British rule by a reasonable prospect of rising to good positions and identifying themselves with the British Government?—Certainly. I said that the security of the Empire would not be in the least weakened.

19,825. On the other hand it would be strengthened?—The moral hold of England on India would be strengthened, and it would give England far more power.

19,826. The argument strongly urged in regard to the employment of Europeans is fairly expressed by Lord Kimberley in one of his speeches, in which he says that the question of British supremacy in India depends on the European service. If, therefore, the European service were at its irreducible minimum, is it not just that the British people, if they find this European service absolutely necessary in order to maintain their supremacy, should pay for it to a reasonable extent?—That is what I urge in my paper.

19,827. (*Mr. Buchanan.*) Do you think that all offices in India, from the Viceroy's downwards, should be open to natives?—Yes, I do say that they should be open to natives. It does not follow that natives would always occupy such places.

19,828. But that they should be eligible for all offices?—Yes

(*Chairman.*) Including those of the Viceroy and the Commander-in-Chief?—Yes.

19,829. (*Sir W. Wedderburn.*) The Mogul Emperors employed Indian officers in the very highest offices of State, did they not?—Yes, they did. A Hindoo Commander-in-Chief was Viceroy of Cabul in the Mogul time.

19,830. And with great success?—And with great success.

19,831. The consequence was that they were regarded as the National Government, although they were originally foreigners?—Now that you put that question to me, I can say that the moment that policy was departed from in the Mogul Emperor's time—the policy of placing complete trust in the Hindoo fellow-subjects, and placing them in the highest positions of responsibility—the Mogul Empire was doomed to fall.

19,832. (*Mr. Naoroji.*) And then, even as foreigners, when they became the rulers of the country, they became really the native rulers, and there was no such thing as the English drain which exists now, as they were no longer foreigners?—Yes.

19,833–4. (*Chairman.*) And you look upon the restoration of the Mogul Empire as a thing to benefit India, as a form of government you would like to see reconstituted now?—Oh, no, far from it. That has always to be taken for granted—that, in all our complaints against British rule and our talk of grievances, we do not, even if our position were made less tenable than it is now, for a moment entertain the idea of British rule being supplanted by any other rule, or of going back to the days of Mogul Government—far from it. I am glad your Lordship elicited that acknowledgment from me; otherwise my evidence was rather apt to be misunderstood. I think I can speak for the other witnesses that come from India, and most distinctly assert that in all these complaints we do not in the least wish to convey an impression that we would have the British hold in India shaken in the least.

19,835. (*Sir William Wedderburn.*) Your wish is to remove grievances, so that the British Government may be stronger than it is at present?—Exactly.

19,836. Because it will be with the assent and approval of the people?—Yes.

19,837. You wish to remove a source of danger and weakness?—Yes, exactly.

19,838. (*Chairman.*) I quite understand, You hold a quite legitimate contention. It is, that the Indians might be much more largely employed; and in holding that opinion, so far as I understand, you are not holding an opinion different in principle from that which the English Government professes. It is a difference of degree. I think it has been laid down by the English Government very strongly that they desire to employ Natives, as far as possible, in the Government of India; therefore, it is a difference of degree?—Exactly. This is exactly our complaint, that the practice is so far different from the theory, that the principles laid down as the guiding principles of British rule in India are so far different from what is being actually done.

19,839. (*Mr. Naoroji.*) And India cannot afford to pay under the present system for such a Government as the British Government is at the present time?—As it is at present administered, of course.

19,840. (*Mr. Buchanan.*) Do you look forward to a time when the whole Service of India should be put into the hands of the natives, the country remaining part of the British Empire?—As you have put that question to me, I say I do look forward to a time when India will be almost in the position of Canada; that, while there will be a very substantial measure and symptom of British supremacy in my country, the administration will be chiefly and almost entirely in the hands of the people of the country. We do look forward to that time, and our whole hope is based upon the fact that the great British nation means to be just and generous, and that it will treat India fairly and generously.

19,841. (*Mr. Naoroji.*) Do you know that Lord Salisbury has expressed a similar opinion that supremacy, a guiding supremacy, would be the best thing, and turn the whole of India into so many divisions called native districts or Native States, so that the whole may be practically governed by the Indians, and yet the British supremacy may be strengthened and may be made far more beneficial even to England itself than it is at present?—I remember his having said something like that in connexion with the restoration of Mysore.

19,842. He said that in connexion with Mysore; but that is only an illustration; and restoring Mysore meant, first, the security of the people, and, secondly, the security of the British supremacy?—Yes, I think so.

19,843. (*Chairman.*) We will now turn to your views upon surpluses and deficits?—It is true that there are no true surpluses in Indian finance due to increased revenues resulting from the taxpayer's prosperity. The surpluses are, in most cases, arrived at by fresh taxation, by loans, or by reduction of the normal standard of expenditure. I have prepared the following statement to prove this.

		Rx.		
1884–85	Deficit	0·39 millions	Total deficit	Rx. 5,039,000
1885–86	,,	2·81 ,,		
1886–87	Surplus	0·18 ,,		
1887–88	Deficit	2·03 ,,		
		Rx.		
1888–89	Surplus	37,000	Total surplus	Rx. 6,804,000
1889–90	,,	2,612,000		
1890–91	,,	3,688,000		
1891–92	,,	467,000		
1892–93	Deficit	833,412	Total deficit	Rx. 2,380,410
1893–94	,,	1,546,998		
1894–95	Surplus	693,110	Total surplus	Rx. 2,227,108
1895–96	,,	1,533,998		
1896–97	Deficit, Revised Estimate	1,986,900	Total deficit	Rx. 4,450,900
1897–98	,, Budget Estimate	2,464,000		

	Rx.
Total deficit during the 14 years	11,870,310
Surplus	9,031,108
Total net deficit	2,839,202

19,844. (*Chairman.*) Will you tell us what you intend to prove by this statement. Are you only proving that the revenue is not elastic?—The point I want to make out is this, my Lord, that the so-called equilibrium between income and expenditure of British India is not based upon any substantial increase of the revenue, it is more or less fictitious.

19,845. That is to say, your impression is that the revenue is not elastic, and that is really what you mean?—Yes.

19,846. Why I asked you the question is this: It is difficult for me to understand what is meant by a surplus not being a true surplus. You can only speak of a surplus of the income and the expenditure of the year; if the expenditure is reduced, perhaps most unwisely, and the revenue has realised more than the expenditure, you have then a surplus; that, for that year, is a surplus. If you choose to borrow money in order to carry out works instead of doing them out of revenue, as far as the income and expenditure goes, it gives you a surplus, though that surplus may have arisen from a policy which is not wise in itself. I am trying to make out what you mean by a true surplus in that sense; but, if you mean that the revenue is not elastic, I do not know whether you could prove it, but that I quite understand?—I think your Lordship has understood me most correctly. What I want to say is, that the surplus is not the result of excess of receipts over expenditure, the excess being due to increased capacity of the people to pay.

19,847. (*Mr. Naoroji.*) You mean that the true surplus should be anything that remains after satisfying all the necessary demands of expenditure; then it would be a true surplus. If by curtailing expenditure or by increasing taxation a surplus has accrued, it is not a true surplus?—That is what I mean. That is what I explain it to be.

19 848. (*Chairman.*) What you mean to say is, that in your view the revenue is not elastic?—Yes.

19,849. In 1897–98 the deficit of Rx. 2,464,000 is, I suppose, upon the Budget Estimate?—Yes.

19,850. But immediately afterwards you have the figures Rx. 4,450,900; what are those?—The total deficit for 1896–7 and 1897–8. I have divided the 14 years into periods of surpluses and deficits.

19,851. Well, of course, I do not demur at all to your including the Estimate for the current year, but still that is an Estimate, and one knows that in Indian finance the Estimate is a very unsafe guide for the year's actual revenue and expenditure?—Yes.

19,852. You see, if you confined yourself to actual facts, and left out the Estimate of 1897–98, you would get upon the 11 years something very like equilibrium; you would indeed get the equilibrium upon the 13 years?—Upon the 13 years.

19,853. It would be very near equilibrium as far as actual facts are concerned?—Still, on the side of deficit rather than on the side of surplus.

19,854. At the same time, if you like to throw in the Estimate, I do not demur to that, only that one knows from experience that the Indian Estimates, especially the Budget Estimates, are very liable to variation—the result generally turns out somewhat different from the estimate?—But I may add, my Lord, that this year the likelihood is rather that the variation will be on the wrong side, looking to the famine and the exchange.

19,855. It is a very extraordinary year; however, taking your figures, they represent on the 14 years something like Rx 200,000 a year as the average deficit. do they not?—Deficit, yes.

19,856. It comes to something under Rx. 203,000. Well, during that period between 1884–85 and the present time, the Indian State has had to meet a very heavy charge owing to a fall in the sterling price of the rupee?—Yes.

19,857. Is it not fair to take into consideration that that very heavy charge had to be met?—Oh, yes.

19,858. Now, I want to test the prudence and the success of the finance of that time. I have here a paper which makes out that there has been an additional charge put upon India during the years subsequent to 1884–85 of nearly 92⅛ millions through the exchange. The average charge for exchange for each year was Rx. 8,400,000. The exchange charge in 1884–85 was 3¼ millions, and that leaves an average yearly excess over the exchange charge in that year, which had to be met, of Rx. 4,883,000; and yet that extra charge has been met during these 11 years, and at the end of the time you are only able to show that it has caused an average deficit of Rx. 200,000. Is it not fair to bring that forward when you are speaking of these surpluses and deficits?—I have; I do not think I omit the consideration due to the fall of exchange in my evidence.

19,859. I know; but still, if it had not been for this fall in the value of the rupee, what a very favourable result the ordinary financial operations of India would have shown; and, as it is, even the whole of this enormous extra charge has been met. It has been met partially by increase of taxation—that I admit—but it has been met, with the result, at the end of the time, of not throwing any burden upon posterity further than may be represented by this average sum of Rx. 200,000, or the accumulated sum of Rx. 2,800,000. I think that is rather a satisfactory result, is it not?—I do not question the wisdom of the financial system

Mr. G. Subramania Iyer.

21 May 1897.

of India at all; my figures are intended to draw your Lordship's attention to the fact that the financial condition is not on a very sound basis, I mean so far as the capacity of the people to pay taxes is concerned.

19,860. But I should call that a very sound basis indeed. I doubt if you will find any State throughout the world that, if it had been exposed during that time to such a heavy increase of charge as that I have alluded to, would be able at the end of the time to show as clean a balance sheet?—It may be so, but what I urge is that we are entitled to better results, if only the expenditure had been kept within more moderate limits.

19,861. That is a fair argument; but that is the result; and when you say that during all this time you have got a total net accumulated deficit of Rx. 2,800,000, without bringing into prominence the fact of this very heavy abnormal charge which the Indian Government has had to meet, you hardly give quite a fair view of what the Government has had to do?—I am quite willing to make all possible allowance, to give due consideration to that great fact of exchange having been so much against the Government; but, on the other hand, if only expenditure had been kept within moderate limits, if military expenditure had not been so largely increased, if compensation allowance had not been given, we might have had a better result; perhaps all these difficulties of exchange might have been overcome with less difficulty.

19,862. I admit the force of what you say as arguments to be taken *per contra*. I think you wish to take the deficits year by year?—Yes. The first period of deficits, that is the four years ending 1887–88, was the period when the addition to the Army was made and Upper Burma was annexed. It was a period of great trial.* Financial equilibrium was restored by an increase of the salt duty, the imposition of an import duty on petroleum, the absorption of the Famine Grant, the appointment of a Finance Committee to enforce reductions of expenditure, and the appropriation by the Government of India of Rx. 640,000 yearly from the revenues at the disposal of Provincial Governments. In the financial statement of 1887, the Finance Minister said: "For the present, therefore, until the outcome of the "present difficulties is seen more clearly, the Govern- "ment considers that, in providing for the necessary "expenditure arising from its administrative needs, it "should avail itself of the resources which, in times of "surplus, are assigned from its resources to the con- "struction of railways or to the diminution of the "amounts which it borrows annually for railways." In other words it was contemplated, in subsequent years, to reduce the expenditure on railways, or to borrow more largely than the Government would have done under better circumstances. As a fact, in the years 1885–86 and 1886–87, so much as 7,700,000*l.* was borrowed in England for the construction of railways, although the declared policy of the Government is to borrow in India for this purpose. There was also the usual increase in these two years of the Government's "Debt and obligations" in India to the amount of Rx. 202,160,459. Measures of additional taxation referred to above were taken in the latter part of the year 1887, and were estimated to produce about Rx. 1,900,000. But, as they were introduced at the end of the year, they had but little effect on the revenues of that year. In sanctioning this additional taxation, the Secretary of State examined and reviewed the financial relations between the Government of India and the Provincial Governments, and pointed out the inequality of the existing arrangements which secured freedom from financial difficulties to Provincial Governments, while the supreme Government might be passing through a phase of acute embarrassment. The Government of India was requested to reconsider the propriety of arrangements which protected Provincial Governments from sharing in the financial responsibilities of the Empire and from contributing to their relief. Proposals were accordingly made in October 1888, which ended in contributions from Provincial Governments to the amount of Rx. 740,000 in aid of Imperial revenues, although at that time hardly eighteen months had elapsed since the so-called quinquennial contracts had been settled. In the year 1888–89, notwithstanding the addition of nearly Rx. 2,000,000 that the new taxation was expected to bring, a deficit was estimated for, after including considerable sums in the expenditure of the year for special defence works and for military expeditions, which were Rx. 1,121,500, and Rx. 387,500 (the latter being Rx. 142,500 for the Black Mountain Expedition, and Rx. 210,000 on account of Sikhim, besides Rx. 35,000 on account of the Lushai Expedition). On January 27th, 1888, Mr. (now Sir J.) Westland summarised the position thus: "The fall in the value of silver, "the necessity of improving our military strength, and "the expenditure connected with the occupation of a "new province, had absorbed not only the three years' "improvement of revenue, but the whole of the margin "which we possessed in 1884–85. Every rupee of the "revenue shown in the estimates of 1887–88 was "pledged, as the financial statement put it, 'for the "'necessary expenditure arising from our adminis- "'trative needs; and for the risks of war and of "'famine, and of exchange and of opium, nothing "'whatever was reserved. Nay, more, we were pledged "'to heavy expenditure upon the defences of our "'harbours and of our North-west frontier, and this "'expenditure, all unremunerative as it is, was entirely "'provided for with borrowed money.'" The accounts of this year (1888–89) showed a nominal surplus of Rx. 37,000, instead of the estimated deficit, due, no doubt, to the increased taxation of the previous year and to the absorption of the Famine Grant, which both improved the revenues to the extent of nearly 2½ millions. This year and the three succeeding years were years of surplus. The years 1889–90 and 1890–91 especially were good years. But it will be presently seen that the surpluses were not due to any increased capacity of the people to pay taxes as the result of prosperity, but were due mainly to temporary causes and to increased taxation. It will be seen from the statement which I have given at the beginning that the aggregate surplus of these four years was Rx. 6,804,000, but against this have to be set off chiefly the additional taxation of Rx. 1,900,000 (imposed in the latter part of the year 1887), which in four years should have yielded about Rx. 7,600,000, and the savings from the Famine Insurance Grant, which amounted to nearly two millions, total Rx. 9,600,000. Rise in exchange was the cause of considerable saving in expenditure, and there was, besides, a contribution from Provincial Governments.

19,863. You make that statement about the savings from the famine insurance, being aware that it is a subject on which there is a grave difference of opinion, and in regard to which your statement about the Rx. 1,500,000 is objected to?—Yes.

19,864. We will not go through the question again, but I only put that before you?—Yes; in the year 1889–90 the surplus was owing "to a temporary improvement" under opium to the extent of Rx. 995,200, to a general growth of revenue amounting to Rx. 766,500, to a short expenditure on special defences and in connexion with the Army by Rx. 344,500, to reduction in the interest charge by Rx. 230,900, to improvement in the railway revenue account, which with other heads yielded Rx. 289,800, and to a rise in the rate of exchange which favourably affected the revenue by Rx. 200,000. There was also a special contribution of Rx. 490,000 from Provincial Governments (*see* Financial Statement for 1890–91, paragraph 9). The surplus of 1890–91, namely, Rx. 3,688,000, was the largest ever realised during the last 46 years. But with regard to the causes that contributed to this surplus, the following remarks of the Finance Minister are worth consideration: "Of the increases in civil revenue, some "represent a growth of revenue which will, in all "probability be permanent; but a portion of the "increase under salt is due to a change in the date of "payment of the duty in Madras, and is merely "temporary, while the increase in mint receipts and "the chief increases in the Home Accounts are due to "special causes and cannot be expected to occur in "future years. The growth of permanent revenue "during the year has been moderate; civil expendi- "ture shows a reduction of Rx. 86,400. There were "savings in expenditure under opium (Rx. 110,000), "in stationery and printing (Rx. 44,000), there was "also a saving of Rx. 65,300 in the cost of police, most "of it in Upper Burma. A remarkable rise in "exchange and short expenditure on special defence "works have caused a great increase in the estimated "surplus of the year. The large surplus of the year "1890–91, as now estimated, does not arise from "causes which can be contemplated with complete

* Between 1884–85 and the budget statement of 1887–88, the total new demands on revenue were Rx. 4,750,000. These demands were met as follows:—Imposition of income tax, Rx. 900,000; other improvements of revenue, Rx. 960,000; resumption of famine grant, Rx. 1,450,000; reduction in outlay on railway construction, Rx. 260,000; diminution in the amount of revenue assigned to the Provincial Governments, causing a reduction of their public works expenditure by Rx. 500,000; absorption of the prescribed surplus, Rx. 500,000.

" satisfaction. The rise in exchange has already been " lost to a very great extent; the fall in the price " of opium continues, and the receipts under XXIV., " Exchange, will diminish still further, as the total " transactions from which they arise are reduced in " amount, and the short expenditure under special " defences is a postponement of the burden and not a " real saving." The year 1891-92 was one of a nominal surplus of Rx. 467,000. It swallowed up the improvements in the revenue of the two previous years, improvements due, it must be remembered, to a rise in exchange, to short expenditure for military purposes, and to reductions in famine grants, besides the proceeds of the additional taxation. This year the expenditure on military works and special defences and on famine insurance was restored to the normal standard. In the following remarks the Finance Minister explains how the improvements of 1889-90 and 1890-91 were swallowed up by increased expenditure in 1891-92, which brought the period of so-called financial prosperity to a close. "During these two " years (1889-90 and 1890-91) there was an improve- " ment of Rx. 2,628,200 in the Revenue, and there " was reduction of the charge for ordinary debt and " of the charge for exchange. These two improve- " ments yielded a total gain of Rx. 3,102,200. But in " the succeeding year (1891-92) special causes absorbed " nearly the whole of this gain. In the first place I " may mention that the cessation of the special " contribution from Provincial Governments absorbed " Rx. 490,000 of the improvement. The reduction " in net opium revenue absorbed a further sum of " Rx. 576,900. The falling off in receipts under " XXIV., Exchange, accounts for Rx. 485,900. The " restoration of the famine grant has taken Rx. 950,000. " Under military expenditure of all kinds (army, " military works, and special defences) there is an " increase of 621,600*l.* in England, and only a decrease " of Rx. 610,200 in India, of which Rx. 300,000 is due " to the effect of exchange on the pay of British troops. " There is also a special charge in 1891-92 of " Rx. 188,000 on account of the census. In this way " the whole improvement of Rx. 3,102,000 is practically " accounted for." 1892-93 and 1893-94 were years of deficit. The exchange was rapidly falling and caused an addition to the expenditure of Rx. 4,142,400. This was the period when the Government tried to solve the currency question of India, and granted compensation allowance to its European employés. To meet the new demands Government had recourse to fresh loans. The measure which was expected to effect a permanent restoration of equilibrium was delayed till the end of the year 1893, in view of the decision of the Home authorities regarding the currency question. On March 10th, 1894, that is, at the end of the financial year 1893-94, a Bill was passed for the re-imposition of import duties. In December of the same year the cotton duties were revived. The deficit in 1892-93 was Rx. 833,412. This deficit would have been greater but for the contributions to the extent of Rx. 466,000 from Provincial Governments on a fresh revision of the provincial contracts. In this year, as well as in the previous year, the famine insurance grant was to the full extent of Rx. 1,500,000. Other causes that improved the revenues were an improvement under interest owing to Government not having borrowed in India for some years, and to investment in Government securities, of a larger amount of the paper currency reserve. The year 1833-4 was one of greatest depression. The rapid fall in Exchange had landed the Government in a state of the utmost despondency. The Government had to find money to cover an estimated deficit of Rx. 1,595,000 in the Imperial Account, and of Rx. 751,300 in the Provincial and Local Accounts. It had also to find Rx. 3,550,000 for expenditure on railways and canals, not charged against revenue, and to provide funds for loans to local bodies, &c. to the extent of Rx. 327,900. It had also to meet the payments by the Secretary of State to the extent of 1,889,100*l.*, amounting at the exchange of 1s. 2$\frac{3}{4}$*d.* to Rx. 3,070,400, of which about one-half only was to be recovered in India from the remitters. To do all these a loan of Rx. 3,000,000 was to be raised in India. The cash balance of Rx. 15,204,200 with which the financial year was expected to open was to be reduced by Rx. 2,561,100. These amounts were to be used for public works, for the Secretary of State's bills, and for other ordinary wants of Government. The large net deposits in the Government savings banks, the repayment by the Bombay Port Trust of a loan of Rx. 616,000, and the payment by the Rampore State of the balance of Rx. 220,000 of the amount that that State had been paying for the construction of the Moradabad-Rampore Railway, these were utilised to strengthen the Ways and Means. There were also noteworthy decreases of expenditure in the year 1893-4, under interest Rx. 233,200, under construction of railways Rx. 118,200, under special defences Rx. 18,600, under miscellaneous civil charges Rx. 32,400, total Rx. 411,100. In the year 1894-95 the surplus was nominal, being only Rx. 693,110. This surplus was reached by the combined product of the tariff legislation of March 1894 and of December of the same year, which amounted to Rx. 1,490,700, being the difference between the old and the new tariff duties, or nearly two millions; by a reduction of Rx. 500,000 in the Famine Insurance Grant, and by contribution from Provincial Governments to the extent of Rx. 405,000, and by the reduction of expenditure to the extent of a million. In regard to the last, the Finance Minister says: "It may be " mentioned that very strict economy has been insisted " on in other expenditure also, and that the grants " under many other heads than those mentioned in " the two preceding paragraphs would have been " larger had it not been for the efforts made to reduce " the deficit in the Estimates. In fact the difficulties " of the position have for the last year or two obliged " the Government to take every feasible measure to " reduce or restrict its current expenditure." Yet in the face of this necessity compensation allowances to the extent of Rx. 1,113,300 were granted, and the Waziri Expedition was undertaken which cost the Government that year Rx. 195,000 and something more in the succeeding year. The year 1895-96 shows a surplus of Rx. 1,533,998. This surplus was arrived at by saving of interest to the extent of Rx. 524,800, owing to the conversion of the rupee debt from 4$\frac{1}{2}$ to 3$\frac{1}{2}$ per cent., by an improvement in Customs duties to the extent of Rx. 1,882,900, by the Famine Grant being limited to Rx. 1,000,000, and by an increase in land revenue, among others, partly due to suspensions carried forward from the previous year, and partly to increased assessments on revision of settlements. This year the Chitral Expedition cost Rx. 1,749,700 plus 16,000*l.*, besides political expenditure which comes to Rx. 20,000 (Financial Statement, para. 11). Exchange compensation was estimated to cost Rx. 1,456,500. In the years 1896-97 and 1897-98 a deficit has been estimated for, chiefly on account of famine expenditure, though exchange has improved. The improvement under exchange, according to the estimates of 1896-97 and 1897-98, amounts in the two years to nearly Rx. 4,000,000; and the same cause gave the Government in the years 1889-90 and 1890-91 an improvement of over two millions. Still the Government has not been able to remit taxation to any extent. If the fall in Exchange has been the sole cause of all our financial difficulties, it is but reasonable to expect that, when the Exchange improves, there would be a proportionate relaxation of the pressure, ending in the taxpayers' burden being lightened. It may be urged that the famine renders all remission of taxation out of the question at the present moment. But this is exactly our complaint. The Government is content to live always from hand to mouth; work up the expenditure to the last pie of its revenues, and leave itself no margin in ordinary years which may be utilised in times of unusual or unexpected difficulties. Famine is not an occurrence which the Government cannot foresee. In fact, successive Finance Ministers have referred to it as a contingency which might face the Government at any time. Yet, when it actually comes, Government has recourse to borrowing as the only source of help available. In fact the policy of 1877, that of providing a famine insurance fund from special taxation for that exclusive purpose, has borne no practical fruit. If that policy had not been adopted, there would have been an addition of about 12 millions to the debt for purposes of protection against famine, but by the side of a total indebtedness of over 220,000,000 this would be a trifle. But at the same time the people have paid more than 25 millions in the name of insurance against famine. They would have been distinct gainers if there had been no famine insurance fund.

19,865. How do you mean they would have been gainers if there had been no Famine Insurance Fund?—Because for their benefit only 12,000,000 have been spent, as I calculate, as against 25,000,000 they have paid.

19,866. That is to say, you are arguing against a Famine Insurance Fund now?—I am not arguing

Mr. G. Subramania Iyer.

21 May 1897.

against it, but I am arguing against the policy of the application of that fund.

19 867. Because that would rather mean that the 1,500,000 a year of which you have spoken was excessive, and that the Government were perfectly right in not spending so much upon it?—*Not* exactly.

19,868. Is not that the case, if you say that the sum which is set apart by the Government has been in excess of that by which the public have been benefited? Surely that would lead you to the conclusion that the 1,500,000 was in excess of what was needed?—But it would not have been so, if the policy had been different, if the money raised on account of famine insurance grant had been properly applied, that is, had been applied in the manner in which it was intended; in which the public was given to understand that it would be applied.

19,869. There is, on that point, a complete issue on a question of fact, which has been put to you several times on the authority of the men who brought in the scheme, confirmed by various other statements. Further than that, it has been shown to you, and you have not up to the present rebutted the statement, that the extra taxation was not 1,500,000, but a million. (I admit your reservation, that there may have been some increase in elasticity.) In such circumstances, it is hardly worth while pursuing the argument. Perhaps I might suggest to you, that you have not given any reason at present for saying that the taxation put on exceeded Rx. 1,000,000?—I will only add, my Lord, that, even if the proceeds of the special taxation were not more than a million a year, I think my contention holds good; in fact the original policy of the 1,500,000 has been a failure.

19,870. I do not understand in what sense, as over a million a year has been set aside according to your own figures. I think you showed that 17½ millions had been spent?—Yes.

19,871. And spent within something less, I think, than 17 years—15 years. Therefore, the extra taxation, whatever it was, has been entirely applied for famine purposes. Therefore, so far, everything that has been raised from the people for famine, has been applied to famine. Do you go further and say that it has been badly applied, and, therefore, that there has been loss to the public?—No, but supposing this special tax did not yield more than a million, and they had spent about 17 millions in 15 years, but the fact remains that these 17 millions includes the direct expenditure on famine relief by small amounts in different years. If the 17 millions had not been created, anyhow the small expenditure on famine relief would have been incurred by Government from current revenues, and they would only have been driven to the borrowing of 12,000,000 for protective railways and the avoidance of debt. To that extent the taxpayers would have been gainers, not including the amount spent on famine relief, because anyhow the Government would have spent it; therefore, if you take only the expenditure on famine protective railways, and the expenditure for the avoidance of debt, I think the amount they have paid is in excess of the amount which has been spent.

19,872. One question upon that; you have gone year by year through the different causes which have led up to these surpluses and deficits; is there any conclusion from them which you wish to impress upon us?—The conclusion which I wish to impress upon the Commission is that the financial position of India requires careful strengthening by moderating the expenditure, and by increasing the margin the Government has in ordinary years in order to utilise it in times of difficulty; that is the conclusion I want to impress upon the Commission.

(*Mr. Naoroji.*) I wanted to understand whether it was said that there were 300 Europeans only in the Uncovenanted Civil Service besides the 1,000 in the Covenanted Civil Service.

(*Chairman.*) I was asking whether that is the case.

(*Mr. Naoroji.*) I have got the figures here.

(*Chairman.*) Perhaps you would give them.

(*Mr. Naoroji.*) I have got the Civil Department altogether.

(*Chairman.*) What I wanted to get at is this. I began by asking the number of what I call the Governing Body of India, that is to say, the Covenanted Civil Service.

(*Mr. Naoroji.*) That is stated to be 1,000.

(*Chairman.*) I also wanted to understand whether there was not another body of people who were under specific agreement with Government, called the Uncovenanted Civil Service. I was under the impression that that was 300.

(*Mr. Naoroji.*) No, it is a very large number. The Uncovenanted Civil Service is a very large number.

(*Chairman.*) I put out of consideration all men employed on the railways as engineers, but, if there is any difficulty about my question, I might confine it to the Civil Service.

(*Mr. Naoroji.*) Leaving out the civil or military Public Works and the Military, I find there are altogether 4,128 Europeans and 1,576 Eurasians, earning 1,000 rupees per annum and upwards, and, if we take the 1,000 Europeans of the Civil Servants, which is rather less than that, there still remains 3,000 Europeans of what are actually called the Uncovenanted Civil Service, instead of 300.

(*Chairman.*) Do you include the Post Office and Customs?

(*Mr. Naoroji.*) The whole Civil Department.

(*Chairman*) And the railways?

(*Mr. Naoroji.*) No, not the railways, only the Civil Department; neither the railways nor the military department nor the public works; only what is strictly the Civil Department, the Civil Service; so that the hundreds and thousands that Sir Henry Brackenbury spoke of is very much justified when you take the whole of the Europeans employed and earning their livelihood there to the deprivation of Indians.

(*Chairman.*) I particularly said that Sir Henry Brackenbury is perfectly justified to the letter, because there were more than 100 employed, and there were more than 1,000, and therefore you would be justified in saying hundreds and thousands; but supposing there had been 2,000 men in one service and 200 men in another, there would be hundreds and thousands; but it does not quite express what you generally mean by hundreds and thousands.

(*Mr. Naoroji.*) Of course, when he said that, he meant, besides the Civil Department, the whole of the European military service, also the public works, and all the unofficial merchants, manufacturers, artizans, planters, and other Europeans who go out to India and find a living there as traders, so that it is a very strong argument. There is also the money drain consideration, which is very large, and economically crushing or bleeding.

(*Chairman.*) We thank you, Mr. Iyer, for the evidence you have given.

The witness withdrew.

(Adjourned.)

At the India Office, S.W.

FORTY-EIGHTH DAY.

Wednesday, 21st July 1897.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN) PRESIDING.

The Rt. Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.

Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.
Mr. COLIN G. CAMPBELL, *Secretary*.

Mr. STEPHEN JACOB, C.S.I., recalled and further examined.

Mr. Stephen Jacob, C.S.I.

21 July 1897.

19,873. (*Chairman.*) Mr. Jacob, I think the points upon which the Indian Government desire through you to give some supplementary information to the Commission are, first of all, the provincial assignment question, and next, the question of the admission of natives to the higher employment in India?—Yes, that is so.

19,874. I propose, in the first instance, to put to you some questions on the subject of provincial expenditure?—Yes.

19,875. You have been good enough to draw up a couple of memoranda upon the subject, which the Commission have seen, have they not?—I believe so.

19,876. We have received evidence intended to show that the provincial contract system has not succeeded, to say the least, so well as had been anticipated, inasmuch as the Provincial Governments did not get their fair share on the periodical revision of the contracts, and that legitimate provincial expenditure is, in consequence, starved. How does the Central Government of India meet that statement?—An appeal may be made to the actual figures of provincial expenditure for the past 20 years, which show what the rate of progress in that expenditure has been. And this appeal may be made either to the figures of the expenditure of all the Provincial Governments taken together, or to the figures for individual provinces, such, for instance, as Madras, Bombay, and Bengal to which the Indian gentlemen delegated to give evidence before the Commission have specially drawn attention.

19,877. Let us first take the expenditure of all the Provincial Governments together?—The following table shows for each year from 1877–78 to 1896–97 the net provincial and local expenditure of all the provinces taken together, other than that included under the railway revenue and irrigation accounts. From 1877–78 to 1881–82 I also exclude the charges for military works in Burma, and for the ecclesiastical department in Bombay, which were then provincialized, but have ever since been Imperial. Provincial expenditure, I may explain, cannot properly be considered alone. The two branches, provincial and local, are not separated on the same lines in all provinces; in all they are more or less mixed up, and transfers are frequently made from one to the other. I have given in the Table the average for each contract. The figures in the Table represent thousands of Rx. Thus 8,573 means Rx 8,573,000. The Table A., which I also put in, reconciles my figures with those given in Table XXI. (p. 72 of Vol. II. of the Commission's first Report), and I do not propose, therefore, to point out in detail the causes of their disagreement with those given by other witnesses.

*TABLE of PROVINCIAL and LOCAL NET EXPENDITURE for all PROVINCES, 1877–78 to 1896–97.

Year.	Thousands of Rx.		
	Total Net Expenditure.	Total for Quinquennial Period.	Yearly Average for Quinquennial Period.
1877–78	8,573		
1878–79	9,205		
1879–80	8,832	45,712	9,142
1880–81	9,140		
1881–82	9,952		
1882–83	11,620		
1883–84	11,262		
1884–85	11,660	57,686	11,537
1885–86	11,311		
1886–87	11,833		
1887–88	11,549		
1888–89	11,775		
1889–90	12,138	61,365	12,273
1890–91	12,545		
1891–92	13,358		
1892–93	13,351		
1893–94	13,416		
1894–95	13,545	68,977	13,795
1895–96	13,865		
1896–97	14,800		

19,878. You exclude, I observe, the railway revenue and irrigation accounts; why do you do so?—Because they are commercial services, which are of an entirely different nature from the ordinary Government expenditure, and are administered on different principles. Also they have been treated in varying methods in the different provinces, and under the several periodical arrangements.

19,879–80. Can you fairly compare the figures of one quinquennial period with those of another?—There have been some variations in the contracts, but generally they are so slight that they do not materially affect the comparison of the figures of one contract with those of another. The exception is in the case of the first contract, on the close of which superannuations (previously provincialised in three provinces only) and medical establishments were provincialized; and Madras, which had till then been working under the generally superseded system of 1871, was brought

* *See* Appendix No. 80.

Mr. Stephen Jacob, C.S.I.

21 July 1897.

into line with the other provinces. These changes necessitate an adjustment of about Rx. 830,000 in comparing the results for the first contract with those of the later contracts.

19,881. But, on the whole, in Madras you prefer merely to compare the three quinquenniums, whereas in Bombay and Bengal you compare the four, do you not?—Yes, in comparing the individual provinces I have done that, but in taking the provincial expenditure as a whole, I have thought it right to make the adjustment just mentioned so that we may go back 20 years.

19,882. You have taken the four quinquennial periods and compared them: can you tell us the average population of British India in each of these quinquennial periods?—Roughly speaking, the average population for each quinquennium may be taken as follows (excluding Upper Burma and Beloochistan, which were annexed during this period, and whose expenditure is not provincial):—

1877-78 to 1881-82	198,000,000
1882-83 to 1886-87	205,000,000
1887-88 to 1891-92	214,000,000
1892-93 to 1896-97	225,000,000

19,883. That is an increase of about 12 per cent., is it not, on the fourth compared with the first period?—Rather more than 12 per cent.

19,884-5. A little over 12 per cent.?—Yes, between 13 and 14 per cent.

19,886. Perhaps you will give the provincial expenditure?—Allowing for the adjustment I have mentioned, the following Table shows the increase for each contract over the last:—

Period.	Average Yearly Expenditure.	Increase over previous period.	Increase over first period.
1877-78—1881-82	9,972	—	—
1882-83—1886-87	11,537	1,565	1,565
1887-88—1891-92	12,273	736	2,301
1892-93—1896-97	13,795	1,522	3,823

Thus the scale of provincial and local expenditure has increased in three quinquennial periods by more than 38 per cent., and if we compare the first year (1877-78) with the last normal year (1895-96—the following year, 1896-97 being a famine year) the increase amounts to 48 per cent.

19,887. Can you now give us what the Imperial expenditure was in those quinquenniums?—The Imperial net expenditure for each quinquennium was as follows:—

Year.	Thousands of Rx.				
	Imperial Net Expenditure.	Exchange included in column 2.			Imperial Net Expenditure, excluding Exchange.
		On English Charges.	On British Soldiers' Pay.	Total.	
1877-78	33,206	1,368	—	1,368	31,838
1878-79	29,184	1,843	—	1,843	27,341
1879-80	34,993	1,862	—	1,862	33,131
1880-81	37,363	1,284	—	1,284	36,079
1881-82	29,201	1,373	—	1,373	27,828
Total -	163,947	7,730	—	7,730	156,217
Average -	32,789	1,546	—	1,546	31,243
1882-83	29,109	1,874	—	1,874	27,235
1883-84	29,709	2,216	46	2,262	27,447
1884-85	28,571	2,111	184	2,295	26,276
1885-86	31,826	2,611	224	2,835	28,991
1886-87	30,735	3,241	276	3,517	27,218
Total -	149,950	12,053	730	12,783	137,167
Average -	29,990	2,411	146	2,557	27,433
1887-88	32,502	3,967	437	4,404	28,098
1888-89	31,513	4,087	517	4,604	26,909
1889-90	32,206	3,907	632	4,539	27,667
1890-91	32,188	3,023	587	3,610	28,578
1891-92	35,536	4,251	407	4,658	30,878
Total -	163,945	19,235	2,580	21,815	142,130
Average -	32,789	3,847	516	4,363	28,426
1892-93	37,038	6,094	612	6,706	30,332
1893-94	36,839	6,242	852	7,094	29,745
1894-95	37,530	7,926	1,134	9,060	28,470
1895-96	38,015	7,129	1,156	8,285	29,730
1896-97 Revised	36,883	6,264	1,103	7,367	29,516
Total -	186,305	33,655	4,857	38,512	147,793
Average -	37,261	6,731	971	7,702	29,559

19,888. Excluding exchange, the Imperial expenditure during that time has fallen from 31¼ millions to a little over 29½ millions?—Yes, but the figures of the first quinquennium are vitiated for comparison with subsequent years, owing to the inclusion of special famine charges, and of the Afghan military operations.

19,889. Then, on the whole, would you prefer to take the second quinquennium as the basis for comparison?—Yes, I think that would show the more normal increase.

19,890. And, in that case, the increase has been from Rx. 27,433,000 to Rx. 29,559,000, has it not?—Yes.

19,891. Being an increase of a little over two million Rx.?—Yes, two million Rx.

19,892. That would be under 8 per cent., would it not?—Yes, it is 7·7 per cent. exactly.

19,893. As against an increase on the provincial expenditure of 38 per cent. which I think you put for the whole period, did you not?—Yes, but for this period——.

19,894. If you take the second quinquennium as your basis, as you did in the case of the Imperial expenditure, what would it be?—It is about 20 per cent.—19·6 per cent. exactly.

19,895. (*Sir Andrew Scoble.*) But during that period the provinces have remained subject to practically the same duties, whereas the duties of the Empire have been increased by the addition of Beloochistan and Burma?—Yes, that is so.

19,896. (*Chairman.*) Therefore you would state, as the result of the provincial contract system, that over three quinquenniums the increased assignments to the provinces are represented by 20 per cent., while the increase of the Imperial expenditure has been, we will call it, 8 per cent.?—That is the Imperial expenditure apart from exchange.

19,897. Apart from exchange?—Yes.

19,898. Exchange enters for a very small sum into the provincial expenditure, does it not?—Yes, to a very small extent. I may say that in the exchange here I have not included exchange compensation.

19,899. I was about to ask you if the exchange compensation allowance is not included?—No, I have merely included the exchange on English charges and on the British soldiers' pay, which is a thing over which the Indian Government has no control whatever. The exchange compensation does enter into the provincial account to proportionately very nearly the same extent as it enters into the Imperial account.

19,900. Do you know the sum to which it amounts?—Yes, I can give you the figures. The exchange compensation only occurs in the last quinquennium.

It accounts for an increase of Rx. 463,000 under Imperial, and of Rx. 234,000 under provincial. That is very much the proportion of the provincial and the Imperial expenditure.

19,901. You may say, perhaps, that, excluding the compensation allowance, the average for the last quinquennium of provincial expenditure would be a little over 13½ millions, would it not?—Yes.

19,902. And you would argue upon these results that it is not correct to say that the provincial services have been starved under the contract system?—Yes, that would be my argument. As far as the resources of the Government have been available, I would submit that these figures indicate that the Provincial Governments have had their full share of them.

19,903. Now, in the revenue which was raised to enable the Imperial Government to discharge this last quinquennial liability of Rx. 37,261,000 (including exchange) is included a certain amount of revenue due to increased taxation, is it not?—Yes.

19,904. That increased taxation was put on simply to meet the Imperial charges, was it not?—Yes.

19,905. And therefore, so far, the provinces would not be entitled to any share of that?—Yes, that is so.

19,906. And, if we were to compare that amount of revenue, in which the provinces may fairly claim a share, that is to say, if we were to deduct from the Imperial revenue that amount of extra taxation which has been imposed solely for Imperial purposes, we should have an increase on the part of Imperial revenue decidedly less than this 8 per cent.; would not that be the result?—Yes, that would be so.

19,907. In fact, you and the Indian witnesses agree very nearly in putting the increase of taxation for those special purposes at a little over two millions per year—22,000,000 on the decade, is it not? Without going into details, it would, in all probability, mean, would it not, that the Imperial share had not risen at all, if you put aside this special taxation?—Yes, that would be, broadly, the result.

19,908. While the provincial shares have increased in this ratio of very nearly 20 per cent.?—Yes.

19,909. Do you think that these increases, which we will call 20 per cent. in 10 years, satisfy the fair requirements of Provincial Governments?—I think it satisfies their fair requirements, so far as the resources of the Government of India enable them to meet those requirements. No one who has any acquaintance with India would deny that there are in every province most valuable projects which might be undertaken if the funds for carrying them out were available, but the question every time for consideration is to what extent we can meet those requirements, keeping in view existing resources, or the necessity for increased taxation.

19,910. May I put it to you thus: If there had been no increased charge for exchange and no increase in army expenditure, there would have been a considerable surplus?—Yes, that is so.

19,911. Do you think that the Indian Government would in that case have increased the provincial assignments, or would they have preferred to reduce taxation?—I suppose that they would probably have done both of those things. They would probably have to some extent reduced taxation, and would also have allowed some further expenditure on internal improvements.

19,912. That is to say, you do not bind yourself down to saying that the Indian Government hold that the 20 per cent., though you consider that it is a fair share to give to the province out of the revenue available, fully meets even what we may call the legitimate demand of the province?—No, I should not profess to say that at all.

19,913. (*Sir Andrew Scoble.*) Take the case of the salt tax, for instance, that was raised in 1887–88 or in 1888–89?—In 1888.

19,914. Has it not always been, so far as you are aware, a laudable object of the Government of India to reduce the salt tax back again at least to what it was in 1888?—Yes, I should say that it had that object constantly before it.

19,915. (*Chairman.*) Now take Bombay; how are your totals there made up?—The figures given in the Table B., which I put in,* give full details of the expenditure in each year from 1877–78 to 1896–97, and the average yearly expenditure for each quinquennial period, for all the Civil Departments (the principal departments in detail), for miscellaneous, and for public works; in fact, they include the whole of the provincial and local charges, except—

(1.) Direct demands on the revenue, which are usually taken as deductions from the principal revenue heads.
(2.) Commercial services (Post Office, Railway Revenue, and Irrigation accounts).
(3.) Ecclesiastical, political, and interest which have been provincial during a part only of the period covered by the table.

19,916–7. In regard to the direct charges, are those appropriations to Native States and pensions to Princes, or what are they?—They are the charges for the collection of the revenue, assignments from the revenue, and refunds.

19,918. What do you call assignments from the revenue?—Assignments under agreements made with the object of increasing, either directly or indirectly, the revenue. For instance, when we took over the salt tracts in Central India we agreed to make certain yearly payments to the Native State Governments which made over those salt tracts to us.

19,919. In reality those payments are collection charges?—Yes.

19,920. They would come under that general head?—Yes.

19,920A. Perhaps you would mention to us the most important figures in your table?—From that table I will read to the Commission the figures for the opening and closing years, and the average for each quinquennial period. I also give the percentage of increase between 1877–78 and 1896–97.

* *See* Appendix No. 81.

Thousands of Rx.

Year or Period.	Civil Departments.								Miscellaneous.	Public Works (including Railway Construction and in one year Famine Relief).	Grand Total.

Mr Stephen Jacob, C.S.I.

21 July 1897.

19,921. What does that head "other" under the "Civil Departments" comprehend; it is not a very large one, I think?—No, it merely includes one or two departments which I did not think it necessary to specify in detail; they are the Marine and Scientific and minor Departments.

19,922. Then there is rather a large head outside the Civil Departments called "Miscellaneous." What does that consist of?—That consists of superannuation charges, stationery and printing charges, and the charges included under the major head of Miscellaneous, the nature of which I explained before to the Commission at a previous examination.

19,923. You do not bring superannuation under the Civil Departments?—No.

19,924. Is it not a charge on the Civil Department?—Yes, it appertains to the Civil and to the Public Works Departments; it includes all the departments except the Military. It is always taken under the subdivision of Miscellaneous in the accounts.

19,925. Well, what is the increase of the fourth quinquennium over the first?—The total increase of the last quinquennium over the first quinquennium is 31 per cent—Rx. 2,065,000 to Rx. 2,703,000. Then in each department almost there has been an increase; 20·3 per cent. under general administration, 3·6 per cent. under law and justice (courts), 37·4 per cent. under police, 58·3 per cent. under education, 31·1 per cent. under medical, 3·7 per cent. under other heads. There has been an increase in expenditure on gaols of 35·9 per cent. The total increase under civil departments is 22·4 per cent. In miscellaneous the increase is 48·4 per cent., and in public works 52 per cent.

19,926. Now, taking that very large heading of the civil departments, I see the percentage of increase on quinquenniums varies very little from the increase by comparison of the first and the last year; is not that the case?—That is the case for the total, but it is not the case for individual departments.

19,927. No, but, on the whole, the comparison of the first and last years varies very little indeed from the comparison of the averages for the quinquenniums?—Yes, for civil departments it does, but, taking the whole expenditure, the percentages are 31 per cent. and 45 per cent.

19,928. But the year 1896-97 includes famine expenditure, does it not?—Yes, but that affects the amount but slightly in Bombay.

19,929. (*Sir Ralph Knox.*) Which of these departments has the heaviest charge for superannuation which is included in Miscellaneous?—I suppose it is understood that these figures include only the superannuation charges in India, not those which are paid in England.

19,930. Oh, they do not include those which are paid in England?—No, they include only the provincial charges; that is, those paid in India. I suppose the Police and Public Works Departments, Land Revenue, and Judicial would account for the greater part of it.

19,931. Then, even taking Law and Justice, there seems to be a very small increase in the effective, but there may be a very heavy increase in the non-effective?—There certainly is a heavy increase in the non-effective.

19,932. And those figures do not include the whole increase? There would be another heavy charge for home payments?—Yes, very large. As regards the small increase in Law and Justice (courts) in Bombay, I have already explained to the Commission the reason for that

19,933. Transfers?—Partly it is due to transfers, partly to a decrease of expenditure in the High Court, and partly to the fact that the standard of expenditure in Bombay was much higher than in the other provinces at the beginning of this period.

19,934. (*Chairman.*) Now, you have given us in your memorandum a table of the provincial expenditure in detail, but on the next page but one, page 4, you give the provincial and local expenditure which amounts in the year 1892–93 to Rx. 2,202,000?—I beg your Lordship's pardon, I am giving there the revenue not the expenditure.

19,935. Oh, not the expenditure. You say the total, for the year 1877–78, of the revenue is Rx. 1,757,000?—Yes.

19,936. While the expenditure in that year is Rx. 1,986,000?—Yes,

19,937. How would the difference between those two sums be met? Out of balances?—Yes. The Provincial Governments constantly spend less in one year and more in another, owing to their either accumulating funds, or spending from their balances.

19,938. Well, then you give the Imperial revenue in Bombay, do you not?—Yes.

19,939. What do you call the Imperial revenue in Bombay? Is it the amount of the duties collected in Bombay which are assigned to the Central Government?—Yes.

19,940. Is there not some misapprehension on that head? Do not the Provincial Governments, as it were, charge the Imperial Government with a large amount of expenditure under this head, which is in reality local expenditure?—Yes.

19,941. I am speaking of such things in Bombay and in Madras as the Army, would you not hold that to be a Bombay or Madras charge rather than an Imperial charge, in the sense in which we are speaking?—Yes, I think so. The Government of India had occasion to draw attention to that point in their correspondence with the Government of Madras regarding the last revision of the settlements; perhaps I might read their remarks to this Commission.

19,942–3. Perhaps you would give us the quotations from that letter, would you?—"The Government of "India are aware that one effect of the system of "provincial finance is to cause that part of the revenue "of each province which is not appropriated to provincial uses—that is, in a general way, spent upon "the local civil administration—to be regarded as in "some way 'contributed to the Imperial fisc.' This "view appears continually in public discussions, but "a view of Indian finance which regards the sums "appropriated to such purposes as (1) the maintenance "of the Madras Army; (2) the payment of leave "allowances and pensions of Madras officers; (3) the "loss upon the Madras railway; (4) the Carnatic and "Tanjore stipends, and other numerous similar charges "as a Madras contribution to the Imperial fisc, is one "so essentially erroneous that the Government of "India take for granted that the Government of "Madras do not use this expression in the sense in "which it is often publicly used, and merely mean to "assert something of the same kind as the Chamber "of Commerce, when it says that 'Madras contributes "more than its fair share towards Imperial revenues.' "With reference to this statement and to the "statement in your letter that the direct outlay incurred by Government in other provinces is proportionately much greater than in Madras, I am to "say that the Government of India not only do not "admit the truth of them, but are not aware that at "any time any attempt ever has been made to establish "them by examination of the facts and figures bearing "upon them."

19,944. That quotation, in fact, shows that a considerable part of what is called Imperial expenditure, inasmuch as it is disbursed by the Imperial authority and on behalf of the Central Government, is in reality provincial expenditure?—Yes, and therefore weakens the force of such comparisons as have been made between the expenditure, on the one hand, of the central Government of the German Empire and the various States which make up that Empire, and, on the other hand, of the Imperial and Provincial expenditure of India.

19,945–6. Now, turning to Madras, you have explained to us that, so far as Madras is concerned, you are only able to compare the three quinquenniums?—Yes.

19,947. (*Mr. Naoroji.*) May I just put one question? Though this army expenditure and other expenditure that was just now mentioned is incurred in Madras, still, however, it is simply a matter of the convenience and the arrangements of the Imperial Government that so much is in Madras or Bombay, or any part of India, is it not? I just want to understand it. It is strictly Imperial expenditure and not provincial expenditure, as far as I can understand?—It depends upon what you define as Imperial expenditure. It is Imperial expenditure in the sense that it is incurred by, and charged against, the Imperial Government directly.

19,948. Yes, and is not this Army expenditure, and other expenditure that was mentioned just now as being more provincial than Imperial, really Imperial expenditure under the control of the Imperial authorities? Is not it for the convenience only of the

arrangements of the Army and for other Imperial purposes that they happen to be in this locality, or in that locality; I only want an explanation?—I do not think it is a matter of convenience, I should rather say that the Army is distributed in the manner that experience has shown to be necessary.

19,949. Necessary for Imperial purposes?—In some cases necessary for the provinces.

19,950. But though it is the necessity of the provinces, still, however, it is under the control of the Imperial Government, and the whole thing is done by the Imperial Government, is it not?—That is admitted; the expenditure is managed by the Imperial Government, and is, therefore, in the Indian sense of the term, Imperial expenditure; but the whole of the expenditure managed by the Imperial Government is not Imperial expenditure in the sense that it is incurred solely for Imperial purposes, as distinguished from the purposes of the individual provinces.

19,951. (*Chairman.*) My question to you, Mr. Jacob, was not intended to suggest that it was not expenditure for which the Imperial Government was responsible; but I wanted to bring out, what I think you have explained to us, that a large portion of this expenditure which is called Imperial really takes place in the province, and, therefore, that should be borne in mind in the contention between the Provincial Government and the Imperial Government?—Yes, that applies especially to such charges as those for superannuation. The whole of the superannuation charge incurred on the Indian accounts in England is an Imperial charge, though it is very largely for provincial establishments.

19,952. Now, in Madras, the increase of provincial expenditure on the Civil Departments considerably exceeds that shown in Bombay, though the Madras figures give only the increase in 15 years. Have you anything to say upon that?—I have drawn up a Table C. for Madras on the same lines as that for Bombay; but including, for the reasons already explained, only three quinquenniums. The following figures summarize the table:—*

* *See* Appendix No. 82.

Year or Period.	Civil Departments.								Miscellaneous.	Public Works (including Famine Relief and Railway Construction).	Grand Total.
	General Administration.	Law and Justice (Courts).	Law and Justice (Gaols).	Police.	Education.	Medical.	Other.	Total.			
1882-83 - -	113	384	90	378	183	153	52	1,353	237	602	2,192
Average:											
1882-83—1886-87	116	390	84	382	190	163	42	1,367	243	631	2,241
1887-88—1891-92	122	414	86	391	213	187	51	1,464	276	694	2,434
1892-93—1896-97	132	459	103	444	275	264	57	1,734	276	761	2,771
1896-97 - -	132	459	100	465	279	271	61	1,767	291	823	2,881
Percentage of increase:											
Last year over first year.	16·8	19·5	11·1	23·0	52·4	77·1	17·3	30·6	22·8	36·7	31·5
Last quinquennium over first quinquennium.	13·8	17·7	22·6	16·2	44·7	62·0	35·7	26·8	13·6	20·6	23·6

The increase is certainly larger in Madras.

19,953. Yes?—But I do not think that it is so much larger as to necessitate much explanation. It is 26·8 per cent. for the whole of the Civil Departments in Madras. I have not calculated it out for the same period for Bombay.

19,954-5. In Bombay it is 22 on the four quinquenniums?—Yes.

19,956. And 26 on the three quinquenniums, in Madras?—Yes, that is of course larger. As regards that, I may say that I have already explained that Madras came under the more extended scheme of provincial finance later than the other Governments. That was, perhaps, its own fault in refusing the extension earlier, but the Government of India certainly treated it more liberally in the agreement of 1882-83 than it treated the other Governments, and principally upon the ground, I think, that it had not received during the previous quinquennium, the increased resources which would have come to it under the extended system.

19,957. Now, both in Bombay and Madras, looking at the table which you give of the revenues of the two provinces, the provincial assignment has increased in a faster ratio than the Imperial revenue, has it not?—Yes, it has.

19,958-9. Perhaps you would give us what the increase has been?—The Bombay figures are as follows:—

Year.	Provincial and Local.		Imperial.		Total.
	Net Revenue in Thousands of Rx.	Percentage of Total.	Net Revenue in Thousands of Rx.	Percentage of Total.	Net Revenue in Thousands of Rx.
1877-78 - -	1,757	22·6	6,006	77·4	7,763
1882-83 - -	1,770	23·5	5,760	76·5	7,530
1887-88 - -	2,126	23·9	6,771	76·1	8,897
1892-93 - -	2,202	23·7	7,100	76·3	9,302

It will be seen that the provincial percentage of the total revenue, provincial and local, has risen from 22·6 in 1877-78, to 23·7 in 1882-83.

19,960. The Imperial percentage, of course, has fallen in the same proportion?—Yes.

19,961. Now, will you come to Madras?—In Madras the figures are as follows:—

Year.	Provincial and Local.		Imperial.		Total.
	Net Revenue in Thousands of Rx.	Percentage of Total.	Net Revenue in Thousands of Rx.	Percentage of Total.	Net Revenue in Thousands of Rx.
1882-83 - -	1,974	27·7	5,161	72·3	7,135
1887-88 - -	2,341	29·9	5,491	70·1	7,832
1892-93 - -	2,578	29·8	6,075	70·2	8,653

Mr. Stephen Jacob, C.S.I.

21 July 1897.

The Provincial pecrentage has risen from 27·7 in 1882–83 to 29·8 in 1892–93, and the Imperial has fallen correspondingly.

19,962. And, so far, the provinces have profited by the contract system, I understand, in a greater degree than the Imperial Government?—Yes, the result of the contract system has been that they have received this great increase in the proportion of their revenue. I think it was the intention of the provincial contract system that they should receive it, and they have received it.

19,963. And so far, I suppose, you would contend that the contract system has not been worked to the benefit of the Imperial partner in the matter?—No, not more than it proportionately should.

19,964. As compared with the provincial?—No, I think not.

19,965. (*Mr. Mowbray.*) Although the increase in the Civil Department is more in Madras than in Bombay (26·8 as against 22·4), in the grand total of the provincial expenditure the percentage of increase in Madras is less than it is in Bombay, 23·6 as against 23·9?—Yes, but the Bombay percentage represents the increase for an extra quinquennium.

19,966–7. That accounts for it, you say?—Yes, partly; but the difference is also partly due to the very large increase in public works expenditure in Bombay. It is a matter entirely in the discretion of the Local Governments, whether they shall apply their revenues to public works or to the improvement of Civil Departments, and, undoubtedly, the Bombay Government has applied a much greater proportion of its increasing revenues to public works than Madras has done.

19,968. That is exactly why I wished to draw your attention to it, because I noticed that the increase of public works in Madras was only 20·6 and the increase in Bombay was 52·6?—Yes, that does partly account for the difference under Civil Departments.

19,969. (*Chairman.*) Now pass on to Bengal?—In Bengal there are four quinquenniums again, and the general result is very much the same as in the case of Bombay and Madras. Making the necessary adjustments in the first year, and in the first quinquennium, on account of certain charges under Law and Justice (Courts), Medical and Superannuations provincialised for the first time in 1882–83, the following figures, abstracted from the Table D.,* which I hand in, show that there has been in the last quinquennium, as compared with the first, an increase in the total provincial and local expenditure of over 24 per cent.

* *See* Appendix No. 83.

Year or Period.	Civil Departments.									Miscellaneous.	Public Works (including Famine Relief and Railway Construction).	Grand Total.
	General Administration.	Law and Justice (Courts).	Law and Justice (Gaols).	Police.	Education.	Medical.	Marine.	Other.	Total.			
1877–78 - -	140	673	165	445	257	174	127	32	2,013	253	554	2,820
Average:												
1877–78—1881–82	150	702	173	413	260	156	114	38	2,006	256	778	3,040
1882–83—1886–87	170	778	169	467	325	142	87	39	2,177	272	792	3,241
1887–88—1891–92	184	818	186	537	354	157	102	35	2,373	292	762	3,427
1892–93—1896–97	202	880	218	620	375	194	90	48	2,627	337	833	3,797
1896–97 - -	206	889	247	647	388	215	88	69	2,729	342	1,125	4,196
Percentage of increase:												
Last year over first year.	47·1	32·1	49·7	45·4	51·0	23·6	−30·7	53·1	35·6	35·2	103·1	48·8
Last quinquennium over first quinquennium.	34·7	25·4	26·0	50·1	44·2	24·4	−21·1	26·3	31·0	31·6	7·1	24·9

19,970. And this increase of what we may call 25 per cent. compares with an increase of 31 per cent. in Bombay, and in Madras, with a smaller number of years as a basis of comparison, 23½ per cent.?—Yes.

19,971. How do you account for the rate of increase being so different in the different provinces?—I think such small differences are unavoidable under the existing provincial system, and would be unavoidable under any system that could be devised; the object of the Government of India at each revision has, however, been to modify the settlements so as to make them equal as far as possible. The tendency during the continuance of one provincial settlement may for various reasons, be to give one province a greater advantage than another, and the whole of the advantage resulting from that tendency cannot be summarily annulled at the end of the contract, but the Government of India has in the revision always taken into consideration the advance that has been made by a province during the term of the last contract. The case of Bengal is a very good illustration of that. It will be seen that a very large portion of the advantage in Bengal accrued in the first quinquennial period. The result has been that in the later quinquennial periods Bengal has not advanced so fast as the other provinces have, and this result has been intentionally brought about.

19,972. Might I describe the object of the Government of India as being not so much uniformity, but to give the different provinces equality of advantage?—Yes, I think so; I think that would express the intention of the Government of India.

19,973. I should like to ask a few questions as to the details of provincial expenditure. Now, education in Bombay shows an increase of 58 per cent. in the four periods, in Madras nearly 45 per cent., there being only three periods on which the comparison is based, and in Bengal 44 on the four periods. This increase is very large, but is not the complaint of the native witnesses rather that the sum set aside for education is too small in itself?—They certainly did advance that as one of the grounds of complaint, but the impression that I derived from their evidence was that the chief objection taken by them was based rather upon a comparison of the increase in provincial expenditure with the increase in the Imperial expenditure. A great part of their evidence was devoted to showing that the Imperial expenditure had increased at as large a rate as, or at a larger rate than, the provincial expenditure, and, as far as that is concerned, I submit that the figures do not bear out their contention.

19,974. Quite so, but the conclusion to which your figures point is that the increase on education has probably been as great in proportion, if not greater, than that on any other head of service?—Yes, I think so.

19,975. But do you not think that their criticism was upon the fact that the total sum set aside for education in the Empire was, at the starting point, so very

small?—It is undoubtedly the case that under education, as well as under many other heads, the expenditure is, from one point of view, small, and might be increased with advantage, if unlimited funds were available; but that seems to me to be hardly a practical question. Perhaps I might read an extract from a letter of the Government of India to the Government of Bengal, which will acquaint the Commission with the Government of India's views upon that point.

19,976-7. Yes?—They say: "The Government of India "have no doubt that in Bengal, as in other provinces, "there are very many projects of expenditure which "are pressing themselves upon the responsible "Administration, and against which, as suitable and "desirable in themselves, the Government of India "have absolutely no objection to raise. But the sum "of this desirable expenditure, taken all over India, is "so vastly in excess of any possible means of meeting "it, and of the amounts which the taxpayer of India "can fairly or reasonably be required to make good, "that the Government of India are repeatedly obliged "to refuse to meet the demands of local governments "and of departments, not because they in any way call "in question the advisability of the proposals of expenditure laid before them, but because they do not "consider it consistent with sound policy to admit "them for the present as burdens upon the public "treasury." And again, in the same letter, they say, with reference to the principles and practice of the Provincial system:—"In your present letter "these principles and practice are set aside, not "only in matters of detail, but even in their broad "and general aspect. Under the head of Education, "the Provincial Government demands an assignment of Rs. 3,24,000 more than was proposed "by the Government of India; under Medical, of "Rs. 1,00,000 more; under Civil Works, of "Rs. 14,60,000 more; and under the general description of 'Undistributed,' Rs. 3,50,000 more; under "Contributions to Local Funds, of Rs. 4,15,000 more; "total, Rs. 26,49,000, mainly because it considers it "desirable that the scale of Provincial expenditure "should be in the future increased beyond its present "standard by these amounts. As to whether the "proposed expenditure is desirable or not, the "Government of India, as above explained, express "no opinion; they merely say that the settlement of "the Provincial allotment of revenue is not the matter "in connection with which the question can be "discussed. But it is surely an inversion of the "whole principle and history of Provincial finance "that one of the wealthiest provinces of India, after "enjoying for five years an assignment of revenue "which not only met all its current demands, but left "a large and increasing balance to the good, suddenly "discovers that this ample revenue requires to be "largely supplemented, and makes a demand for an "addition of 15 or 20 lakhs of rupees (the precise "amount depends upon the estimate of railway "earnings) to be made up from the common purse—"that is, by the taxpayer outside Bengal as well as "within Bengal—at the very moment when that "common purse is being strained to the utmost to "meet the demands of a dire calamity, and is called "upon to furnish many tens of lakhs of rupees to feed "the famine-stricken peasants within the area of "Bengal itself. The Government of India can only "say that the present is not a time when these "demands can be entertained."

19,978. That is a perfectly intelligible statement of the case of the Imperial Government, namely, that they have only a certain sum available for all the services of India, and that that sum in all probability is not sufficient to meet what may be called the legitimate demands of the provinces; but I wanted to elicit your view upon what I take to be the criticism of the native witnesses, namely, that the whole expenditure on education in India is very much too small. I think there can be very little question upon the point to which you have called attention, namely, that there has been a very large increase, proportional increase, on education within these 20 years, but that would not touch the question whether the initial sum upon which that percentage is based was not comparatively insignificant. For example, Rx. 210,000 in Bombay was the initial expenditure on education?—Yes.

19,979. Rx. 183,000 in Madras and Rx. 257,000 in Bengal. Now, I take it the critics say that that Rx. 650,000 was a totally insufficient sum to be devoted to education?—The Government of India, in the extract which I have read, say that they do not profess that the scale of expenditure is in every case adequate, but they think that the actual distribution must be judged with reference to the total resources of the Government of India; if, then, the expenditure on education is to be increased, it merely means either that the expenditure on some other Department must be decreased, or that there must be additional taxation.

19,980. (*Sir Andrew Scoble.*) I see, Mr. Jacob, that in one of your tables (Table A.)* you show that the expenditure on education in India has gone up from Rx. 939,000 in 1882-83 to Rx. 1,303,000 in 1896-97?—Yes.

19,981. And that shows an increase during that period of Rx. 364,000 and the percentage of that increase is 39?—Yes, that is so.

19,982. So that that would seem to show that the claims of education had not been in any way neglected by the various Governments throughout India?—That is the argument which I wish to submit to the Commission. As to whether the starting point was adequate or not, I do not suppose anybody would say that it was absolutely adequate; but I think, keeping in view the available resources, that the additional assignments which have been made for education show that the Local Governments have appreciated the necessity of increasing that expenditure wherever they could.

19,983. As far as their means permitted?—As far as their means permitted.

19,984. (*Sir James Peile.*) I suppose the initial expenditure on education would depend on what the British Government found at the beginning of its rule in India?—Yes, and if we go back to an earlier period than that comprised in these tables, the increase has been something tremendous. The expenditure on education in 1856-57 was only Rx. 212,000; in 1895-96 it had risen to Rx. 1,536,000—that is to say, that in those 40 years it has grown by six times as much as it was.

19,985. (*Mr. Mowbray.*) Is there any charge for education, which is Imperial and not provincial, in addition to these?—Only in Upper Burma and in a few of the very small provinces, such as Ajmere and Beloochistan, where the expenditure is charged as Imperial, though it is really the expenditure of the provinces.

19,986. (*Chairman.*) That argument of the increase might be applied in other States. If you go back 60 years with us, the charge of education has risen from *nil* to very many millions?—That, I would submit, strengthens my argument. No one could suppose that India now is at all in the condition in which England was at the time when a system of general compulsory education was adopted; and, as far as I can recollect, the expenditure in India upon education from the public purse is far in advance of what it was in England before the system of compulsory education was adopted.

19,987. Still, do you think that the Indian Government, supposing that there had been no increase in the charge of exchange and no increase in the Army, would have wished to increase to any great extent the expenditure on education?—I have no doubt they would have increased the expenditure on education to some extent, if they had been in those happy circumstances.

19,988. I am looking at the criticism made, as I understand it, that the expenditure on education in India is too small?—Yes.

19,989. The question is, do the Indian Government think that India does not need expenditure on education to the same degree that, we will say, we have it here, or would they say that they would like, if they had the means, to increase the expenditure on education very much?—I doubt very much if the Government of India would wish, under present circumstances, to largely increase the expenditure from general revenues upon education. I am, however, quite sure that it would not at all attempt at present to make education compulsory. I may add that full advantage is not taken even of the existing expenditure on education. There are many schools supported or aided by Government, which are by no means full. My own experience of district work enables me to say that with absolute confidence; that the educational resources

* Appendix No. 80.

Mr. Stephen Jacob, C.S.I.

July 1897.

which are placed at the disposal of the people are not fullly utilised at present.

19,990. Then merely taking your own view and your own experience of the matter, would you put it in this way, that, if the Indian Government had money at their disposal, they would probably increase the appropriation for education; but that they would not measure the wants of India for education by the same sort of measure that we measure the wants for education here?—Certainly, I should say that.

19,991. Now again Law and Justice show in Bombay an increase of less than 4 per cent., in Madras of 17 per cent., and in Bengal of 25 per cent.; do you think the Indian Government would be satisfied with these figures, bearing in mind the increase of population, or would they wish to increase the appropriation if they had the means?—I doubt if the expenditure on courts would increase very largely, even if the Government of India had more ample means. Of course, there is an increase which is necessitated by the increase of population, and I think that, except in Bombay, the increased expenditure has kept pace with that. There has also been some increase in expenditure owing to raising the salaries of subordinate judges and munsifs, the lower grades of judges, but I do not think the Government of India would raise their pay any higher at present, even if they had the means. I do not think that in the case of law and justice there would be any very large increase except possibly on the construction of court houses, which as it happens would not be classified under the head of law and justice, but under public works; I think more expenditure would be incurred on that account probably.

19,992. Has it not been an objection to measures for separating judicial and executive functions that the expense would be a difficulty?—That is one of the objections, I do not think it is the sole objection; I should say that there are administrative objections which are equally as strong as the financial objection.

19,993. But my recollection is right, is it not, that the Indian Government did plead the increase of expense, as well as other reasons, in the matter?—I think that they would plead that reason, even if they had increased resources; that is to say that I think there are other objects to which they would first apply any increased resources rather than to the separation of the executive and judicial functions.

19,994. Of course, the increase in Bombay of 4 per cent. over 20 years is a very small one?—Yes, that I have already explained in a previous answer (Q. 19,933).

19,995. Perhaps I might ask very much the same question with reference to public works, though I do not know that their case is quite so striking as the other was?—There has been a very large increase in the expenditure on public works; undoubtedly there is room for an almost unlimited increase in that class of expenditure, and to whatever extent the Government of India could make resources available for that purpose I think they would. Good roads and means of communication are very much needed in many parts of India still.

19,996. We have heard from you that such services as irrigation, which are looked upon as of a commercial character, are excluded from those figures?—Yes, irrigation is.

19,997. Therefore it is merely ordinary Government buildings and roads that are included under the public works is it?—That is the chief expenditure. There is also included some small expenditure on the construction of railways, as indicated in the tables.

19,998. Are there any other useful services included under that head?—There are some which are called miscellaneous public improvements, and there is also expenditure on ferries and other means of communication. The expenditure is mostly for improving the communications and for Government buildings.

19,999. You may say that the Public Works as they are put down in your tables are confined to public buildings and communications?—Yes, almost entirely.

20,000. (*Sir Andrew Scoble.*) And water supply—I do not mean irrigation canals, but ordinary supply?—Yes, to whatever extent Government undertakes, that. It undertakes it to a very petty extent only.

20,001. (*Chairman.*) What do you mean by water supply; water supply in big towns?—No, that, of course, is municipal entirely; but occasionally expenditure is incurred on tanks for villages and rural districts.

20,002. (*Sir James Peile.*) Tanks and wells?—Yes.

20,003. (*Chairman.*) Objection has been taken to the quinquennial revisions; what is the reason which leads the Indian Government to prefer that method of adjustment to a more continuous system, say, allotting year by year a certain percentage of receipts to provincial needs?—This matter was one which was dealt with by Sir James Westland in the course of the last budget debate in the Legislative Council of the Government of India. I will, if the Commission will permit me, put in an extract from his speech relating to this point.* But, briefly, his arguments are that while in a country like India expenditure must be progressive, and it is only reasonable to divert a portion of the increasing revenues to meet such expenditure, yet the first and primary claim upon the increasing revenues is that of the taxpayer; and that that claim cannot be satisfied if a permanent contract is made with the Provincial Governments or even if the contract is for a longer period than about five years. Further, the settlement of a permanent contract would involve a dip into futurity, which our financial experience shows us we should be unwarranted in making. Finally, the revisions are not always favourable to Imperial interests; the Government of India is ultimately responsible for the solvency of the Provincial Governments. Where the revenues progress at a reasonable rate, and thus provide sufficiently for the requirements of administrative expenditure, a permanent contract might remain in force; but where this is not the case, and especially where famine or other abnormal disaster occurs the Government of India must step in and relieve the Provincial Governments by additional assignments, as it has had to do in the current year. The contracts, therefore, if made permanent, could only really be so in cases in which such permanency favours the Provincial Government. The periodical revision of the contracts is accordingly an absolutely necessary part of the provincial contract system; and it does not seem possible to lengthen the term of revision beyond the period now prescribed. His Excellency the Viceroy dwelt at some length on the same question and concluded his remarks upon it as follows:—"Whatever "the Imperial assignment, be it a larger or a smaller "proportion, I maintain that the Government of India "will fail in its duty if it does not retain a constant "and strict control over it. Remember, every assign-"ment of this kind is a direct hindrance to the "remission of taxation. So long as the same body "imposes the taxation and is responsible for the "expenditure it can be called to account if taxes "become excessive; and it will always bear in mind "the necessity of diminishing, if possible, the imposts "on the people. The tying up of a large part of its "income by its permanent devolution to a spending "authority, which is not also a taxing authority, "directly diminishes these incentives to economy, and "the inevitable result is that growth of income is "used for increase of expenditure and not for remis-"sion of taxation." It is true that in recent years the Government of India has not been able to remit taxes but has been obliged to impose fresh taxation to meet its expenditure, owing largely to the fall in the rate of exchange. But the above arguments apply with equal force to this state of affairs also; for, but for the power of revision, the additional taxation would necessarily have been greater.

20,003A. Therefore, the Government of India hold that the system of periodical contracts is necessary to that control which the Imperial Government ought always to keep over the disbursements of revenue?—I think so; and I think that they hold that even in allowing a five-yearly contract, they are going to the very extreme limit of the relaxation of that continuous control.

20,004. And, therefore, they uphold the system of periodical contracts not merely as expedient for administrative purposes, but as a question of financial principle?—I think so.

20,005. (*Mr. Mowbray.*) I see that in your paper, Mr. Jacob, you refer to a possible idea of separating education and making a permanent and fixed grant in regard to that?—Yes.

20,006. May I ask how far you think such a proposal is open to the objections which you have already

* *See* Appendix No. 84.

been detailing as expressed by Sir James Westland and the Viceroy?—I do not think it is open to those objections at all. The Government of India has under consideration a scheme. I think I can hardly say more than that; it was mentioned by Sir James Westland in the budget debate, but he took care to state that it was only his own view at present. I know from subsequent communications that I have received that it is certainly now under the consideration of the Government of India. Whether it will be adopted ultimately in the particular shape which Sir James Westland sketched or not I do not know; but this is the shape in which it suggests itself to Sir James Westland. It is a scheme for separating off certain classes of expenditure (such for instance as education, medical and public works, and possibly a few others), and making for them a certain fixed and permanent assignment from the general revenues, requiring any future additions to be made either by the development of existing local taxes or by the imposition of new local taxation. If this were done, this expenditure might be treated as separate from the general expenditure, as indeed, a separate branch of finance completely under the Provincial Governments and the Councils, and the expenditure might then be developed independently of the condition of the general finances. The scheme is, however, at present, quite in an embryo state, and it is impossible to say yet whether it can or will be adopted.

20,007. But how far is a scheme of that kind free from the objections which you have been urging against the general fixing of a permanent assignment?—I do not think there would be any objection to fixing a permanent assignment if it was a fixed assignment. The objection, as I conceive, is to allowing for such purposes an assignment of a percentage of the revenues.

20,008. Of a percentage of the revenues?—Of a percentage of the revenues, which would steadily increase.

20,009. And the idea of this proposal would be a fixed permanent grant and not a percentage of revenue?—That is the general idea. I believe that Sir James Westland also entertains the idea, in order to admit of a very small increase, of possibly allowing a very small assignment of revenue under some specified head to be given for these purposes; but, if the proportion assigned were very small, the objections to it would be minimized.

20,010. Would it not take out of the hands of the Imperial Government the possibility of making a remission of the taxation?—It would perhaps to a small extent; but if the percentage were only very small, say only two or three per cent. of any particular head of revenue, it would not seriously hamper the Government of India in making a remission of taxation; whereas now about one-fourth of the revenue, you may say generally more under some heads and less under others, is assigned to the Provincial Governments and an assignment so large as that might really form a serious obstacle in dealing with the whole revenue.

20,011. And, in fact, it is free from the objections which you have been urging, because it is only proposed to put it in force on a very small scale?—Yes.

20,012–3. *(Chairman.)* Would not that be an important measure? Take the progress of education from the figures which you have put before us over these 20 years, and which was very striking, showing an increase over 20 years of between 40 and 50 per cent. Under such a plan as that which Sir James Westland sketched out there would be hardly any room for an increase of that kind, would there?—His intention is that the assignment from the general revenues for, say, education, is to be fixed, not the expenditure on education; but that any further increase, that might be required, would have to be made up from local taxation. The requisite taxes would be raised by the Provincial Governments. They would then feel the pinch, which they now do not feel, of having to provide the resources as well as spend the funds.

20,014. That is intended to meet the very sound financial objection of the Governor General that the disbursing and the raising of taxation ought to be in one hand?—Yes.

20,015. Or, rather, ought not to be in different hands?—Yes.

20,016. But, apart from this question of principle which leads the Indian Government to prefer the system of periodical contracts, would you not consider from the figures which you have put before us that the Provincial Governments would rather have lost than gained if a self-acting rule had been in force?—I think that is certainly the case; they have gained by the present system, as compared with a system under which they would receive a fixed percentage of the total revenue.

20,017. That is to say, your figures show that during this period the assignments of the Provincial Governments have increased in a greater ratio than the Imperial?—Yes, but I think that the so-called self-acting rule would be unworkable in practice for the reason which, I think, I have already quoted from Sir James Westland's speech, that the Government of India is ultimately responsible for the finances of the Provincial Governments, and that, if a definite percentage were assigned to them, the Imperial Government would have ultimately to make good any deficiency resulting from the contract.

20,018. The argument that Provincial Governments are "shorn" in these revisions is not confined to the Indian witnesses who appeared before us. They appear to have had some reason for relying on that plea, inasmuch as the Provincial Governments themselves advance it. How do you account for the responsible Provincial Governments advancing that argument if there is no ground for it? They, of course, had or could have had the true figures on which you rely before them?—Before answering that question, I would venture to submit that the expressions used in this connexion are certainly exaggerated. The term "shearing," which your Lordship has quoted, implies much more than what the Government of India can, on any reasonable view, be described as doing at the time of revision. "Shearing" implies that the whole of the increase accruing between two periodical revisions is taken away and that the finances are reduced at the second revision to the same dead level of revenue and expenditure as at the preceding revision. The figures which I have laid before the Commission show that that has not been, in any instance, the case. But I am very glad that your Lordship has asked me the question, because it enables me to give a reply to objections which less well-informed criticism would probably bring. Your Lordship's Treasury experience must have led you to arrive at the conclusion that the description of Treasury action which would be given by the heads of other Departments would not be that which would commend itself to the Treasury, or even to an impartial critic. In respect of the apportionment of the general revenues the heads of the Provincial Governments are at the periodical revisions very much in the same relation to the Government of India as the heads of the spending Departments in England are to the Treasury. They, themselves, as soon as the revision is complete, come into the position of being the financial authority responsible for the proper distribution of available resources, and in their dealings with their heads of Departments they have then to assume very much the same position as the Government of India assumes with regard to them. It must be borne in mind that at the revision the Provincial Governments are arguing for an increase of their share of the total resources at the disposal of the Government of India. They have constantly brought before them important projects of expenditure, and these are pressed upon them now-a-days, not only by the heads of Departments but by the members of the Legislative Councils, who, in recent years, have been assigned a much more independent position than they had a short time ago. Sir James Westland referred, in the last Budget debate, to the pressure which was put upon Provincial Governments in this way as a danger to provincial finance under existing circumstances. Then, impressed as they are with the importance of these projects, they find their resources cut down, for, undoubtedly, at the time of revision there is an immediate cutting down of provincial resources, not indeed to the same level as at the beginning of the previous contract, but to an appreciable extent as compared with the resources which were in the hands of the Provincial Government in the previous year. This reduction of resources looms large before the head of a spending Department or of a province, and obscures his vision of the very real progress which has been made in the past, and of the higher standard from which each fresh revision starts, facts which are clearly established, I would submit, by the figures which I have laid before the Commission.

20,019. Of course you will observe that the arguments laid before us by the native gentlemen who have

Mr. Stephen Jacob, C.S.I.

21 July 1897.

appeared before us derived considerable force from the fact that they seemed in some cases to be little more than a repetition of what the Provincial Governments themselves have stated?—That is undoubtedly the case, but I have here an extract, which I should like to read to the Commission, if they would permit me—it is not a very long one—from a review by Sir Charles Elliott of the Provincial Finance during his five years tenure in Bengal; which will show, I think, that even in the view of a Provincial Government and of a Governor so well informed as Sir Charles Elliott, the Province of Bengal has made very considerable progress during one five yearly period: The extract is as follows:—"Notwithstanding this drain upon the provincial "resources, the Lieutenant-Governor is glad to be able "to look back upon a substantial array of administrative "improvements which have been carried out within "the period under review."

20,020. What is the drain of which he is speaking?—That is rather an interesting point; that was the drain which Mr. Banerjea mentioned as a special levy from the Bengal Government. There was one special of ten lakhs of rupees from the Provincial Government during the period, and this, which Mr. Banerjea called another special levy of 67 lakhs, was not a special levy at all. The special drain referred to appears to have been the total amount for five years of the fixed sum which was under the terms of the provincial contract with Bengal was deducted from the percentage of the land revenue—25 per cent.—assigned generally to Provincial Governments. In some cases, this percentage gives a Local Government slightly more, in other cases slightly less than is necessary to balance its revenue and expenditure; and the Government of India at the time of settling the terms of the contract makes a fixed deduction from or addition to the Provincial Revenues as the circumstances may require. This sum of 67 lakhs was made up of these fixed sums taken back from the Bengal Government during the whole term of the contract. They were not a special levy at all; but were taken under the terms of the contract itself.

20,021. They were part of the contract?—They were part of the original contract.

20,022. (*Sir James Peile.*) Have we anywhere in the evidence a list of the special levies which have been taken from the provinces from time to time?—Yes, they are given in the Appendix.

20,023. And I suppose the return shows what levies were refunded afterwards?—Yes.

20,024. (*Chairman.*) And this ten lakhs?—This levy of ten lakhs is shown in the Appendix.*

20,025. That was refunded afterwards, was it not?—No.

20,026. That has never been refunded?—No.

20,027. And that was levied under circumstances of great pressure; it was a demand upon the local assignment to meet the pressing demands of the general government?—Yes.

20,028. And it has not been refunded?—No; I may say that this extract is in immediate continuation of what Mr. Banerjea quoted in regard to the 67 lakhs. Of course it did not suit his purpose to make this further quotation.

20,029. (*Mr. Mowbray.*) In which year was the ten lakhs levied?—1890-91. Sir C. Elliott continued:—"Three new districts have been created; the number "of subordinate judges and munsifs has been increased; "an additional judge has been appointed for the eastern "districts; the ministerial establishments of judicial "officers have been strengthened; and the number of "rural sub-registrars has been increased. The police "has been reorganised mainly on the lines suggested "by the Police Commission of 1890, at a total cost "of more than five lakhs per annum; a school for the "training of police officers has been opened; barracks "have been built and improved; special reserves of "armed police have been created in every district to "meet local emergencies, and the French system of "identifying criminals by measurement has been "introduced. The gaols at Buxar and Bhagalpur have "been enlarged; the Hazaribagh gaol has been converted into a central gaol; special committees have "been formed for the purpose of conducting systematic "inquiries into the condition of the less healthy gaols, "and the water supply of all the gaols has been "examined and improved. A large block of buildings, "to be devoted to the study of anatomy, has been "added to the Medical College, and numerous minor "improvements have been made in the buildings of "that institution; surgical and mid-wifery wards and "a dispensary have been constructed at the Campbell "Hospital; a new hospital is under construction in "the south of Calcutta; the Vaccination and Sanitary "Departments have been completely reorganised; a "second vaccine depôt has been opened at Darjeeling "and is now extending its operations to Nepal; "quinine has been brought, through the Post Office, "within the reach of the poorest classes, and the "supply has been increased by the purchase of a "fresh plantation at Nimbong, near Darjeeling. The "system of weighing salt has been improved, and the "salt warehouse at Sulkea has been connected with "the East India Railway, so as to facilitate the export "of salt by rail. Under the head of Public Works the "period has been one of considerable activity. In "Calcutta a new police court, an office for the Presidency Commissioner, the Collector of Calcutta, and "the Collector of Income Tax, and two new buildings "for the Stamps and Stationery Departments have "been built, a fresh wing has been added to the "Indian Museum, and the Small Cause Court has "been greatly enlarged. In the Mufasal a large "number of Government offices have been built and "extended, and quarters have been provided for "several officials in places where houses were not to "be had. Feeder roads have been opened in connexion "with several railways, and a definite scheme has been "worked out for future operations in this direction. "Material help has been afforded to the backwood districts of Palamaw, and the Sonthal Parganas towards "new and improved roads; the communications of the "tea districts of the Duars and Darjeeling have been "improved, and a great number of bridges have been "constructed on provincial roads. During the current "year a large project, the canalisation of the Bhangor "Khal, has been undertaken, which will improve the "boat route to Backergunj, and extend the facilities "for traffic with Eastern Bengal generally. The "Orissa system of canals has been extended, and the "Hijili Tidal canal remodelled. Particular attention "has been given to the construction of distributaries "and the collection of irrigation rates has been "improved. In the Education Department Provincial "money has been spent on improving the teaching at "the Sibpur Engineering College, and adding to it a "class for mining engineers, and a new set of workshops has been constructed for the practical training "of the students; a veterinary school and hospital has "been created in Calcutta; primary and female education have been extended; an industrial school has "been opened at Patna; a new school for European "boys is being constructed at Kurseong; a chemical "laboratory has been added to the Presidency College; "a new building provided for the school of art in "Calcutta; and finally large additions have been made "to the Eden Hindoo Hostel, and the Calcutta Madrasa "boarding-house has been begun with the object of "providing suitable accommodation for all or a large "portion of both Hindoo and Mahomedan students. "The list is a long one, but, were it twice as long, much "would still have been left to do. Where the claims "to assistance are so numerous and so pressing as they "are in Bengal it is clearly out of the question that "all should be met. The utmost that the Government "can hope to accomplish is to allot the limited resources at its disposal as far as possible in accordance "with the relative urgency of the demands which are "put forward. Sir C. Elliott trusts that he has "applied this principle as equitably as circumstances "permitted. He leaves the Provincial Finances in a "condition of exceptional prosperity, and he rejoices "to think that his successor will be able to utilise "the large balance with which the present year will "close in carrying out some of the projects and "improvements which he himself has been unable to "complete."

20,030. (*Chairman.*) Well, that is the Provincial Governor reviewing the period of his administration?—Yes.

20,031. And showing the very considerable progress that has been made during that period; but you find that to be somewhat at variance with what the Lieutenant-Governors or the Governors have expressed to the Central Government when it was a question of trying to get more money?—Yes.

* *See* Appendix.

20,032–3. And you look upon those expressions, then, as arguments rather *ad hoc*, addressed to the particular object that they had in view?—I think so.

20,034. In one of your memoranda you comment upon the answer of Professor Gokhale to questions 18,107 and 18,109?—Yes.

20,035. What you say there represents the position of the Governments when they are not reviewing what they have done themselves, but when they are applicants to the Imperial Government for larger grants?—Yes.

20,036. Perhaps you will read that comment?—It is undoubtedly the fact that some heads of Provincial Governments do not approve of the working of the Provincial contract system, and especially of the periodical revisions of the assignments made for Provincial Expenditure. The Lieutenant-Governor of Bengal and the Governor of Madras have both expressed an unfavourable opinion of the working of the system.

20,037. Was that Sir Charles Elliott?—No, the Lieutenant-Governor referred to is Sir A. Mackenzie; this criticism was quoted by one of the witnesses. The Governor of Madras—the present Governor—has characterized the system as "demoralising both to the Provincial and Supreme Governments." He said, in a speech in the Provincial legislative council, "It "appears to me the contract system, so called, is bad "in itself, and is demoralising both to the Provincial "and Supreme Governments. It is bad, as each "revision as it takes place has a terribly disturbing "effect on the local administration, especially in the "important department of public works, to which the "pruning knife has to be constantly and ruthlessly "applied. It is demoralising to the Provincial "Government, because it tends to impair that "sympathetic co-operation between the Supreme and "Provincial Governments, which is very desirable, and "because it tempts the Provincial Government in its "financial relations with the Supreme Government, "which is master of the situation, to have recourse to "the tactics of the weak. When we are well off we "try to hide our money, and spend it recklessly, lest "the Supreme Government should lay its hands on it; "when we are poor we try and give undue emphasis "to our poverty. The system is demoralising to the "Supreme Government, because it relieves that "Government of the consequences of its extravagance. "I am of opinion that the financial condition of this "Presidency will never be satisfactory until a larger "degree of financial independence and control is "conceded to the Provincial Government, and until "some arrangement more constant and permanent "and less one-sided than the present contract system "has been adopted." That is certainly the view by certain Provincial Governments, but I think the figures which I have submitted with reference to Madras, for instance, will show to what extent the Commission can uphold the view of the Governor of Madras that in the important Department of Public Works the pruning knife has to be constantly and ruthlessly applied. The figures which I have submitted show that in Madras the expenditure on Public Works has increased very largely even in the short period reviewed in the tables I have drawn up.

20,038–9. You will quite understand the effect that such arguments as those used by the heads of the Provincial Governments must have; and you would probably admit that you would not be surprised that native inquirers into these matters should be struck by such statements coming from an official authority, and should use them?—I think there is great force in that consideration. I am not at all surprised that these arguments should be adopted. But I happen to have by me a remark as to the working of the Treasury control made by just as responsible an official as any of those who have spoken in India, which describes the Treasury control in the following way:—This is what the witness said: "In large matters I think the "control of the Treasury Department might be in-"creased, in small matters I think it is a pity that it "is increased. It has given rise to much work and "large expenditure, and no advantage."

20,040. And that you put forward as the same kind of criticism made by a high officer here upon the control of expenditure here?—Yes, it was made by Sir Ralph Knox in the evidence given before the House of Commons Select Committee on Army Estimates in 1887.

20,041. The point being that too much stress should not be laid upon such arguments of administrative officers when they are pleading for a particular point?—Yes, I think you have to consider what the particular object they have in view is.

20,042. But now let us come to the real answer which, I take it, you put forward to these pleas, whether they come from the native gentlemen who have appeared before us or from the Provincial Governments. You point out by those figures which you have very effectively put before us the very large increase which has taken place in Provincial assignments over the period to which you call attention?—Yes.

20,043. And that those assignments have really considerably exceeded the ratio in which the general revenue, from which those assignments are made, has increased?—Yes, that is so; that is the general argument; in fact, the Government of India in dealing with the Provincial Governments, might adopt, almost word for word, Sir Charles Elliott's summing up of his dealings with the various Departments under his care.

20,044. (*Mr. Mowbray.*) Do you think there is any justification for the suggestion made by the Governor of Madras and some of the witnesses, that in the last year of the quinquennium unnecessary expenditure is incurred in order to make the position of the Provincial Government appear better when it goes to the Central Government to have those terms revised?—I think there is a tendency to that; I should not suppose it can occur to any very large extent. I think your Lordship will bear me out that it is the fact that in England, as well as in India, there is a similar tendency even under the annual Budget system; that is to say, that the departments which have a Budget grant try to spend the balance of that Budget grant at the close of the year, with the view of getting the money while it is appropriated to them, as the Budget grant lapses at the close of the year. The tendency is controlled as much as possible, but it certainly does exist. I do not, however, think it occurs to any so great extent as to vitiate the Provincial contract system; and I would urge that the figures that I have submitted show that there is, as a general rule, no such great difference between the expenditure in the last year of a contract and in the first year as would support that argument. If the figures are looked at, it will be seen that there is no very great difference between the expenditure in the last year of one contract and the first year of the succeeding contract.

20,045. The increase, such as it is, is normal, and not exceptional for the purpose of making better terms?—There is very small expenditure, I should say, for that purpose.

20,046. (*Chairman.*) I think your instance is a very fair one. In my experience, I should say, that the great spending departments do press their expenditure in the last month of the year as far as they can, because their grants lapsed at the end of the year, which is very much the position in which the Provincial Governments stand in India; namely, their grant terminates at the end of five years?—Yes.

20,047. It is only human nature that, if they have balances available, they should try to spend them?—Yes.

20,048. I should not attach very great weight to that argument, provided always that there is a watch kept over this expenditure. Here, a watch is kept over it by our Comptroller and Auditor-General, who promptly reports to Parliament if there is any very abnormal expenditure in the last month?—Yes.

20,049. He is perfectly aware of the tendency, and looks very strictly at the orders given and notes how far the expenditure is abnormal. I do not think you have that check in India; but at the same time you have the check of the Imperial Government, which, I suppose, would notice if a Provincial Government at all played ducks and drakes with the money?—Practically, no large scheme of administrative public expenditure could be matured and brought into force within a year. If any exceptional expenditure of that kind is contemplated, it would probably require the sanction of the Government of India, and the Government of India would be able to control any abuse of the system in that way. Any extra expenditure incurred is usually on public works, which does not involve the Provincial Government in any recurring expenditure, but simply uses up its balances for the time being.

Mr. Stephen Jacob, C.S.I.

21 July 1897.

20,050-1. It has been stated that under the present system the allotments to the various provinces are not fixed on any fixed or intelligible principle. I think, in answer to a former question, you have met that objection to a certain extent when you have pointed out that the contract system was engrafted on the previous system, and that the Indian Government was endeavouring to bring the system in the various provinces more or less together?—Yes.

20,052. And I will only ask whether anything occurs to you further to show that that argument is not a well-founded one?—I should say, in answer to that argument, that it is an undoubted fact that the original allotments were made on the basis of existing facts. The plan adopted by the Government of India was not that of setting up a theoretical standard of expenditure for all provinces, and endeavouring to introduce it suddenly and at once. Any such changes must be introduced gradually, and the Government recognised this. But it was one of the main objects of the decentralisation scheme to get rid of the haphazard allotment of resources in the future, and starting, as they must, from the existing state of things, to introduce a plan under which the local governments would be able gradually to develop their resources and to expand their expenditure on useful objects. If the local governments are at each revision to press their claims to a consideration of what they deem the requirements of their provinces, and to demand additional resources to meet these requirements the so-called allotment by clamour would continue in force; and, further, the taxation would on the whole be largely increased. The Government of India has indeed had to meet this argument in the recent recent revisions of the Provincial settlements, and I have already quoted some of the remarks they made with reference to it.

20,053. That concludes all the questions which occur to me on this question of the Provincial Expenditure. I do not know whether there is any point which I have omitted to which you would like to call attention?—I do not think there is any other of importance, so far as I can judge.

20,054. Then I think we will now pass on to the second point which I have mentioned, namely, the admission of natives to the higher appointments in the public service. The Indian witnesses urged that natives of India should be admitted in greater numbers to the higher branches of the public service. The Commission would be glad to learn from you, in view of this evidence, whether the Indian Government is extending the employment of natives in the higher offices?—The Government of India is certainly extending the employment of the natives of India in the higher offices. A considerable portion of the evidence of the Indian witnesses has been taken up with the discussion of this question, and with criticism of the action in this direction of the Government of India. Mr. Banerjea, however, at the close of his evidence, admitted that much had been done, and that some progress had been made, and his final criticism came to this, that more might have been done and that the progress should have been faster. I think, therefore, that the course the Commission would prefer I should adopt in my evidence is not to follow the witnesses through their detailed criticisms, but merely to lay before the Commission a statement of fact, showing as briefly as possible, in the case of each important Department, what are the orders of the Government of India now in force for the more extended employment of natives in appointments of the higher grades. It must, of course, be borne in mind that full effect can be given to these orders only by degrees. For the extended employment of natives new appointments have not been created, certain appointments formerly filled by Europeans are in future to be filled by Indians; but when the orders were issued these appointments were held by Europeans, and neither can they be dismissed at once to make room for Indians, nor can their reasonable prospects of future promotion be disregarded; vested interests must be respected, and the new scheme can be introduced, for the most part, only at the bottom of the scale, and as vacancies occur. Further, in some Departments, where technical skill or knowledge is required, the recruitment is necessarily limited by the number of candidates who may qualify themselves by special professional training for the duties of those Departments. In every case, therefore, some years must elapse before the scheme can be introduced in its entirety, and in some cases the period may extend to 20 or 30 years; but the orders, which I propose to bring to the notice of the Commission, show the goal at which the Government of India for the present aims, and the extent to which natives will eventually be introduced into the higher branches of the service without any further orders being passed. Should the Commission care to acquaint itself with the earlier history of this question, I beg to refer it to the Report of the Public Service Commission (especially Chapter III.), and to the correspondence relating to that Report which was presented to both Houses of Parliament in 1890 (No. C.—5,926). I do not propose to abstract the correspondence which has subsequently taken place, but merely to state the final orders which have been issued in respect of the principal Departments as the outcome of that correspondence.

20,055. Perhaps you will state to the Commission the outcome of that correspondence, and take first the Executive and Judicial Departments?—In each province a Provincial Service has been established, consisting of the old class of subordinate judges, deputy collectors and extra assistant commissioners, and of certain appointments previously reserved by law or practice to the Indian, formerly called the Covenanted, Civil Service. It is in respect of these latter that a concession is made to natives (the concession being in the case of these Departments in substitution for that made by the Statutory Civil Service, appointments to which are now discontinued). I put in a list showing for each province—other than Assam and Burma, which are not yet ripe for the introduction of the Provincial Service System—the officers transferred from the Indian Civil Service to the Provincial Civil Service, and their pay, which has been fixed in round numbers at about two-thirds of that drawn by Indian Civil Servants in similar posts.

Appointments.	Madras.	Bombay.	Bengal.	North-West Provinces.	Punjab.	Central Provinces.	Total.	Monthly Pay.
1. Heads of districts -	2	2	4	2	2	1	13	Rs. 1,000 (except in Madras and Bombay), and Rs. 1,200, and Rs. 1,600.
2. Sub-collectors, joint-head-assistant and assistant collectors and assistant commissioners.	7	9	8	9	3	2	38	Rs. 300–700 (but varying in the different provinces).
3. Secretary to Board of Revenue or Financial Commissioner.	1	—	1	1	1	—	4	Madras, Rs. 1,000; Bengal, Rs,1,200; North-Western Provinces, grade pay, plus Rs. 150; Punjab, Rs. 600.
4. Settlement and assistant settlement officers.	—	1	—	2	2	1	6	Punjab, Rs. 800 and Rs. 1,000; Bombay, Rs. 800; North-Western Provinces, Rs. 500 and Rs. 700; Central Provinces, grade pay plus Rs. 100.
5. Assistant-Director of Land Records and Agriculture.	—	—	—	1	-	—	1	Rs. 400–500.

Appointments.	Madras.	Bombay.	Bengal.	North-West Provinces.	Punjab.	Central Provinces.	Total.	Monthly Pay.
6. District and sessions judges, and divisional judges.	4	2	6	4	2		18	Rs. 1,000–1,600, Madras, Bombay, and Bengal, and Punjab; Rs. 1,000–2,000, North-Western Provinces.

9. Small Cause Court judges.	—	—	—	2	—	2	4	North-Western Provinces, Rs. 800 and Rs. 1,000; Central Provinces, Rs. 700 and Rs. 800.
10. Registrar of High Court.	—	1	—	—	—	1	2	Central Provinces, grade pay plus Rs. 100.
11. Under-Secretary to Government.	1	—	1	—	—	—	2	Rs. 700.
Total - -	15	18	20	21	12	7	93	

The appointments shown against item 2 have been amalgamated with the grades of Deputy Collector and Extra Assistant Commissioner. In the other cases there is no fixed number of appointments in each grade, the members of the Provincial Service rising *pari passu* with their contemporaries in the Indian Civil Service. Besides the appointments shown above and actually listed for the Provincial Service, members of that service are also eligible for higher posts, such as high court judgeships, commissionerships, and memberships of the Board of Revenue. Every appointment to the higher grades of the Provincial Service is to be based wholly upon fitness and merit, seniority being regarded only where the claims of two or more officers who are equally fit come into competition. Statutory Rules under 33 Vict. c. 33. s. 6., have been framed and published to give effect to these orders. These rules require the sanction of the Government of India to any other than merely temporary appointments (of three months duration) to the office of District and Sessions Judge or Chief Administrative Officer of a district or to any higher office.*

20,056. Are we to understand that the Provincial Service consists entirely of natives?—It consists almost entirely of natives. The Government of India has the power to appoint Europeans, but it is intended that natives of India should, as a rule, be appointed; and I believe that all the appointments that have been made so far under this scheme have been those of natives of India.

20,057. Therefore, we have in each of the Provinces, as it were, two bodies of services, the Indian Civil Service and this Provincial Service?—Yes.

20,058. And practically, you may say, the Provincial Service represents the native element?—Yes, there are natives, of course, in the Indian Civil Service as well, who have passed in the open competition in England.

20,059. Quite so. That is to say that just as there is the power to appoint Europeans to the Provincial Service, so there is the power to appoint natives to the Civil Service?—Yes.

20,060. There is no absolute block against either race in either service?—No.

(*Mr. Naoroji.*) In the Civil Service they are only appointed if they pass an examination here; it is not that, they have the power to appoint anybody.

(*Chairman.*) Whether it is right or wrong to require it, they have to conform to the rules of the Indian Civil Service, which involves an examination here.

(*Mr. Naoroji.*) So that it is not a power of appointment in the Government.

20,061. (*Chairman.*) Generally speaking, would you give us the effect of this table?—The higher appointments made over to the Provincial Service are heads of districts, 13; district and sessions judges and divisional judges, 18; joint judge, 1; district judge in the Punjab, 2; assistant judges, 2; sub-collectors, joint, head assistant and assistant collectors and assistant commissioners, 38; secretary to the Board of Revenue or Financial Commissioner, 4; settlement and assistant settlement officers, 6; registrars of High Court, 2; Small Cause Court judges, 4; under-secretary to Government, 2; assistant director of land records and agriculture, 1; total, 93.

20,062. Is that the cadre that exists now, or is it what you are aiming at?—This is what is aimed at.

20,063. That is to say, at the present moment we should not find all those posts held by natives?—No.

20,064. Because, of course, you wait till vacancies happen before effect can be given to a new scheme?—Yes.

20,065. I see you put against each of these grades their pay, for instance, the heads of districts, 1,000, 1,200, and 1,600 rupees; are these monthly payments?—Yes.

20,066. Have you any idea of the proportion that this number of 93 bears to the number of Europeans occupying similar positions?—I cannot give the exact figures, but I can give roughly what the proportion of Europeans is to natives in the whole of the executive and judicial departments.

20,067. But would that represent the higher employments, because these are what we are dealing with now, are we not?—It represents those who hold appointments which correspond with the appointments held by the Indian Civil Service either lower or higher.

20,068. Yes, but you see here the lowest pay apparently is 400 to 500 rupees a month?—300 to 700.

20,069. That, of course, comes under the heading of higher appointments?—Yes.

20,070. They are good salaries?—Yes.

20,071. And therefore what I wanted to know is, comparing with that kind of salary and that kind of appointment, what would be the number of Europeans employed?—I have not the exact figures for the Indian Civil Service; but I may say that the whole of the Indian Civil Service used to be taken roughly at about 1,000, but that number has now been somewhat reduced, and it includes natives appointed after competitive examination to the Indian Civil Service as well as the posts eventually to be transferred to the Provincial Service. If you take off about 150 on this account, that would leave eventually about 850 Europeans.

20,072. And how would that compare with those 93?—Well, you would have to add to the 93 about 1,500 or 1,600 posts of the grade of deputy collector, extra assistant commissioner, and subordinate judge and munsif on pay of from 250 or 300 rupees a month to 1,000 rupees a month.

20,073. (*Mr. Caine.*) Would the 93 be included in the 150?—Yes, the 93 would be included in the 150.

20,074. When this scheme is complete it would be as 150 to 850?—That would be about it.

20,075. (*Chairman.*) I understood Mr Jacob to go rather further than that and to say, taking the natives,

* For the table and the above orders *see* Government of India Home Department Resolution No. 9, Public, 1342–1352, dated 21st April 1892; Secretary of State's Despatch, No. 84, Public, dated 31st August 1892; and Secretary of State's Despatch, No. 111 of 17th November 1892, with the Government of India letters to which they reply.

Mr. Stephen Jacob, C.S.I.

21 July 1897.

not, of course, holding the highest employment but holding employments of the higher grade, you would put them considerably above that number?—I was thinking only of the highest posts. In such employment as you mention there would be about two natives to one European.

20,075*a*. That is what I want to come to; we can make the distinction that the highest places are held by Europeans, generally speaking?—Yes.

20,076. But when you come to speak of places carrying what we should call a good salary, and therefore involving responsible work, you would put it that there are about two natives to one European?—Yes.

20,077. Always bearing in mind that the Europeans hold the highest places?—Yes.

20,078. (*Mr. Caine.*) Would that be so in the Public Works Department?—In the Public Works Department eventually; the proportion of natives would be smaller.

20,079. In the Public Works Department?—In the Public Works Department the proportion of natives might eventually be about 300 out of 730, that would be about 40 per cent.

20,080. 40 per cent. natives?—More than 40 per cent. of the whole.

20,081. (*Chairman.*) You only refer to the Executive and Judicial Departments?—Yes.

20,082. When you come to speak of the 1,500 or 1,600, that would be the total of all these Departments?—No, the Executive and Judicial only.

20,083. There are 1,500 or 1,600 of them?—Yes.

20,084. (*Mr. Caine.*) That is the lower appointments which it has never been customary to give to Europeans?—For the last 30 or 40 years or more the majority of these appointments have been held by natives of India, but it is only within the last 20 years that the appointment of Europeans to these posts has been prohibited.

20,085. (*Chairman.*) But, apart from that, what you wish to draw attention to is that under this new system of the Provincial Service the natives will be admitted in larger numbers than hitherto to these higher places?—Yes.

20,086. And you consider that the appointment of 93 natives to the Judicial and Executive Departments is a considerable increase on the number of natives admitted to the higher posts?—As regards the Executive and Judicial Departments, the process has been going on for some time, as I stated before; this scheme is in these Departments merely in substitution for the Statutory Civil Service scheme, and natives have been already introduced in those Departments—into some of the higher appointments.

20,087. Has it not been alleged that this scheme is a more restricted one and not so favourable to the natives as the scheme which you call the statutory one?—That has been alleged, but the objection appears to be in the main a matter of sentiment. The Public Service Commission condemned the Statutory Service, and some change was necessary. As far as pay and position is concerned there is, however, no material difference between the Statutory and the Provincial Service. The line of separation from the Indian Civil Service is, perhaps, more marked in the case of the Provincial Service than in that of the Statutory Service; but even the latter was quite a distinct and separate service, and the difference is one of degree only. That, however, is, I think, the chief difference between the two services.

20,088. Between the two schemes?—Between the two schemes. The officers get on the whole about the same pay under the new scheme—the Provincial Service scheme, as they did in the Statutory Civil Service. It is not calculated in exactly the same way, but roughly it is the same. Under the Statutory Civil Service they get exactly two-thirds of the pay of the corresponding appointment in the Indian Civil Service. Under this scheme the pay is calculated roughly at two-thirds, but generally it is fixed in even hundreds.

20,089. (*Mr. Mowbray.*) Are there as many as 1,000 in the Indian Civil Service? I have a despatch of the Government of India before me here in 1893 in regard to the question of simultaneous examinations in India, and they give the figures there as 890?—I think that is much nearer the figure; I merely stated it in round numbers.

20,090. (*Chairman.*) You merely gave 1,000 as a round figure?—Yes, I could not lay my hands on this despatch at the moment the question was asked me, and I gave an outside round figure.

20,091. (*Mr. Mowbray.*) They then go on: "The "Civil Service of India contains in its cadre, that is, "it is recruited to fill, 898 posts in the Public Service. "Of these 74 are in special or technical Departments, "not concerned with the General Judicial and "Executive Administration of the country. . . . . "Ninety-three have been entered in lists, published in "April 1892 and January 1893, for transfer to natives "of India belonging to the Provincial Service. . . . "Deducting the 93 posts assigned to the Provincial "Service, the cadre of posts at present reserved for "covenanted and military officers is 731"?—Yes, that figure is probably much nearer the mark than that I gave before, but it would leave the proportion roughly at about what I have stated—at about one European to two natives. The figure you quote is 731, and for the natives you have 1,550 plus 93, that would be 1,643, it is rather more than two natives to one European.

20,092. (*Chairman.*) I suppose you put it roundly rather more than two to one of men receiving what would be called in the Public Service a good salary?—Yes.

20,093. You would not carry the comparison further than that, would you?—No, of course the majority of the higher appointments are still to be held by Europeans.

20,094. (*Mr. Caine.*) And promotion to anything higher than those is barred, of course, to this 93?—No, it is not barred.

20,095. It is not barred?—No, they are eligible for promotion to the higher appointments.

20,096. They can become Commissioners?—Yes, they can.

20,097. (*Chairman.*) And then they step into the covenanted Civil Service do they—into the Civil Service?—They would draw the same pay then as the covenanted civilians.

20,098. But would they be transferred into that service or not?—No, I do not think they would be transferrred into that service. They would not get any of the special Civil Service privileges, such as the pension and so on, but they would draw the same pay.

20,099. (*Mr. Caine.*) That is to say, if one of these 93 were promoted to be a Commissioner and he had not passed the Civil Service examination, he would not draw the full pay?—Yes, he would.

20,100. Well, he would draw two-thirds?—No, he would draw the full pay.

20,101. The full pay?—Yes.

20,102. But he would not draw the pension?—No.

20,103. Is there any case upon record in which any of these 93 have got out of this grade into a higher?—Certainly not, the scheme has not been long enough in force; the new recruits have not yet risen to the top of the grade assigned to the Provincial Service.

20,104. (*Chairman.*) But there always are a certain number of natives who do occupy the higher appointments, is there not, as a matter of fact?—Those in the Indian Civil Service, who have passed by competition, do.

20,105. For instance, there are some judges of the High Court, are there not?—A certain number of the judges of the High Court are always natives.

20,106. And are there no other of the higher posts filled by natives?—Not of the highest posts such as the Board of Revenue and Commissioners. There are native collectors and judges already who are members of the Statutory Civil Service and even of the Provincial Service.

20,107. (*Mr. Caine.*) There have been Acting Commissioners, I think, of natives who have passed the ordinary Civil Service, have they not?—Yes, of the Indian Civil Service there has been one to my knowledge; Mr. R. C. Dutt in Bengal has acted as Commissioner.

20,108. (*Chairman.*) I will now run through these Departments and ask you whether there is anything you would like to mention. Take the Opium Department?—No change has been made in the method of recruitment for this Department, in consequence of the suggestions f the Public Service Commission.

20,108*a*-9. May I ask what were the suggestions of the Public Service Commission, I do not mean in detail? — The Commission stated them very briefly in the following passage: — "The Commis- "sion does not advocate the continuance of the "experiment of appointing natives by selection to a "proportion of the vacancies, and recommends that "the future recruitment for the Department shall be "subject to the general principle of equality of "treatment of all classes of Her Majesty's subjects, "and of tested preliminary qualifications which have "been proposed for the Provincial Service." But the Government of India considered, and the Secretary of State has approved of their view, that natives had been so recently introduced into the higher appointments of the Opium Department that it was not advisable at present to increase their employment. Under the rules which have been in force since 1886 every fourth vacancy is filled by the appointment of a native of India of "purely Asiatic descent," consequently one-fourth of the higher posts will eventually be held by natives of India, of pure Asiatic descent. Of the remaining three-fourths a considerable proportion is composed of officers who come within the general definition of natives of India, though they are not of pure Asiatic descent.

20,110. The Parliamentary definition is Europeans, who are domiciled in India, or of mixed blood, is it not?—Yes, it includes those.

20,111. Then next the Forest Department? — The Provincial Service is eventually to consist of 126 officers, of whom 40 are to be transferred from the Imperial Service. This transfer can, however, be effected only gradually. The service is composed of 32 extra deputy conservators, 3 on Rs. 600, 5 on Rs. 550, 11 on Rs. 500, 13 on Rs. 450; 94 extra assistant conservators, 20 on Rs. 450, 22 on Rs. 350, 26 on Rs. 250, 26 on Rs. 200. Of the above total, all the deputy conservatorships, and eight (four in each of the two higher grades) of the assistant conservatorships are to be transferred from the Imperial Service.

20,112. The Postal Department?—This department has, since 1879, been brought under the general rule that only natives of India are eligible, save with the special sanction of the Government of India, for any office carrying a salary of Rs. 200 a month or upwards. The highest appointments, those of Postmaster-General and Director-General, &c., are generally held by members of the Indian Civil Service. The Public Service Commission recommended that a certain number of direct appointments should be made to the supervising grades by competition instead of by promotion from the lower grades, and that three out of the seven highest appointments should be filled by promotion within the department. Both these suggestions have been adopted; the department will, therefore, be manned eventually by natives only, save in the higher appointments, and even of these three will be held by natives of India, whenever men fit for promotion are available.

20,113. The Financial Department?—This Department has always been recruited partially from natives of India. Before the Public Service Commission's Report, every third vacancy was filled by the appointment of a native of India. Now, in addition to these, appointments from the lower grades of the Department (consisting entirely of natives) may be made to the extent of one-third of the remaining two-thirds. The enrolled list of the Department consists of 46 officers, of whom five are appointed ordinarily from the Indian Civil Service, and one Accountant-Generalship is also assigned to the Department. The above orders have therefore increased the ultimate "native" proportion of the strength from about 14 to 23.

The pay of the various grades is as follows:—

	Rs.
Accountant-General -	2,250, 2,500, or 2,750.
Enrolled list, class I. -	1,500.
,, ,, ,, II. -	1,250.
,, ,, ,, III. -	1,000.
,, ,, ,, IV. -	800.
,, ,, ,, V. -	600.
,, ,, ,, VI. -	400.
Probationers - -	200, rising to 300.

Besides these, there are in the Department 13 chief superintendents, all natives of India, on pay rising from Rs. 450 to Rs. 600.

20,114. Therefore there would be one Accountant-General, who would be a native?—The Accountant-Generalship is open to any native member, who will get it *pari passu* with the other members, if he is equal in ability.

20,115. The Financial Department, is that the Central Financial Department of India?—That is the Department which keeps the civil accounts of the Government of India in all the Provinces; it is directly under the Government of India.

20,116. And does it include the officers paid simply to control?—It includes, in the number previously given, the Comptroller-General and the remaining Accountants-General.

20,117. They are in addition to this?—Yes, there are five Accountant-Generals and one Comptroller-General in addition to those already mentioned.

20,118. The Comptroller-General being yourself?—Yes.

20,119. The Accountants-General are immediately under you, and they are Europeans?—One of them may be a native as shown here.

20,120. When you say may be a native, would he probably be a native?—I should think he occasionally would be. There would not necessarily be always one native Accountant-General.

20,121. The Government in India would prefer one to be a native, if he were qualified, may I take it as far as that?—I think they would certainly like to have a native Accountant-General if he were qualified—thoroughly qualified.

20,122. The Police Department? — No provincial service has been established in this Department, nor has any fixed proportion of the higher appointments been assigned for recruitment from natives of India. The European officers required are now recruited by open competition in England, but local governments are left free to promote to the higher ranks native inspectors who are found qualified for the duties of such ranks.

20,123. The Education Department?—This Department has been divided into two branches, the "Indian Educational Service" recruited in Europe and the "Provincial Educational Service" recruited in India. Natives of India have for some time past been largely employed in this Department, but the orders now issued have increased the local recruitment.

The following table shows the increase to the "Provincial Service" by transfers from the "Indian Service" in the six provinces in which the change has been introduced. Assam and Burma are not yet considered ripe for the introduction of the scheme.

	Locally Recruited.		
	Formerly.	Now.	Increase.
Madras - - -	30	35	5
Bombay - - -	38	38	—
Bengal - - -	100	113	13
North-Western Provinces and Oudh.	23	24	1
Punjab - - -	16	17	1
Central Provinces - -	4	4	—
Total - -	211	231	20

The scheme involves a saving on the whole of nearly Rs. 57,000 a year, less an uncertain but small amount on account of a few local allowances. "Natives of India" will ordinarily be appointed to the Provincial Service; but if, for special reasons, the Secretary of State appoints a native to the "Indian Service" he will draw the same pay as the European officers of that service.

The pay of members of the Provincial Service varies from Rs. 200 to Rs. 700 a month.

This scheme was finally sanctioned by the Secretary of State in his Public (Educational) Despatch, No. 22, dated 12th March 1896, but some of the measures thus finally sanctioned have been gradually and tentatively introduced during the last five or six years, and the number of natives of India employed in the Educational Service has already materially increased.

20,124. (*Mr. Mowbray.*) Do these education appointments carry pensions?—Yes.

20,125. And would the native appointed to the Education Department—you say he would draw the

Mr. Stephen Jacob, C.S.I.

21 July 1897.

same pay as a European officer—would he draw the same pension too?—Yes.

20,126. (*Chairman.*) The Public Works Department?—A provincial service for this Department is established by Government of India, Public Works Department Resolution No. 2,112, dated 19th July, 1892.

A definite number of posts in each grade is not assigned to the Provincial Service, but it is the intention that eventually half of the appointments other than those manned by Royal Engineers shall be held by members of the Provincial Service, and to this end half the yearly recruitment (12 and 13 in alternate years) has been made locally since 1890. The ultimate distribution of the superior grades of the Department is thus stated in Government of India's Public Works Despatch, No. 65, dated 22nd October, 1890 (paragraph 16).

Province or List.	Total Strength.	Distribution of Strength.		
		Royal Engineers.	European Civil Engineers.	Indian Civil Engineers.
Bengal - -	76	14	31	31
N.-W. Provinces, 100.	—	—	—	—
Punjab, 119 -	—	—	—	—
Local administrations, 129.	—	—	—	—
Railway, 150 -	498	88	205	205
Madras - -	84	16	34	34
Bombay -	72	12	30	30
Grand total -	730	130	300	300

Of the total local recruits in each year, eight are students of the Indian Engineering Colleges, being "natives of India" (a term which includes Eurasians and domiciled Europeans) and four or five (in alternate years) are upper subordinates already employed in the Department.

The pay of the Provincial Service is fixed in round figures at about two-thirds of the pay of the European engineers, but any judged fit for appointment to the grades of chief engineer will receive the full pay of those grades. The monthly pay will thus be: chief engineers, Rs. 1,800, Rs. 2,000, and Rs. 2,500; Superintending engineers, Rs. 750, Rs. 900, and Rs. 1,050; Executive engineers, Rs. 400, Rs. 475, Rs. 550, and Rs. 650; Assistant engineers, Rs. 250 and Rs. 350.

When once appointed to any post an officer of the Provincial Service is listed on the general graded establishment of the Department, and rises through the grades *pari passu* with those appointed in England.

Members of the Provincial Service come under the Indian Service Leave Rules, and receive the general rates of pension. In other respects no difference is made between them and the members of the Imperial Service.

20,127. Then we come to the Public Works Accounts, is not that part of the Public Works Department?—No, it is not part of the Public Works Department, it is a separate Department for keeping the accounts. Occasionally officers are transferred from the Public Works Department to the Public Works accounts.

20,128. Is not the accountant under the head of the Public Works Department, or is he financially separated from him?—The Accountant-General is under the Public Works Department. The rules for this Department have been assimilated to those for the Financial Department. The proportion of natives recruited for the superior grades and the pay of the various grades correspond exactly with those of the Financial Department. Natives of India were before the issue of these orders appointed to this Department, but no proportion of such appointments was laid down and the number of natives actually appointed was small.

20,129. The Telegraph Department?—The orders for establishing a provincial service in this department follow closely the lines of those regarding the Public Works Department. No definite number of posts is assigned to the provincial service, but the recruitment is so arranged that three-sevenths of the department will eventually belong to the provincial service. In England two are recruited each year, and in India one and two in alternate years. The total strength of the department is taken at 84, so that the distribution will eventually be 48 Imperial, 36 Provincial Service. The recruitment is to be effected generally from "natives of India" who are students of the Indian Civil Engineering offices, but occasional selection of meritorious officers of the subordinate grades is also sanctioned. The pay is, in the case of the Director-General and Deputy Director-General, to be the same as that of the Imperial service. That of the other grades is to be: Director, Rs. 950; Superintendents, Rs. 600, Rs. 700, Rs. 850; Assistant Superintendents, Rs. 300, Rs. 400, Rs. 550. In other respects the Public Works rules apply.

20,130. Lastly, the Survey Department?—The proposals of the Public Service Commission in respect of this department have been accepted. Under these proposals 12 appointments belonging to the senior division (out of a total of 49) have been transferred to the local branch, the pay rising to Rs. 1,300 a month: and this local branch is to be recruited from natives in the proportion of one in four.

20,131. Are there any departments held to be specially under the Imperial Government which are outside these rules?—I have only given here the principal departments. There are other departments, but rules have been laid down for every department of the public service. I thought it was not necessary to give details of the smaller departments.

20,132. Can you give us any figures showing the number of natives of India employed in higher posts at different periods during the last 20 years?—With the view of showing the Commission how the employment of natives has actually increased in recent years, I give below the following table, showing for three different periods the total number of natives (other than clerks, &c.) on pay of Rs. 250 and upwards employed in the principal departments in Bengal, North-Western Provinces, Punjab, and the Central Provinces, and for two of these periods the corresponding figures in Madras and Bombay. The statistics have been abstracted from the Civil Lists, and the Madras and Bombay lists for earlier years are incomplete, so that it is impossible to give the figures for them for the first period. There can be no doubt, however, that a corresponding increase to that shown in the other provinces took place in Madras and Bombay between 1877 and 1887.

——	1877. April 1st.	1887. April 1st.	1897. April 1st.
Bengal - -	427	611	754
North-West Provinces -	202	302	406
Punjab - - -	95	192	237
Central Provinces -	28	56	88
Total - -	752	1,161	1,485
Madras - - -	—	212	320
Bombay - -	—	256	305
	—	1,629	2,110

20,133. When you say the total numbers of natives other than clerks, what do you mean by excluding clerk in this case: do you mean that no clerks receive pay of 250?—No, I have excluded the clerks, because I have no information about them.

20,134. (*Mr. Caine.*) Do you not think anyone who received 250 would come under a higher grade than that of clerk?—No, some on that pay are classed as clerks in some of the higher offices; they may be called superintendents in the office, but still they are classed as ministerial officers.

20,135. (*Chairman.*) If they are called superintendents would they come within your table here?—No.

20,136. Then, looking at the proportion of the figures, it is very doubtful whether if you had the figures for Madras and Bombay the total in 1877 would reach 1,000, would it not?—Yes.

20,137. And, therefore, if one assumed 1,000 it would be a very liberal allowance?—It might be a little over 1,000, but it would not be over 1,100 I should say.

20,138. And then it rises to 1,629 in 1887, and to 2,110 in 1897?—Yes.

20,139. From that I suppose you would wish to bring before us the very large increase in the number of natives employed?—Yes; in the 20 years it has very nearly doubled. Then I have also redistributed the above figures between various scales of pay.

20,140. (*Mr. Caine.*) May I just ask in passing do you include Eurasians?—No, I do not. I have included no Eurasian or European. I have taken only those with native names.

20,141. (*Chairman.*) You were going on with the explanation? — The following is the table I was mentioning:—

	1877, April 1st.			1887, April 1st.			1897, April 1st.		
—	Bengal, N. W. P., Punjab, and Central Provinces..	Madras and Bombay.	Total.	Bengal, N. W. P., Punjab, and Central Provinces.	Madras and Bombay.	Total.	Bengal, N. W. P., Punjab, and Central Provinces.	Madras and Bombay.	Total.
Above Rs. 2,000 -	1	—	—	3	3	6	11	5	16
From Rs. 1,500 to below Rs. 2,000.	—	—	—	4	2	6	4	1	5
From Rs. 1,000 to below Rs. 1,500.	7	—	—	19	8	27	33	25	58
From Rs. 750 to below Rs. 1,000.	28	—	—	46	16	62	62	36	98
From Rs. 500 to below Rs. 750.	121	—	—	221	100	321	243	112	355
From Rs. 250 to below Rs. 500.	595	—	—	868	339	1,207	1,132	446	1,578
	752	—	752	1,161	468	1,629	1,485	625	2,110

It will be seen that in the first four Provinces the total number of native employés on Rs. 250 and upwards is in 1897 nearly double what it was in 1877, and that the number paid at rates of Rs. 1,000 and upwards has risen from 8 to 48 in the same period.

In the last 10 years the total number in all the six Provinces has increased by about 30 per cent. and the number on Rs. 1,000 and upwards has risen from 39 to 79 or by more than 100 per cent. This increase has for the most part ocurred in the last five years, or less, being due to a great extent to the introduction of the Provincial Service Scheme recommended by the Public Service Commission.

20,142. Have you any idea what the figures would be when the rules now in force come into full operation? I understand these are actual facts?—Yes, these are actual facts. I have not made out any statement showing the ultimate result for all the departments together.

20,143. Can you give us any idea of whether, we will say 10 years hence, you would look for a very large increase. You see the last 10 years shows an increase from 1,600 to over 2,100; should you expect to see the same rate of increase continue?—I should think there would be a larger rate of increase if anything.

20,144. A larger rate, and of course under these rules there would be a tendency to work up to the maximum?—Of course it is very difficult to say to what extent the rules will actually result in the employment of natives. If qualified natives present themselves for employment in these departments they will undoubtedly be employed, but Government cannot make the natives qualify themselves. There are civil engineering colleges, for instance, in India; if natives qualify themselves at those civil engineering colleges and present themselves for examination, they will be appointed to the Public Works Department to the extent to which I have indicated; but if natives do not present themselves, the Government of India will have to fill up the appointments in some other way.

20,145. If the natives really qualified would be chosen for these appointments, that is really throwing open the service to the natives?—Yes.

20,146. Because I suppose nobody would argue for appointing unqualified natives?—No.

20,147. You have never considered, supposing the natives were to avail themselves of this qualification, what the number would rise to?—No, I have not worked out what it would rise to on the whole. I have shown what the proportion in each important department would be. For instance, in the executive and judicial departments I have stated there would be two natives to one European.

20,148. (*Mr. Jackson.*) Following out that, that means that when it arrives at its normal, assuming that they are qualified and that they had qualified themselves to come in, that ultimately the service will consist of two to one?—Of that one particular department, the Executive and Judicial Department.

20,148*a*. Quite?—Yes.

20,149. (*Mr. Caine.*) The ratio is only fixed in that one department?—No.

20,150. (*Mr. Jackson.*) There is a ratio, as I understand, in all departments?—In all departments. In the Opium Department there will be one native to three.

20,151. (*Mr. Caine.*) The ratio varies?—The ratio varies in the different departments. In the Accounts Department there will be at least one in three, and something more than that, because a certain number of subordinates are also to be promoted.

20,152. Do you know what proportion of the whole 2,110 is, Mr. Jacob; what is the total number?—I do not know what proportion it bears to the whole number of appointments on Rs. 250 and upwards.

20,153. You do not know what the total number employed there is?—No.

20,154. Do you think it is more than one half or anything approaching to one half?—I find it very difficult to say, but I should think it is more than one half.

20,155. More than one half the existing number of persons drawing this pay of all sorts?—I do not mean that there would be half on every scale of pay, because the higher appointments are held by the Europeans; but I think from Rs. 250upwards there is a greater number of natives employed than Europeans; for instance, in the Executive and Judicial Departments the proportion is about two to one.

20,156. (*Mr. Jackson.*) Would you say, Mr. Jacob, you gave us these figures and, put roughly, there had been an increase during a certain period of about 30 per cent.; has the total service grown during that period?—Very slightly; not anything approaching to that proportion.

20,157. And therefore the proportionate growth of the admission of the natives has been much greater than the growth of the service?—Yes, much greater.

20,158. (*Chairman.*) Men drawing salaries above 250 a month rising to 500 and larger salaries than that you have already got 2,000?—Yes.

20,159. You have told us you took the Civil Service roughly at 1,000 and Mr. Mowbray quoted figures to show that that would be rather in excess probably of the amount?—Yes.

20,160. And, therefore, as far as that goes you have already got as a basis here 2,110 natives as against, say, between 800 and 900 civil servants?—Yes, but these figures are not only for the Executive and Judicial Departments, these are for all departments.

Mr. Stephen Jacob, C.S.I.

21 July 1897.

20,161. For all departments?—So that you cannot compare them with the Europeans in the Executive and Judicial Departments alone.

20,162. It seemed to me important to find that out if we could; what I see to be the effect is this: that the Indian Government is throwing open very largely the appointments to the natives, provided they are qualified, but as you have shown with great reason, it takes a long time before the due effect can be given to such regulations; you have to wait fo vacancies occurring?—Yes.

20,163. I should like very much to have some idea of what the present regulations might lead up to in the appointment of natives, assuming that they are qualified?—I think it would be almost impossible to form any estimate of that now. I may say that the Government of India has, in making the actual appointments, gone far beyond what would have been estimated at the time when the provincial scheme was introduced as the actual effect within five years. The Government of India has been able, owing to special circumstances, to introduce immediately a much larger number of natives than it anticipated.

20,164. And therefore you are able further to show that the system has not by any means obtained its full development, but you would expect to see, provided always that the natives are qualified, a considerably larger number than that 2,110?—Yes, there will be a very much larger number eventually, for instance, in the Public Works Department eventually there will be 300 out of 730 belonging to the Provincial Service.

20,165. And how many are there now. I forget whether you mentioned it?—The present number cannot be anything approaching that.

20,166. (*Mr. Mowbray.*) How does a man get into the Provincial Service now, is that by competitive examination?—Not always, I do not think there are any general orders prescribing the method of recruitment; it is left very much to the local governments to lay down the orders for each province. In some provinces they do have competitive examinations for some of the departments, but not for all, I think.

20,167. And where the competitive examinations are held, they are held in India, I suppose?—Oh yes.

20,168. (*Chairman.*) Well then, may we take it that those new rules creating the Provincial Service indicate that it is the policy of the Indian Government to increase the number of natives in the higher posts if duly qualified?—Yes. I think that is the policy of the Government of India.

20,169. I will ask you one more question, but it will be for you to consider whether you like to answer it. Of course if we may take the evidence which has been given to us by the native gentlemen who have appeared before us, I should understand them to hold that the Government of India should practically be conducted by natives; that the European element should be very small indeed. Of course, however willing the Indian Government is to extend the employment of natives, as long as England holds India, there must always be a sufficient number of Englishmen employed to insure the Government of India being carried on the principles laid down by the ruling power?—Yes, I do not think the Government of India ever pretends to conceal its views as to that point. The Public Service Commission laid great stress upon the fact that the bulk of the Executive and Judicial Departments—that is to say the ruling departments—must be Englishmen, trained up on English principles. The utmost limit in that department that the Government of India at present sets before itself in which the higher appointments can be held by natives is about one sixth.

20,170. Of the highest posts?—Of the higher posts.

20,171. That would give an idea of what the limit is to which the Indian Government think they might be able to carry the employment of natives?—Yes. That is in that one department. Of course in other departments which are not concerned with the Government of the country, you may say, such as the Public Works Department and the Accounts Department and others a very much larger proportion of natives can be employed, even in the higher grades, and will be so employed.

20,172. I confined my question to this, that a sufficient number of Englishmen must be employed to insure the Government of India being conducted on the principles which the ruling power has laid down?—Yes, I think that is the principle which the Government of India constantly sets before itself.

(*Mr. Naoroji.*) I have already stated I would make a statement of my own, therefore it is useless taking up the time of the Commission.

20,173. (*Chairman.*) You made some notes as you were going through Mr. Gokhale's evidence, and there are a few of them which I think we might just as well get upon our records. For instance, I observe that you have an amendment to make upon Mr. Gokhale's statement that Lord Ripon's Government took nothing from the Provincial Governments in 1882–1883?—Yes, that statement is correct only when all the Provincial Governments are considered as a whole. Even in that year the contracts with some of the Local Governments were revised so as to reduce their assignment, and it was this reduction which enabled the Government of India to remit Provincial Taxation in one province, and to deal more liberally with certain other provinces. It must also be borne in mind that this particular revision took place at a time when a large remission of taxation had just been effected, and when it was only natural that the provinces should be allowed to share in the general prosperity and should be treated more liberally than at periods when it was difficult to make both ends meet without imposing additional taxation.

20,174. In answer to Q. 18,185, Mr. Gokhale dwells on the increase in Army expenditure, while such departments as Education, Law, and Justice were starved. I think on that point you have a remark to make?—Mr. Gokhale is apparently referring to the general financial policy of the Government of India during the period from the Mutiny onwards; and his allegation seems to be that while Army expenditure has been largely increased such departments as Education, Law and Justice, and Police have been starved, so that it has not been possible to carry out pressing administrative reforms in them (including the separation of judicial and executive functions). I have already remarked that no one would deny that there are reforms more or less pressing which might be carried out in all departments if only funds were available; but it is not the case at all that the expenditure in the departments named has risen at a slow rate. The following figures prove this:—

—	1856–7.	Thousands of Rx.			
		1895–6. Total.	Exchange.	Balance, excluding Exchange.	Increase in 1895–6, compared with 1856–7, excluding Exchange.
Army - -	12,780	25,500	3,180	22,320	9,540
Judicial and Police.	2,586	8,088	2	8,086	5,500
Land Revenue Administration.	1,657	4,097	—	4,097	2,440
Education -	212	1,536	1	1,535	1,323
Medical -	93	1,031	5	1,026	933
	4,548	14,752	8	14,744	10,196

20,175. And, rather as opposed to Mr. Gokhale's view, you think that those figures prove, that while, no doubt, the Army expenditure has largely increased, at the same time the expenditure on what I may call domestic services has increased largely also?—Yes.

20,176. In fact in a larger ratio?—Yes.

20,177. At Q. 18,189, Mr. Gokhale makes a comparison between the present and the time when the Company's Government existed in 1852, the comparison was rather to the advantage of that Government; on that you have a remark to make, I think?—As to this statement, I may note that the expenditure on Police and Judicial Establishments, even in 1857–8, was only Rx. 2,635,000. The expenditure on education and medical relief was at the end of the five years quite insignificant. The employment of natives in the higher branches of the service was very much restricted indeed, and cannot in any way be compared with the present standard of such employment. If two crores were then spent, apart from the railway revenue account, on public works, over nine crores are now so spent.

20,177*x*. At Q. 18,335, Mr. Gokhale makes a statement to the effect that native services have not received much increase of pay to speak of. What is your opinion on that point?—Mr. Gokhale said "he does "not know a single instance in all this Finance Committee's report where native services have ever "claimed for increased pay or pensions or ever got any "concessions." As regards pay it is only necessary to refer to p. 13 of Vol. I. of the Finance Committee's Report, where the committee say, with reference to the revision of the provincial contracts in 1881–2:—"A "re-organisation of the subordinate judicial and "revenue services was being worked out, which "was to entail considerable increase of expenditure. "Bombay had a sum of Rs. 44,000 added to its income "to meet that increase. Madras and Assam were "promised whatever sum would be necessary to meet "it. The Punjab, Central Provinces, Bengal, and "North-Western Provinces had to meet it out of the "assignments made to them." I may note that the subordinate judicial and revenue services mentioned in this quotation comprise the subordinate judgeships and deputy collectorships which Mr. Gokhale refers to in Answer 18,505, as "the only branches of the public "service which are free from this practical monopoly "by European officers." They are, in fact, manned only by natives. Then, again, on p. 461 occurs the remark that "charges for subdivisional establishments "have increased slightly owing to the enhancement "of the pay of sub-deputy-collectors," all of whom are natives. Numerous other instances of concessions made to services manned exclusively by natives might easily be quoted. Similarly the change in the pension scale, under which a pension is given after 10 (instead of 15) years' service and the pensions are graduated more favourably, applied to natives as much as to Europeans.

20,178. Then taking question 18,351, Mr. Gokhale makes rather a telling quotation from some remark of the Bombay Chamber of Commerce on exchange compensation. I think on that you have some remark to offer?—Yes. The opinion of the Bombay Chamber of Commerce quoted by Mr. Gokhale was, it must be remembered, expressed in 1886, when exchange had not fallen nearly so low as it has since fallen. The rate for that year was about 1*s*. 6*d*., which is the privileged rate for the calculation of exchange compensation. On the other hand the following extract from the Homeward Mail for April 12, 1897, shows that now an entirely opposite view is held by the Calcutta Chamber of Commerce. "A letter is published in "which the Bengal Chamber of Commerce urges on "the Local Government the necessity for increasing "the pay of the judges in the High Court. It is "pointed out that owing to the fall in exchange, and "the conditions relating to pension and leave, Calcutta "judges have suffered severely, and it will be impossible "to induce civilians and barristers of high standing "to undertake the duties. The local Press warmly "supports the views of the Chamber." I may note that the Trades Association of Calcutta has since lent its support to the opinion expressed by the Chamber of Commerce and that this opinion has been expressed even after the relief granted in the shape of exchange compensation allowance had been given.

20,179. On question 18,466 Mr. Gokhale makes some remarks on the Forest Revenue, on that I think you have something to say?—I think his remarks relate to the increased charge for forests.

20,180. Yes, that is it?—With reference to that I have only to remark that the Revenue has increased by much more than the charge in the period named, so that the net revenue has risen. The provincial figures are:—

Year.	Revenue.	Charge.	Revenue.
	Rx.	Rx.	Rx.
1891–2	164,232	96,357	67,875
1894–5	187,502	103,396	84,106
Increase	23,270	7,039	16,231

The increase of Rx. 7,000 in the expenditure cannot be said to be "mainly due to exchange compensation" for the increase in that item under provincial is only Rx. 2,000.

20,181. (*Sir Ralph Knox.*) In what form does that revenue come in?—It is the revenue derived from the collection of forest dues and the sale of forest produce chiefly.

20,182. (*Chairman.*) Are there no licenses given to people to feed cattle in the forests and to take the wood?—Yes, to some extent, the revenue comes in in that way.

20,183. (*Sir Ralph Knox.*) But it is mainly the sale of the products of the forest?—Very largely it arises out of the sale of timber and other forest products.

20,184. (*Chairman.*) In question 18,493 Mr. Gokhale says "there are some Inspectors of Police who are "Europeans; he puts it at about half and half." Do you consider that an over statement of the case?—Yes. Almost all the Inspectors are natives. The latest Bombay Civil Lists show 41 natives out of a total of 46 Inspectors on duty.

20,185. You think that the one anna cess in the provincial rates is more productive, do you not, than Mr. Gokhale admits?—Yes, he said that the one anna cess was of a non-progressive character, the provincial rates have, however, risen from Rx. 214,000 in 1875–76 to Rx. 294,000 in 1895–96.

20,186. I think those are all the points to which I wish to call your attention in Mr. Gokhale's evidence, but I think you have also some comments to make upon Mr. Wacha's evidence. I will take question 17,150. Some stress was there laid upon the fact or the belief that the Civil Estimates were not available for a very long time after they had been prepared. I think it was said that nearly a year elapsed before they could be obtained?—Yes, that statement is not correct. The Civil Estimates of some of the provinces are printed off in their final shape in little more than a month after the budget is published; and the volume containing all the Civil Estimates is published about June. The dates on which the Civil Estimates of each province for 1896–97 were printed off are given below:—

India	8th June, 1896
Central Provinces	30th April, ,,
Burma	25th May, ,,
Assam	25th April, ,,
Bengal	2nd June, ,,
North-West Provinces	25th April, ,,
Punjab	28th April, ,,
Madras	3rd June, ,,
Bombay	17th May, ,,

A copy of the general volume has not been received in England, so that I cannot give the date of its issue; but, the latest date above being 8th June, the general volume must have been published within that month.

20,187. At 17,234, Mr. Courtney asked the witness whether his complaint was that in 20 years, 1872–93, the Finance Members had been too sanguine in their estimate of the rate of exchange. I think you do not think that that idea is well founded?—No, I think not. The correct answer to Mr. Courtney's question may be found in Appendix 40 to the Commission's first Report, which gives the Budget and the realised rate of exchange for each year from 1869–70 to 1895–96. The following table shows the difference between the Budget rate of each year and the realized rate of the previous year, for the last 20 years. I give the table:—

Year.	Budget.	Realized.	Excess (+) or Deficiency (−) of Budget as compared with realized rate of previous year.
	s. *d*.	*s*. *d*.	
1876–7	1 8·5	1 8·508	—
1877–8	1 9·227	1 8·791	+ ·719
1878–9	1 8·4	1 7·794	− ·391
1879–80	1 6·995	1 7·961	− ·799
1880–1	1 8	1 7·956	+ ·039
1881–2	1 8	1 7·895	+ ·044
1882–3	1 8	1 7·525	+ ·105
1883–4	1 7·5	1 7·536	− ·025
1884–5	1 7·5	1 7·308	− ·036
1885–6	1 7	1 6·254	− ·308
1886–7	1 6	1 5·441	− ·254
1887–8	1 5·5	1 4·898	+ ·059
1888–9	1 4·9	1 4·379	+ ·002
1889–90	1 4·38	1 4·566	+ ·001
1890–1	1 4·552	1 6·089	− ·014
1891–2	1 5·25	1 4·733	− ·839
1892–3	1 4	1 2·985	− ·733
1893–4	1 2·75	1 2·547	− ·235
1894–5	1 2	1 1·1	− ·547
1895–6	1 1·09	1 1·641	− ·01
1896–7	1 1·75	—	+ ·109

Mr. Stephen Jacob, C.S.I.

21 July 1897

The difference is not, in any case, very great; it will be clear, from the above table, that the only year in which the Government of India could be charged with taking too sanguine a view of exchange was 1877-78. When the Budget of that year was framed the circumstances were very peculiar; the rate of exchange during the first half of 1876-77 had been very low, falling at one time to but little over 1*s.* 6*d.*; but in the latter half of the year it had risen, having been, at one time, above 1*s.* 10*d.*, and not having fallen below 1*s.* 9*d.* These facts explain the high rate taken in the Budget of that year.

20,188. The Budget of 1896-97 has been criticised as an instance of a Government's disposing too rapidly of a so-called improvement, in that you do not agree?—No, I think that a more unfortunate instance could hardly have been selected. In the first place the rate of exchange adopted (1*s.* 1¾*d.*) was about a penny *below* the rate current at the time the Budget was framed; and Sir J. Westland thus explained his reasons for taking the lower rate:—"The prospects "indicated by these figures are decidedly encouraging; "but, as last year the Government of India made up "their minds to avoid any speculations as to the "future, so this year also they have determined in "their estimates to take no account of the recent, "and perhaps yet unexhausted, rise in exchange. "They consider it very important, under present "circumstances, to be on the safe side, and have fixed "the exchange to be taken in the Budget Estimates at "a rate which would certainly have been deemed wise "and prudent in the beginning of February, though "to many persons it may appear in the light of more "recent events to err on the safe side. The rate we "have taken is 13¾*d.*, being only slightly in advance "of the realised rate of 1895-96. If we could calculate "on a rate approaching the present current rate of "14¾*d.*,* the time would have come for a revision of "our general financial position; and we believe that "no one will consider our position sufficiently assured "for any such measures." It will be seen that the Government indicated no desire to show an undue "improvement" in its financial position, by catching hastily at a too high rate of exchange. It was, indeed, criticised at the time for being too cautious in this matter; and the rate actually realized for the year was 14·46*d.*, or nearly ¾*d.* above the Budget rate. Again, the method of disposal of the improvement is criticised; but in answer to these criticisms it may be pointed out that only half the improvement was utilized in reducing taxation, and that the other half was assigned to meet a charge which had long been pressed upon the Government, and which was not of a recurring nature, so that it did not affect the financial position beyond the current year.

20,189. (*Sir Ralph Knox.*) What was that remission of taxation?—That was on the cotton duties.

20,190-1. (*Chairman.*) Mr. Wacha made a statement of the increased revenue during the decade due to enhanced taxation. I think your figures very nearly agree with his, but I should like to get it on record what your calculation of the produce of increased taxation was?—I do not think Mr. Wacha's statement of the increased revenue during the decade due to enhanced taxation is open to any very serious modification. I give below the figures which he takes and the results of my own calculations, the basis of which can be reported to the Commission if desired:—

Increased Revenue due to Enhanced Taxation under the heads below.

	Mr. Wacha's figures.	My figures.
	Rx. (Thousands).	Rx. (Thousands).
Assessed taxes - -	9,879	9,020
Salt Duty - -	11,981	10,281
Customs - - -	2,135	3,065
Total - -	23,995	22,366

The difference is under 2 millions for the decade, and is, therefore, hardly worth criticising. Under customs, Mr. Wacha has understated the increase because he has taken account only of the imposition of the duties in 1894 and not of the raising of the duty on spirits and the imposition of the duty on petroleum in 1890.

20,192. (*Mr. Jackson.*) There is a good deal of difference between the figures as regards two items?—Yes, the detailed figures differ, but the totals happen to work out nearly the same.

20,193. (*Chairman.*) As to question 17,347, you think that Mr. Wacha overstated the increase in the Army charges?—Yes. The table below shows the details of the calculation on which the increase in net Army charges, excluding exchange, works out to Rx. 33,938,000. The table also shows the extent to which the fall in exchange has increased the expenditure in the 10 years as compared with 1884-85. That increase is Rx. 43,276,000 and is considerably in excess therefore of the increase in net military charges excluding exchange.

Table showing increase in charges for exchange and in military charges excluding exchange in ten years from 1885-86 to 1894-95 over the charge in 1884-85.

Year.	Exchange (Thousands of Rx.)	Military Charges (Thousands of Rx.). Net Charge including change.	Exchange. On Sterling Expenditure.	Exchange. On British Soldiers' Pay.	Exchange. Exchange Compensation.	Exchange. Total.	Net Charge excluding change.
1884-85	3,536	17,058	951	184	—	1,135	15,923
1885-86	4,290	20,062	1,145	224	—	—	—
1886-87	5,632	19,739	1,377	276	—	—	—
1887-88	6,049	21,005	1,582	437	—	—	—
1888-89	6,383	21,095	1,838	517	—	—	—
1889-90	6,758	21,518	1,851	632	—	—	—
1890-91	5,468	21,573	1,504	587	—	—	—
1891-92	7,201	23,270	2,057	407	—	—	—
1892-93	10,287	24,164	3,014	612	—	—	—
1893-94	11,523	23,863	2,913	852	277	—	—
1894-95	15,045	24,252	3,597	1,134	540	—	—
	78,636	220,541	20,878	5,678	817	27,373	193,168

Increase in Exchange.

	Rx. (Thousands)
Total charge for exchange for decade -	78,636
Deduct 10 times charge for exchange in 1884-85 (3,536) - - -	35,360
Increase - -	43,276

Increase in Military Charges excluding Exchange.

	Rx. (Thousands)
Net military charges for decade excluding exchange - - - -	193,168
Deduct 10 times corresponding charge in 1884-85 - - - - -	159,230
Increase - -	33,938

20,194. How does your figure compare with what Mr. Wacha stated?—He gives the total increase in net Army charges as 37,495,000, and my figure is 33,938,000, a difference of about 4 millions.

20,195. Do you know upon what point he would be found to differ from you?—No, I could not find out how his figures were obtained.

20,196. Because the difference is a very large one indeed?—Yes. I asked Mr. Wacha to let me know how his figures were obtained, but he omitted to do so. He told me how his figures were obtained in some instances, and I was able to convince him that it was necessary to correct his figures where a mistake had taken place, but in this case he did not show me how his figures were obtained.

20,197. (*Sir Ralph Knox.*) Did he modify his figures to any large extent?—In one or two cases he did: he was asked by the Commission to do so.

* "Has fallen during the week to 14½*d.*"

20,198. Yes, but I want to know?—I think in the most important cases, owing to the cross-examination, he was not able actually to alter the figures; but he has put a footnote to his evidence, showing what the correct figures are.

20,199. Does that absorb much of the difference between you, his correction of his figures?—Under this head do you mean?

20,200. Yes, under military charges?—No, it had not reference to the military charges at all; I am referring to other cases.

20,201-2. (*Chairman.*) As I understand, you do not know at all how he made up his figures?—No. He did not tell me; he sent me details in other cases, but not in this case. It was probably an accidental omission.

20,203. (*Chairman.*) I think you have some comment to make upon the Questions 17,472 and 17,474 in regard to railway expenditure?—Yes; Mr. Wacha's statement that the results quoted refer to the mere working of the railways, and the suggestion that they do not include interest on capital outlay are incorrect. The figures in the Railway Administration Report agree with those of the Finance and Revenue Accounts upon which the figures given by Mr. Wacha are based; for instance, the total figure given by Mr. Wacha for 1894-5, Rx. 2,348,489, as taken from the Railway Administration Report, corresponds with that given for the same year in Appendix 28 to the Commission's First Report, which is taken from the Finance and Revenue Accounts.

20,204. Then the same subject is dealt with in a question or two a little further on, and on that point I think you differ from Mr. Wacha?—Yes, Mr. Wacha's explanation of the difference from year to year in the net result is quite incorrect; the figures in the Railway Administration Report and in the Finance and Revenue accounts agree absolutely with each other. The loss varies in each year, especially with the rate of exchange, a fall in which enhances the rupee equivalent of the sterling charges for interest. The following table shows the loss on State Railways, on Guaranteed Railways, and on other Railway Revenue Charges and the total loss for each of the ten years.

Loss + (or Gain −) on Railway Revenue Account.

——	1885-6.	1886-7.	1887-8.	1888-9.	1889-90.	1890-1.	1891-2.	1892-3.	1893-4.	1894-5.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
State - -	−394,881	375,061	1,121,343	1,254,616	983,920	387,297	−109,560	1,041,200	666,180	737,450
Guaranteed -	983,314	675,581	930,333	922,839	699,530	145,989	333,228	805,569	778,938	1,535,679
Other Items -	143,280	138,026	70,710	55,937	169,151	154,005	92,196	283	90,385	75,360
Total - -	731,713	1,188,668	2,122,386	2,233,392	1,852,601	687,291	315,864	1,847,052	1,535,503	2,348,489

These figures correspond exactly with those given in Appendix 28, and their total sums up to Rx. 14,862,959. It will be seen that the variations from year to year are very great, the loss varying from Rx. 315,864 in 1891-2 to Rx. 2,348,489 in 1894-5. The figures given in answer to Question 17,480 are incorrect, the exchange figures especially so. In 1893-4 the exchange in the Railway Revenue Account amounted to Rx. 3,732,878 and in 1894-5 to Rx. 4,774,565. In every year except one the charge for exchange exceeded, and in many years largely exceeded, the net loss on the railways, and its effect on the net result of that account is much larger than would be inferred from the figures for exchange given by Mr. Wacha. This is illustrated by the following table, which shows for each of the 10 years the exchange included in the net loss as above and the gain apart from exchange.

Year.	Net loss as above.	Exchange.	Gain excluding exchange.
	Rx.	Rx.	Rx.
1885-6 - -	731,713	1,594,814	863,101
1886-7 - -	1,188,668	1,987,178	798,510
1887-8 - -	2,122,386	2,268,780	146,439
1888-9 - -	2,233,392	2,629,783	396,391
1889-90 - -	1,852,601	2,517,090	664,489
1890-1 - -	687,291	1,862,886	1,175,595
1891-2 - -	315,864	2,454,430	2,138,566
1892-3 - -	1,847,052	3,443,258	1,596,206
1893-4 - -	1,535,503	3,732,878	2,197,375
1894-5 - -	2,348,489	4,774,565	2,426,076
Total - -	14,862,959	27,265,662	12,402,703
1895-6 - -	1,620,268	4,366,814	2,746,546

The net loss of nearly 15 millions is converted into a net gain of nearly 12½ millions if exchange is excluded. I have added at foot of the table the figures for 1895-6, the latest year the accounts of which have been closed.

20,205. I think you have a comment to make upon 17,568 in which the witness was speaking of the rates of interest paid on loans in India?—Yes, Mr. Wacha's answer is not correct. The Government of India at one time borrowed at 6 per cent. in India and it has borrowed at various times at 5½, 5, 4½, 4, 3½ and 3 per cent.

20,206. (*Sir Ralph Knox.*) That is in India?—Yes.

20,207. (*Chairman.*) I think in question 17,706 Mr. Wacha states it is impossible to understand on what principle the Indian Midland and Bengal and Nagpore Railways are considered to be protective railways in reference to the Famine Relief Fund. Perhaps you will tell us why they were reckoned as such?—The Indian Midland and Bengal Nagpore Railways have been held to be protective railways on the same grounds as other protective railways. They met the needs of tracts, which were mentioned by the Famine Commissioners as needing protection. The net charge is brought to account in the Railway Revenue Account; but it was decided that the net loss on these railways should be taken in reduction of the Famine Insurance Grant, because it was recognized that they would not pay commercially, and Government represented that it could not both bear the loss upon them in the Railway Revenue Account and at the same time provide the full amount of the Famine Insurance Grant. The alternatives were therefore either that their construction be delayed until the capital cost could be met out of the Famine Insurance Grant or that the net charge on their working be taken in reduction of that grant.

(*Chairman.*) That makes up all the questions referred to in the memorandum that you have placed before us. I do not know whether any member of the Commission has any questions.

20,208. (*Sir Ralph Knox.*) Were those two railways included in the original recommendations of railways for protective purposes?—They were not specified by name, but they provide for the protection of tracts which were mentioned by the Famine Commissioners, and they were specially mentioned as protective railways in the Report of the Parliamentary Committee of 1884. The Commission distinctly stated its opinion that they were protective in character. I may perhaps add, with reference to the Chairman's remark, that there are several criticisms that might be made on the evidence of Mr. Banerjea and Mr. Iyer, but I have not submitted a formal note about them, because most of the points have been covered by the general evidence which I have given on the working of the provincial contract system, and the employment of natives in the public service. There are a few other cases in which their figures are incorrect, but I do not think it is necessary to point them out in detail.

20,209. (*Chairman.*) Thank you. I think we quite understand that you have called our attention to those points upon which there is such a divergence, as it is desirable to explain?—Yes.

The witness withdrew.

Adjourned.

APPENDICES.

(Further Appendices handed in since the Publication of the First Report.)

APPENDIX No. 66.

Handed in by Sir H. Waterfield, K.C.S.I., C.B. (with reference to Question 680, et seq.).

NOTE on the ALTERATION of DUTIES between 1880–81 and 1893–94 under the heads of STAMPS, EXCISE, PROVINCIAL RATES, and REGISTRATION (compiled from information obtained from the SECRETARY to the GOVERNMENT OF INDIA in the FINANCE DEPARTMENT).

STAMPS.

The rates of non-judicial stamp duties are contained in the schedules to Act I. of 1879. They have not been increased since; the chief alteration is in the reduction by Act I. of 1888 of the duty on policies of insurance.

The Court fees were prescribed by Act VII. of 1870, and, though subsequently modified, the alterations have not been made with the intention, and, it is believed, not with the effect, of increasing the fees.

EXCISE

Liquor.—The following statement gives a comparison, as far as is practicable, of the rates of still-head duty in force in 1880–81 and 1893–94, per Imperial gallon, London proof:—

—	1880–81.	1893–94.
Bengal:—	Rs. as.	Rs. as.
Burdwan	4 0*	3 0 to 5 0
Midnapore	4 0*	3 12*
Hooghly, 24 Parganas, Nuddea, Jessore, and Khulna	4 0*	4 0 to 5 0
Calcutta and Howrah	4 0	5 0
Murshidabad	3 8*	4 6
Cuttack	2 0*	2 0*
Balasore and Puri	2 0*	2 0
Sonthal Parganas	1 8 to 2 0	2 0
Hazaribagh	1 8*	2 0*

(In other districts the comparison cannot be made, as the outstill system was in force in one or both of the years.)

N.-W. Provinces and Oudh	1 0	1 8 from 23 to 27 U.P. 1 0 from 48 to 52 U.P.
Punjab	No change.	
Madras:—		
Madras	4 9 to 4 14	3 12 to 4 11
Nilgiris	4 0	5 0
Malabar	4 0	1 9 9 to 5 0
Salem	3 3	3 12
Chingleput and North Arcot	3 3	3 12
Bellary and Anantipur	2 14 to 4 0	3 12 to 4 6
Cuddapah, Tanjore, and Coimbatore	2 14	3 12
South Arcot	2 14	1 14
Nellore and Trichinopoly	2 8	3 12
Karnul	2 8	1 14 to 3 12
Ganjam and Vizagapatam	2 8	1 14
Madura and Tinnevelly	2 2	3 12

(In 3 districts the outstill system was in force in 1880–81.)

—	1880–81.	1893–94.	
	25° U.P.	25° U.P.	60° U.P.
Bombay:—	Rs. as.	Rs. as.	Rs. as.
Ahmednagar, Poona	2 8	3 10	—

Madras.—License fees introduced in 1889.

Bombay.—Up to December 31, 1880, only license fees; thenceforward also a duty on transport of 5 rupees if the quantity does not exceed 10 maunds, and one rupee for every additional 2 maunds.

Central Provinces.—In 1880–1 a duty of 2 rupees a seer. In 1893–4 the same duty, but the contractor also, according to tender, paid a price for every seer sold by him to retailers whom he supplied at 3 rupees a seer. In Sambalpur and Sehawa the duty in 1893–4 was 1 rupee, and the wholesale price 2 rupees, per seer.

——	1880–1.	1893–4.
	Rs.	Rs.
Assam	3 8 to 4	6 to 8
Burma.—Not allowed	—	

Toddy.

Madras.—In 1880–1 the right of obtaining supplies from trees within a certain area was farmed. In 1893–4 this system had in many localities been replaced by one of license fees on each palm tree. This is the chief point in which taxation under the head of *Excise* has been increased.

Provincial Rates.

The increase in the income is mainly attributable to four causes:—

(*a.*) Legalisation of new imposts. This cannot be authorised by the Provincial Governments; but legislative sanction may be obtained, at their request, by the Imperial Government, so that it may be said that additional cesses are the result of the system of decentralization.

(*b.*) Rise in the rate of cesses which had not been levied up to the maximum allowed by law.

(*c.*) Increase in the amount of Land Revenue upon which cesses are levied. This arises from improved administration, extension of irrigation and cultivation, improvement of the standard of agricultural practice, rise in rents, and more careful methods of assessment.

(*d.*) Direct improvements in the administrative collection of the cess income. Grantees who held their estates revenue—free or at favourable assessments used to pay cesses only on the revenue paid to the Government, but have in several provinces been gradually made to pay cesses on a full assessment, as the districts came under re-settlement. The influence of this cause is, however, comparatively small. In other cases cesses formerly realized directly by the person for whose maintenance they were levied, and not brought into the accounts, are now paid into the Government Treasury and administered like other income; but in such cases there is no increase of taxation.

Registration.

Various alterations have been made in the schedules of fees in the several provinces, but they have had no appreciable influence on the taxation. The general tendency has been to reduce fees on documents of lower values, and (if there has been any increase at all) to increase those on documents of higher values.

APPENDIX No. 67.

EXPENDITURE IN ENGLAND ON GENERAL ADMINISTRATION.

LETTER from the GOVERNMENT OF INDIA, July 22, 1881, No. 196 (Financial).

MY LORD MARQUIS,

WE have the honour to forward, for your Lordship's information, a copy of our Resolution in the Department of Finance and Commerce, No. 1900, dated the 22nd July 1881, defining the duties of our Accountant-General in the Military Department, and laying down the official relations of the Comptroller-General with the account officers of the Military and Public Works Departments (including the Accountants-General of those departments) and the Post Office.

We have, &c.

Enclosure in No. 1.

RESOLUTION.—By the GOVERNMENT OF INDIA, Department of Finance and Commerce, dated 22nd July 1881, No. 1900.

1. In Financial Despatch No. 46, dated 27th January 1881, the Right Honourable the Secretary of State communicated with his orders the report of a committee appointed to inquire into the existing system of military accounts in India, and in paragraph 4 of that despatch it was stated that the Committee—

"Further consider it necessary to define more clearly the duties of the Comptroller-General and of the Military Accountant-General, and they make certain specific recommendations, which are detailed in the 23rd paragraph of their report, and of which I approve."

2. The recommendation of the Committee regarding the relative positions of the Comptroller-General and the departmental account officers was as follows:—

"That the respective duties of the Comptroller-General and the Military Accountant-General, and their official relations towards each other, be more clearly defined than they are at present. The Comptroller-General should be the chief authority in all matters affecting the mode of keeping the public accounts, including those of the military and other spending departments. He should be held solely responsible for the general finance accounts, and should be the recognised channel for information in regard to the financial position as indicated by those accounts. He would therefore be answerable for watching the issues for military and all other services, and keeping the Government closely informed as to the actual progress of both revenue and expenditure. He should be required to send to the Military Accountant-General monthly statements of the total issues from civil treasuries for military services, including all charges incurred and paid by the Civil Department for military purposes; and he should require from the Military Accountant-General monthly statements exhibiting, on one side, the moneys received from civil treasuries and other military receipts, and per contra the amount of expenditure actually audited, and the sums remaining to be audited and accounted for. He should be empowered to call for any explanations which he may at any time consider necessary, especially in regard to outstanding or unsettled charges.

"The Military Accountant-General should occupy the position and exercise the authority of a Deputy Secretary for Finance in the Military Department, retaining his present duties, and being specially charged with the function of watching and reporting upon the current military expenditure; his responsibility for the due and proper conduct of the departmental audit of military expenditure and for the prompt adjustment of outstanding advances being assimilated to that which attaches to the Comptroller-General in regard to the Civil Department. It would be necessary for him to keep such books as would enable him to consolidate the accounts of the military controllers, and to compare the expenditure as it proceeds (under the various heads and subheads) with the amounts of the sanctioned grants. He should require the several Controllers of Military Accounts to transmit to him immediately after the close of each month, or at such other periods as may be found convenient, statements of all milltary drawings of every kind upon civil treasuries in the period just ended, and such other financial returns as will ensure his being in a position at all times to advise the Government of the actual and anticipated progress of military expenditure. He should also require every military disbursing officer who now renders cash balance reports to forward direct to him monthly abstract statements of receipts and expenditure, and of the balances in hand at the commencement and close of the month. He should sign the separate accounts of audited military expenditure appended to the finance accounts, and be answerable for their accuracy."

3. In directing, in general terms, the adoption of this recommendation as defining the general functions of the Comptroller-General and the officers of the Military and other Account Departments, the Governor-General in Council has resolved to place the Controllers of Military Accounts in immediate subordination, in all matters of account, to the Comptroller-General.

4. According to the system of the Civil Account Department, the Accountant-General (to whose position that of the Controller of Military Accounts corresponds) exercises his office in subordination to three different authorities:—

1. To the Comptroller-General, to whom his accounts are rendered; who also determines, under the general instructions of the Government, the form of the accounts, sees that as accounts they are properly kept and punctually rendered, and generally directs all questions of account procedure.
2. To the Local Government, to whom the Accountant-General is bound to give all the information arising out of his accounts which is required for administrative purposes, and in consultation with whom the Accountant-General must regulate the procedure of his own office in those matters in which it comes in contact with the Administrative Departments.
3. To the Government of India in the Financial Department, in respect of all questions arising on audit, and of the administration of his own office.

5. In regard to the first of these matters, the Controllers of Military Accounts will have the same relation to the Comptroller-General that the Civil Accountants-General have. They will render their accounts to him in such form as he may direct, and must be prepared to give any explanations which he may require. It will be the Comptroller-General's duty to see that the accounts are punctually and properly prepared by the Controllers, and rendered to him; and especially that they work up to, and fit in with, the accounts received by him in other departments. He will have the general direction of the detailed accounting work in respect of deposits, advances, and accounts with other departments. He will take measures (as in the case of Civil Accountants-General) to satisfy himself that the work of audit and account is efficiently maintained, and is kept up to date, the responsibility for the manner in which the business of the different offices of military account is conducted resting, however, on the Accountant-General, Military Department.

6. In the other two matters, the Controllers of Military Accounts will be directly subordinate to the Government of India in the Military Department, rendering to that department such accounts and returns as it may desire, and referring to it, for orders, all matters which are not pure questions of account, or which affect officers or departments, not their own subordinates.

7. The Accountant-General of the Military Department will be a deputy secretary in that department, whose special function it will be to deal with all matters that arise in connexion with military finance or with the Military Account Department. His duty will be to obtain the fullest information (from the controllers especially, but from other officers also, for purposes of check or of early information) regarding military receipts or outgoings, and to record it in such form as may be best adapted for bringing out their effect and their results. It will be his duty, not only to keep the Government in the Military Department informed regarding receipts and expenditure, but to bring to its notice any point of administrative importance or interest which arises out of the information received by him. The military estimates will also be in his special charge, both in respect of their original compilation and in the subsequent comparison with them of the actual progress of receipts and expenditure.

8. The above orders relating to the Military Department apply also to the Marine Department; and as regards the other departments (Public Works and Post Office), the present relation of the Accountant-General of the Department, Public Works, and the Comptroller, Post Office, is nearly in confermity with that recommended by the India Office Committee. These two officers will render their accounts, as at present, to the Comptroller-General; and, while the Comptroller-General will be responsible for compiling the general figures of them, and keeping the Government in the Finance Department generally informed regarding the receipts and expenditure on military account, it will be for the departmental account officers to maintain the more detailed accounts and statements necessary for the information of the Government, and the effective financial control of their departments.

9. No alteration will be made in the system by which the Accountant-General, Department Public Works, receives and compiles the accounts of the Examiners of Public Works Accounts, and maintains the general accounts of the Public Works Department.

10. The officers and accounts of the Controllers of Military Accounts, of the Examiners of Public Works Accounts, and of the Comptroller to the Post Office, will be open to the inspection of the Comptroller-General and his inspecting officers; but in the case of the Examiners of Public Works Accounts, any instructions arising out of the inspections will be communicated through, and in consultation with, the Accountant-General of the Department Public Works, who will continue to be immediately responsible for the proper working of the Examiners' offices.

No. 2.

LETTER from the GOVERNMENT OF INDIA, August 26th, 1881, No. 314 (Military).

MY LORD MARQUIS,

IN our Resolution, No. 1900, dated 22nd July 1881, in the Department of Finance and Commerce, effect was given to the orders contained in your Lordship's Financial Despatch, No. 46, dated 27th January 1881, upon the inquiry lately instituted by you into the existing system of military accounts in this country.

2. In accordance with the terms of that resolution, the Accountant-General to the Military Department has been appointed* a deputy secretary in that Department, but the services of this officer cannot be utilised to the proper extent, unless his office be strengthened. It has been, indeed, apparent for some time that, quite apart from the above change, the duties devolving on the Accountant-General, Military Department, are more than can be performed to the best advantage by that officer, with the help of only an Assistant Accountant-General, and that the appointment of Deputy Accountant-General, which has been in abeyance since it became vacant in 1878, ought to be filled up.

3. In the despatch of the Government of India, No. 312, dated 16th September 1878, it was proposed that this appointment should not be filled up; and

* G.G.O. No. 413, of 1881.

Viscount Cranbrook, in his Financial Despatch, No. 415 dated 28th November 1878, confirmed the proceedings. But we are now satisfied that this was a mistake, and that, having regard to the great financial interests involved in dealing with the expenditure of the army, the appointment of Deputy Accountant-General ought to have been maintained. It is not only that the army expenditure amounts in the aggregate to a very large part of the total public expenditure of the country; the complicated and variable nature of the items which make up the military expenditure renders necessary a special and minute degree of constant supervision, while the tendency manifested in all branches to submit proposals for administrative changes and improvements, usually involving an increased outlay, calls for the exercise of unceasing vigilance and detailed scrutiny of the claims preferred. In the interests of economy, therefore, it appears desirable that the chief office of control and account of army expenditure should be strong enough to carry on its work in a thoroughly efficient manner. The Accountant-General, with whose zeal and ability we have every reason to be satisfied, reports that with his present establishment he can barely keep pace with the current duties, while many important questions which need investigation cannot be taken up, or cannot be handled in an adequate manner. This is not conducive to practical economy in the financial administration of the army in India. It is, moreover, very desirable to have a competent officer in training, who might take the place of the Accountant-General in case of his vacating an appointment which requires large experience in military finance.

4. We consider, therefore, that it is very necessary that the appointment of Deputy Accountant-General, which has been in abeyance since 1878, should be filled up again, and we accordingly recommend this for your Lordship's sanction. The salary of this appointment was Rs. 1,500, rising to Rs. 1,750; but, after consideration of the matter in the Financial and Military Departments, we propose that it be now fixed at Rs. 1,200, rising to Rs. 1,600 by annual increments of Rs. 80.

5. In pursuance of the arrangement under which the Accountant-General has been made ex-officio Deputy Secretary in the Military Department, we have considered it expedient to form a finance section of that Department, in which matters relating to accounts shall be dealt with direct by the Accountant-General in his capacity as Deputy Secretary. The establishment proposed for this section is detailed below,* and we solicit your Lordship's sanction to the appointment of the clerk on Rs. 300, rising to Rs. 400 per mensem.

No. 3.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA October 13th, 1881, No. 303 (Financial).

8. The investigation has drawn my attention to the fact that the compilation of the estimates of the various Departments has in recent years been taken away from the Comptroller-General, and removed entirely into the Financial Secretary's office. I request your Excellency to consider whether such a measure is calculated to promote the efficiency of the service, and whether it would not be desirable to associate the Comptroller-General with the Financial Secretary in the performance of this duty. Such a step would, of course, in no degree weaken the responsibility of the latter for satisfying himself that the estimates have been prepared in a proper manner, and that they do, in fact, represent that which they are placed before the Government as denoting.

No. 4.

DESPATCH to the GOVERNMENT OF INDIA, November 3, 1881, No. 321 (Financial).

MY LORD MARQUIS,

YOUR Excellency's letter of the 22nd of July last, No. 196, forwarded, for my information, a copy of a resolution* of your Government, defining the duties of your Accountant-General in the Military Department, and laying down the official relations of the Comptroller-General with the Account officers of the Military and Public Works Departments (including the Accountants-General of those Departments) and the Post Office.

2. In your Excellency's further letter of the 26th of August last, No. 314 (Military), you state that, in accordance with the terms of that resolution, the Accountant-General of the Military Department has been appointed a Deputy Secretary in that Department, and you observe that "the services of this officer "cannot be utilised to the proper extent unless his "office be strengthened." With this view you propose that the appointment of Deputy Accountant-General in the Military Department, which has been in abeyance since 1878, should be again filled up, with a salary attached to it of Rs. 1,200, rising to Rs. 1,600, per mensem, by annual increments of Rs. 80.

3. This appointment, on the salary mentioned, is sanctioned.

4. You further observe that, in pursuance of the arrangement under which the Accountant-General has been made *ex officio* Deputy Secretary in the Military Department, you have considered it expedient to form a Finance Section of that Department, in which matters relating to accounts shall be dealt with direct by the Accountant-General in his capacity as Deputy Secretary; and you propose an establishment for this section at a total cost of Rs. 480, rising to Rs. 680, including the appointment of a clerk on Rs. 300, rising to Rs. 400, per mensem, for which you solicit my sanction.

5. I should have thought that, in carrying out the proposed changes, clerical labour would have been saved, both in the Accountant-General's and Military Secretary's office; and I request, before giving my sanction to the appointment of a clerk at the salary mentioned, that you will furnish me with further information showing the necessity for the contemplated addition to the staff of the existing establishment.

I have, &c.
HARTINGTON.

No. 5.

LETTER from the GOVERNMENT OF INDIA, October 17, 1882, No. 319 (Financial).

MY LORD MARQUIS,

WITH reference to paragraph 8 of your Lordship's Despatch, No. 303, dated the 13th October 1881, we have the honour to forward a copy of the instructions which we have issued with a view to associate the Comptroller-General with the Financial Secretary in the compilation of the estimates of the various departments.

2. In connexion with this subject, we wish to make a few remarks on the responsibility of the Financial Secretary for the correctness of the Military Estimates. Under the orders now given, the Comptroller-General is bound to attend specially to the reconciliation of the departmental figures (both actuals and estimates) with the payments into, and issues from, the treasuries; and it is also his duty to work out the adjusting entries, which connect the audited figures of the Military Account Department with the net issues from the treasuries.

3. The responsibility of the Financial Department for the Military Estimates is necessarily limited by the means which that Department possess for checking these estimates. The Financial Secretary has before him the recorded figures of receipts and expenditure in past years; he also knows the receipts and issues at the Civil treasuries to the end of the latest month, and he necessarily possesses some knowledge of any

---

* No. 1,900, dated the 22nd of July 1881.

important measures which are likely to affect the Military Estimates; but the information in the possession of the Financial Department is not sufficient to enable that Department either to check the Military Estimates in detail, to form a sound opinion on the sufficiency of the estimate in case of war, or to exercise any effective control over the details of the military expenditure during the currency of the year. The main responsibility for framing the Military Estimates, and the whole responsibility for controlling the military expenditure during the currency of the year, except in so far as a rate of expenditure in excess of the estimates may be shown by the issues from the Civil Treasury, will rest, therefore, with the Military Department.

We have, &c.

Enclosure in No. 5.

The SECRETARY TO THE GOVERNMENT OF INDIA, Department of Finance, to the COMPTROLLER-GENERAL.

(No. 609.) January 30, 1882.

I am directed to forward, for your information, an extract, paragraph 8, from a despatch from Her Majesty's Secretary of State, No. 303, dated 13th October last, and to inform you with reference thereto that your proposal, submitted demi-officially, by which the Comptroller-General will be associated with the Financial Secretary in the compilation of the estimates, is approved.

2. Under the new system—

(*a.*) The civil estimates will be considered in detail by the Secretary, as at present, on their receipt from the various departments and officers. The Comptroller-General will note on any of them if he finds necessity for so doing.

(*b.*) The estimates of Forest, Post Office, Telegraph, Marine, Military, Public Works, and Ways and Means will be handed up to the Secretary by the Comptroller-General with a note. The Comptroller-General will give special attention to the reconciliation of the departmental figures (both actual and estimates), with the payment into, and issue from, the treasuries, and, in the case of the military estimates, will work out the adjusting entries which connect the "audited" figures of the Military Account Department with the net issues from the Treasury.

(*c.*) The "Budget notes," as passed by the Secretary, will be compiled by the Comptroller-General in a set of forms which harmonise with his regular accounts, and will be useful to him for comparison and check throughout the year.

(*d.*) The Financial Secretariat will simultaneously compile the same notes into its usual forms, which are so framed as to be a connecting link with the Provincial Governments and Accountants-General.

(*e.*) The final result brought out by the Secretariat will be compared with that produced by the Comptroller-General, and discrepancies, if any, will be reconciled. As the two results will have been worked out from the same original data, by two totally different processes, the check will be complete, and accuracy will be ensured.

No. 6.

DESPATCH to the GOVERNMENT OF INDIA, December 14, 1882, No. 391 (Financial).

MY LORD MARQUIS,

I HAVE considered in Council your Excellency's letter, dated the 17th of October last, No. 319, forwarding a copy of the instructions which you have issued with a view to associate the Comptroller-General with the Financial Secretary in the compilation of the estimates of the various departments. The instructions appear to be well calculated to obtain accuracy in their preparation.

2. With reference to your remarks regarding the departmental responsibility for the military estimates, it appears to me that, in regard both to the military and public works estimates, it is with those departments that the responsibility for the sufficiency and moderation of the estimates in the first instance, and for the control of the current expenditure, must rest; and that the action of the Financial Department must be limited to the exercise of due care, that *primâ facie* the estimates properly exhibit the authorised charges on account of the several services of the year, and that the expenditure is not proceeding at a rate unwarranted by the sanctioned estimates, in which case the matter should be at once brought to the notice of your Government.

3. With such safeguards, I trust that the Government of India would never remain long in ignorance of any unauthorised rate of expenditure, and would be able at once to exercise the necessary control over it, or, if it be unavoidable, to give their authority for the increase over their former sanction.

I have, &c.
HARTINGTON.

APPENDIX No. 74.

MEMO. on RETRENCHMENT of EXPENDITURE by the COUNCIL of the BOMBAY PRESIDENCY ASSOCIATION.

(*Handed in by Mr. D. E. Wacha, with reference to qq.* 17,325 *and* 17,360.)

Considering the causes whose combined pressure is stated to have obliged the Government of India to institute a fresh inquiry into the national expenditure, the Council cannot help regretting at the outset that the scope of that inquiry should have been so extremely restricted. If the object to be secured is such a large and sensible reduction of expenditure as shall enable the Government to permanently relieve Indian finance from its condition of embarrassment and make it in a great measure independent of those circumstances which are now supposed to threaten its stability, then, the Council think, the investigation, instead of being circumscribed, as at present, ought to cover the whole field of public expenditure. The subject of financial reform, however, is of such paramount importance in Indian administration that the Council trust the Committee, even with the limitations now imposed, will spare no efforts to make its proposals as comprehensive as possible.

2. The chief causes of our financial embarrassment are:—the growth of military expenditure, the contingencies of war and famine and the increasing loss by exchange. To these may be added the growing cost of civil administration in all its departments. As regards military expenditure, the Council fully expressed their opinion on the necessity of its reduction in the memorial they submitted in January last, to the Secretary of State for India, a copy of which is herewith appended for the information of the Committee. It is superfluous here to observe that the additional permanent burden of two millions sterling (which is equivalent to incurring a permanent debt of fifty millions sterling), the outlay on frontier railways and military works, and the contingencies of future increase of military expenditure in consequence of the new adventurous policy—inaccurately described as a policy of preparedness—are all elements of danger to the stability of Indian finance. The Council think it is

high time, therefore, that India's share in the cost of the army services, which are now rendered to England and India jointly, should be fixed by a committee of impartial experts, representing equally Indian and English interest, and confirmed by a Parliamentary statute. The share should be a lump sum, liable to no variation unless the necessity was conclusively established. The annual outlay on military works and frontier railways is also very burdensome. Seeing that nearly eleven millions have already been expended on the former during the last ten years and over four millions on the latter during the four years that ended with 1884, it is clearly necessary that this heavy expenditure, which is wholly unproductive and of at least doubtful expediency, should be altogether stopped. At present, the annual average charge on these heads amounts to nearly two and a half millions, and the Council see no valid reason why that amount should not be saved by the Imperial treasury.

3. Loss by exchange, which has of late varied from about four to four and a half crores per annum, and which is liable to swell with a further fall in the value of silver, no doubt entails a heavy burden on the revenues of India. While the embarrassment it causes to the Indian exchequer is much to be deplored, the Council would observe, that it is within the power of the Government to mitigate, to some extent, the evils arising from it, provided the causes which create this loss are themselves fairly faced. It is evident that the loss is mostly due to the Home charges. These, the Committee are aware, now amount to seventeen millions and upwards per annum, and must grow in the future with the increased military expenditure that has unfortunately been determined upon, and with the increase of interest on the sterling debt. They are incurred on account of the army services, interest on guaranteed railways and sterling debt, stores, and certain civil salaries and pensions, which have to be paid in gold. Considering the immense influence which remittances on this account exercise on the rise or fall of exchange between India and England, it must be obvious to the Committee that a material reduction in the loss incurred at present by a low exchange can only be looked for when there is a corresponding material reduction in the said charges. Under the circumstances, the Council are of opinion that if the Government insists upon a reasonable diminution of the dead weight of these charges, the permanent relief to the Indian treasury in the future will be not inconsiderable. They think it essential for the Indian Government at this juncture to urge strongly on the Secretary of State for India in Council, the desirability of devising some practical scheme to commute in silver the liabilities that have at present to be met by payments in gold. The Council are aware that the obligations which have been incurred in the past must undoubtedly be fulfilled, but it is desirable that some active steps should be taken to mitigate the evils arising from these obligations, as far as practicable, especially with regard to guaranteed railway interest, by opening negotiations with the representatives of the different interest involved to bring about the suggested commutation. In support of the above suggestion the Council would refer to the observations made by Sir John Strachey and General Strachey at pages 80 and 83 of "The Finances and Public Works of India." At the same time they would also suggest the expediency of contracting payment in silver only, so far as it may be possible, of all liabilities and obligations which the Indian Government may have to incur hereafter, as well as of salaries, pensions and gratuities of every kind and nature.

4. Beyond the charges which entail loss by exchange there are others annually incurred for which the Indian revenues are made liable, but which in all fairness, should be borne by the British Treasury. (1). There are the political establishments outside India, which are really maintained in the interest of the Imperial Government, and by which this country is but little benefitted, such as the Residencies at Aden and the Persian Gulf, and the minor establishments in China, at Tehran, Meshed, and Astrabad, at Bussora, Jedda, Muscat, and Zanzibar. The Residency at Aden, especially, is an expensive burden and the charges of its maintenance are paid out from the Indian Treasury. Its utility as a half way house to the southern Asiatic Continent is confined not only to India but to Ceylon, to the Straits Settlements, to Hongkong and to the Australian Colonies, and its maintenance should not, therefore, be thrown on the revenues of India. (2). There are rents, taxes, and other charges incurred on the large buildings which have of late years been constructed at the expense of India, such as the India Office (540,000*l.*), the Library (70,000*l.*), the Store Depôt (68,000*l.*), Cooper Hill's College (100,000*l.*), and Ealing Lunatic Asylum (38,000*l.*). Apart from the annaul loss of 32,000*l.* in interest which this total outlay entails on India, these rents and taxes, &c., amount in round numbers to 15,000*l.* Coopers Hill College has been able to pay its expenses only during the last three years, by admitting outsiders to attend lectures on payment of fees. This is an arrangement that was uot originally contemplated by the authorities. Besides, having regard to the fact that there are special engineering colleges in India, the alumni of which are not very handsomely treated, the Council fail to see the justice of keeping open the college in England, and, would, therefore, recommend its abolition. Again, it seem to be very unfair that the Ealing Lunatic Asylum, which now costs about 4,000*l.* per annum, should be maintained at the cost of the Indian taxpayer. (3). There is a variety of miscellaneous charges also incurred in England which amount to about 25,000*l.* on an average per year. Some of these are excessive, as for instance, the cost of the Civil Service examinations and the salaries allowed to passed candidates while on probation. It is a very large amount to pay, 14,000*l.*, especially when the doors of the examination are practically closed against the natives of India. The Council think all the several charges referred to above may fairly be borne by England.

5. Beyond these annually recurring expenses there are temporary charges now and again incurred which are objectionable and ought, therefore, to be disallowed, such as passage and outfit expenses of Viceroys, Governors, and Judges. There seems no reason why such officials, coming out on high salaries, should not pay their own passage. As a general rule, passage and outfit money ought to be disallowed to all officers who are sent from England to join their appointments in India.

6. As regards the serious growth of salaries, the Council would in the first place invite attention to the appended table marked A., being an analysis of the return presented to Parliament in 1881. The first and most striking fact which these figures disclose is the very small difference between the average annual salary, viz., 458*l.* of an effective officer and the average annual pension, viz., 380*l.*, of a non-effective officer. Thus, it would seem that it costs the Government only a little less for an actual worker than for a non-worker. It is clear, therefore, that the total burden of pensions, in the Civil and Military branches of the administration, is oppressive. The second point which equally challenges attention, upon a study of the table, is the extreme costliness of the European agency employed in the administration. While the salaries (above 100*l.*) of 9,157 Natives of India annually amount to 1,639,411*l.* those of 12,916 European (Eurasians excluded) amount to 8,470,835*l.* In other words, while the number of the former is less by 41 per cent. their salaries are less by 416 per cent. The number and cost of the pensioners appear to be even more disproportionate. The European non-effectives exceeds the Natives 303 per cent. in number and 339 per cent. in pensions. Thus, 8,350 Europeans receive pensions amounting to 3,226,262*l.* against 2,074 Natives receiving 734,452*l.* The Council cannot shut their eyes to the fact that the burden of the cost of Europeans in the military department is very heavy indeed. It is understood that their number is needlessly large while their salaries are now considerably higher than what they were sixteen years ago. According to the table, there are nearly 6,000 military officers on salaries amounting to 3½ millions and upwards, and 6,500 on pensions amounting to 2¼ millions per annum. An effective military officer costs 605*l.*, and a non-effective 344*l.* on an average per year. Thus, the facts here stated give addition emphasis to the representations made by the Council to the Secretary of State for India regarding the imperative necessity of curtailing military expenditure to the standard figure of 14 to 14½ millions, and of liberally opening the doors of the military service to a fair number of qualified Indians.

7. Passing from the military service, it seems that the cost of the European agency in Civil employ is likewise excessive. Thus, a Covenanted European Civil Servant costs on an average 1,715*l.* per annum, in salary and 806*l.* in pension; an Uncovented European 421*l.* in salary and 291*l.* in pension, and a military officer in Civil employ 880*l.* in salary and 497*l.* in pension.

The entire cost of the Civil European agency, accordingly, amounts to nearly 5 millions in salaries and nearly a million in pensions against 1½ millions in salaries and a little over half a million in pensions incurred on account of the Native agency.

8. The above statistics conclusively establish the fact that the European agency in all the departments of the public service has hitherto been maintained on too lavish a scale—a scale that has no parallel in any other part of the civilised world, and is, besides, out of all proportion to the financial ability of India. The Council would strongly urge on the Committee the necessity of recognising this important fact if the reduction in expenditure is really to be of a character to sensibly relieve the Indian treasury of its embarrassment. A very large saving might be effected by more extensively employing competent Natives in positions which are now filled by highly paid Europeans. And with that view the Council would suggest to the Committee the desirability of gradually reducing the cost of the Covenanted Civil Service by recommending a diminution in the number of Civil Servants annually recruited from England. If the Service is in future so manned that ultimately its strength shall be one-third of the present number, and if, moreover, the scale of salaries is revised after a due consideration of the financial capacity of India, a large saving may be effected.

9. The burden of the expense of an Uncovenanted European officer and a Military officer in Civil employ is also very heavy. The former draws on an average 421*l.* per annum and the latter 880*l.* The salary of an Uncovenanted Native officer averages 187*l.* and that of a Native Military officer in the Civil employ 380*l.* per annum. The amount of the yearly salaries allowed to 6,006 Europeans in the Unconvenanted Civil Service aggregates 3¼ millions and that allowed to 7,561 Natives a little over 1¼ millions. The facts speak for themselves, and it is a matter of regret to the Council that in spite of the Despatch of the Secretary of State for India and the Circular orders of the Supreme Government, a very large number of appointments, above Rs. 200 per month, which "are reserved" in the several specified departments for Natives of India, are still given away to Europeans, and that, too, on an higher average scale of salaries.

10. In reference to the above observations, the Council beg to invite the Committee's attention to Table B. herewith annexed. It will be seen from the table how great is the disproportion both in number and salaries between the Europeans and Natives employed even in those departments of the public service which are "reserved" for the latter. Though the figures are incomplete, it will be observed from the last column that over 1,650 appointments, carrying salaries amounting to 84 laks and upwards per annum, are held by Europeans, to the 190, carrying salaries amounting to about Rs. 3¾ laks, held by Natives. In the case of the Bombay Presidency, there are 283 Europeans on salaries amounting to 2 laks, to 61 Natives on Rs. 21,000 per month, in the various departments "reserved" for the latter, such as the Financial, Forest, Salt, Revenue, Survey, Public Works, Police, &c. The majority of the appointments are given away to Europeans because, the Council believe, the holders happen to be the nominees of influential persons. So long as the local authorities ignore the claims of Natives, and prefer to give these appointments to Europeans, there can be no economy in the cost of the Civil administration. It is essential that the appointments "reserved" for Natives of India in the several departments should be scheduled, and an Act passed prohibiting provincial authorities from appointing any persons except Natives of India to those posts. As it is, the Circular instructions of 1879 are overridden. At any rate, nothing has prevented the provincial authorities filling up almost the whole of the higher appointments reserved for Natives of India by Covenanted and Uncovenanted Europeans and European Military Officers. Under these circumstances the Council cannot refrain from strongly urging on the notice of the Committee the extreme desirability of insisting that almost the whole of the Uncovenanted appointments now held by Europeans should be held by Natives. The Committee is aware that a general rule has been laid down to give to Native incumbents of offices under Government two-thirds of the pay that would be given to European incumbents of the same. The Council do not wish to object to the maintenance of this rule, provided that offices at present held by Europeans are very much more largely conferred upon Natives. It is only if this condition is satisfied that the measure, as a measure of economy, will be of any avail. And the Council are clearly of opinion, that, except as a measure of economy, such differential rates of pay for the same office would be indefensible on principle.

11. Other important points in reference to the question of retrenchment which the Committee may properly consider are the exodus to Simla, and the disestablishment of the ecclesiastical department. The annual migration of the Supreme Government to Simla, we think, costs between 7 and 12 laks of Rupees, inclusive of the expenditure incurred by the removal of all the other great departments which follow the staff of the Viceroy and Governor General. It is generally admitted to be injurious from a financial point of view and by reason of the length of the period over which it extends from an administrative point of view also; and it therefore demands an urgent remedy. The maintenance of the Christian State Church in a country where by far the greatest number of people are non-Christians is quite indefensible.

12. Turning next to the cost of collection of revenue, we find that the proportion it bears to the growth of revenue itself is very large, as may be seen from the table below:—

Revenue.	Percentage of Increase of Revenue in 1884–5, compared with the Average of 10 Years from 1870–80.	Percentage of Increase of Cost Collection in 1884–85, compared with the Average of 10 Years from 1870–80.
Land - -	7·47	15·80
Stamp - -	25·34	34·29
Forest - -	56·44	57·54

13. Another noticeable point is the difference in the cost of collection of revenue in the different Provinces. How great is the difference may be illustrated by the following table on Land Revenue:—

Provinces.	1884–85.		
	Land Revenue.	Cost of Collection.	Percentage of Cost to Revenue.
	£	£	
Bengal - -	3,742,025	340,355	9·10
Assam - -	404,943	92,403	22·81
N.W. Provinces and Oudh -	5,727,624	811,521	14·17
Punjab - -	2,070,008	297,199	14·35
Central Provinces	606,309	70,865	11·68
Burma - -	1,141,231	238,324	20·9
Madras - -	4,186,376	790,622	19·
Bombay - -	3,855,586	674,405	17·49

14. Two other heads of revenue show similar differences. The Customs revenue presents particularly noteworthy statistics. In spite of the diminution of revenue by the abolition of the import duties on piece goods and other articles and by the reduced duty on salt, the departments seem to have been maintained very expensively, with the result that the percentage of cost of collection to revenue in Madras rose from 5·8 per cent. in 1875–76 to 6 per cent. in 1884–85, in Bengal from 6 to 17·94, and in Bombay from 11 to 22·51 per cent. during the same period. The cost seems to be very excessive, and needs to be reduced to a moderate figure in all the three Provinces. In the Forest department likewise there seems to be considerable variation. Not only does the cost of administration absorb in most cases over 50 per cent. of the whole of revenue but it actually exceeded the revenue in the province of Assam. There, the revenue in 1884–85 was Rs. 18,042, while the cost was Rs. 19,676! The percentage of cost of collection to revenue in Bengal was 27 in the N. W. Provinces and Oudh 84, in Punjab 74, in the Central Provinces 48, in Burma 70, in Madras 79, and in Bombay 63.

15. The cost of the superior permanent establishments in the Public Works Department also needs to be closely investigated. It would seem from the Parliamentary Return of 8th June 1883, that there were in all India 781 Engineers of several grades as under: 13 Chief Engineers on salaries amounting to Rs. 27,700 per month; 39 Superintending Engineers on Rs. 52,650; 304 Executive Engineers on Rs. 2,21,150, and 425 Assistant Engineers on Rs. 1,69,550. The total annual salaries of these Engineers, almost all of whom are Europeans, amount to Rs. 57,82,600. The Council consider that the numerical strength of the staff as well as the scale of the salaries, requires to be re-examined by the light of present circumstances with the view of gett ng a reasonable reduction. It is worthy of consideration whether Chief Engineers on an average monthly salary of Rs. 2,133, Superintending Engineers on Rs. 1,350, Executive Engineers on Rs. 760, and Assistant Engineers on Rs. 398, do not form a costly aggregate. Native engineering talent, it is a matter of regret, has not received that adequate encouragement which it deserves, and it is desirable that greater scope may be given to it by employing Natives in the higher grades in larger numbers in the Public Works Department. It may be also desirable to inquire into the system of preparing designs and estimates. The Council understand that before final estimates are passed and sanctioned a needlessly large number of preliminary estimates and designs are made for a particular work which must in the aggregate cost the State a large amount of money that is necessarily wasted. Again, it is important to inquire into the expenditure on repairs to roads and communications, and on Civil and Military buildings from Imperial and provincial funds. The percentage of the cost of executive establishments and supervision in reference to capital outlay on original works, and expenditure on repairs, needs to be closely scrutinised. The Council think that the activity in the construction of Civil buildings in the various provinces may be judiciously controlled, so as to bring about some reasonable reduction of expenditure. The details of the system of letting contracts and the checks in vogue, also deserve the attention of the Committee, as it is feared that a great deal of the State money must be wasted on works which collapse soon after they are built. Lastly, the Council think that with the view of having a more economical and effectual administration of the Imperial Public Works Department, it would not be inopportune were the Committee to give its careful consideration to the proposal of conducting its operations upon a contract basis analogous to that of the quinquennial agreements with provincial governments, as suggested by the Honourable Mr. (Sir T. C.) Hope in his minute appended to the Despatch of the Government of India to the Secretary of State, dated 23rd January 1883.

16. The cost of General Administration, too, has grown enormously since 1870–1. Not a single year has since passed in which some charges have not been permanently added. In 1885 the growth was fully 39·42 per cent. more than the average of the three preceding years, and 11·35 more than the average of the previous decade. The details of the various departments tell a uniform tale of increased charges. Thus, the cost of the Police in 1885 showed a growth of 15 per cent., compared with the average of the decade commencing from 1870. The charges of Medical Establishment in 1885 were also 15 per cent. higher, compared with the average of the same ten years. The growth of the Political establishment in the last four years alone has been 48 per cent. It shows that the expenditure under this head is imperfectly controlled. Scientific and minor department shows a growth of 24 per cent. in 15 years, Superannuation and Pensions of 20¼ per cent., and Stationery and Printing of 47 per cent. The expenditure incurred on the last can be very satisfactorily curtailed, if the growing practice of preparing bulky reports and minutes is discouraged, and if all Government printing were done by private enterprise. The Council think that administrative efficiency, which is now in a measure smothered in a mass of uninteresting and useless details, would very much gain by a rigid curtailment of expenditure under this head. The growth of the cost of the General Administration in its different branches being what has been here shown, the Council are strongly of opinion that the expenditure may very well be brought down, back to the scale on which it stood in 1870–71.

17. As to provincial assignments, the Council do not think that any very lengthy observations are needed to prove the inexpediency of curtailing them after the exhaustive treatment the subject has received at the hands of the Government of India in their Despatch of 24th August 1883, and in the minute of Mr. Barbour which is appended to it. It would be no doubt injurious to their material progress if the provinces were considerably shorn of the revenues at present assigned to them for their legitimate requirements. A curtailment of these allotments would seriously hamper the progress which all provinces have been fairly making since 1876, and impede the growth of that healthy system of decentralisation which has received such marked development since 1882. It may even lead in the long run to additional local taxation. And, once the system has received a rude shock, it will, it is to be feared, be difficult to place it again on the sound footing to be now witnessed. The Council hope that in dealing with provincial assignments the Committee will give the subject that careful and impartial consideration which it deserves.

18. At the same time the Council would remark that expenditure in the three Presidencies varies greatly, as may be seen from the tables below:—

Presidencies.	Area, Square Miles.	Population.	Cost of Administration.
			£
Bengal - -	150,568	66,691,456	201,330
Madras -	52,051	30,868,504	147,084
Bombay -	24,605	16,489,274	176,336

19. Thus Bombay, with six times less area and four times less population, and Madras with one-third of the area and half the population, are administered more dearly than Bengal. The detailed figures of some of the departments are still more striking. Thus:—

Presidencies.	Law and Justice.	Police.	Stationery and Printing.	Medical.
	£	£	£	£
Bengal -	792,596	413,267	163,754	131,051
Madras -	413,141	353,222	78,369	156,078
Bombay -	462,106	450,533	50,724	137,742

20. The expenditure in Bombay and Madras under the first three heads is excessive compared with Bengal, while the charges incurred for Stationery and Printing in Bengal and Madras are very high compared with those of Bombay. It is difficult to believe that the circumstances of the different Presidencies are so radically different as to justify such immense variations. Apart from the above facts, the Council would observe that the expenditure generally, as shown above, is large and susceptible of reduction.

21. The Revenue-commissionerships in Bombay, and the Revenue Boards in Madras, Bengal, the Punjab, and the United Provinces; the Director-generalships of Railways and Post Office; the Inspector-generalships of Forests, Police, Prison, and Registration; the Sanitary Commissionerships and Surgeon-generalships; the Superintendentship of the Archæological department and other similar offices, many of which are mere channels of communication between the executive officers of the District and the Central Government, seem to be quite superfluous, and may be abolished without inconvenience. Besides their salaries, the holders of the several offices cost a great deal in travelling allowances, an expenditure which may very well be spared. Travelling allowances to all classes of State employés, save those on a monthly salary below Rs. 500 should, as a general rule, be abolished. So also all sorts of local allowances, which in the aggregate amount to a very large sum per annum. The Council would also suggest the abolition of all prizes awarded for proficiency in the Indian Classical and Vernacular languages. They are a pure waste of public money.

22. Coming to the Bombay Presidency, the multiplicity of departments in District administration may be considered. The separation of the Land Revenue, Survey Settlement, Forest, Abkari, Salt and Opium

and Customs' departments, has resulted, not only in increase of the cost of administration, but much mischief and friction. The Collector, who formerly managed all these departments, may again be entrusted with their supervision, an Assistant or Deputy being in charge of each department separately, and the general magisterial work being arranged for in some other suitable way. The Collector, instead of being the Collector of Land Revenue only as at present, should be the Collector of all revenue. He should be the head of all the earning departments, and may be relieved of his magisterial, police, and jail functions.

23. The Council do not see the necessity of the offices of the Commissioner of Customs, Opium, Salt and Abkari in Bombay, and of the Collector of Customs, as the work to be done has been considerably lightened since the abolition of the import duties, and the subordinate staff respectively attached to the offices is sufficiently strong for all the work needed. They think the Collector of Bombay can be easily relieved of his duties as Superintendent of Stationery and Printing, and entrusted with the additional duties of Collector of Customs and other revenue. The Sanitary department again as a distinct department has little reason for its maintenance. The Local Boards and Municipalities, with the assistance of the Medical department, headed by the Civil Surgeon in a district, may well be trusted to look after sanitation. The Presidency Surgeonships are offices which are also of doubtful necessity. It is difficult to see what useful functions they fulfil. The Council venture to think these offices, and all such sinecure appointments, should be ungrudgingly abolished.

24. As to the Judicial department, it has been suggested that the original side of the High Court should be abolished, and its work entrusted to some subordinate Judges and district Judges. The Council are aware of the costliness of litigation on the original side, and it may be necessary that some steps should be taken to reduce the cost. But this should be done without in any way impairing its efficiency as the highest tribunal in the Presidency. Further, the work on the original side may be somewhat reduced by conferring extended jurisdiction on the Small Clauses Courts. By a judicious reform in these directions it is possible that an additional judgeship may be rendered unnecessary. And here the Council would suggest the desirability of resuscitating the machinery of the village punchayets for the administration of justice in the Mofussil. It appears to be still a living institution in the Punjab and the United Provinces, and doing useful work in that direction. Civil and criminal cases of an ordinary kind can be well entrusted to the village punchayets, and thus the numerical strength of the Mofussil civil and criminal courts may be reduced at considerable saving not only to the pockets of those seeking cheap and efficient justice, but to the Indian treasury itself. At the best the Council can only make a crude suggestion here, and would leave it to the Committee to mature a scheme if the suggestion meet their approval. All civil, rent and revenue suits under a certain value may be entrusted to the punchayets, and appeal from their decision may be made to subordinate Judges, who should be told off to go on circuit at stated intervals.

25. Turning to appointments and salaries in the various Civil departments of the Bombay Presidency, the Council would remark that the suggestions and reductions here proposed are far from complete, and are also put forward tentatively, owing to the absence of any published returns containing full and minute information regarding the different establishments, and also owing to the necessarily imperfect information on the subject which outsiders possess. These circumstances have likewise resulted in making some of the suggestions hereinbefore made less definite than the Council could have desired. But it is hoped that they may lead to some beneficial results by drawing the attention of the Committee to facts which challenge investigation.

Administration.—Considering that the membership of the Executive Council does not entail work of a more exacting character than what is undergone by a Judge of the High Court, and also bearing in mind that a member of the Council works for a considerable portion of the year in a more invigorating climate, the salary of the former office seems somewhat excessive. It can be reduced to a reasonable figure, say Rs. 4,000 per month. The annual saving will amount to Rs. 40,320. The salary of the Chief Secretary ought to be less than that of Her Majesty's Judges, and need not exceed Rs. 3,000, while it is desirable that the pay of each of the Secretaries should not exceed Rs. 2,000. The reduction would amount to Rs. 31,900 per year.

Financial Department.—By reducing the salary of the Accountant-General to Rs. 2,500 of the senior Assistant Accountant-General to Rs. 1,000 and of the two Chief Superintendents to Rs. 500 each, a saving of Rs. 8,160 may be effected per annum.

Collector of Bombay.—The office can be amalgamated with that of the Collectorship of Customs and Salt. The salary of the combined office should not exceed Rs. 2,000 per month. At the same time the Collector can be relieved of the duties of Superintendent of Stationery and Printing. These charges would effect an annual saving of Rs. 59,280.

Commissioner of Customs, Salt, Opium, and Akbari, and Reporter General of External Commerce should be entirely abolished at a total yearly saving of Rs. 42,000.

Superintendent of Stamp and Stationery.—The officer now employed as Assistant should be made Superintendent on the same salary, viz., Rs. 600 per month.

Registration.—The Inspector-Generalship is a sinecure and can be abolished without impairing the efficiency of the Department. The special Registrar can conduct what little work that office requires, say on a small increase, if necessary, to his present salary. The annual saving by this change will amount to Rs. 21,600.

Mint and Assay Office.—The salary of Rs. 3,000 allowed to the Mint Master seems excessive. It can be cut down to Rs. 1,500. The salaries of the Assay Master and the Deputy Assay Master are also high. The salary of the former can be reduced from 1,850 to 1,000, and that of the latter from 1,200 to 600. There is no reason why a supernumerary, as probationer, should be allowed on Rs. 600 per month. The yearly savings will amount to Rs. 42,600.

Minor Departments.—The Director-Generalship of the Archæological Survey of India can be abolished without detriment to public efficiency. The office of Inspector of Factories can be amalgamated with advantage with that of the Inspector of Steam Boilers and Prime Movers. The total savings will come to Rs. 21,600.

Law and Justice.—Should the changes referred to in the 26th paragraph be carried out, then the salary of a Judge may be saved. The salaries of the following officers can be fairly reduced:—

Master in Equity - - -	to Rs.	2,000
Prothonotary - - -	,,	1,000
First Deputy Registrar - -	,,	500
Second ,, ,, - -	,,	500
Head Assistant Prothonatary -	,,	600
Registrar, Appellate side - -	,,	1,000
Government Solicitor - -	,,	2,000
Legal Remembrancer - -	,,	2,000
Second Judge, Small Cause Court	,,	1,250
Registrar - - -	,,	500
Chief Presidency Magistrate -	,,	1,500
Second Magistrate - -	,,	1,000

The aggregate savings will amount to Rs. 1,14,600 per year.

Police.—The Commissioners salary should not exceed Rs. 1,500. The Deputy Commissioner can be reduced to Rs. 600. The Superintendent of the G. I. P. Police to Rs. 700. The reduction will amount to Rs. 10,800 per annum.

Medical.—The Surgeon Generalship can be abolished. So also the Presidency Surgeonships. Also the Sanitary Commissionership. Saving Rs. 1,03,400.

Printing.—The salary of the Superintendent can be reduced to Rs. 500. Saving Rs. 4,080.

In round numbers an annual saving of Rs. 5½ lakhs may be expected by carrying out the above reductions. But it must be borne in mind that beyond this a very large saving can be effected if the important suggestions already referred to in the 11th paragraph, so far as they relate to this Presidency, are also carried out. If most of the unreserved appointments in the Sind Commission, in the Revenue, Survey, Forest, Salt, Customs, Police, Public Works, and other departments which are now held by Europeans, are in future held by Natives of India, the saving would be considerable.

26. In conclusion, the Council are of opinion that reduction of expenditure will in the long run do little to permanently relieve the finances in a sensible degree and place the Indian exchequer on a thoroughly sound and healthy footing, unless substantial changes are at the same time introduced into the system of administration in consonance with the spirit of the times, in sympathy with the legitimate aspirations of the people and with due regard to the financial ability of India. The essential fact of the poverty of this country should never be lost sight of. It is imperative that expenditure should be adjusted to income rather than income to expenditure. It was elicited in the evidence of Sir Charles Trevelyan, before the Parliamentary Committee of 1871–74, that there has been a reversal in recent years of the old rule whereby the income was dealt with as a certain quantity by which expenditure was regulated, whereas the system at present in vogue seems to be of first fixing expenditure and bringing the taxation up to it. There was also evidence in support of the conclusion that the interests of India as regards expenditure are not sufficiently protected under the constitution of the Council of India in England and that there was much better protection in the time of the East India Company. There seems to be no sufficient barrier against official pressure in the direction of lavish expenditure. Lord Lawrence was of opinion that the revenues of India are overcharged in various ways in favour of the Imperial revenue. The alarming growth of Civil and Military expenditure was also brought in evidence. Thus it is the faulty system of administration which is at the root of the financial embarrassment of the Government of India. The evils of that system are: mischievous military activity on the frontiers and elsewhere, a lavishly paid foreign agency, oppressive home charges, an undue subordination of Indian revenues to England's interests, and a want of rigid control over expenditure generally. Loss by exchange is one of the principal and direct consequences of the first four of these evils. And the conviction is growing, therefore, that no permanent relief to the finances of India can be hoped for until a saving from about four to five millions at the least is effected by: (1) reducing the excessive burden of Military expenditure; (2) curtailing Home charges; (3) gradually substituting on a large scale Native for European agency; (4) resolving to contract all future obligations, as far as possible, and all salaries and pensions, in silver; and (5) by devising most efficacious checks for controlling expenditure both in India and England. To secure these several objects it is of the utmost importance to make fundamental changes in the system of administration. Without these it would be vain to indulge in the hope that any permanent relief now so necessary can be afforded to the Indian treasury. The Council are far from underrating the difficulties and opposition which the Government is liable to encounter should it set about earnestly to carry out the changes. But these are not of so insuperable a character as not to be overcome. They feel confident that the Government has only to give proof of its resolute determination to carry out the changes unflinchingly to be able in the end to secure the desired financial reform with the cordial co-operation of the Indian communities.

APPENDIX No. 75.

(*Handed in by Mr. Wacha, with reference to Qu.* 17,349.)

MEMORIAL forwarded by the BOMBAY PRESIDENCY ASSOCIATION to LORD RANDOLPH CHURCHILL.

Bombay Presidency Association,
37, Hornby Row, Bombay,
January 1886.

To the Right Honourable Lord Randolph Churchill, Her Majesty's Principal Secretary of State for India in Council.

May it please your Lordship,

IT is with the deepest concern that the council of the Bombay Presidency Association have viewed the measures that are now being actively taken by the Government of India, under instruction from the Secretary of State in Council, to add to the present military force of the empire 10,000 more British and 20,000 more Native soldiers, at a cost which is estimated at about two millions sterling per annum.

2. Bearing in mind the fact that the strength of the Indian army was till very recently maintained, with but immaterial variations, almost at the figure originally recommended in the Report of the Royal Commission of 1859, and afterwards approved of by the Simla Army Commission of 1879; and considering the opinion expressed in the report of the latter, that for repelling external aggression on the north-west and north-east frontiers of India a field force of 50,000 to 60,000 fighting men is quite adequate, while 39,600 British soldiers and 75,800 Native soldiers would still remain available for the internal defence of the country, and "suffice to maintain order in British and feudatory "India and on the frontiers," the Council of this association have failed to understand the reasons for which it is now proposed to augment the existing strength of the British India army. If the necessity for repelling external aggression is fully met by the 50,000 or 60,000 fighting men that can readily be placed in the field from the existing force of 189,000 men, it is difficult to think of any other necessity or contingency arising to justify, in times of peace, a permanent addition of 30,000 troops and, consequently, a permanent burden of two millions sterling on the revenues of India. For if by some unlucky mishap or disaster it was even found imperative to move a greater portion of the remaining available fighting force to the field of operations such a movement could be easily effected. The present facilities of transport and telegraphic communication would enable the military authorities, at very short notice, to replace from England, or from England's colonial possessions nearest to India, the European portion of the force which may be ordered on field duty; while by a judicious utilisation of the remaining regular native troops, in conjunction with the better class of drilled soldiers which the princes and feudatories of the empire would be ready and willing to place at the disposal of Government, a sufficient number of soldiers would still be available for preserving internal order or quelling disturbance with the aid of the civil police, which is now maintained at a net cost to the Imperial revenue of 2,150,000*l.* per annum. And the number available for internal defence might be considerably increased were the Government to encourage the formation of volunteer corps in important centres of the country from among the educated and respectable classes of the Indian community.

3. Above and beyond these facts it is needful to remember, as has been very clearly demonstrated in the despatch from the Government of India (No. 168 of 1879, Military Department), dated Simla, 22nd May 1879, that the construction of railways and the development of communications have greatly increased the power of the Indian Government to concentrate troops, and thus altered strategical conditions; that districts which 20 years ago were unsettled are now peaceful and settled, and that the troops have been re-armed with improved weapons, which vastly enhance their fighting capacity as against any Asiatic troops, and perhaps even as against European troops, according to some of the highest military authorities.

4. Thus, while fully alive to the necessity of adequate measures which shall place the empire in a position to repel external foes when occasion arises, and to maintain internal peace at all times, the Council beg leave to submit that no case has been made out for the augmentation of the present forces. And such augmentation is to be specially deprecated in view of the appalling expenditure of 17,000,000 sterling, which India is now obliged annually to incur upon its army, even as at present constituted.

5. Successive Viceroys and Finance Ministers, as well as other high authorities on military finance, have deplored, from time to time, the growth of our military expenditure and emphasised the necessity of curtailing it. It is only within the last official year that the accounts have shown some reduction, but Sir Auckland Colvin has not been slow in his financial statement of March last to express his fear as to the maintenance of this somewhat reduced expenditure. And in any case the stupendous enhancement of our military charges in years past admits of no concealment.

7. In 1861, Mr. Samuel Laing, the then Finance Minister, observed: "I am sanguine that the total "expenditure on the army may be kept at 12,250,000*l.* "or even brought down to 12 millions in India and "two millions in England. . . . . It is not fair "that India should pay the full cost of the reserve "establishment in England. . . . . If a fair "settlement is made I look for a considerable further "reduction in the military estimates." It is important to mention here that this estimate was arrived at after the laborious investigations carried on in England by Sir G. Balfour, whose impartiality in the examination of military accounts for the distribution of the entire military charges between England and India is well known. This estimate of 14 millions has, however, remained merely a theoretical one, while the latest complete accounts for 1884-5 show an actual net military expenditure of 17 millions, inclusive of all outlays. In paragraph 5 of their military despatch, No. 168, dated Simla, 22nd May 1879, the Government of Lord Lytton remarked in reference to the payments made to the Imperial Government on account of imperial troops, that "these have been repeatedly "investigated, but with results we have not been able "to accept as equitable and satisfactory. . . . . "We have grave reasons for thinking that justice to "India requires the reduction of these payments (by "about half a million sterling) to a consolidated "yearly payment of 850,000*l.*" Every Finance Minister in turn has protested against increased military charges in England, charges in the regulation of which, as the Government of India has more than once observed, it has no voice. It was elicited in evidence from some of the witnesses examined before the Select Committee of the House of Commons on Indian Finance, that the Government of India was not consulted by the English War Office whenever permanent increased charges were thrown upon the Indian Exchequer. The Marquess of Salisbury was obliged to admit this fact, and to observe that vigilance was required on the part of the India Office in order to guard against danger from other departments of the State encroaching upon the rights of the Indian Exchequer; while letters of remonstrance were addressed by Lord Northbrook and the Duke of Argyll as to the "unjust" and "scandalously unjust" character of some of the charges fastened upon India. Again, Sir T. T. Pears observed before the same Committee that, with an aggregate increase of nearly 400,000*l.* a year for pay and allowances entailed by certain changes made by the War Office, there was little or no consultation with the India Office as regards the changes themselves. Lord Sandhurst deposed to the effect that questions of military organisation were decided at home without reference to Indian authorities. While Lord Salisbury further admitted that increased expenses had been entailed upon India by the necessity of following the lead of England in making changes in the British army organisations, changes made without special reference generally to the interests of India; his Lordship did not hesitate to state that it was expedient that this country should be generally consulted by the War Office in reference to any changes affecting its revenues.

8. "It has to be observed on the other hand," state the Government of India in their Despatch, No. 401, of

21st November 1884, "that whereas the British " garrison in India has practically remained unaltered " in respect of numbers and efficiency for many years " past, its cost has been in course of constant increase " from the various changes which have been made in " the organisation of the British army, changes made " entirely, it may be said, from Imperial considerations, " and in which Indian interests have not been consulted or advanced. The introduction of short " service, the increase in the higher rank of officers, " the rules relating to promotion, have all made large " demands on the Indian treasury; in return for " which India has derived no commensurate advantage " . . . It has to be remembered that charges which " do not cause any very serious additions to English " estimates, and which are carried out without the " least reference to India, involve very much larger " charges on the Indian revenues by reason of the " much more liberal allowance enjoyed by officers in " this country. The conversion, for example, of the " first captains of the Royal Artillery into majors " gives the officer so promoted an increase of only five " shillings a day in England; in this country the " difference between the pay of a major and a captain " of artillery is 342 rupees a month."

9. It is for your Lordship to consider the appalling gravity of the charge which is made manifest even in this one instance. But in order that the injustice of the many military charges which have been fastened on India since 1864–5, and their baneful influence on the Indian revenues may be seen to the full, the Council of the Association beg to refer your Lordship to the 45th paragraph of the same despatch. Not a single year has elapsed since 1864–5 in which some permanent charges, light or heavy, have not been thrown on India. It is not surprising if in the succeeding paragraph the Government of India is constrained to remark that " this process of increasing the charges of " the European forces in India has indeed been carried " on of late years to an extent which Her Majesty's " Government are perhaps hardly aware. . . . " These additional charges amount to more than " 800,000*l.* a year. Some of them were for necessary " improvements; others were imposed with little or " no reference to Indian wants, and in most cases " without the Indian Government having any voice " in the matter." Thus, though the expediency of consulting the Indian Government on changes in the British military organisation affecting the revenues of India was admitted and acknowledged in 1873, that Government had, 11 years later, still to complain that it had no voice in the adoption of such changes so far as they affected Indian revenues.

10. Your Lordship cannot be unaware of the fact that, strictly speaking, the net revenue of India, during the decade ending 1883–4, has increased at the rate of about 670,000*l.* per annum, but that this increase is absorbed by expenditure of almost equal amount. Of this annual average increase of revenue, military expenditure alone absorbs about 144,000*l.* The net military expenditure in 1874–5 was 15·5 millions. In 1883–4 it rose to 16·99 millions. During the same decade the growth of the net land revenue was 400,332*l.* or say, 40,000*l.* per annum. So that it is clear that increased military expenditure absorbs in one year the net increase in land revenue of three years and a half.

11. It is evident that inasmuch as the steady yearly growth of revenue is absorbed by corresponding expenditure, the Indian Exchequer has no reserve to fall back upon. There is no true surplus to speak of, while the periodic calamities of scarcity or famine, let alone other and unforeseen contingencies, have generally to be met with borrowed money which only swells the permanent interest charge on the revenues of the country. Reviewing in 1879 the finances of India for the seven preceding years, Sir John Strachey observed, that India " possessed no true surplus of revenue over " expenditure to cover the many contingencies to " which a great country is exposed." The Council beg to observe that this state of Indian finance still continues.

12. Such being the ordinary condition of the Indian revenue we must leave it to your Lordship to consider how the finances can bear the severe strain that is now about to be put upon them to the extent of 2,000,000*l.* sterling per annum. The inability of the country to meet any further demand upon its resources is now notorious, while there are no two opinions as to the fact that the limit of taxation has been reached. In their despatch of 8th February 1878, the Government of India observed that "placed as it was under the " serious responsibility of so administering the affairs " of the greatest dependency of the British Crown, " that while British supremacy is strictly guarded, " the means of securing that end shall not unduly " weigh on the people of the country, it was constrained " to represent to Her Majesty's Government that the " burden thrown upon India on account of the British " troops is excessive, and beyond what an impartial " judgment would assign in considering the relative " material wealth of the two countries and the mutual " obligations that subsist between them." And again, " all that we can do is to appeal to the British Govern- " ment for an impartial view of the relative financial " capacity of the two countries to bear the charges " that arise from the maintenance of the Army of " Great Britain, and for a generous consideration of " the share to be assigned by the wealthiest nation in " the world to a dependency so comparatively poor " and so little advanced as India." Later on, the supreme Government acknowledged that " owing to " the poverty of the people and their consequent " inability to bear taxation, it was unable to supply " the funds required for the most necessary and " desirable objects." In the face of these unequivocal declarations the Council are extremely concerned to find that an additional permanent burden of two millions sterling is now sought to be imposed on the population whose yearly income barely goes beyond 40*s.* per head, and that, too, for a purpose of which the necessity is not made out. Such a step, if persisted in, can only result in discontent, which should be avoided at all hazards, not to say anything of the perpetual hindrance it would offer to the execution of those measures of great public utility which are so imperatively wanted.

13. The Council of the Association therefore hope that your Lordship will on a reconsideration of the whole question in all its bearings, political and financial, be pleased to recall the instructions issued on the subject, and at the same time take such measures for the curtailment of the over-grown military expenditure as to bring about a sounder and healthier state of Indian finance generally.

14. Should, however, Her Majesty's Government adhere to their resolution to carry out the proposed increase in the army, the Council submit that the expenditure thereon should be met from retrenchment, for which there is yet great scope, and not from increased taxation, and that the Imperial Government of England be asked to share the greater portion of the burden. The ostensible reason urged for the increase of troops is the necessity of preparedness to repel foreign invasion on the north-west frontier. While we hold that the safest and most prudent policy of safe-guarding the Empire is to remain within the country's true line of defence, supported at the back by the whole strength of a devoted and contented people, we would also urge that in such an eventuality as the increased expenditure is proposed to meet a sense of strict justice alone should prompt England to share with India the great burden of the military charges thus entailed, bearing in mind the capacity of " a dependency so comparatively poor and so little " advanced as India," and remembering that England's vital interests are involved in the maintenance of the Indian Army.

15. The Council of the Bombay Presidency Association therefore pray, firstly, that the resolution to increase the Indian Army by 30,000 troops be rescinded with the view to save Indian revenues the proposed permanent additional burden of 2,000,000*l.*; but if that course fail to meet the approval of Her Majesty's Government, then that the expenditure be shared in an equitable way by England and India. Secondly, that the most rigorous economy be enforced on all departments of the public service, whereby considerable savings may be effected to ease the finances of an oppressive burden, and enable the Government of India to lay by a substantial reserve which may be useful in times of emergency. Thirdly, that a scheme be considered and determined upon for the formation of Native Volunteer Corps. And lastly, that a more stringent system of check and control be established so that encroachments on the revenues of India may be effectually prevented.

We have, &c.
(Signed) B. Tyabji, Chairman.
Pherozeshah M. Mehta,
K. T. Telang,
Dinshaw Edulji Wacha,
Secretaries.

1862-63 - 45.1.
1870-71 - 51.2.

Taxation during the period.
Certificate tax, 1868-69.
Income-tax substituted, 1869-70.
Raised.
Salt tax raised in Madras and Bombay.

Expenditure:	1862-63.	1870-71.
Civil charges -	15.88	19.13
Army charges -	14.89	16.07
Interest charge -	5.47	5.8
Total expenditure, including other heads -	42.9	49.3

Increase - 6.4

Outlay on Public Works during 1862-63, 1870-71:
Ordinary works - 52.66
Guaranteed railways - 43.5 (from 48.8 in 1862-63 to 92.4).
State outlay on prod. public works - 4·6
100.7

Net deficit:	Surplus.	Deficit.
During the period -	6.2	6.4 = 2
Debt - -	62.3	70.1
	96.8	104.0
Increase - 7.0		
Balances - -	62.3	70.1
	23.1	20.1
Decrease - 3 crores.		

Famines:

		Cost in lakhs.
1865-66.	Bengal, Madras, Bombay -	1,53
1868-69.	North-West Provinces, Central Provinces, Punjab, and Bombay	72

Frontier Expeditions:

Sitanna, Bhotan, Lushai.

Railway net loss to State:
1862-63 - 1.6.
1870-71 - 1.9.

Home charges:
Net expenditure:
1862-63. £4.9 millions.
1870-71. £8.01 millions.

Fresh War Office charges during the period:
£451,000 (*vide* Government Despatches, November 21, 1884).

Two irrigation companies formed, and Port Canning, and other harbour improvement, reclamation companies, &c. (with Government support, direct or indirect).

Opium revenue:
1862-63 - 8.06 crores.
1870-71 - 8.04
1861-62 - 6.36

(1.) Large administrative improvements were required after the Mutiny—Civil.

(2.) Provincial administrations made increasing demands for varied local improvements, not being themselves responsible for funds.

(3.) Public opinion in England urged measures for material progress (deemed neglected by the East India Company).

(4.) The commercial interests of England demanded improvements of communication and other public works.

(5.) The recurrence of famines emphasised the obligation of the State as to protective works.
(*a.*) Private enterprise encouraged in all ways.
(*b.*) State agency since 1867 employed to co-operate.
(100 crores in all spent on public works).

(6.) War Office measures in respect of the British Army imposed a net charge of 450,000*l.* due to amalgamation and unequal military partnership.

Total expenditure rose from 42.9—49.3.

Expanding demands for expenditure:—
(1.) General administrative improvement.
(2.) Public works—productive, ordinary, protective.
(3.) Provincial needs.
(4.) War Office demands.
(2) and (4) beyond the control of Government of India.

Necessity for limitation of expanding demands.

In respect of (3) provincial decentralisation carried out 1870-71.

Post-Mutiny Period of Indian Finance. Division II.

1871-72—1881-82.

(Partially Decentralised Finance.)

Elements of Uncertainty during the Period.	Fiscal Reserves.

1881-82 -	.2

(1.) It was an abnormal period of war and famine.

(2.) English public opinion continuing to urge measures of material progress, yet Public Works expenditure had to be reduced, which fell from 100 crores to 70 crores during the period.

(3.) The famines and the vast expenditure required led to the formation of a Famine Insurance Fund, yet the fund diverted to war.

(4.) Fresh War Office charges amounting to 48 lakhs due to amalgamation came upon the Indian budget for increase of military efficiency.

(5.) What disturbed Indian finance most was a change of policy on North-Western frontier. Imperial policy in Central Asia entered upon a new phase with Russia's conquest of Khiva. Afghanistan given up as a neutral zone, and the Amir promised material and moral aid against unprovoked foreign aggression, a change of policy which converted Afghanistan virtually into a British Frontier Protectorate.

The line of the Indus given up as the border line of British India. Indian finance loaded with cost of schemes of Imperial territorial expansion in Central Asia, and a preponderance came to be given to military considerations in our financial arrangements.

Here Indian interests were subordinated to the exigencies of Imperial policy.

(6.) Exchange difficulty increased.

Total expenditure increased by 9.7 crores.

Expanding demands:

(1.) General administrative improvement.

(2.) Public Works. Pressure of English commercial interests.

(3.) War Office demands (amalgamation).

(4.) Treasury Office demands, Central Asian Imperial policy.

(5.) Exchange.

(2), (3), (4), and (5), all beyond the control of the Government of India.

(1.) Further decentralisation.

POST-MUTINY PERIOD OF INDIAN FINANCE. DIVISION III.

1881-82—1894-95.

(Finance decentralised as at present.)

Elements of Uncertainty during the Period.	Fiscal Reserves.
(1.) War Office demands. (2.) Military Expenditure. (3.) Famine. (4.) Public works—commercial pressure as to railways. (5.) Opium revenue. (6.) Exchange. (7.) Railway Finance. (8.) Imperial policy in Asia—conquests and frontier protectorates.	(1.) Balances. (2.) Taxation. (3.) Curtailment of public works—optional expenditure. (4.) Famine grant. (5.) Contributions from Provincial Governments. (6.) Periodical revision of provincial contracts. (7.) Transfer of public works from revenue to capital.

NOTEWORTHY FEATURES.

1882-83 - .670

Railway net loss:
1881-82 - .2
1894-95 - 2.348

(1.) The period was a disturbed period of war, panic, and military precautionary measures and territorial annexations, costing us about 70 crores during it.

(2.) English public opinion pressing for material progress, the commercial interests demanding railway extensions, the local services clamouring for increased pay and pensions and exchange compensation. The strain on Indian finance was severe.

(3.) Developments of Imperial policy in Asia involving us in large trans-frontier and other liabilities; Upper Burma and other frontier provinces thrust on our hands for administrative development, which means vast future outlay.
India, now in touch with the great powers of Asia, is necessarily pledged to vast military expenditure.
Indian defence weakened.
Indian finance at the mercy of military considerations
Indian armies increased.

(4.) Exchange difficulty enormously increased concurrently with a fall in opium.
Grant of exchange compensation allowance.
Total expenditure increased by 14.44 crores, as against 9.7 and 6.4 of the previous periods.
Expanding demands:
(1.) Public works.
(2.) War Office demands.
(3.) Demands of Central Asian policy.
(4.) Exchange.
All beyond the control of the Government of India.

Taxation having reached its utmost limits, the enormous growth of expenditure during the period leaves us no fiscal reserve; yet elements of uncertainty and instability of Indian finance have largely grown, and the Government of India is compelled, in the interests of financial solvency, to be able to meet fluctuating and expanding uncontrollable demands to keep tight its hold on every fiscal resource, limiting the means of the provincial administrations on the one side, and reserving its freedom of action in regard to famine grants. Productive public works expenditure and provincial contributions.

APPENDIX No. 79.

(Handed in by Mr. G. K. Gokhale with reference to Q. 18,427.)

COPY of a DESPATCH from the SECRETARY OF STATE FOR INDIA to His Excellency the Right Honourable the GOVERNOR GENERAL OF INDIA IN COUNCIL.

(Financial No. 62.)

India Office, London,
20th February 1879.

MY LORD,

Para. 1. I have considered in Council your Financial Letter, dated the 16th of September, No. 354, proposing a modification of the rules under which works may be sanctioned that are intended to afford protection against famine, and asking that, in special cases, the condition may be waived "that the annual "income from a work must be estimated to be, within "a limited time, equal to the interest charge on its "capital cost."

2. In the Marquis of Salisbury's Despatch of the 23rd of July 1874, No. 387, it was laid down that the only ground on which certain works of irrigation and State railways could with propriety be excluded from the general account of Income and Expenditure, and placed under a separate head of Extraordinary, or as it is now called, Productive Public Works, was that the works included under that head would "prove "remunerative, by yielding, in the shape of annual "income, a sum equal to the interest on the money "expended in their construction, including interest "for the period subsequent to the commencement of "each work during which no income is obtained." If was, however, added, "in regard to such works as shall "be suggested with the view to the prevention of "famine, and which may not come within the class of "directly remunerative works," that your Government were not "necessarily to refrain from proposing them, "if you should be unable to meet the expenditure "from ordinary income, for, in such a case, the works "might properly be constructed from borrowed money, "the expenditure being included among ordinary "charges under a separate head." It was further provided that all funds for productive works must be borrowed in India.

3. Thus the principle was distinctly set forth that none but remunerative works were to be included among those the expenditure on which was excluded from the ordinary accounts; and that, while it might become necessary to borrow for the construction of unremunerative works for the prevention of famine, the charge must be included in the regular accounts as ordinary expenditure.

4. Your Government pointed out that, in your opinion, the adoption of these rules might prove inconvenient, and that, as interest on money borrowed had been paid year by year out of the general revenues, and not provided by increasing debt, the expenditure might be continued on the supposition that any "additional interest on account of money "borrowed for the purpose of constructing extra-"ordinary works will be met from the increased "receipts derived from similar works which have "been, or will from time to time be, completed and "brought into operation." To this argument, however, Lord Salisbury replied, in his Despatch of the 10th of August 1876, No. 305, that, "if works "upon which loan funds have been expended are "not remunerative to the extent of repaying the "interest on the money expended on them, and "additional works be annually undertaken which "will be unremunerative in a similar degree, every "additional work must tend to increase the annual "charge for interest which will fall upon the general "revenues." And, bearing in mind the uncertainty regarding the cost of obtaining from India the large supplies needed for the Home treasury, Lord Salisbury added "that it would be unjustifiable to undertake, "out of moneys to be obtained by borrowing, any "outlay on account of new works, unless their yield "will cover the interest of the loan."

This view was accepted by your Government, and Sir John Strachey, in his Financial Statement, on the 15th of March 1877, observed that "it ought "clearly to be understood that, if such charges as "those for famine and for unremunerative public "works cannot be provided out of the ordinary "revenues, the state of our finances must be "unsound." "It cannot be too distinctly stated that "charges for the relief of famine must be looked "upon as ordinary charges." "For the future, it has "been resolved, in communication with the Secre-"tary of State, that no work shall, under any cir-"cumstances, be classed as extraordinary, unless "we are satisfied that it will yield a net income "sufficient to cover the interest upon its capital "cost."

6. It had been laid down by Lord Northbrook, in 1874, "that, besides a fair surplus of income over "ordinary expenditure, such a margin should be "provided, in addition, in ordinary times, as shall "constitute a reasonable provision for meeting "occasional expenditure upon famines;" and, in referring to the subject in the debate of the 27th of December 1877, Sir John Strachey mentioned the argument of Lord Northbrook, "that, if this surplus "were devoted to the reduction of debt, or to "preventing the increase of debt for the construction "of reproductive public works, in years of ordinary "prosperity, there would be no objection to the public "expenditure exceeding the public revenue in "occasional years of adversity, so that we might then, "without objection, meet the charges on account of "famine from borrowed funds, to the full extent to "which our surplus had permitted the discharge of "debt, or prevented its increase."

7. The cost of the famines was estimated, on an average of years, at about 1,500,000*l.*, and provision was made for meeting this expenditure by measures of financial decentralization and by new taxation. "The Government of India," said Sir John Strachey, "intends to keep this million and a half as an insurance "against famine alone; . . . we consider that "the estimates of every year ought to make provision "for religiously applying the sum I have mentioned "to this sole purpose; and I hope that no desire to "carry out any administrative improvement however "urgent, or any fiscal reform however wise, will "tempt the Government to neglect this sacred trust."

8. On the 9th of February 1878, Sir John Strachey explained in greater detail the mode by which it was proposed to deal with the additional sum raised to meet the famine expenditure. It being a portion of the policy of the Government to borrow certain sums annually for the construction of reproductive works, this amount would be reduced, and the annual addition to the public debt would be proportionately diminished, by the appropriation of the million and a half raised for famine purposes, so that, when, on the occurrence of a famine, it became necessary to borrow, the amount of the debt would remain no higher than if the receipts to meet the famine expenditure and the corresponding outlay had not been brought into the account. "The "soundness of this argument," he observed, "depends "of course on the assumption that the works which "are constructed from our annual contribution of "1,500,000*l.* from the public revenues will be really "reproductive, that is, that they will at the end of the "ten years produce an income at least equal to the "interest which we should have to pay, if we had then "to replace by borrowing a sum equal to that fur-"nished from the new taxes for their construction." Arrangements were to be made with the Local Governments, throwing on them to a great extent the responsibility of protecting the people from famine in the manner prescribed; "the provincial revenues," he stated, "will have to supply to the Imperial "Treasury, or to hold at its disposal year by year, a "sum equal to the interest on the capital expended on "all the reproductive works, constructed either with "borrowed money or funds supplied for the new taxes." In this mode, said Sir John Strachey, the 1,500,000*l.* to be provided as an insurance against famine would be applied "virtually to the reduction of debt; and, when "the calamity of famine actually arrives, we hope not "only to be able to meet it without throwing fresh "burdens upon the country, but to find that our "means of giving efficient relief have been immensely "increased by the useful works which we have carried "in the preceding years of prosperity."

9. These views were repeated, in almost the same words, in the letter from your Government, dated the 4th of January 1878, No. 7; and a general approval of your proposals was given by Lord Salisbury, in his telegram of the 12th of January, and again in his Despatch of the 1st of April last, No. 104, in which, however, he observed, that "it is necessary that, when-"ever the demand for bills and the state of the exchange "will admit, the sum which has been provided from "the Home Treasury to meet famine expenditure

" should be repaid from the million and a half which " is to be raised anually on account of famines.

10. With the view of carrying into effect the policy on which you had determined, your Government published in the Gazette of India Extraordinary for the 18th of March a Resolution, No. 1911, defining the method in which it was to be put in operation through the agency of the Local Governments. It will manifestly be a necessary condition of success," it was observed,* " in carrying out such a policy, that the works under- " taken shall in fact produce the growing income " from which to meet the gradual increase of interest " charge, and it therefore becomes essential to examine " very strictly the character of all projects brought " forward for execution, so that borrowed capital shall " not, under any circumstances, be supplied for any " work of which it cannot reasonably be anticipated " that it will in a definite period of time produce a " net income at least as great as the interest on the " capital outlay upon it. Further the same limitation " . . . must also be applied to . . . . the new " resources lately specially created to provide a surplus " from which to meet charges on account of the relief " or prevention of famine." "The justification for " granting, for productive works, funds from the " surplus revenues which might otherwise be applied " to the extinction of debt, is that, so far as it prevents " an increase of debt, it will virtually be equivalent to " a corresponding discharge of debt, a condition, " however, that cannot be fulfilled unless the works " are properly remunerative." The " dead weight of " interest charge during the time when the income of " the works is not fully developed" might, however, " properly be met from the provincial revenues at the " disposal of the Local Governments for carrying out " works of internal improvement."

11. These are the conditions which, in the letter now under my consideration, your Excellency proposes to modify, in order to complete the transfer of the liability for Productive Public Works to the provincial revenues and to meet the case of works not in themselves fully productive, but intended to give protection against famine, some of which have actually been begun during the late seasons of distress.

12. You explain that, in sanctioning the execution of a work from borrowed money, the cost of which was to fall on the general revenues of the country, you have hitherto, subject to the sanction of the Secretary of State, decided on the merits of each case whether or not the risk of constructing it should be incurred, with reference to the period within which it might be reasonably expected to become remunerative; and you are of opinion that this principle may be extended to the action of the Provincial Governments. At the same time you observe that, if unremunerative works are carried out from the money provided for the cost of counteracting famines, under conditions which reduce the surplus so provided beyond a certain limit, additional taxation will be eventually required to make good the loss. But, owing to the difficulty of discriminating between works strictly productive and those only admissible as providing against the effect of famine, you propose "to accept a yearly " maximum dead-weight charge, to be fixed as " experience may suggest, for works constructed as " productive, whether under the existing strict " conditions, or, as now proposed, in order to prevent " famine, or give protection from famine, or diminish " the expenditure for the counteraction of famine if it " occurs. In other words," you "would limit to a " specific maximum amount the net expenditure for the " interest on the capital cost of all such works and their " maintenance, after setting off all the net income " yielded by the works."

13. This amount you would for the next five years fix at 25 lacs of rupees in any one year, in addition to your "existing net liabilities," and you think that the Famine Insurance Fund of one million and a half sterling may be safely reduced by that sum, on the consideration that the construction of any works not fully productive according to the existing definitions which may be thus facilitated, will cause an equivalent, reduction of your ultimate liability on account of famines when they occur.

14. In this manner you believe that the Local Governments will be provided with the means of undertaking works for protection against famine, while a safeguard will be furnished against the improvident extension of liabilities for works of which the remunerative character is doubtful, and the financial responsibility, which has hitherto rested almost exclusively on the Government of India, will be shared by the Local Governments in a manner practically useful and conducive to the exercise of forethought and economy.

15. With this view you request sanction to a relaxation of the rules under which productive works may at present be undertaken, so that, in exceptional cases, works may be included in that class which are not directly remunerative, provided—

" 1. That a work will be unquestionably useful for " the prevention of famine or as giving protec- " tion therefrom, or that, upon the occurrence " of famine, it will probably cause reduction of " the public expenditure commensurate with its " cost;

" 2. That the total net yearly charge imposed upon " the revenues of India, for the maintenance and " payment of interest upon the capital invested " in productive works of all classes, after setting " off the income they produce, shall not, till the " end of 1883–84, exceed the corresponding net " yearly charge at the present time by more " than 25 lacs of rupees."

16. I have given a most careful consideration to this important question, and regret that I am unable to give my consent to the modification proposed. At the time that your letter was received, Sir John Strachey was in this country, and, with the advantage of the personal explanations received from him, I was in hopes that I might have been able, even if not sanctioning the proposal in the exact form made by your Government, to have sanctioned arrangements which would have been accepted by you as satisfactorily meeting your desire to proceed rapidly with the construction of protective works.

17. The events of the last few months and their effect on our financial position have, however, compelled me to reconsider the question of public works expenditure, and I propose to address your Excellency in another Despatch on this subject. In the meantime, however, I deem it necessary to express the opinion that the present condition of the finances does not justify any loan for outlay on protective works, or any expenditure on them beyond what may be met from the receipts from the special taxation recently imposed.

18. The first claim on these receipts being that of the Home Government for the repayment of debt already incurred on account of famine, I am of opinion that not less than one-half, or say 750,000*l.*, should be held available for remittance to England in the next and ensuing years on that account. The remainder may be appropriated, at your discretion, to the extinction of debt, to the relief of famine, or to the construction of protective works, not necessarily directly remunerative, but obviously productive in the sense of guarding against a probable future outlay in the relief of the population. I cannot, however, under present circumstances, sanction the raising of capital by loan for the construction of works which do not distinctly fall under the regulations laid down for Productive Public Works.

19. To guard againt misapprehension, I deem it necessary to draw attention to a statement in the concluding paragraphs of your letter, that you have omitted from the definition of productive works the condition prescribed in the 49th paragraph of the Despatch of the 23rd of July 1874, that they must be expected "to be remunerative, by yielding, in the " shape of annual income, a sum equal to the " interest on the money expended in their construction " including interest for the period subsequent to " the commencement of each work during which no " income is obtained." This omission you infer that you are justified in making by the tenor of Lord Salisbury's Despatch of the 27th of September 1877, No. 310A. In that Despatch, which directed that the term productive should be adopted instead of extraordinary, and that the results should be exhibited in a new form, it was expressly stated "that no change is " intended to be made in the character of the works " henceforth to be admitted into this category." For the inclusion of any work in the productive class it is necessary that there should be a prospect of its repaying, within a reasonable time, the whole of the interest incurred on the money expended in its construction, though it is immaterial whether the interest which accrued during the process of construction be treated as a charge against the income of future years, or be added to the capital on which interest is to be paid.

I have, &c.
(Signed) CRANBROOK.

* Paras. 76-79.

APPENDIX No. 80.

(*Handed in by Mr. Jacob, with reference to Qu.* 19,877.)

Total shown in Table XXI., page 72, of Vol. II. of the Royal Commission on the Administration of the Expenditure of India - -	9,176	10,430	9,955	10,027	12,037	10,325	10,986	10,834	11,629	12,271	12,128	11,569	12,351	12,525	13,105	12,643	13,601	12,845	13,401	13,339	13,159	13,752	13,546	13,439	15,385

* For comparison with the figures of a later date, about Rx. 830,000 must be added to the totals of 1881-82, mainly owing to the acceptance by the Government of Madras of a fresh provincial system in place of the one established in 1871, and to the complete provincialisation of Superannuation and Medical Establishments. Other changes have been made from time to time, but not of sufficient importance to affect the comparison of the figures of the different periods.

APPENDIX No. 81.

* These figures are adjusted so as to throw out of the account the large refund in 1883–4 from Imperial to Provincial of Rx. 288,000 on account of railway capital expenditure incurred and charged to Provincial in the two preceding years.

APPENDIX No. 84.

(*Handed in by Mr. Jacob with reference to Question* 20,003).

EXTRACT from SPEECH by the Honourable Sir J. WESTLAND in the course of the discussion of the FINANCIAL STATEMENT for 1897-8 in the LEGISLATIVE COUNCIL on March 27th, 1897.

Now, my Lord, to go on with this vexed question of the provincial settlements. The Honourable Mr. Sayani, if I correctly followed him, stated that the arrangements of the Government of India were made upon the theory that the revenues were not the revenues of the separate provinces and were not appropriable to the expenditure of several provinces but were the revenues of a common fund, the local governments being merely the agents of the Government of India for their realisation. I think he mentioned the theory in some words like these, only for the purpose of condemning it. Well, I wish to assert that theory in the most positive manner I can. The revenues of India are the revenues of the Government of India—its constitutional possession. The Government of India is a body created by Act of Parliament, and if reference is made to that Act of Parliament it will be seen that the revenues of India are the revenues of the Government of India and of that Government alone. Every action that the local government takes in respect of them must be justified by a specific order of the Government of India; the local governments derive their powers entirely from the Government of India, and apart from that Government they exercise no financial powers whatever. Now I may go on to expand a little and show what the real meaning of this claim is. I may begin by taking an illustration. I will imagine that the residents of Calcutta come to His Honour the Lieutenant-Governor of Bengal with a remonstrance regarding the application of the revenues which are levied in Calcutta itself. The stamp revenue in Calcutta, the excise revenue in Calcutta, the assessed taxes levied in Calcutta, all amount to a very large sum. The inhabitants of Calcutta, I will imagine, make a representation to the Lieutenant-Governor that it is unjust that these revenues levied in Calcutta, and paid by the residents in Calcutta, are distributed over the expenditure in other places. His Honour the Lieutenant-Governor would justly point out that this claim was based on a false foundation. He would point out that the wealth of Calcutta was entirely derived from its being the commercial centre of a large tract of country; he would point out that the administration of this tract of country was in the hands of the same body (whether you talk of the English Government or of the Government of India or of the Government of Bengal) which administered Calcutta. He would point out that if the districts behind Calcutta were in the hands of another power, if they were not organised, if they were left either to anarchy or possession of a foreign power, Calcutta would never be what it is—it would not be a centre of the wealth and commerce of the great province of Bengal. He would point out further that in taxing the people of Calcutta he was only taxing the general wealth of the province of Bengal. Its commerce all tends to this centre. Many wealthy landlords who derive their revenues from the lands in Bengal come to Calcutta and spend it here. Calcutta is a city which is inevitably linked with the districts of Bengal and cannot be separated from them and would not exist without them. He would further say it was out of the question that different principles should apply to the taxation and administration of Calcutta and of the districts of Bengal, and he would say that for financial purposes they must be taken as one single fiscal body and that the tax levied in one place must be considered appropriable to the expenditure all over the provincial administration.

But now I go further and ask why this principle should stop at the confines of Bengal. The division between Bengal and the North-Western Provinces is merely a geographical line. There is no division as regards the distribution of wealth or trade. There is no division as regards the fact that all this country, whether the North-Western Provinces or Bengal, supplies the commerce of Calcutta. Calcutta derives its commerce and its wealth from the whole of the North-Western Provinces and even from the Punjab as well as from Bengal. The same argument, therefore, which justifies His Honour the Lieutenant-Governor in using the taxation which is levied in Calcutta as part of the general funds usable for the general purposes of his administration, carries us farther and shows that the appropriation of this taxation cannot be confined within those boundaries, but the amount must be, in part at least, equally appropriable even further north. Bengal is a wealthy country which has many large cities, but its wealth is derived from the fact that it lies in such a position that the wealth and trade of other provinces drain through it. The revenues of Bengal therefore cannot be justly claimed by the people of Bengal as entirely appropriable to their own purposes, but must be considered at least with reference to the claims upon them arising out of the administration of the provinces further away. I am taking Bengal only as an illustration, but exactly the same arguments apply to the revenues of Madras and Bombay. They are all territories which derive their wealth from the fact that they lie between a hinterland and the sea, and that through them the wealth of that hinterland passes to the sea-board.

I take another illustration to show that the revenues of these provinces cannot be claimed as appropriable only to expenditure within their geographical limits. Supposing Bengal existed, as at one time it did exist, as a separate province; that the North-Western Provinces were in the hands of a foreign power which owed no allegiance to the British Crown. What would be its necessities? It would have for one thing to maintain a very large army. In the case of Bombay, if you go a century back, you find that it was surrounded by great and warlike chiefs of Rajputana and Central India, and by a powerful Mahommedan chief, the Nizam; the Mahratta powers were continually on its frontiers; and Bombay had to maintain its integrity by possessing a large military force. The same may be said of Madras. Mysore at one time was a foreign territory and Madras had to protect itself by a military force against Mysore and also against the Government of the Nizam. The British Power has advanced since these days. It now covers the whole of the interior country, and the consequence is that Bombay, Madras and Bengal have no longer to maintain within their borders the military forces which under a different system they would have to maintain. The number of soldiers in Bengal is very small, but the reason is that the army, which under other circumstances we would have to maintain in Bengal, has passed forward into the districts of the North-Western Provinces, and is now scattered over those districts and also over the Punjab. The warlike populations, which under other circumstances would swoop down upon Bengal and against which Bengal would have to protect itself, are now themselves peaceful subjects of the British throne, and are held from a military point of view by the soldiers which are located within their territories. Similarly, in the case of Bombay, we have now moved its troops forward. They are stationed in Mhow, they are stationed up the valley of the Nerbudda, they are stationed within the Nizam's territory at Hyderabad. But those military forces would have to be located in the military districts of Bombay, if circumstances had not changed so as to enable us to carry them forward into other lands. Now can it be legitimately claimed in any way that the revenues, on the one side of Bengal or on the other side of Bombay, are not legitimately appropriable to the maintenance of these forces. Every province in India gains enormously by the fact that the other provinces in India are held under the same dominion as itself. It might be possible to imagine a state of things where Bengal was possessed by the English, the North-Western Provinces by Russia and Bombay by some other power. Under these circumstances, what would happen? Would not each of these provinces be burdened by an enormous military expenditure from which at present it is entirely free. So that every province benefits by the fact of the other provinces being grouped and combined with it under the single tenure of the British Power. If that is the case you see there again the argument which prevents any one

of those provinces from claiming any exclusive right to the benefit of the revenues raised within its geographical area, and justifies the Government of India in looking upon the whole of those revenues as contributed to one common fund which is to be administered not for the benefit of the particular province but for the common purposes of the Empire.

I need not go on to talk of the other mutual relation between the provinces, railways now run joining one province to another and linking them into one common system. You have the charges of the central administration in this country and the charges which are administered by the Secretary of State. You have the payment of interest on debt. In all of these each province has its share. On all these grounds you find that it is absolutely impossible—even if you were to attempt to sit down and work out the problem—to assign any particular revenues as properly appropriable to the expenditure in any one province.

Still less is it possible to consider them as assigned to the comparatively small portion of the expenditure which is called provincial and here there is one great mistake made by many members. The importance of provincial expenditure naturally bulks very largely in the eyes of civilians. They see round them what is being spent upon civil administration and they see in every direction the many requirements that have to be met in civil administration, and in all those matters in respect of which financial powers are given to the local governments. It is not unnatural for them under these circumstances to regard the administration of the provinces as the main purpose of the revenues of the Government of India. But really this is not the case. If you look at the accounts you will find that there is no justification for looking at the provincial governments as having to provide for such a large proportion of the expenditure. I pointed out this last year, but I would ask the attention of honourable members to the yellow book which I laid upon the table a week ago. If you look at the accounts there on page 13, where the whole of the expenditure of India, in India, not in England, is distributed between Imperial, provincial, and local, you will find that the expenditure on Imperial account amounts to 44½ crores and the expenditure on provincial account amounts to only 20 crores—less than half the Imperial. So that even as regards the distribution of expenditure between Imperial and provincial, the provincial only bears a very small share. This also shows you how impossible it is to base any theory of financial administration upon a system of the appropriation of the revenues of each province to that province and to no other province.

Every honourable member will admit, I fancy, the entire truth of the theory which I have been urging—the theory which regards all revenues as revenues of a single empire—so far as concerns the circumstances which existed before the provincial service scheme was initiated. Before 1870 every expenditure, wherever it was incurred, was expenditure of the Government of India. Now I would ask what is there in this provincial scheme which leads honourable members to suppose that it ever was the intention of the Government of India to give up any portion of its revenues? That was in no degree the purpose of the scheme, taking it either in its initial form in 1870 or in its subsequent form in 1877. It was merely lopping off a certain portion of the common revenue and placing that portion of revenue in the hands of the provincial government, as agents of the Government of India, under certain definite conditions and terms, and telling it, "you have "the charge of all this expenditure, and we give you "so much of our revenues in order to meet it." You will not find in any of the documents relating to the institution of the provincial service scheme any foundation whatever for the theory that the Government of India at any time parted with its dominion over its own revenues or intended to apply any new system of administration to them. In the same way as before 1870 or before 1877 it was free to apply revenues derived from any part of the Empire to the expenditure in any other part, in that same way it remained free and has remained perfectly free up to the present time. And so when the Honourable Mr. Sayani tells me that the Government of India is always coming down on the provincial governments and asking them for more and more, and when His Honour the Lieutenant-Governor begins to talk of my demanding money from him in this last provincial settlement—a contribution from his revenues—I deny the position altogether. I admit that the Government of India five years ago assigned certain revenues to the Government of Bombay, to the Government of Bengal and to other Governments, but that assignment was made for five years only. It was distinctly limited to that term. At the end of the five years the Government of India re-enters absolutely into the rights it previously possessed, and then, if the provincial government is to continue to exercise any financial powers, a new provincial settlement has to be made.

Now upon the question of periodical revision I wish to point out that if it were possible to regard the assigned revenue and the assigned expenditure of any provincial contract as both of them absolutely stationary, it is obvious that a contract made in 1877 upon the basis of the stated amounts of expenditure and of revenue is a contract which could subsist for all time. But both revenue and expenditure are progressive and, I am thankful to say that, at present at any rate, apart from the calamities of the present season, revenue is more expansive than expenditure. Now upon an increasing revenue there are these claims: In the first place there is the claim of the taxpayer. The taxpayer has a right to demand that we shall not spend the whole of our taxes if we can carry on the administration with a smaller amount. He has a right to say that we should be as economical as possible and that we should not consider ourselves justified in perpetually levying from him the same rate (and an increasing amount) of taxation if by any means we can secure a reduction of it. That, therefore, is the first claim upon an increasing revenue—the claim of the taxpayer. The second claim—and I deliberately put it in the second position—is the claim of an increasing expenditure. In a country like India, progressive in all provinces, more in some and less in others, there are continually new requirements which have to be met. I admit that the increase of revenues ought in some measure to be diverted to meet these requirements; but it is obvious that if we admit an increase of expenditure equal to the increase of revenue we shall never have anything whatever wherewith to satisfy the first and primary claim, which I regard as that of the taxpayer. What we actually do when we take a provincial contract is that we divide the revenue for a time between the Imperial government on the one side and the provincial government on the other. As a whole the revenue, Imperial and provincial, is about equal to the expenditure, Imperial and provincial. Altogether the total revenue does not exceed the expenditure more than two or three per cent. of the amount. While we hand over to the provincial government a share of that revenue equal to its expenditure, we keep for ourselves on Imperial account a share of the revenue which is equal to our share of the expenditure. Now taking both of these together, as I pointed out, we would be in a very unsound financial position if we used the whole of the increased revenue in meeting increases of expenditure. The obligation lies upon the provincial as well as upon the Imperial Government to limit its expenditure in such fashion that it shall have some revenue to give up—some revenue which can be utilised, if possible, for the remission of taxation. It is this necessity—an absolute necessity of a sound financial system—which gives rise to these periodical revisions of the provincial contracts. It is not consistent with sound finance that we should find ourselves at the end of five years in such a position that the provincial government has got to retain the whole of the revenues that were assigned to it five years before, because it is obvious that if that were the case there would be nothing remaining, so far as the provincial share of the revenues is concerned, to satisfy what I have called the claim of the taxpayer. Now in what possible way are you to make a contract of a permanent character which will meet this claim of the taxpayer? There are two ways in which you can do so. In the first place you can follow the plan which we at present adopt; that is to say, we make over the revenues definitely for five years: we make a comparison of revenue and expenditure when we come to the end of the five years, and if we find it possible we call upon the provincial government to give up part of its revenues—that is to say, part of the increase of the revenue which has taken place during the five years. There is another way in which it can be done, and that is that instead of giving the local government the whole of the increase of its share of revenue, we can say it is only to get half or some other proportion, and the remaining half is to be resumed to the general account in order that, if possible, it may be utilised for remission of taxation.

His Honour the Lieutenant-Governor has quoted from Sir David Barbour an opinion which Sir David Barbour gave before the Commission now sitting in London, that this intention of periodical revision was not present to the minds of the original authors of the provincial system. I am afraid that Sir David Barbour at that moment had forgotten his facts. I shall read a sentence which is taken from the Financial Statement of 1877–78, the very financial statement which developed the system of assignments of revenue. In fact Sir John Strachey in this statement is talking of the new provisions for the assignment of specific revenues in place of an assignment fixed in amount. What he says is:—

"The most important of the revenues transferred are excise, stamps, and the hitherto reserved revenues under law and justice: the net revenue assigned under these heads is 640,600*l.*; and the transfer has been made subject to certain conditions. These sources of revenue have gone on pretty steadily increasing throughout India; and it is not proposed to surrender to the local governments any part of that normal growth of income which might have been expected to continue if no change of system had been made. On the other hand, while we desire that the local governments shall share largely in any increase of revenue to which their own improved administration may lead, it is evidently reasonable and necessary that the Imperial revenues should share in this increase also."

This, as I say, is the declaration made at the time of the assignment of revenues. It is obvious, therefore, that the provision for the revision of the contract in the sense of withdrawing from the provincial governments part of the revenues they enjoyed was an essential part of the original revenue-assignments system.

I ought to have mentioned when I was talking of the two measures which may be adopted to resumption of part of the increase of provincial revenue, that it is more advantageous for the local government that it should get a full share of this increase of revenue for five years, and then have the excess taken from it, than that the excess should be taken from it every year as would necessarily be the case if it were allowed only portion of its share of increase and not the whole. So that of the two possible systems, that system which has been adopted is the most favourable one to the provincial governments. But there is another reason why the system of revision is necessary, and that is that the settlement of a permanent contract involves a dip into futurity which our financial experience at least shows us we are entirely unwarranted in making. I regret to say that there is nothing more uncertain in many respects than Indian finance. Last year we were swimming with our heads far above water, looking forward to a time when part of the taxes which have of late years been imposed might be considered as capable of remission. Before we had gone very far we saw that the calamity of a famine was upon us, and at the end of this financial year we proclaim deficits of large extent. Is that not a lesson that one ought not to prophesy too securely about Indian finance, or make arrangements which involve an assumption of permanency in the relations between revenue and expenditure?

There is one thing to be borne in mind in respect to these revisions, in respect to any contract of the kind, and it is this, that the Government of India is responsible for everything that is done in the matter of expenditure and revenue all over India. That is a responsibility of which it can never wash its hands. It can never say to a provincial government, "I have "handed over to you certain revenues, and I am very "sorry you have gone beyond them but you must get "out of the difficulty as you best can." We cannot remain in that position and stand aside. We are as much responsible for a deficit in the provincial accounts as we are for preventing a permanent deficit in our own account. It is, therefore, obvious that if we make a permanent contract with a provincial government that contract must be an entirely one-sided one. It is a contract that must be based on these terms: that if everything is successful, and if the local government finds its revenues sufficient for its increase of expenditure, then the contract would remain good. But if the local government through any calamity loses its revenues, or finds an excess of expenditure over revenue which is perfectly unavoidable, then the Government of India would have to come forward to help it. The contract can be permanent only in the cases in which its permanency favours the local government. It is rather assumed in all these discussions that a revision of contracts must necessarily be a revision in favour of the Imperial Government. Now I would draw attention to the fact that in the current revision, at any rate, the revisions have not been all in favour of the Imperial Government. We have found, as a matter of fact, that through certain circumstances which I need not here explain, certain provinces, namely, the Punjab, the North-Western Provinces and the Central Provinces, are all in such a position that they can not be expected to get on without increase to their previous assignments of revenue. The revision of revenue in these cases has to be made to the detriment of the Imperial revenue. It may be said that we might have left those governments to flounder in their deficit.' But we cannot divest ourselves of responsibility, both financial and other, for their administration, and moreover we are their bankers; they cannot provide funds out of their present assignment to meet what we consider their necessary expenditure, and it is perfectly impossible for us to leave them in that condition. We have satisfied ourselves that this deficit of provincial resources cannot be met otherwise than by adding to the provincial revenue, and we have therefore in those three cases come forward to add to the assignments given them in 1892, and to establish them again on a sound footing, running from 1897. It is very natural that His Honour the Lieutenant-Governor and the other governments which find themselves in prosperous circumstances, should decry this system of revision, and say that it is extremely desirable that revisions should not take place and that they should be left exactly in the position in which they are at present. But if a vote were now taken among the local governments, I can give the names of three who would give an opinion directly contrary to the opinion expressed by His Honour the Lieutenant-Governor. It is very curious, but I was reading a short time ago the record of certain deliberations which took place in 1892 among the members of the Government of India on this very question of prolonging the terms of the settlement. Sir David Barbour at that time was Finance Minister. He pronounced it to be impossible, as it most certainly is, but one of the members who pronounced very strongly in favour of prolongation and declared that the term of the contracts should be made longer was Sir Charles Crosthwaite, who afterwards became the Lieutenant-Governor of the North-Western Provinces. If he were now asked for his opinion he would say, I am afraid that Sir David Barbour was perfectly correct and would admit that the system of revision was necessarily a part of the provincial contract.

There is another theory to which utterance has been given to-day in the speech of the Honourable Mr. Sayani—a speech I admit which was very pregnant in suggestion, and which it will be useful for us to read at leisure—he made a suggestion that it was wrong that two-thirds of the revenue should remain Imperial and that one-third only should remain provincial. I watched to see whether he would give any reason for this opinion; there was none, he simply said there were certain objects of expenditure which were very desirable under provincial governments, and if they had more than one-third of the revenue they would meet that expenditure. I have not the smallest doubt of it. I do not wish to hint that local governments make bad use of their money, on the contrary, I am quite sure they would make excellent use of more money if they had it. But taking the figures of 1895–96 the total amount of expenditure for which revenue has to be provided comes to 44 crores of rupees of Imperial expenditure, and 20 crores of provincial expenditure. Well, we have for that purpose, as I have pointed out, a nearly equal amount of revenue, namely, 64 crores to distribute. At present we give 20 crores to meet provincial wants and we keep 44 crores to ourselves to meet Imperial expenditure. Now, if we are going to start on some abstract principle that the provincial governments ought to have some theoretical proportion of this revenue and that that theoretical proportion is something more than 20 crores, that we ought on a sort of a general consideration of comparative necessity of provincial heads of expenditure and Imperial heads of expenditure to give to the former more than 20 crores, then I ask how are we to provide for our own crores? We have only 64 crores altogether. If we give 21 and thus enhance the provincial share of revenue by one crore or 5 per cent., we reduce our own available revenues to 43 crores. How, with that 43 crores of revenue, we are to meet 44 crores of expenditure I confess I do not know. Of course it would result in our imposing some new tax in

order to find the missing crore. And that, as I said in my first speech, is what I desire to bring home to honourable members; that is, there is no use of our talking of providing for increases of expenditure of any kind without considering where we are to find the money for it; that if expenditure is increased it means that we have either to put a direct burden upon the taxpayer or, at least, postpone a remission of taxes which would be otherwise possible.

The Lieutenant-Governor has alluded to another matter which I cannot help thinking a very serious one, namely, the consequences of the provincial governments having, like the Government of India, expanded their councils. These councils take, and are justified in taking, and it is their business to take, a very deep interest in the finances of their provinces. They naturally see the requirements of the provinces and they naturally bring those requirements sharply and continually before the local administrations. The financial questions do not now lie between the Government of India and the head of the local province. They are now questions between the Government of India and a local governor, subjected to all the urgencies of his local council. There is one difficulty in this position at present, a difficulty which will have to be met when we examine the question which His Honour has pressed upon us, a question to which I may say I have given no small amount of consideration. The difficulty I allude to arises from the fact that, under the present constitution of provincial finance, the local governments do not have to find funds by exercising their powers of taxation. A local governor is not in a position to say to his council regarding a great part of the expenditure pressed upon him that "if you want "this expenditure, you must be content to bear the "necessary new taxation." At present the expenditure is pressed upon him always in the shape of requesting him to get a new assignment from the Government of India. The burden, therefore, of supplying the money under present circumstances falls upon the Government of India. It is here that the difficulty arises, because each province has to weigh its demand for expenditure, not against the burdens which it itself would have to bear, but against the possibility of throwing burdens upon the whole of India. Now, in touching upon the subject, I wish it to be understood that I do not speak for my colleagues. I have stated that I have given some consideration to the question of an alteration, in some respects, of the provincial system, because I feel with His Honour the Lieutenant-Governor that the present system is one which cannot last. The Government of India cannot be placed in the position of having to bear all the expenses and all the odium of having to impose new taxes; but at the same time if the expenditure which is pressed upon us by the various local governments is to be met, it is a question of new taxation and of nothing else. The idea which has struck me as a possible issue out of this—an idea regarding which I have conversed with various high officers and also with His Honour the Lieutenant-Governor—is that we should separate the provincial revenue and expenditure into two classes, one being the general account and the other the local account in every province. There is at present local taxation levied for local purposes, but there is no definition as between the appropriation of provincial revenue and the appropriation of local revenue to these purposes. Local boards bear only a portion of the expenditure for medical purposes, for educational purposes, for roads and various other things, and this is the class of expenditure in which local councils are naturally most urgent. It includes a class of expenditure which, as my honourable friend Mr. Stevens mentioned, is extremely urgent in Bengal, namely, that of sanitary improvement. But as matters are at present arranged the local taxation is nowhere equal to meet the whole of this expenditure, and the consequence is that the provincial government has to meet a great deal of it itself. The result is that when pressure is put upon the local government to find funds for this class of expenditure, it is in the form of demanding further funds out of the general revenues for meeting the expenditure and not of proposing any increase of local boards. Now it strikes me that it would be well to separate off the whole of this class of expenditure, whether it is met out of local taxation, or whether it is, as at present, largely met out of the general revenues, into a separate account, and in respect to that separate account to make a permanent assignment from general revenues to the local government. There would be no revision wanted in a contract of that kind. If, for example, we found that we could separate off the whole of that expenditure as it stands in Bengal, we would say that for this expenditure a certain definite sum fixed once for all would be given out of general revenues in addition to local taxation to cover the whole amount, then we might make that portion of the account an absolutely separate one. We would treat it as a separate branch of finance under the local government and under the local councils. The result would be that the local councils when they pressed, as they are continually pressing (and I do not in the least degree wish to indicate that their action in pressing is unreasonable on their part), but when they press for expenditure of that kind they would also know that they would have to find the means for it by some sort of local taxation. That is the theory of financial control and responsibility; the whole theory is that those who press for expenditure should know that they will have to bear the burden of it. If, for example, we were to hand over the cesses and taxes as revenues for local purposes we would be placing in the hands of local councils a power of getting more revenue if they thought it worth while. There is a system of finance of this kind which I took the opportunity of studying in Belgium some years since. There is there not only a central financial body but a provincial body whose functions are defined exactly in this way; that is to say, certain classes of expenditure are made over, and are to be provided for by those provincial bodies, and the Government makes them a definite and final assignment for the purpose. The assignment in Belgium is part of the assessed taxes and the local taxes besides. The result is that these provincial bodies, if they want to extend the class of expenditure in their charge, have to do it by finding local taxes or by adding to the assessed taxes. The assessed tax in Belgium is not equal in every province. Of the total amount part is an assessment common to all Belgium which goes to the central government, part is an assessment varying with each province, and going to the provincial councils. The Honourable Mr. James will also be glad to hear that one of the sources of revenue of the provincial councils of Belgium is a dog tax.

These are the general lines in which it seems to me a solution of many difficulties will be found. We will have to continue the present system so far as it relates to the general functions of the Government, that is to say, the administration of the country, the administration of law, and the various other big branches. With regard to this part of the account we have to do exactly as we do at present, continue the five years' contract system, but it is not for the most part in that class of expenditure that new and heavy demands are made on the local governments.

And here I take the opportunity to say something about a particular demand in Bengal pressed upon me by more than one speaker to-day, and that is with regard to the General Hospital in Calcutta. In this matter I can speak for the Government of India and for His Excellency the Viceroy as well as myself. We perfectly recognise the extreme urgency of this demand. It is very sad, that when we compare the city of Bombay and the city of Calcutta we find one of them with magnificent hospitals founded by merchant princes, and the other so devoid of proper provision of the kind. We do not possess these merchant princes in Calcutta, and the consequence is that we have a general hospital in which I agree with my honourable friend Mr. Chalmers that the only thing to be done with it is to raze it to the ground. Now I will read a paragraph from the Government of India's letter of the 17th March last to the Government of Bengal on this subject.

"The Government of India feel that this decision (that is to say, that we could not afford all the money the Lieutenant-Governor asked for) will, in one respect, cause great disappointment to His Honour the Lieutenant-Governor, namely, in respect of his plans in connection with the European General Hospital in Calcutta. They do not differ from His Honour's estimate of the urgency of this work, * * *.

"The strain of the present famine has unfortunately further postponed the expenditure; but the Government of India, while excluding from immediate consideration any additions to the assignment on account of this special demand, hope that it may not be found impossible for them to give some assistance towards it when the financial horizon becomes clearer."

That is hardly a pledge, though I admit that it means that if we were well off we should try to find our way to helping the Lieutenant-Governor of Bengal to build

a hospital which would be worthy of Calcutta and would meet the tremendous demand that there is in Calcutta for a decent European hospital.

The Honourable Mr. Stevens has also accused me of want of generosity towards Bengal in this last Provincial settlement. I reply to the general accusation of illiberality by pointing out that at least I have been more liberal in this revision than in any previous revision the Government of India has been, inasmuch as in three provinces out of the eight I have enhanced assignments. But with that one passing objection I will address myself to his figures on the subject. And in passing, I demur altogether to His Honour's statement that the matter is in dispute between the Government of Bengal and the Financial Department. It is quite true that the Government of India has issued orders on the matter through the Financial Department, but His Honour the Lieutenant-Governor is sufficiently well acquainted with the course of business in the Government of India to know that an important matter like this, although those orders were issued through the Financial Department, they are really the orders of the Government of India as a whole. Now I wish to draw attention to one paragraph in the financial statement, in which I showed the exact figures of the way in which the various provinces had been dealt with. If reference is made to paragraph 50 it will be seen that in the present revision we have allowed for expenditure in Bengal which is 10·9 per cent., in addition to the expenditure which was provided for in 1892. I think that is a very fair allowance on the face of it. If any Government increases its expenditure at the rate of 10·9 per cent. in five years, I do not think it has much to complain of if we say we do not see our way to allow of any further increase. His Honour the Lieutenant-Governor has made a claim that his province contributes more to the central government than any other province. The question of what each province contributes is a very difficult one, and to tell the truth I do not think it can be solved. It is rather singular that precisely the same claim has been made on this occasion on the part of the Government of Madras. I know the Government of Madras believes that is a sort of milch cow for the supply of the other local governments of India. I do not wish to pronounce any opinion as to whether any government contributes more than or less than its fair share. It is absolutely and entirely a question of opinion, because although you can take much of the revenue and say it belongs to a particular province, you cannot say with respect to very large sections of the expenditure how much, in any distribution between the provinces, ought to fall upon each. The Honourable Mr. James has been somewhat severely attacked in respect of his observations on this point, and I desire to come to his rescue in explaining some matters relating to the Government of Bengal. Although I do not altogether agree with what he said, still I may say that, in respect to the question of the amount which the Government of Bengal contributes to the common fund, there is something to be said for the view that in one respect at least Bengal does not pay the same amount of revenue and is not assessed on the same scale as the other provinces; that is of course in respect to its land revenue. Now I do not want to say anything about the Permanent Settlement; I accept it as a fact and there is an end of it, But there is one thing to be remembered and it is this. Supposing the various provinces of India had each remained from the beginning on a separate financial basis; that their funds had not been joined altogether, as the Scotch lawyers say, in hotch-pot; that they had always been conducted on entirely separate financial systems, such as exist at the present day in the Australian Continent which has five separate colonies, each of which is financially separate from the other. Supposing Bengal and the other provinces had been independent up to the present day, I think it is quite evident that Bengal would have had to put up with a smaller scale of expenditure than other provinces for the simple reason that it would not have the means of providing what the other provinces can pay for; its revenue being in one respect assessed on a smaller scale than the other provinces. I do not for a moment say that we ought not to place it in respect of expenditure on a level with other provinces, because my theory is, as I have already explained, that the revenues of India are the revenues of one single body and the expenditure must also be recognised as the expenditure of one Empire. But I think that it is quite fair to remind Bengal that in being placed on the same level with other provinces in respect of its demands for expenditure it is receiving at the very least an adequate measure of justice from us.

APPENDIX No. 85.

QUESTION of the INCLUSION in the COST to INDIA of ORDNANCE STORES of INTEREST on the CAPITAL invested in the ORDNANCE FACTORIES.

To the Secretary of the Royal Commission on Indian Expenditure.

SIR, India Office, 27th January 1897.

WHEN Sir Ralph Knox was under examination by the Royal Commission on Indian Expenditure on the 22nd July 1896, it was mentioned by him (Q. 13,026–7), that an agreement had been made between the Treasury and the War Office, to refer to the Royal Commission the question whether interest on invested capital should be charged in the Manufacturing Accounts, and thereby added to the cost of the stores supplied to the Government of India and other customers; and, in a letter dated the 23rd of November last, from the War Office, of which a copy, with its enclosures, is herewith transmitted, the correspondence was forwarded to this office, in order that it might be laid before the Commission.

So far as India is concerned, Lord George Hamilton does not desire to raise any objection to the consideration of the subject by the Commission; but I am desired to request that the following observations may also be borne in mind.

It has been agreed that, in paying for ordnance stores, India should be charged with the cost price; and the arbitration of Viscount Cranbrook in 1891 decided that cost price properly includes interest on capital, and also depreciation of buildings, machinery, and plant, but excludes profit. It should, however, be remembered that, when in 1859 the term "cost price" was accepted as the basis of the charge to India, interest was not included; and, therefore, that its inclusion under Lord Cranbrook's arbitration is a distinct addition to the charges for which the Government of India were previously liable.

The previous arrangement was the result of mutual concessions under which India withdrew from the position of a competitor in the open market, thereby affording to the War Office an advantage of which it was intended that the Indian Government should obtain a share through the arrangement with regard to cost price; and the decision of 1888 to place that Government on the same footing as the Army and Navy, &c., which specifically excluded interest on capital, was only a reasonable method of treating the question in the altered circumstances.

If it were now to be decided that interest on invested capital should be included, it would be necessary strictly to criticise the manner of aiming at the amount of capital supposed to be invested in the ordnance factories; to ascertain to what extent capital should be written off, and a new valuation effected; to see whether machinery is rightly charged to production (as in the case of the magazine rifle machinery involving upwards of 100,000*l.*), while it remains the property of the War Office, and may be altered at the cost of some new manufacture; and to consider whether in other respects the factory accounts are

prepared on a mercantile basis. In particular, it would be requisite that the incidental charges should be spread equally over the whole cost of the establishment, and that prices should not be made to depend on the extent of the employment of a factory during a particular period.

In illustration of this last point, I am desired to mention that the War Office charged 6*l*. 11*s*. 10*d*. for a naval gun fitting made at Woolwich in 1893–4, for which the Admiralty paid, on an average, to contractors in 1894–5 only 3*l*. 18*s*. 4*d*.; and the explanation given was that work in the factory concerned was slack, and that therefore the price of the article was high.

I am, &c.
A. GODLEY.

Enclosure.

To the Under Secretary of State, India Office.

7512/840. War Office, Pall Mall, S.W.
SIR, 23rd November 1896.

I AM directed by the Secretary of State for War to acquaint you that correspondence has for some time been proceeding between this Department and the Treasury on a proposal, made by that Department, to include in the prices of stores made for India in the ordnance factories charges for interest on invested capital.

Copies of the correspondence, so far as it is concerned with the question between the Home and Indian Governments, are enclosed; the parts omitted refer merely to questions of modes and forms of account.

It will be seen that the Lords Commissioners of Her Majesty's Treasury are prepared to refer the question to Lord Welby's Commission on Indian Finance; and I am to request that, if the Secretary of State for India in Council sees no objection, the correspondence may be referred accordingly.

I am, &c.
(Signed) ARTHUR HALIBURTON.

Enclosure in letter of 23rd November, 1896, No. 7512/840.

CORRESPONDENCE on the QUESTION of including CHARGES for INTEREST on CAPITAL in the PRICES at which STORES are supplied to INDIA from the ORDNANCE FACTORIES.

1. *Extract from War Office letter to the India Office, dated 13th July, 1888, No. 57/Gen. No./19.*

Consequent upon the re-organisation of this Department, which has involved a change in the administration of the ordnance factories, it has been decided to place the Government of India on the same footing as the Army, the Navy and the Colonies, *i.e.*, to charge to all alike the actual cost price of manufacture, including a percentage for inspection, but to omit the charges hitherto made for interest on capital, and (under the head of Indirect Expenditure) for superannuation allowances.

2. *Extract from India Office letter to the War Office, in reply to the above, dated 5th December 1888, No. F. 2990.*

Viscount Cross learns with much satisfaction that the principle is thus conceded for which this Office has contended for upwards of 20 years, since the foregoing differs little from the recommendation of the Departmental Committee of 1859, which was accepted by War Office letter dated the 29th of February 1860, namely, that the charge for each article "should be the "cost price with all actual expenses up to delivery "into custody of the War Office Storekeeper; any "after expenses, with the exception of packing for "shipment, to be considered as covered by the usual "addition of 5*l*. (meaning 4*l*. 14*s*. 9*d*.) per cent."

3. *Award of Viscount Cranbrook as arbitrator in the contention between the India Office and the War Office in regard to the prices charged to India for warlike stores made in the Ordnance factories.*

To the First Lord of the Treasury.

The question referred to me as arbitrator between the War Office and the India Office is, whether the arrangement recommended by the Committee in December 1859, and adopted by the two Departments, has been acted upon in the charges made by the War Office to the India Office up to 1888 for stores supplied. It was to the following effect—

"The charge for each article to be the cost price, with all actual expenses up to delivery into the custody of the War Office Storekeeper. Any other expenses, with the exception of packing for shipment, to be considered as covered by the usual addition of 5 per cent."

I do not understand that any controversy exists upon the latter clause under which an abatement was made in accordance with old practice and an actual addition of 4*s*. 14*s*. 9*d*. per cent. made. I take note of a letter written by Mr. Godley from the India Office, dated the 20th March 1891, in which he states that the object of the reference to me "is not a claim to have "retrospective effect given to an alteration made "recently, but to obtain a decision whether the "agreement of 1859 has been fulfilled."

After careful consideration of the documents laid before me by the two Departments, I have come to the conclusion—

That No. 2 balance sheet, under which the India Office was charged, fairly represented the cost price of the articles supplied in accordance with the terms agreed upon between the War Office and the India Office.

"Cost price," properly includes interest on capital and depreciation of buildings, machinery and plant, but, of course, excludes profit, and I find no allegation that any was made. It is claimed that the vocabulary should have been more frequently revised; but I have no materials on which to found an opinion on the fitting times for such revisions, nor on the effect that they might have had, whether a fall or rise of price.

I make no order for a refund of any part of the payments made by the India Office.

(Signed) CRANBROOK.
March 30th, 1891.

---

4. *Extract from the Treasury Minute on the Second Report of the Public Accounts Committee, 1892, and correspondence thereon.*

SECTION 37. SUPPLIES to COLONIES, CONTRACTORS, and others, through the WAR OFFICE, instead of directly.

The Secretary of State will observe that the Committee, though not condemning this exceptional method of supply, concur with this department in holding that it should be confined to small orders, and that its operation requires careful watching.

My Lords would take this opportunity of inquiring whether consideration has been given to the suggestion made in the Treasury Minute of 5th January, 1892, on the third report of the Public Accounts Committee, 1891, and in the Treasury letters of 15th March and 13th July, 1892, that a charge should be made to the customers of the ordnance factories for interest on capital, as well as for departmental management.

---

5. To the Secretary to the Treasury.

7512/751. War Office, London, S.W.,
SIR, 1st February, 1893.

WITH reference to the inquiry contained in paragraph 37 of the Treasury Minute of 5th November, 1892, on the second report of the Public Accounts Committee, 1892, whether consideration has been given to the suggestion that a charge should be made to the customers of the ordnance factories for interest on capital, I am directed by the Secretary of State for War to acquaint you, for the information of their Lordships, that he has carefully considered this subject in all its bearings.

It is to be observed that, under the present system of payment by advances, the customers of the factories fall into three classes as regards the supply of *working capital*, viz.—

1. Imperial services, supplying their own working capital (Army and Navy).
2. Services not Imperial, supplying working capital (India, and Colonies in the case of large orders).
3. Services for which the Army supplies working capital (Colonies in the case of small orders and contractors).

As regards *fixed capital*, all the customers of the factories stand on the same footing. The ordnance factories, however, have no expenditure for interest on capital, corresponding to the charges incurred by a commercial concern, and hence any charges for interest made through the balance sheet would appear in the appropriation account of the factories vote as a sum to be surrendered. If, therefore, interest on fixed capital were charged to all alike, the result would be that considerable sums would have to be voted by Parliament on the Army and Navy estimates to be surrendered on the ordnance factories' account.

On the other hand, to except Imperial services and to charge non-Imperial services through the factory accounts would necessitate the introduction of different prices for similar stores in the production voucher, whereas the constant aim of the Secretary of State since the re-organization of the factories has been to show only one price for one article.

At the same time, Mr. Campbell-Bannerman is fully alive to the importance of showing the effect which a charge for interest would have upon prices, and so rendering the comparison of factory and outside prices more easy. He thinks, however, that considering all the circumstances alluded to above, that object will be best attained by adding a note to the accounts of the factories to the effect that a charge of interest at per cent. on fixed and working capital would increase the prices shown for stores by per cent.

If their Lordships approve of this proposal, it will be adopted in the accounts of the current and future years.

I am, &c.,
(Signed) R. H. KNOX.

---

6. To the Financial Secretary, War Office.

1867/93. Treasury Chambers,
SIR, 11th May 1893.

THE Lords Commissioners of Her Majesty's Treasury have had before them Mr. Knox's letter of the 1st February last (7512/751), in which it is explained that Mr. Secretary Campbell-Bannerman is opposed to including interest on either fixed or working capital in the prices charged to customers of the ordnance factories, but is prepared to add a note to the accounts of the factories showing by what percentage prices would be increased if such interest were included.

My Lords agree that if customers advance the working capital required for the wages, and materials necessary for meeting their own orders, they cannot be charged interest on that capital, and it will be enough to make a note of it on the accounts as proposed by the Secretary of State. But their Lordships are not satisfied that interest ought not to be charged on fixed or invested capital, *i.e.*, on the assumed value of land, buildings, plant, and stock of stores, with which the factories started business, on their new footing, on 1st April 1888.

The objections of the Secretary of State to the latter charge are:—

(1.) That the charge would not represent any actual expenditure by the factories, and its produce would therefore have to be surrendered to the Exchequer.
(2.) That the charge to Army and Navy, who are beyond all comparison the largest customers of the factories, would necessitate large additions to Army and Navy Votes.
(3.) That if the charge were confined to non-Imperial customers, it would be necessary to return to a double price list, one of the chief evils which the re-arrangement of 1888 was meant to obviate.

My Lords would, however, ask the Secretary of State to consider whether all these objections might not be met by the following scheme:—

Let the fixed capital of the factories be valued at, say, 1,971,472*l.*, as estimated on 1st April 1888, and corrected to 31st March 1892, and let interest at 2¼ per cent. per annum, or 54,215*l.* 9*s.* 7*d.*, be charged thereon, and be paid by the factories to the two departments on whose behalf that capital was originally provided by Parliament, in proportions fairly representing the average share of each in the business of the factories; *i.e.*, let, say, two-thirds of the annuity, or 36,143*l.* 13*s.* 1*d.* be paid to the War Department, and one-third, or 18,071*l.* 16*s.* 6*d.* to the Admiralty.

Let each Department treat its portion of the annuity as an appropriation in aid of its Warlike Armaments Vote.

Let the annuity be distributed like other fixed charges on the factories over the cost of production, and be recovered from all customers alike, by means of a single price list.

Under this arrangement the factories would only recover what they actually had to pay, and therefore need not surrender what they recover. No addition would have to be made to Army and Navy Votes. The gross Army and Navy Estimates would be increased by their portion of the charge for interest, but the net Army and Navy Estimates would be rather more than equivalently reduced by their shares of the annuity. Lastly, the single price list, by which the Secretary of State sets so much store, would be preserved.

The percentage addition to present prices would vary from year to year, but might perhaps be estimated at from 2 to 2½ per cent., and the effect would be to make them compare more fairly with those of the trade.

I am, &c.
(Signed) R. E. WELBY.

---

7. *Extract from War Office Letter to the Treasury of 12th February* 1894, *No.* 7512/769.

THE Secretary of State is pledged to supply India with stores made in the ordnance factories at the same price as those at which they are issued to the Army and Navy, which would only nominally be the case under the plan proposed.

---

8. To the Financial Secretary, War Office.

2356/94. Treasury Chambers,
SIR, 7th June 1894.

THE Lords Commissioners of Her Majesty's Treasury have had before them Mr. Knox's letter of the 12th February last, 7512/769, as to the addition of interest on invested capital to the prices of the productions of the ordnance factories, and direct me to submit the following remarks thereon for the consideration of Mr. Secretary Campbell-Bannerman.

The object which my Lords have in view is to insure, 1st, that the true cost of productions be shown in the Factories Accounts; 2nd, that the true cost be recovered from customers.

It is not disputed that interest on invested capital is, as Lord Cranbrook decided, an element of true cost price; and the Secretary of State agreed to show how it affected cost by a note to the Factories Accounts; but he declined to take the further step of charging it to the customers of the factories, because the factories did not really pay interest, and they would be recovering a charge they did not incur, and which ought, therefore, to be surrendered to the Exchequer.

It was to meet this objection that my Lords suggested the charge of rent to the factories, which should be the equivalent of interest on invested capital, and be appropriated in aid of Army and Navy Votes in certain proportions. The factories would then only recover what they actually paid, and at the same time that recovery would involve no net increase of charge on Army or Navy Votes.

The Secretary of State urged some objections to this device in Mr. Knox's letter of 21st July last, to which my Lords replied on the 2nd August last; and he repeats them in somewhat more detail in the letter under reply.

In my Lords' opinion there is only one serious objection that can be brought against it, viz.:—that it is an unnecessarily roundabout method of enabling the factories to charge true cost price to outside customers. They suggested it as a means of preserving the single price list by which so much store has been set since 1888.

In Mr. Knox's letter of 1st February 1893 the Secretary of State said "To accept Imperial services, "and to charge non-Imperial services through the "factory accounts would necessitate the introduction "of different prices for similar stores in the Production "Voucher, whereas, the constant aim of the Secretary "of State since the re-organisation of the factories "has been to show only one price for one article."

Again, in the letter under reply, the Secretary of State says that he "is pledged to supply India with "stores made in the ordnance factories at the same "prices as those at which they are issued to the Army "and Navy."

My Lords would ask whether the pledge in question was given in writing, and what were its terms, and whether the concurrence of the Treasury was obtained in it.

It seems to them, however, that there would be no difficulty in maintaining a single price list; and yet charging India and the Colonies with a fair share of interest on invested capital. The interest need not be added to the price of each article, but might be a percentage added at the foot of the account, in a single sum.

My Lords will not further press their idea of charging the factories with rent, and will be content with the proposed footnotes to the accounts, if the Secretary of State will recover from India and other non-Imperial customers, in the manner above suggested, interest on invested capital, which, though not paid by the factories themselves, has been forfeited by the British public, which established them.

I am, &c.
(Signed) FRANCIS MOWATT.

---

9. To the Secretary to the Treasury.

7512/805.

War Office, London, S.W.,
5th August, 1896.

SIR,

WITH reference to Treasury letter 2356 of the 7th June 1894, I am directed by the Secretary of State for War to state that, as no final decision has yet been arrived at on the question of including charges for interest upon the invested capital of the ordnance factories in the prices charged to India for stores made in the factories, it appears to him that it would be well to take advantage of the opportunity of getting the question authoritatively decided, by referring it to Lord Welby's Commission on Indian Finance.

The pledge to supply India with stores made in the factories, at the same prices as those at which they are charged to the Army and Navy, referred to in War Office letter 7512/769 of the 12th February 1894, was conveyed in a letter from the War Office to the India Office, dated 13th July 1888, from which the following is an extract:—

"It has been decided to place India on the same footing as the Army, Navy and Colonies, viz.:—to charge to all alike the actual cost price of manufacture, including a percentage for inspection, but to omit the charge hitherto made for interest on capital." (57/Gen. No./19.)

No specific reference to the Treasury on this point appears to have been made, as the matter was dealt with incidentally as a part of the general re-organisation of the ordnance factories carried out in 1888; but the pledge was deliberately given after full consideration, and has been acted upon for eight years. It will, therefore, be apparent to their lordships that any proposal to depart from it, unless made in connection with a general re-settlement of the financial relations between the Home and Indian Governments, might be open to grave objection.

The Secretary of State proposes accordingly, with the concurrence of their lordships, to lay the correspondence on this subject, together with Lord Cranbrook's award of 1891, before the Royal Commission on Indian Finance.

I am, &c.
(Signed) H. T. DE LA BERE.

---

10. To the Financial Secretary, War Office.

12057/96.

Treasury Chambers,
21st August, 1896.

SIR,

IN reply to your letter of the 5th instant, (7512/805), I am directed by the Lords Commissioners of Her Majesty's Treasury to say, for the information of the Marquess of Lansdowne, that they concur in his proposal to refer to the Royal Commission on Indian Finance now sitting the question of including interest upon the invested capital of the ordnance factories in the prices charged to India for stores made in the factories.

My Lords do not understand Lord Lansdowne to contend that the Treasury should not have been consulted before the letter from the War Office to the India Office of the 13th July 1888 was written, or that any consideration has been paid by India or the Colonies, which would make it inequitable to charge them in future with interest on invested capital, in accordance with the decision of Lord Cranbrook that such interest is an element of true cost price.

I am, &c.
(Signed) FRANCIS MOWATT.

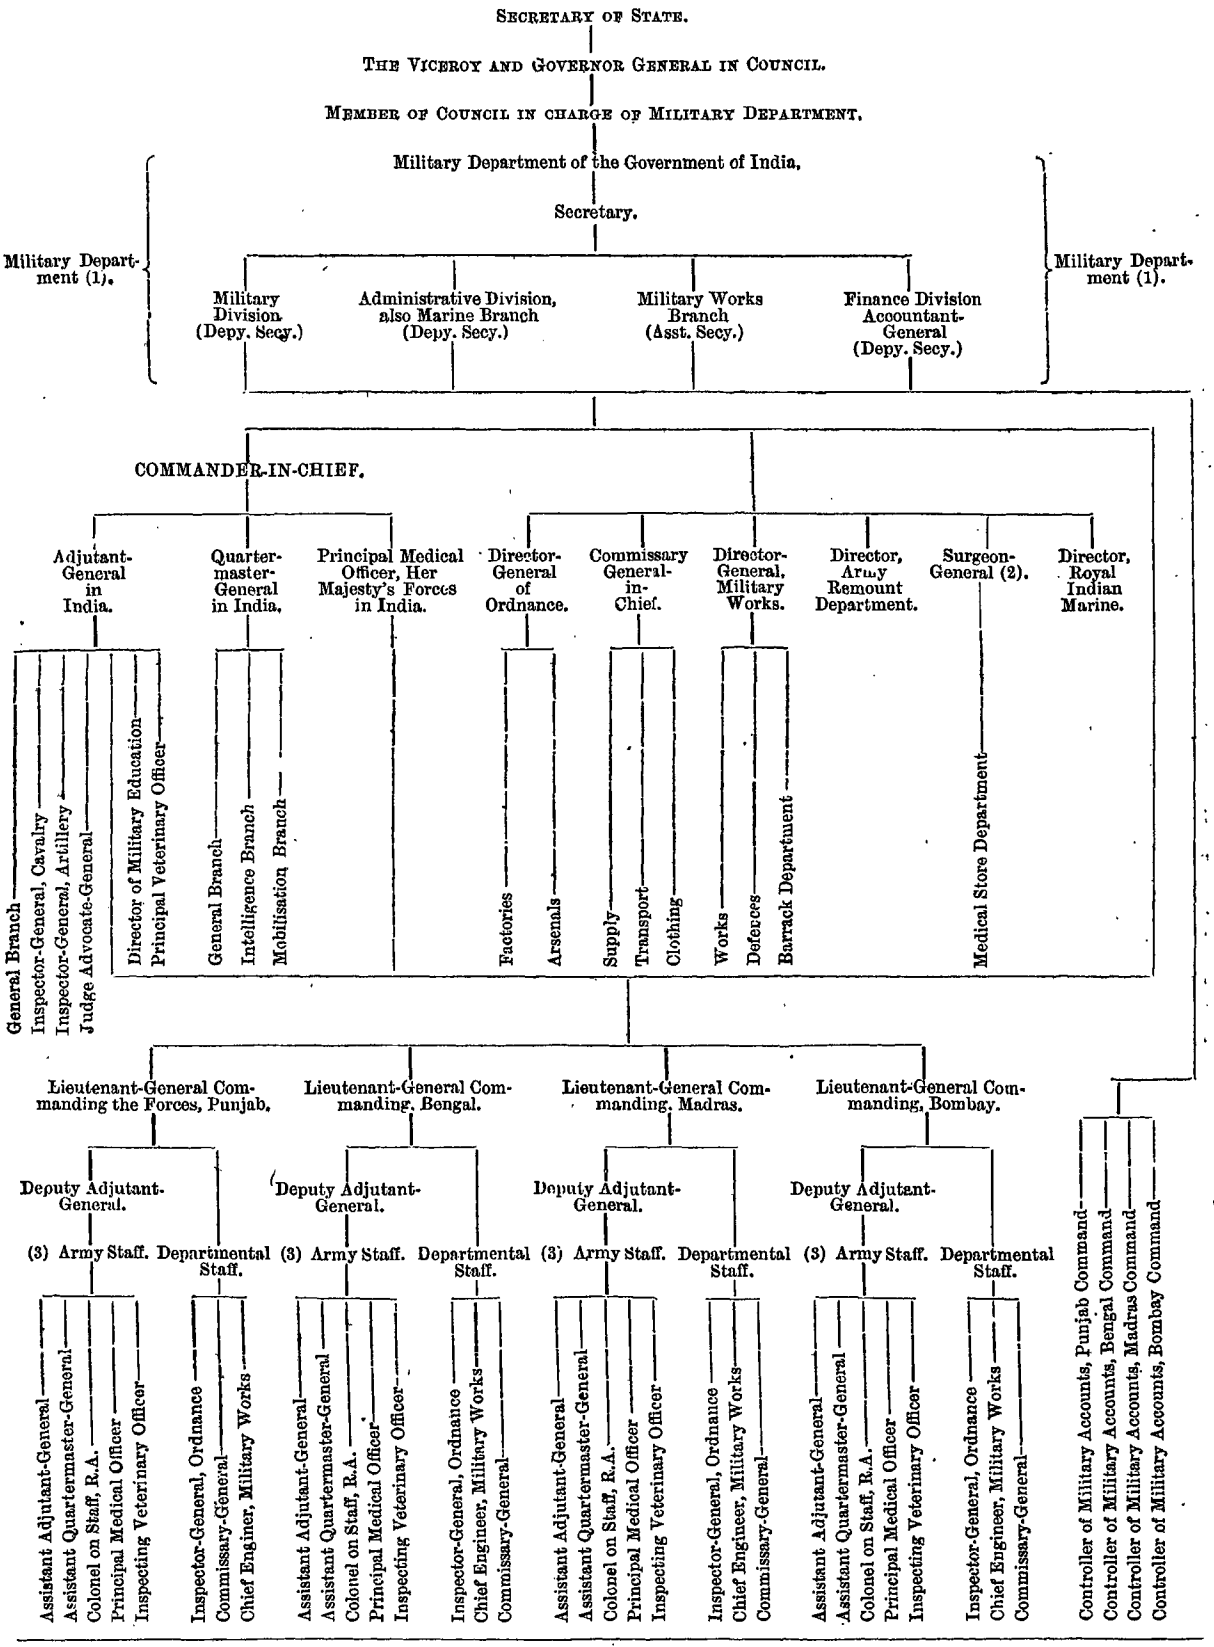
APPENDIX No. 86.

MEMORANDUM on the MILITARY ACCOUNTS DEPARTMENT and SYSTEM OF MILITARY FINANCE IN INDIA.

(Handed in by Sir E. Collen, K.C.S.I.)

1. Before describing the constitution and functions of the Military Accounts Department of India, it may be desirable to explain briefly the system of Military Administration. This will be best shown in the accompanying diagram:—

DIAGRAM TO ILLUSTRATE THE MILITARY ADMINISTRATION OF INDIA.



(1.) The Secretary in the Military Department has the rank of Major-General; the three Deputy Secretaries are Colonels; there are besides the staff shown above, three Assistant Secretaries, one Deputy Accountant-General, and one Assistant Accountant-General, or with the Member of Council 11 officers in all.

In each Command there is a Controller of Military Accounts, who is the Financial Adviser of the Lieutenant-General Commanding the Forces, but directly subordinate to the Government of India, and these officers are shown separately.

(2.) The Surgeon-General with the Government of India is directly under the Home Department, but advises the Military Department on questions connected with the Indian Medical Service. This title is about to be changed to that of Director-General, Indian Medical Service. The officers of the Indian Medical Service employed on *military* duty are under the Principal Medical Officer, Her Majesty's Forces.

(3.) The various staff officers assisting the principal staff officers have not been entered. Signalling, Gymnasia, and Educational Staff have also been omitted.

2. The Member of Council in charge of the Military Department is directly responsible for the business of the Army Departments, such as Commissariat-Transport, Ordnance, Military Works, Army Remounts, and for military finance. The Command of the Army and the Staff and departments appertaining thereto, fall within the exclusive province of the Commander-in-Chief, but all proposals by the latter involving expenditure (with certain restrictions), changes of organisation in the Army, or other important questions, come up to the Military Department, and where they are of sufficient importance, these questions are presented by the Member of Council in charge to the Governor-General, and if necessary, are laid before the Governor-General in Council.

3. The Secretary to the Government of India in the Military Department is their ministerial agent, and is responsible for the whole of the military business which comes to the Military Department. The head of the Finance Division in the Military Department is the officer who holds the dual appointment of Accountant-General, as head of the Military Accounts Department and Deputy Secretary for Finance. He cannot be overruled by the Secretary or Member of Council without the concurrence of the Finance Department. The Finance Division of the Military Department thus comprises two branches: (1) the Accounts Branch of which the Accountant-General, as chief of the Military Accounts Department, is the head; (2) the branch presided over by the Accountant-General in his capacity as *ex-officio* Deputy Secretary to the Government of India.

CONSTITUTION OF MILITARY ACCOUNTS DEPARTMENT.

4. I.—The history of the department is given in the Note of 1885 attached to this paper (Appendix C). The constitution of the Military Accounts Department is as follows:—

Accountant-General, Deputy Accountant-General, Assistant Accountant-General	With the Military Department of the Government of India.	
Controllers of Military Accounts		4
Military Accountant, 1st class		3
Do. do. 2nd class		5
Do. do. 3rd class		4
Do. do. 4th class		4
Assistant Military Accountants, 1st class		5
Do. do. 2nd class		4
Do. do. 3rd class		4
Total		33

II.—Subordinate Accounts Service.
III.—The Clerical Service.

The Military Accounts Department is divided into four parts corresponding to the four great commands:—

Punjab Command,
Bengal Command,
Madras Command,
Bombay Command,

and the establishment of the Controller's office in each command is as follows:—

—	Punjab.	Bengal.	Madras.	Bombay.
Central Branch.				
Controllers of Military Accounts	1	1	1	1
Assistant to Controller of Military Accounts.	—	1	—	—
Deputy Examiners	1	1	1	1
Assistant Examiners	2	2	2	1
Accountants	5	9	5	4
Clerks	10	15	10	8
Accounts Branch.				
Military Accountants (Examiners)	—	1	—	—
Deputy Examiners	1	1	1	1
Assistant Examiners	1	1	1	1
Accountants	4	5	4	5
Clerks	21	25	21	23
Pay Branch.				
Military Accountants (Examiners)	1	2	1	1
Deputy Examiners	2	1	2	2
Assistant Examiners	2	3	3	2
Accountants	8	11	8	8
Clerks	58	85	83	51
Commissariat Branch.				
Military Accountants (Examiners)	1	1	1	1
Deputy Examiners	1	1	1	1
Assistant Examiners	1	2	1	2
Accountants	8	8	5	6
Clerks	63	77	55	53
Ordnance and Clothing Branch.				
Military Accountants (Examiners)	—	1	1	1
Deputy Examiners	—	1	1	1
Assistant Examiners	—	2	—	1
Accountants	—	4	4	3
Clerks	—	74	43	28
Commissariat Branch, Rangoon.				
Military Accountant (Examiner)	—	—	1	—
Assistant Examiner	—	—	1	—
Accountants	—	—	2	—
Clerks	—	—	49	—
Pay Offices, Rangoon and Bombay.				
Military Accountant	—	—	—	1
Deputy Examiner	—	—	—	1
Assistant Examiner	—	—	—	1
Accountants	—	—	2	4
Clerks	—	—	9	20
Inspectors of Accounts (one for each command), Special Duties, and Probationers.				
Military Accountants	2	2	2	2

5. In the Military Accounts Department are included all appointments concerned with the audit and compilation of military expenditure and the payment of the Army, its establishments and departments, other than the appointments of regimental paymasters. Officers are appointed for five years (for the first year of which they are on probation), and are seconded in their regiments for that period, at the expiration of which they are transferred permanently to the department, or revert to regimental employment at their own request, or on the recommendation of the head of the department. Applicants for the department have to show a general character for energy and ability, and special knowledge of and aptitude for accounts, application, steadiness of character, tact, judgment, and discretion. They are nominated by His Excellency the Viceroy and subjected to an examination in arithmetic and algebra, essay writing, bookkeeping, general knowledge of Army Regulations, and Instructions for the payment of British and Native troops. Those candidates who pass are attached to the different branches of a controller's office, and at the end of the year are again examined. The scope of this final examination extends to commissariat, audit of pay lists of regiments and batteries, the principles and orders laid down in the Military Account Code, and the candidate has to answer a large number of questions on the detailed work in all the branches of the controller's office.

6. II. *The Subordinate Accounts Service.*—The Subordinate Accounts Service, employed on the audit, compilation, classification, and consolidation of the Military Accounts, is divided into Deputy and Assistant Examiners and Accountants, and all appointments and promotions to the grades above those of Assistant Examiner are made by the Government of India on the recommendation of the Accountant-General. The Assistant Examiners may be appointed from the following classes:—non-commissioned officers in the army or persons in civil life who have served not less than 12 months on probation in the Military Accounts

Department and have passed the qualifying test, or Accountants of the Department who have passed the qualifying test. Candidates are required to pass in book-keeping, précis writing, letter drafting and general knowledge of the work of the department. Appointments to the grade of Accountants are made from outsiders and from members of the Clerical Service who have passed a qualifying examination.

7. III. *The Clerical Service.*—The Clerical Service is concerned with the mechanical and clerical portion of the work of the Department, and appointments to it are governed by the rules relating to the Clerical Service of the Government of India.

Organisation of the Offices under Controllers of Military Accounts.

8. The organisation of the office of the Controller of Military Accounts in each command is as follows, and although there may be slight differences in the number of the officers and subordinates, the system is the same throughout. As an example, the office of the Controller of Military Accounts, Bengal Command, may be taken.

9. *The Central Branch* is the central bureau of the Controller, and the office to and from which all subjects pass which cannot be dealt with by the subordinate officers, excepting purely account matters, which are dealt with in the Accounts Branch.

10. *The Accounts Branch* deals generally with all matters relating to accounts, including the inter-departmental exchange accounts and the London Account current.

This branch is also responsible for the preparation of the monthly statements of receipts and charges and other account returns, and for the rolls of family and other remittances to England. The military ledger and journal are also kept here.

11. *The Pay Branch* is the office presided over by the Pay Examiner or Principal Auditor. The Pay Examiner or Auditor deals with a large portion of Grant 1, Grant 2, the whole of Grant 3 (regimental pay and allowances), a considerable portion of Grant 4, the *personnel* of Commissariat establishments, and compensation for dearness of provisions and forage; the whole of the *personnel* of Grant 5 with certain exceptions; the *personnel* of Grants 6 and 7; a large portion of Grant 8; the *personnel* portions of Grants 9 and 10; the whole of Grant 11; most of Grant 12; the whole of the *personnel* of Grant 13, and the whole of Grants 14 to 20.

The Pay Examiners in Bengal, Punjab and Madras are also disbursing officers—*vide* paragraph 19.

12. *The Commissariat Branch* is presided over by the Examiner of Commissariat Accounts, who is the Chief Auditor. He deals also with the Remount Accounts, with travelling and other allowances under various grants; with the greatest portion of the accounts and *matériel* under Grant 4, *Commissariat;* with a large portion of Grant 5, *Remount and Veterinary;* with the whole of the *matériel* portion of Grant 7, *Barrack Establishments;* with portions of Grant 8, *Administrations of Martial Law;* and with a large portion of Grant 9, *Medical.*

13. *Ordnance and Clothing Branch.*—The next branch in the Controller's Office is the *Ordnance and Clothing Branch,* presided over by the Examiner of Ordnance and Clothing Accounts. The Examiner or Auditor for Ordnance and Clothing deals with the whole of the *matériel* portion of Grant 10, *Ordnance,* and with the whole of the *matériel* portion of Grant 6, *Clothing.*

14. *Special Branches.*—There is a Special Commissariat Branch established at Rangoon for the audit of the Burma accounts. There are also Special Pay Offices at Rangoon and Bombay; that at Rangoon for Burma, and at Bombay as it is the principal port of embarkation and disembarkation.

15. In addition, certain Military Accountants are detailed for inspection and special duties. The payments of pensioners in the Punjab and Bengal Commands are effected by the Post Office, and Civil Treasury Officers respectively, but there are special officers for this purpose in the Madras Command. In the Bombay Command, pensioners are paid by Civil Treasury Officers in the Presidency and Poona circles, and by a Military Paymaster in the Southern Konkan circle.

(The Government of India are now considering, as a measure of economy, the abolition of the Paymaster, Southern Konkan, and the introduction of the payment of pensioners by the Post Office.)

System of Account and Audit, and Duties of the Officers.

16. The principles upon which the control, audit, and account of the financial transactions of the Military Department of the Government of India are conducted are, *first,* a strict preliminary scrutiny and review of the demands entered in the estimates of the several subordinate departments; *second,* a careful examination into all demands for money or stores prior to supply; *third,* a stringent control over the due application of money and stores to the service for which they may be sanctioned; *fourth,* a prompt check and audit of the accounts of such expenditure when rendered, and, *finally,* an appropriation audit explanation.

17. The Military Accounts Department is charged with the collection of the accounts of all military expenditure and the detailed check and audit of the same.

The Government of India look to the Military Accounts Department as well as to the heads of executive and administrative departments to investigate closely and frequently all expenditure incurred in the several departments of the army and to suggest economies where practicable. It is the duty of Controllers of Military Accounts and Military Accounts Officers, generally, to constantly scrutinise all sources of expenditure, and to be on the watch, not only to check expenditure, but, in communication with heads of departments concerned, to suggest economies. Where advisable, the Controllers will address the Government of India through the Accountant-General in regard to such matters.

18. The operations of examining, reviewing, and scutinising demands, and enforcing the observance of limits of aggregate and detailed expenditure under its major and minor classifications, are confided—

I. To disbursing and Issuing Officers.
II. To Examiners of Accounts.
III. To Controllers of Military Accounts, who are the dispensers of the funds allotted for prospective expenditure.
IV. And lastly, to the Finance Division of the Military Department of the Government of India, in which the proceedings of the above-noted officers are reviewed, as periodically submitted.

19. *Disbursing and Issuing Officers* are the Pay Examiners in Bengal, Punjab and Madras Commands, the Presidency Paymaster, Bombay, the Paymaster, Rangoon, Acting Paymasters of British Regiments, the Paymaster, Deolali Depôt (for troops embarking and disembarking at Bombay), Officers Commanding batteries of artillery and native regiments, Commissariat officers, officers in charge of Remount Depôts, Superintendents of Army Clothing in Bengal and Madras and Pension Paymasters. (Payments on account of the Ordnance Department are made by Commissariat Officers.) Military Treasure Chests are also maintained at Mhow, Nimach, Deesa and Asirgarh, at which stations there are no Civil Treasuries.

20. While the Comptroller and Auditor-General is responsible for compiling the general figures of all accounts rendered to him, and keeping the Government of India in the Department of Finance informed regarding the receipts and expenditure on military account, it is the duty of the Military Account Officers to maintain the more detailed accounts and statements necessary for the information of the Government of India and the effective financial control over military expenditure.

21. The Controllers of Military Accounts are placed in immediate subordination in all matters of account to the Comptroller and Auditor-General, and have the same relations with that officer that the Civil Accountants-General have in this respect. They render their accounts to him and keep their books in such form as he directs, and must be prepared to give any explanations which he may require. It is the duty of the Comptroller and Auditor-General to see that the Accounts are punctually and properly prepared by the Controllers and rendered to him; and specially that they work up to, and agree with, the accounts received by him in other departments. The Comptroller and Auditor-General has the general direction of the accounting work in respect of deposits, advances,

accounts with other departments, and debt heads generally, and takes measures to satisfy himself that the work of audit and account is efficiently maintained and kept up to date. The Comptroller and Auditor-General has full power in person or by his deputies to inspect the offices and accounts of the Controllers and their subordinate officers, and to make test audits. In other matters, the Controllers of Military Accounts are directly subordinate to the Government of India in the Military Department, rendering to that department, through its Accountant-General, such accounts and returns as it may desire, and referring direct to it for orders all matters which are not pure questions of account, or which affect officers or departments not under their orders.

22. The Controllers of Military Accounts are placed in direct relations with the Lieutenant-Generals Commanding the Forces in each of the Commands in all matters affecting their duties, and are the financial advisers of those officers, although as Controllers they are directly subordinate to the Government of India. If the Commander-in-Chief or Lieutenant-Generals Commanding sanction any expenditure which is opposed to existing rules or regulations, on which the Controller may report unfavourably, a report is made to the Government of India by the Commander-in-Chief, or through him if sanctioned by the Lieutenant-Generals Commanding. The Controller also reports the same to the Accountant-General, Military Department.

23. The Controllers have charge of the annual departmental estimates of cash requirements, and grant letters of credit on Civil Treasuries for such cash as may be required for the military services, and are responsible for keeping the Civil Account Officers promptly informed of the cash required by military disbursing officers. The actual funds are placed at the disposal of military disbursing officers by the local civil Accountants-General. The check by Controllers and Military Account Officers, generally, is applied to stores and materials as well as cash transactions, and they are responsible for reporting every instance in which reduction of expenditure, whether in money or stores, by any means or economy may be practicable. Careful scrutiny of the financial results of departmental administration is essential, but a strict observance must be maintained of the broad distinction between financial and administrative control.

24. Controllers have to sift all references made to them by the officers of account and audit, and they only submit to higher authority what they cannot dispose of, dealing with all other references according to the recorded opinions or orders of Government or the rules and instructions prescribed for them. Controllers arrange for the periodical inspection locally of such regiments and departments in their respective commands as they may select.

25. The *Examiners of Accounts* are the Sub-Accountants of the Controllers in reference to all the details of the accounts of the departments which it is their duty to examine, from whatever source such detail may be derived. All the duties connected with the check in detail and compilations of expenditure in military departments are performed by the Examiners.

26. The estimates and the regulations are the basis of the Examiners' audit, and it is their duty to disallow any charge not provided for in the estimates or sanctioned by the general regulations applicable in each case, so that no expenditure may be allowed in excess of that allotted to the several services specified in the estimates or not allowed by regulation. The object in view is to combine the stringency of an immediate check with a prompt rendering and satisfactory settlement of all claims and accounts, it being fully recognised that all delays in preferring claims or in examining and disposing of them are injurious.

27. Examiners are required to enforce with strictness the exact and regular transmission of all accounts and statements due by disbursing officers, carefully and promptly scrutinising and compiling all such accounts when rendered. Examiners regulate their audit strictly by the established rules, having no discretionary power to relax them.

28. Examiners of Accounts, whether of money, stores, or scales of diet, must consider it an important duty to check effectually, within their proper sphere as defined, all outstanding balances, either of money or stores, as well as all excesses in stock, reserves, or allotments. All new contracts in departments must be scrutinised by the Examiners concerned, and the tendered prices subjected to the prescribed tests, besides being compared with the rates actually paid, previously or contemporaneously, for like supplies. A report on all these points, showing the length of time for which the contract is to run, must be submitted to the Controller on the acceptance of every fresh contract.

29. In cases of doubt the Examiner refers to the Controller of Military Accounts, but will in all other cases act as an independent Examiner, exercising distinct duties and responsibilities. Appeals or references on any questions involving the passing of a charge are made to the Controller, and through him to the Government of India, if deemed necessary, in order that the independence of the Examiner may be secured. If an appeal is lodged against the action of an Examiner, and the Controller decides in favour of the appellant without the Examiner being convinced, the question is referred for the decision of the Government of India in the Military Department.

30. Examiners may call for an explanation of any unusual charge or of anything questionable that appears on the face of accounts or returns, but where the enquiry affects the acts of staff officers or heads of departments, the enquiry should proceed through the Controller. An Examiner, before admitting in audit any charge which requires the sanction of the Secretary of State, must satisfy himself that the sanction has been accorded either by general or special order of the Secretary of State. The rules on this head are given in the Military Account Code and also in Appendix A, Finance and Accounts, special India Army Circular, dated 26th October 1894, published* with Government General Order No. 981 of the 26th October 1894, announcing the changes in the administration and organisation of the Army in India carried out from the 1st April 1895. They are quoted in para. 81.

31. Disbursing officers submit their cash and store accounts to the Examiners of Accounts. In the event of services suddenly arising for which disbursing officers have no funds available from the letters of credit granted to them on their monthly estimates, the Civil Treasuries disburse the requisite funds under the orders of the officer commanding the station, who has first to satisfy himself of the propriety of the advance applied for. Disbursing officers are required to carefully examine all demands and claims and all items of expenditure before paying money or issuing stores. They are required to check ill-considered demands by pointing out the error and throwing the responsibility on the officer who may persist in the supply, especially reporting such cases to the Examiner.

32. *Civil Exchange and Central Adjusting Accounts.*—The transactions of the Military Department with Civil Departments are communicated to or by other departments in Exchange Accounts; the transactions with Public Works, Postal, Telegraph, and Marine Departments are adjusted through the Central Adjusting Account.

The Military Department formerly exchanged separate accounts with these latter departments, but as the transactions were not numerous, they were with effect from 1882–83 amalgamated into one account called the Central Adjusting Account, which is passed to the Military Department through the Comptroller and Auditor-General.

These accounts are received in the Accounts Branch of the Controller's office, and are passed on for audit and compilation in the military accounts to the examiners concerned by means of inter-departmental schedules. These schedules are subsequently returned with the examiner's audit remarks to the Accounts Branch. The latter then raises responding debits and credits to the department concerned in the case of all items accepted by the examiners, and communicates all objections raised by examiners to them.

The adjustment of all transactions in these accounts are watched by means of monthly and annual progress registers, and every effort is made to clear them without any unnecessary delay.

Financial Powers of various Authorities.

33. *Controllers of Military Accounts.*—Controllers are empowered to sanction, finally, expenditure not provided for by regulation up to a limit of Rs. 500 in each case, but not exceeding a total of Rs. 1,000 in any one

* Republished as clause 143, India Army Circulars, 1894.

month, provided that no permanent alteration of existing rules is involved, that the amount so sanctioned is non-recurring, that there is nothing irregular in the character of the expenditure so sanctioned, and that the authority is only used for charges which are now recognised as fit subjects for military expenditure; also that the amount can be provided from the budget estimate of the year under the particular head of the grant affected. Schedules of such cases are submitted monthly to the Government of India in the Military Department.

34. *Local Heads of Departments with each of the four Commands, such as Commissary-General, Inspector-General of Ordnance, &c.*—The local heads of departments act in regard to their financial functions and duties under the general regulations, and in regard to their executive duties in subordination to the Lieutenant-General Commanding the Forces in the Command.

35. *Commissaries-General.*—Besides the powers which local commissariat officers have under the regulations for the Commissariat Department, and those possessed by the Chief Commissariat Officer, the Commissary-General of a Command has certain financial powers, such as—

(1.) Supply and renewal of furniture of offices, up to Rs. 500.
(2.) Contingent expenses exceeding Rs. 500 and up to Rs. 1,000.
(3.) Various miscellaneous charges, such as rewards for special services in connection with the recovery of cattle, &c., above Rs. 100 and up to Rs. 500.
(4.) Charges of an exceptional nature which could not be foreseen, above Rs. 500 and up to Rs. 1,000.
(5.) Charges for making up articles for experimental purposes up to Rs. 1,000.
(6.) Extra temporary establishments under certain conditions up to Rs. 1,000 within a period of six months.
(7.) Petty minor works costing less than Rs. 500.
(8.) Provision of temporary shelter, Rs. 500 and up to Rs. 1,000.

He has also powers, detailed in the regulations connected with losses, wastage and contracts.

36. *Inspectors-General of Ordnance.*—The power of an Inspector-General as regards expenditure is limited by the amount sanctioned in his Budget Estimates, but he cannot inaugurate expenditure of a permanent or recurring nature without the sanction of Government which must be obtained through the Director-General of Ordnance accompanied by the report of the local Controller of Military Accounts.

An Inspector-General has power to sanction extra expenditure within Budget limits as follows:—

(*a.*) Purchase of Europe stores in the local market up to Rs. 1,000 in each case under the following circumstances, and up to the following annual limits:—

i. When similar articles indented for from England have not been invoiced and inconvenience would be caused by awaiting their arrival.
ii. When a sudden emergency has arisen.
iii. When stores of equally good quality can be purchased locally more cheaply than they can be imported.

Annual limits for (i) and (ii).

	Rs.
Bengal Command	30,000
Bombay ,,	20,000
Madras ,,	10,000
Punjab ,,	10,000

(*b.*) Supply, renewal and repair of furniture for their own or any Arsenal, Depôt or Factory Office up to Rs. 250 annually.
(*c.*) Making up articles for experimental purposes up to Rs. 500.
(*d.*) Extra, temporary office establishments up to Rs. 1,000. (In Bengal Command Rs. 2,000.) These amounts represent the limit of each command, and not each establishment in a command. This power is restricted to a period not exceeding six months in each case.
(*e.*) Petty and minor works up to Rs. 1,000 in each case.
(*f.*) Payment for overtime (after such overtime work is sanctioned by the Director-General).

An Inspector-General has power to sanction writing off losses as follows:—

(*a.*) Ordinary losses or ordinary wastage where no blame attaches to any one up to Rs. 100.
(*b.*) Extraordinary losses up to Rs. 500.

An Inspector-General exercises the powers of a local Government in the case of pensions granted under Civil Rules to all civilian employés not appointed directly by the Secretary of State or the Government of India.

37. *Ordnance Officers and Superintendents of Factories.*—An Ordnance Officer or Superintendent has power to purchase all *local* stores, not of factory or Government workshop supply, which are deficient and required to comply with demands passed upon him, or which are required to bring up stock to ¼th of the average annual issues, provided funds are available from the "local supplies" grant.

An Ordnance Officer or Superintendent can also expend sums not exceeding Rs. 50 on the supply, renewal or repair of office furniture.

38. *General Officers Commanding Districts.* — The general Officers Commanding districts and Officers Commanding stations have certain powers regarding expenditure which are detailed in the regulations. These powers are specially granted with regard to the entertainment of extra establishments, the issue of extra articles to troops, extra rations for troops and horses, fuel, &c. All orders issued by General Officers Commanding districts involving expenditure not covered by regulations are taken cognisance of by the Controllers of Military Accounts, who exercise a reasonable discretion in dealing with them and only submit exceptional cases to the Lieutenant-Generals Commanding the Forces.

39. *Lieutenant-Generals Commanding the Forces in the four Commands*, viz., *Punjab, Bengal, Madras, and Bombay.*—In order to diminish references on unimportant matters, Lieutenant-Generals Commanding the forces are empowered to finally sanction expenditure not provided for by regulations up to a limit of Rs. 1,000 in each case, and not exceeding a total of Rs. 2,500 in any one month under the conditions mentioned in paragraph 33. But when it is not possible to meet the expenditure under a particular head of the grant, Lieutenant-Generals Commanding may transfer funds from one head to another in the same grant in the budget of their own command, on the condition that the grant affected is not exceeded as a whole. The Lieutenant-General Commanding ascertains from the Controller of the Command and heads of spending departments whether funds are available. If funds are not available, but the amount concerned does not exceed Rs. 50, no reference is necessary, provided that such absolute sanctions shall not exceed Rs. 50 in each case or Rs. 250 in the month.

40. If Lieutenant-Generals Commanding issue orders or instructions resulting in expenditure which in the opinion of the Controller needs the approval or sanction of the Government of India, they are required to report the matter at once to the Government of India in the Military Department through the Commander-in-Chief in India, accompanied by the Controller's report.

41. The Lieutenant-General Commanding the Forces is supplied each month by the Controller with a statement showing under all heads of account the total amount for the year included in the sanctioned budget estimate, the proportionate amount of the sanctioned estimate for the period from the 1st April to date, and the total expenditure for the year up to date.

42. To enable the Inspectors-General of Ordnance, the Director-General of Ordnance, the Commissaries-General, the Commissary-General-in-Chief, Surgeons-General, Principal Medical Officer, Her Majesty's Forces, the Director, Army Remount Department, Superintendents of Army Clothing, and the Inspector of Submarine Mining Defences, to control the expenditure of their departments and to keep it within the amount sanctioned in the budget estimates, the Examiner of the accounts of the department concerned furnishes these officers, immediately on the accounts of a month being compiled, with a statement showing in detail the expenditure under each subhead of the grants for which they are responsible.

43. *The Commander-in-Chief in India.*—The Commander-in-Chief can finally sanction expenditure not

provided by regulations, but not beyond the power of sanction by the Military Department, up to a limit of Rs. 2,500 in each case, and not exceeding Rs. 10,000 in any one month, taking all four commands together, on the conditions mentioned in paragraph 33. The condition that the amount can be met from the sum provided for a particular command in the estimate under a particular head of the grant, may be so far relaxed that the Commander-in-Chief may within the limit of his sanctioning power re-appropriate funds for the purpose required when they are available in the same grant in the budget of another command or commands, on the condition that the total sum provided under the particular head affected in the estimates for all four commands is not exceeded. To assist the Commander-in-Chief, one of the existing Controllers is appointed Central Controller, and he records the total of the expenditure of all four commands under budget heads, so that he can inform the Commander-in-Chief whether there are savings in the estimates to meet the cost of the proposed sanction. It is the duty of the Central Controller to see that the powers delegated to the Commander-in-Chief are not exceeded.

44. *Heads of Departments with the Government of India, such as Commissary-General-in-Chief, Director-General of Ordnance, &c.*—The Commissary-General-in-Chief is the head of the whole Commissariat Transport Department in India, but he is the adviser of the Commander-in-Chief in such matters as are dealt with by the latter, and has complete administrative and financial control of the whole department. The Government of India sanction contracts such as for malt liquor, meat, rum, sheeting, tea, &c., on the recommendation of the Commissary-General-in-Chief.

45. *Director-General of Ordnance.*—The power of the Director-General of Ordnance over all departmental expenditure is affected only by the limitation assigned under the sanction of Government to the amount to be expended under budget grants.

The Director-General of Ordnance can transfer, under corresponding heads, moneys provided in the grants of the four commands, on the understanding that the total expenditure under each of these heads, collectively for all commands, shall not exceed the total estimates for all India under those heads.

It may be noted that the Director-General of Ordnance in India is empowered to meet excess expenditure in one command under the major heads—stores, camp equipage, and line-gear—by reductions in expenditure under the corresponding heads of another command, provided the budget provision for all India under each of these heads is not exceeded.

Re-appropriations of savings under the head "Extra Temporary Artificers and others," taking the grants for the four commands as a whole, can, however, only be sanctioned by the Director-General of Ordnance under the following conditions:—

i. Savings from the budget provision of any establishment under this head may only be re-appropriated for expenditure in an establishment maintained for the same class of work.

ii. The re-appropriation must in every case be sanctioned by the Director-General of Ordnance before the expenditure is incurred.

iii. The estimate under this head of the establishment from which the re-appropriation is made is to be reduced by the amount so re-appropriated.

Estimates.

46. The military estimates are the basis of the military account system, and it is necessary to describe the preparation of these before dealing with the manner in which they are treated when they reach the Accountant-General, Military Department, and the Government of India. The annual budget estimates of departments are prepared by the local heads of the departments in the commands and are submitted to the Controllers of Military Accounts of each command as follows:—

Ordnance:—	
Personnel - -	15th September.
Matériel - -	15th October.
Commissariat:—	
Personnel - -	1st October in Bengal, Punjab and Madras, and 10th November in Bombay.
Matériel - -	15th October in Bengal and Punjab, 1st October in Madras, and 10th November in Bombay.
Clothing, Remounts, and Medical:—	
Personnel } *Matériel* } - - -	1st October.

47. The estimates are checked in the Military Accounts Department and a consolidated estimate prepared for each grant concerned. A copy of this estimate, for each grant, together with the departmental detailed estimates, from which it has been prepared, is forwarded to the heads of departments for submission to the Accountant-General, Military Department—Ordnance to the Director-General of Ordnance in India, to reach him 1st December; Commissariat to the Commissary-General-in-Chief, 10th December in Bengal and Punjab, 5th December in Madras, and 6th December in Bombay; Army Clothing to the Commissary-General-in-Chief, 10th December in Bengal and Punjab, and 30th November in Madras; Army Remount to the Director, Army Remount Department, 1st December; Medical, direct to the Accountant-General, 15th December.

48. The estimates relating to salaries and establishments are based on the orders of the Government of India or of the Secretary of State, or on the scales laid down in the various army regulations. Nothing may be entered in the estimates which has not received the sanction of the Government of India in the Military Department. When these estimates have been sanctioned, they form the limits within which military expenditure may be incurred without previous reference to the Government of India. The limits are absolute and may not be exceeded under any circumstances without the sanction of the Government of India. This applies not only to the estimates for the army of India, but to each grant in each estimate of commands. Expenditure which cannot be met from the grant made, requires the sanction of the Government of India, and save for exceptional or extraordinary reasons, expenditure for which no provision has been made in the estimates of the current year should not be proposed. When it is proposed, it has to be stated whether it can be met from savings, and whether it is considered indispensably necessary that the outlay should be immediately incurred and not postponed to the next financial year, while an explanation is required why the need for the expenditure was not foreseen in time to include it in the estimates. The fact of a charge being included in the budget estimates is no authority for its payment until authority has been obtained in the usual way. The estimates and reports connected therewith have to reach the Accountant-General on the dates mentioned below:—

(1) The Military Budget estimate of ensuing year, not later than 15th December.
(2) Cash requirement estimate, not later than 20th December.
(3) Report showing the circumstances or orders likely to affect to any considerable extent the provision in the budget estimate of current year, not later than 1st July.
(4) The preliminary revised estimate of current year not later than 25th October.
(5) The revised estimate of current year, not later than 18th January.
(6) Revised cash requirement estimate of current year, not later than 26th January.

The Commander-in-Chief and Lieutenant-Generals Commanding the Forces must put forward proposals affecting expenditure so as to reach the Government of India at latest by the 30th November.

49. Controllers of Military Accounts scrutinise the estimates both in regard to details and general results of the military expenditure proposed, passing in review all the fixed establishments in every department, and apply to the charges not fixed, including stores, army supplies, and contingencies, every possible test for determining whether the estimates provided for these services are being administered with due economy.

50. The collection of details for the estimates is performed in the following manner. About the middle of August in each year the Controller addresses heads of departments and offices asking for their estimates for the ensuing year; the estimates for expenditure other than those by heads of departments are prepared by the Controller, while at the beginning of June the

Controller addresses the Accountant-General, Military Department, in view to obtaining information of the number of regiments and batteries and the strength of the force to be provided for in the estimates of the next financial year; and this information is furnished by the Controller to the heads of departments for their estimates.

51. The check of estimates of receipts and expenditure is made according to definite rules laid down in the Military Account Code. The *matériel* portions of the estimates for ordnance, medical, and clothing stores proposed to be purchased locally, are checked by comparison of the quantities of stores estimated for with those provided in the estimates of the current year, and of the total value with the total expenditure of the two previous years, any considerable variations being brought to notice; while the rates are compared with the contract rates of the previous year. Discretion has to be used in calculating and checking the estimates with reference to the effect that events occurring or impending are likely to have on receipts or expenditure. The Controller does not forward to the Accountant-General, Military Department, any demand for provision in the budget which cannot reach him before the 25th January, but returns the communication to the officer or department concerned for submission to Government if desired. Special rules are laid down for checking the estimates for pensions and rewards for military services. The estimate is prepared from the detailed estimates furnished on a form supplied annually by the Accountant-General, from the detailed estimates furnished by departments and from those prepared by the Military Accounts Department, and should reach the Accountant-General not later than 15th December, accompanied by detailed estimates, with the exception of the estimates for departments which go to the head of the department concerned. With these estimates are furnished statements showing the effect of the Controller's proposals on each grant in comparison with previous actuals and with current year's estimates and the budget estimates of the heads of departments for the next financial year; and the Controller sends an explanatory letter noticing the chief items of variation compared with the preceding year's estimate, and mentioning any special items or proposals for which no provision has been made. This letter should reach the Accountant-General not later than the 25th December.

52. On receipt of the sanctioned estimates from the Accountant-General, copies are at once distributed by Controllers to the officers concerned, and the various heads of departments are at the same time informed of the alterations made in their estimates and of the reasons for the same.

53. The Controller also furnishes the Accountant-General yearly with a preliminary report by letter, to reach him on the 1st July, whether there are any circumstances or orders issued since the preceding 1st of April which are likely to affect the provision in the estimates of the current year, and similar reports are submitted through Controllers by the administrative officers of the Commissariat, Clothing and Ordnance Departments to the heads of those departments with the Government of India.

54. *Preliminary Revised Estimate.*—The preliminary revised estimate shows only the total receipts and expenditure under each grant based on the actuals of the first four months of the year, and is submitted to the Accountant-General by the 25th October. In order to enable the Controller to prepare this estimate, each Examiner will submit to him about the 5th October a preliminary revised estimate of receipts and charges under the various grant heads for which he is responsible. In framing the preliminary revised estimates all important changes affecting it have to be taken into consideration, and this duty is performed by the heads of local departments who are responsible for informing the Controller.

55. *Revised Estimate.*—The revised estimate is based on the actuals of the first seven months, the Examiners submitting their revised estimates to the Controller by the 5th January, the similar rules prescribed for the preliminary revised estimate being followed. Expenditure which has not been sanctioned by authority cannot be included in the revised estimate, and provision cannot be made for any additional expenditure as the estimate is a mere forecast of probable actuals, but anticipated extra sanctioned expenditure is of course included. Notes are made against certain particular heads such as "Provisions for Europeans," "Provisions for Natives," "Compensations," &c., &c., stating whether a rise or fall in prices may be anticipated in the remaining months of the year. The actual receipts and charges for the first eight or nine months in the year in each grant are telegraphed to the Accountant-General on the 30th January and the 28th February, respectively, at the latest.

56. *Cash Requirement Estimate.*—The figures of the military budget estimate are taken as the estimated military receipts and expenditure, and the figures under Debt and other heads are based on the average of the previous three years. The cash requirement estimate is in fact an estimate of the actual cash which will be required for payments to be provided in the Treasuries of India, and which will naturally be considerably less than the total of the budget estimates, which take into account various receipts and credits which do not enter into the cash requirements of the service.

57. *Revised Cash Requirement Estimate.* — This is based on the actuals of the first seven months of the year and the last five months of the past year.

58. The comparison of receipts and expenditure with budget grants is made by each Examiner responsible, and whenever it appears probable that the expenditure will exceed the budget estimate, or that there is likely to be a falling off in receipts, the Examiner has to make a full report to the Controller. And as in some cases receipts and charges under the same budget head are finally dealt with by more than one Examiner, although one alone is responsible for watching expenditure under the grant, he is furnished by other Examiners with extracts from their monthly compilation of accounts showing the total amounts finally audited and compiled by them against the grants for which he is finally responsible.

59. Appropriation of savings which occur in the ordinary course with normal fluctuations and in consequence of the introduction of definite economies under one head of a grant to meet excess expenditure in other heads of the same grant, will be provided by the Controller in communication with the head of the department concerned. Savings under one grant must not be appropriated towards excess expenditure under another except under the orders of the Government of India, and generally only small savings which ordinarily occur in the various items will be appropriated in this way without the special sanction of Government.

60. When it appears probable that the total provision under any grant of the estimate will be exceeded, a report is at once made by the Controller for the information of the Government of India. Excess of expenditure over budget provision is taken into consideration by Government in preparing the revised estimates of military expenditure, and heads of departments have to furnish to the Controller, to reach him not later than the 28th January, with a report of any known circumstances or orders of Government or arrangements made by themselves which are likely to cause variations in the figures. No transfer of savings from one Command to another can be made, but as excess expenditure in one Command may be met by savings in another, such has to be reported to the head of the department with the Government of India for the orders of the Government of India if necessary.

61. The Accountant-General is kept informed by the Controllers of every kind of variation that is likely to occur in the estimates. Statements are furnished by the Examiners, comparing the military receipts and charges with the budget proportions, to the Controller, every month within six days from the despatch of the consolidated compilation of receipts and charges from the Accounts Branch of the Controller's office to the Accountant-General, Military Department. The Controller consolidates these statements and reports the consolidated figures to the Accountant-General within 15 days from the date of the despatch of the consolidated compilations of receipts and charges.

62. Each Controller prepares an annual appropriation audit statement on the basis of the statements prepared by the Examiners, and these audit statements are consolidated by the Accountant-General and submitted to the Comptroller and Auditor-General.

63. A quarterly statement of additions and alterations of establishments sanctioned by the Government of India is submitted to the Military Department

within two months of the close of the quarter to which it relates.

64. A monthly statement of extra expenditure (not provided for in the budget estimate) sanctioned or confirmed during each month by the Government of India, or the Secretary of State for India, is submitted by the Controller to the Accountant-General before the expiration of the month following that to which it relates. This statement is prepared from the register maintained in the Controller's office.

65. Schedules of extra expenditure sanctioned by the Commander-in-Chief, Lieutenant-Generals Commanding or by Controllers, are submitted to the Government of India in the Military Department on the 15th of the month following that to which they relate. In submitting these schedules, the Controllers specially invite the attention of the Government of India to any sanction that may appear to call for further notice.

66. With regard to the supplies obtained from England, annual indents and estimates are prepared by the respective local heads of departments in the Commands and submitted to the Controller of Military Accounts. These are carefully reviewed and submitted to the head of the department concerned with the Government of India, who after review and correction forwards them to the Government of India for transmission to the Home authorities.

Financial Organisation of Military Department.

67. The Military Department is divided into three main divisions :—

(1.) The Military Division which deals chiefly with military questions.
(2.) The Administrative Division which deals with the business of the Commissariat, Ordnance, Medical, &c., Departments.
(3.) The Finance Division.

In addition to these three main divisions, there are the Marine and the Military Works Branches.

68. At one time the business of the Military Department was distributed in sections which were not grouped together under these three main heads, and the consequence was that various sections dealt with such matters as Pay and Allowances, Pensions, Accounts, Compensation, Funds, Advances, Losses, and so forth. What was called the Accounts Branch of the office was under the Accountant-General, who was responsible for the scrutiny of presidential budgets and accounts, compilation of Imperial budgets and accounts, preparation of statistics and information, and was the adviser of the Military Department in matters of account, economy, and finance.

69. Since 1888, however, the Military Department has been organised as above described. In the Finance Division there are two distinct branches :—

(*a.*) The Accounts Branch which is the Chief Office of accounts, and deals with all the questions which are referred by the Military Accounts Department, and reviews the various proposals for expenditure.
(*b.*) The other branch of the Finance Division is called Section F, and forms a branch of the Military Department in which financial subjects are dealt with, such as advances, compensation, funds, pay and allowances, pensions, and so forth.

70. This latter section was established on the advice of the committee appointed in 1880 by the Secretary of State to inquire into the system of military accounts and estimates in India, and the Accountant-General was to be a Deputy Secretary whose special function it would be to deal with Military Finance and the Military Accounts Department. His duty was to obtain the fullest information regarding military receipts or outgoings, to keep the Government in the Military Department informed regarding receipts and expenditure, and to bring to notice any points of administrative importance or interest arising out of the information received. The military estimates were to be in his special charge, both in respect to their original compilation and the subsequent comparison of them with the actual progress of receipts and expenditure.

71. *Accountant-General.* — The Accountant-General and Deputy Secretary for Finance is the head of the Finance Division of the Military Department. As Accountant-General he deals with the business of the Accounts Branch in communication with the Controllers, one in each Command; as Deputy Secretary for Finance he has charge of the Finance Section of the Military Department, and notes or minutes on matters which are dealt with in that Section (known as Section F). But is must be observed that his opinion, report, or review as Accountant-General, is often required on matters dealt with in the other branches of the Military Department, and in such cases the papers are referred to him as Accountant-General. Although a large number of questions dealt with by the Military Department do not involve financial issues, yet, on the other hand, a great deal of the business which comes to it involves increase or decrease of expenditure, and, therefore, the work of the Military Department is to a large extent financial, and the officers of the Military Department are required to scrutinise all proposals which may come up to the department from this point of view, although the technical report may be received from the Controller of Military Accounts or from the Accountant-General.

72. It may be noted that all references from the Commander-in-Chief through the Adjutant-General, Quartermaster-General, and Principal Medical Officer, or from the Lieutenant-Generals Commanding the Forces, as the case may be, have, when on the following subjects, to be submitted to the Government of India through the Controller of Military Accounts concerned :—

(*a.*) Sanction to new or excess expenditure.
(*b.*) For increased pay, or claims to pay and allowances, whether ordinary or special.
(*c.*) For pensions.
(*d.*) Applications of like nature. The Controller concerned reports on the financial bearing of the proposals or application. When officers or others appeal against a retrenchment from their pay and allowances, the appeal, if the Controller's decision is not accepted, will be referred by the latter for the final decision of Government. If the Controller refuses to refer the case, the officer appeals through the military authorities or his department to the Commander-in-Chief.

73. The Accountant-General and Deputy Secretary in the Military Department is assisted by the following officers :—

Deputy-Accountant General.
Assistant Accountant-General.
Assistant-Secretary for work in Section F.

74. The Deputy Accountant-General is *ex-officio* Assistant Secretary to the Government of India as, in addition to his duties as the Accountant-General and Deputy, he deals under Deputy Secretary's orders with certain matters in Section F, which comprises a large number of subjects. The Accountant-General is the head of the Military Accounts Department in India, and has charge of the chief office of accounts. The estimates for the military expenditure of the whole of India are collected by him, he corresponds with Controllers on accounts, procedure, estimates, and similar subjects, and issues the necessary instructions either on his own responsibility or after taking the orders of Government. He advises the Government of India on every question relating to military expenditure which may be referred to him. He corresponds direct with the Comptroller and Auditor-General, to whom he submits an annual appropriation audit report. As Deputy Secretary for Finance he deals with all matters that arise in connexion with Military Finance, or the Military Accounts Department—see paragraph 70 *ante*. He deals with the annual confidential reports on officers of the Military Accounts Department and makes officiating promotions and transfers of officers of that department, but appointments and permanent promotions are made by the Government of India.

75. The duties of the Accountant-General, always extremely onerous, become doubly responsibly and arduous in time of war, or when large military expeditions take place. The responsibility rests in the first place with the Controllers. These officers have to telegraph to the Accountant-General on the 20th of each month the total military expenditure by military disbursing or civil officers in the previous month; and on the 26th the total debits for military expenditure incurred in other departments as received through the central adjusting accounts for postal, telegraph and public works services.

76. This is the ordinary procedure, but in time of war, these debits may reach a high figure, and Controllers are required to ascertain their value at the earliest date, and also to ascertain the probable demands which may come forward. The Controllers must place themselves in communication with the heads of the spending departments and the General officers in the field so as to supplement independently the information received from disbursing officers. In the same way the Accountant-General, in communication with the heads of departments and the chief military authorities, as well as with the Controllers, watches the current, and endeavours to anticipate the future, expenditure, while he is assisted in this duty by the returns received from the Comptroller-General of the outgoings from the treasuries. Controllers furnish him on the 10th of each month with forecast estimates showing the extra expenditure likely to be incurred during the month on account of field operations and special services, and on the 28th of the following month a statement of preliminary actuals showing the extra expenditure likely to be compiled in the accounts for the month and the total value of all outstanding liabilities up to the end of the month in question.

77. The returns and statements received by the Accountant-General, and issued from his office, are very numerous, but enable him to watch the expenditure closely, and to furnish the Military Department with complete information (see Appendix A).

Financial Powers of the Military Department.

Control of the Finance Department.

78. The Government of India are the final sanctioning authority for all expenditure in India, on whatever service, and in whatever department of Government incurred. In the Department of Finance all arrangements necessary for the provision of funds are made. In cases involving an increase of salary, the creation of a new appointment, or the grant of a special pension, which require the previous sanction of the Secretary of State, the proposal is submitted to him by the Department of Finance. Increases to salaries and establishments requiring the sanction of the Secretary of State may not, except in cases of great emergency be carried into effect until that sanction has been obtained.

79. No order involving an abandonment of revenue for which the Government of India have taken credit in the budget, or expenditure which has not been provided for in the budget, or which, though provided for, has not been specially sanctioned, shall issue without previous reference to the Department of Finance. No measure, which must or may involve a permanent abandonment of revenue to any material extent, can be adopted without the previous sanction of the Secretary of State.

80. The following are the principal rules of business in connexion with questions of finance in the Military Department:—

I.—Heads of Departments and Executive Officers of the Army are prohibited from making provision in their annual budget estimates for items of expenditure which have not been sanctioned by the Government of India.

II.—This prohibition also applies to the Military Department, which cannot, without the previous concurrence of the Finance Department, enter in its estimates any new items of expenditure which require the concurrence of that department, or the sanction of the Government of India as a whole, or of the Secretary of State.

III. The mere fact of provision having been made in the budget for any charge, conveys no sanction to the expenditure, as special sanction must be obtained in every such case before the expenditure is incurred.

IV. After the annual estimate has been sanctioned, no expenditure, save in special and exceptional cases, should be proposed or sanctioned, unless it can be met from savings in existing grants.

In submitting applications for such extra expenditure, officers concerned are required to specifically state how it is proposed to meet the same, whether from savings, and what savings, or by an additional grant.

V. All applications for sanction to fresh expenditure should be accompanied by a statement in the form given in Appendix B which should be filled up, as far as possible, by the head of the department submitting the proposal; and when he is unable to do so completely, he should ask the Controller of Military Accounts, through whom it is to be submitted, to complete the statement, when passing on the application to Government.

VI. Applications for sanction to fresh expenditure to be provided in the Annual Military Budget Estimate of the ensuing official year, should be submitted for the consideration and orders of the Government of India not later than the 30th November of each year.

Only proposals which are of an exceptional and urgent character, and which could not have been submitted before the 30th November, can be received after that date; and when so forwarded, explanation of the delay should accompany them.

VII. The following rules define the powers of the Military Department to sanction military expenditure without previous reference to the Department of Finance:—

(*a*.) Military expenditure may be sanctioned by the Military Department, without previous reference to the Finance Department, only on the following conditions:—

(1.) The expenditure must be purely military or *quasi*-military.*

(2.) The expenditure must be such as does not require the sanction of the Secretary of State, and it must not involve any outlay in excess of the budget grant for the combined requirements of all the four commands under any of the minor heads under "46, Army."

(3.) Expenditure on the acquisition of land for military purposes must not exceed Rs. 10,000 in the case of any one project.

(4.) No new principle or no change of practice which is likely to lead to expense shall be introduced.

(5.) No appointment of which the pay is more than Rs. 250 a month shall be created, and no addition shall be made to the pay and allowances of any officer if they exceed, or would after the addition exceed, Rs. 250 a month.

(6.) No rule or standing order of the Finance Department shall be contravened.

(*b*.) The Military Department exercises the powers of a local government as defined in Article 41 of the Civil Service Regulations in respect of officers serving directly under it and not under any local governments, and subject to the proviso that so far as clause (*b*) of the Article is concerned, the pensions sanctioned are chargeable against the Military Estimates. [The regulations referred to relate to temporary appointments and deputations, pensions and travelling allowances.]

(*c*.) The Military Department may not sanction any pension, whether under civil or military rules, in excess of amounts admissible under rule; or relaxation of any rule affecting an officer's title to pension without the previous concurrence of the Finance Department, and the sanction of the Secretary of State obtained through the latter department.

(*d*.) With the exception of cases failing under clauses (*a*) and (*b*) every proposal for new expenditure which has not been provided for in the Military Estimates, or which, though provided for has not been specifically sanctioned by the Government of India in the Finance Department, shall be forwarded to the Finance Department for previous consideration, the amounts for which sanction and additional grants (if any) are required being stated in every case. Where the expenditure has not been provided for in the estimates, the reference should be accompanied by a statement in the form prescribed in Financial Resolution No. 1360-A., dated 21st March 1895, *vide* rule V.

In cases which, in the opinion of the Governor-General, require great secrecy or despatch, it shall not be necessary for the Military Department to make such reference; but every order so passed must have the sanction in writing of the Viceroy, and must be communicated to the Finance Department without any delay.

(*e*.) If at any time it should appear probable that the combined grant for the four commands under any

* A revision of a petty establishment which is within the powers of the Military Department to sanction, is not excluded from these powers by reason of its involving the contingency of larger pensions to any members of the establishment,

of the minor heads under "Army" is likely to be exceeded, the earliest possible information should be given to the Finance Department, and application made for a further grant sufficient to meet the probable excess; and the application must be accompanied by the statement referred to in clause (*d*).

(*f*.) When any special military operations are about to be undertaken the Finance Department should be promptly and specially informed of the fact, and furnished with a forecast of the probable expenditure and probable cash requirements—

(1) in as great detail as possible; and

(2) as promptly as possible.

The forecast estimate should be accompanied by a statement in the form referred to in clause (*d*). Any material modification which it may be advisable to make from time to time in the forecast shall also be communicated to the Finance Department.

(*g*.) The Accountant-General, Military Department, shall not be finally overruled upon a question of rule or procedure, including these rules.

(*h*.) Quarterly statements of all pensions, gratuities, and compassionate allowances, and increases and decreases of establishments sanctioned in the Military Department under clauses (*a*) and (*b*) shall be sent to the Finance Department for information.

In reviewing those statements the Government of India in the Finance Department reserves the right of objecting to alterations in rates of pay or allowances, which in its opinion would produce inconvenience in other departments.

VIII. A scheme involving the reorganisation of a whole department throughout India requires the sanction of the Secretary of State for India, whatever the amount of the salaries in question.

IX. No modification of, or addition to, the authoritative regulations and codes of the Government of India, in regard to pay and allowances or pensions, which is of a nature to require the sanction of the Secretary of State for India, can be made without reference to that authority.

X. In no case, without the sanction of the Government of India and the Secretary of State, shall the addition of a bonus or honorarium, from whatever source, raise the total emoluments of any officer above Rs. 5,000 a year. If it is proposed to grant to any officer for special work of any description a bonus or honorarium which will require the sanction of the Government of India or of the Secretary of State, as the case may be, the consent of the Government of India in the Finance Department must be obtained to the payment of a specific sum before the work is begun.

XI. Any proposition involving an increase of salary or the creation of a new office which requires the sanction or confirmation of the Secretary of State for India, from whatever department it may have emanated, shall be finally considered in the Finance and Commerce Department, and transmitted in that department to the Home Government.

XII. All departments of the Government of India, local governments and administrations, and heads of departments, should refrain from recommending for sanction, in anticipation of the approval of the Secretary of State, any expenditure which requires the sanction of Her Majesty's Government. Nothing short of urgent necessity could be held to justify any disregard of these orders, and when such urgent necessity occurs, it should be precisely explained, together with the reasons why it was not foreseen in time to enable the Government of India to take the orders of Her Majesty's Government in due course.

XIII. All communications in respect to the relaxation of any rule or order of the Government of India in the Finance Department relating to pay, allowances, leave, and other service rules and privileges, in any departments other than those noted in the margin, should be primarily addressed to that Secretariat of the Government of India in which administrative questions relating to the department affected are dealt with.

Excise.
Customs.
Assessed taxes.
Salt.
Opium.
Stamps.
Post Office.
Mint.
Account Department (Civil).
Merchant shipping.
Ports and port dues.
Light-houses and light dues.
Pilot service.

XIV. Correspondence between the Financial Department and the other departments of the Government of India, respecting the pay and allowances of any officer on any Secretariat establishment of the Government of India, or the application of financial rules to any such officer, or respecting any expenditure by such Secretariat, should be conducted officially.

For the purposes of this rule, the Accounts Branch of the Military Department is held to be part of the Secretariat.

XV. In furtherance of the orders of the Secretary of State that in future an audit officer shall require the sanction of the Secretary of State for India, before admitting any expenditure charged against the public revenues, which is not within the competence of the Government of India to sanction, the Government of India have laid down the following rules for the guidance of offices of audit:—

(*a*.) An audit officer, before admitting in audit any charge against the public revenues which requires the sanction of the Secretary of State, must satisfy himself that that sanction has been accorded either by general or by special order of the Secretary of State. The cases in which that sanction is necessary are stated in the following rules; for the admission of any charges which are not stated in these rules to require the sanction of the Secretary of State, the authority of the Government of India (or, in classes of cases for which the Government of India has delegated its powers to local governments, of the local government) is sufficient.

(*b*.) In these rules the word "salary" includes all payments to officers from general revenues or from local funds administered by Government, whether in the nature of fixed allowances or of fees, rewards, or honoraria.

(*c*.) The sanction of the Secretary of State is required to the following:—

(1.) The creation of an appointment of which the salary exceeds Rs. 3,000 a year, whether permanently or temporarily. But in the case of a temporary appointment, the sanction need not necessarily be obtained previous to the appointment taking effect.

(2.) The raising of the salary of an officer or of a sanctioned appointment to an amount in excess of Rs. 5,000 a year, or increasing a salary which is already in excess of that amount, whether by the grant of increased fixed allowances, or temporarily by the grant of fees, rewards, or honoraria.

(3.) All orders involving expenditure for which the Civil Service Regulations or other authorised code specially declare that the sanction of the Secretary of State is necessary.

Finance and Commerce Department Resolution, No. 1,637, dated the 19th April, 1892.

(4.) Revisions* of establishments which involve expenditure of more than Rs. 25,000 a year.

(*d*.) The following are exceptions to the preceding rule; for them the sanction of the Government of India is sufficient:—

(1.) The grant of travelling and conveyance allowances.

(2.) The grant of deputation allowances, that is, of allowances in addition to other emoluments to officers placed on deputation, as defined in Chapter IV. of the Civil Service Regulations.

(3.) The grant of house-rent allowances or of free quarters.

(*e*.) In applying these rules, audit officers may assume that all the provisions of the Civil Service Regulations, the India Army Regulations, the Public Works Codes, the Forest Code, and any other authorised Code have received the sanction of the Secretary of State in all cases in which that sanction is necessary. They may, therefore, admit without requiring the sanction of the Secretary of State any pensions, acting allowances, or other allowances which are admissible under the rules of those Codes. Any allowances which are in excess of those admissible under those Codes will require the sanction of the Secretary of State if they come within the terms of rule (*c*) above.

[* NOTE.—That is, revision of establishments which will add more than Rs. 25,000 a year to the cost of the establishments.]

(*f.*) Audit officers may also assume that any general sanctions issued before 1889 (such, for example, as the orders granting personal allowances to military officers in the police in some provinces and the rules under which rewards are granted to officers for passing language examinations) had duly received the Secretary of State's sanction when that is necessary, although under the procedure in force up to that year the orders were communicated to audit offices on the authority of the Government of India only.

* * * * *

(*g.*) Any objection raised under these rules to any order issued by the Government of India will be reported to the Secretary of State for information if the objection is overruled by the Government of India, and for the required sanction if the objection is not overruled. The Military * * * Department of the Government of India must, therefore, refer any such objection to the Finance Department before disposing of it.

81. Numerous rules have, it will be seen from the above, been laid down in past years for governing and restricting the powers of the Military Department and for watching expenditure; but within the last few years, stricter and more detailed regulations have been issued within the Military Department itself prescribing the mode of dealing with proposals involving an increase or decrease of expenditure affecting the military or marine estimates. With every proposal for expenditure a statement is required to be put up to show clearly the amount, initial and recurring, and whether the sanction of the Finance Department is necessary. No proposal involving an increase in any future estimates is sent for the concurrence of the Finance Department except by order of the Military Member of Council, while no proposal of this kind which can be sanctioned by the Military Department is sanctioned without the authority of the Member of Council, except in cases where the secretary may think it unnecessary to refer to him; and this applies to any proposals for expenditure which affect the current year and the expenditure in connection with the home estimates. Final sanction for provision being made in future estimates is not given to any proposal involving an increase of expenditure unless the case does not admit of delay, but when after full consideration the necessity for the expenditure is accepted, and it is within the power of the Military Department to sanction it, the orders issued, except in cases of extreme urgency, should indicate that the entry of the items in the estimates depends on funds being available when the estimates are being considered. Such orders will be passed only by the member of council or by the secretary acting on his behalf. Similarly the concurrence of the Finance Department or the sanction of the Secretary of State to any expenditure beyond the power of the Military Department to authorise should, except in cases of urgency, only be asked for, subject to money being available.

82. The Accountant-General closes the budget estimates in their preliminary stage on the 25th January, and all finally sanctioned items are entered in the estimates which may have reached him up to the 24th January; and after that date nothing will be entered except through the final list (see paragraph 86). Each section of the Military Department (and there are certain separate sections to each division of the department) keeps up registers of all proposals involving increase or decrease of expenditure, and when orders are passed, the words "sanctioned," "negatived," or "to be considered with the estimates," are to be noted against the entry in the column allotted for that purpose. Separate registers are kept for each financial year, and those proposals which have not been finally disposed of on the 31st March by reason of their being still under consideration, form the first entries in the register for next year, and those that have been rejected for want of funds, but which are ordered to be considered with the estimates of the following year, are entered afresh in the registers of that year; while those that have not been ordered to be so considered with the estimates of the following year are treated as if they had been finally negatived. The financial registers show the effect on the estimates of the current and coming years, respectively, when a proposal has been accepted, the initial expenditure being carefully distinguished from recurring annual expenditure.

83. The quarterly lists are prepared by each section in the same form as the financial register, and show all proposals finally sanctioned during the quarter or which have been postponed for consideration with the estimates. These lists are printed up at the close of the quarter. As soon as possible after the close of each quarter, lists are prepared in section F., and submitted through the Secretary to the Member of Council in charge of the department, together with the quarterly abstract. These show:—

(A.) Items sanctioned finally in the current year but not provided for in the estimates for that year, which may not recur in the ensuing year.

(B.) Items sanctioned in the current year, but not provided for in the estimates of that year, which will recur in the ensuing year.

(C.) Items deferred for consideration with the estimates of the ensuing year on the understanding that orders will not issue until the question of funds has been considered by the Financial and Military Members of Council with the estimates of that year.

(D.) As soon as possible after the 1st April, when the estimates have been closed, a list D., of special items provided for in the budget estimates of the current year which may not recur in the ensuing year, as far as is known at the time, is prepared by the Accountant-General and submitted through the Secretary to the Member of Council in charge. Expenditure for war and special services is distinguished from ordinary expenditure.

84. In October, a copy of this list is communicated by the Military Department to the heads of departments concerned, asking them to specify which of the items contained in it will have to be provided for in the estimates of the coming year. The replies are then dealt with in the sections concerned, in the same manner as all other proposals which involve expenditure. Early in January, section F. circulates to sections a copy of list D., and they complete it with the decisions dealing with the replies received from the heads of departments. Those items in list D. which the Governor of India decide to consider with the estimates will be entered in the final list C. under the heading "special items provided for in the estimates " of the current year, for which provision is desired " in the estimates of the ensuing year."

85. A list similar to the quarterly printed list mentioned before is prepared for the period from the 1st January to the date prior to the closing of the military budget estimates in the Accountant-General's viz., Office, 24th January, and the lists A. B. and C., are completed by section F. up to the 24th January and submitted to the Member of Council. At the beginning of each of the lists will be shown the amount brought forward from the previous lists. All cases for consideration with the estimates are noted by the sections concerned, and a complete list of them for the period from the 25th January to 15th February is sent to section F. not later than the 18th February. List C. is now completed for the period from the 1st April to the 15th February, and in this form is called final list C. After its completion, no item will be accepted for consideration with the estimates except under the special orders of the Member of Council, and no proposals for expenditure in the year following that for which the estimates have been thus closed, should be submitted until after the 1st April following. The final list C. includes all items of grants lapsing for the current year, which require to be provided for the ensuing year. The amounts to be provided in the ensuing year on account of field operations will also be shown in this list. The Military Member of Council having ascertained from the Financial Member of Council what sum is likely to be available for the following year, and having ascertained from the Accountant-General the approximate amount of the military estimates as framed before the entry of any of the items in the final list C., will fix a date on which he will examine those items and select only those which he may consider most urgent. This is done in communication with the Commander-in-Chief. A revised list is then drawn up under the orders of the Member of Council showing what items are to be included in the estimates, and these orders are issued by the Miltary Department to heads of departments concerned. This revised list is passed to the Accountant-General under the Secretary's initials as authority for inclusion in the estimates. The Accountant-General at the same time is authorised to close the estimates, and a copy of the revised list is sent to the Financial Member of Council.

86. By means of the foregoing financial lists the Government of India in the Military Department can watch the progress of military expenditure in the current year, and can regulate the expenditure of the ensuing year within the limits assigned by the Financial Department.

87. *Procedure in respect to Estimates in the Military Department.*—The mode in which the estimates are prepared by Controllers of Military Acccounts has already been detailed. When these estimates are received by the Accountant-General, he consolidates them in the Accounts Branch of his division. He thoroughly examines the estimates of the four commands in detail, and alters them if he considers it necessary. He brings the corrected figures together in one general estimate for the whole of India, and submits them to the Military Department. He checks the estimates item by item, and calls upon Controllers for any further explanation that may be necessary. The estimates of the large spending departments in each command are forwarded by Controllers to the heads of those departments with the Government of India, namely:—the Director-General of Ordnance in India, the Commissary-General-in-Chief, and the Director, Army Remount Department. These officers, after reviewing them carefully, make suggestions for modifying them to the Accountant-General, who also revises them thoroughly, and addresses those officers in view to the provision under any of the authorised heads being increased or reduced according to any circumstances or orders he may be aware of. Should they agree to his proposals, these are carried out at once, otherwise the matter is submitted to the Military Department for orders. In a word, it may be said that every item in the estimates as submitted to him, pass under a rigorous scrutiny in his office. The form of the estimates themselves shows the requirements of the Finance Department with regard to past actuals, and the Controller and Auditor-General is also consulted. The Controller-General is bound to attend specially to the reconciliation of the departmental figures (both actuals and estimates) with the payments into and issues from the treasury; and it is also his duty to work out the adjusting entries which connect the audit figures of the Military Department with the net issues from the treasuries. The Accountant-General's responsibility consists in checking the Controller's estimates in regard to provisions for establishments as allowed by the regulations, and any special orders of the Military Department, and as regards services according to the average normal expenditure of past years and any special orders of the Military Department; and he has to modify the estimates in accordance with any subsequent orders from the Military Department.

88. The responsibility for the sufficiency and moderation of the annual estimates rests with the Military Department, and the Secretary in that department has, therefore, distinct responsibility for the military estimates.

89. The Military Member of Council is responsible generally to the Governor-General and his colleagues for the military estimates, the supreme responsibility for the estimates resting upon the Governor-General in Council, or the Government of India collectively.

90. After the fullest consideration of the estimates by the Member of Council, they are sent to the Finance Department with a formal letter or memorandum, intimating that they have been passed in the Military Department, and these estimates have to reach the Finance Department about the 13th February.

91. The Finance Department does not check the military estimates in detail, and if there should be an error in the estimates as originally passed by the Military Department, any failure on the part of the Comptroller-General or the Financial Secretary to detect that error will not relieve the Military Department of its responsibility. The measure of responsibility of the Comptroller-General and the Financial Secretary for the military estimates will be the means which they possess of checking these estimates. Up to the limit of their power of checking the military estimates, their responsibility would be enforced, and beyond that limit it cannot be enforced.

92. It is with the Military Department that the responsibility for the estimates in the first instance, and for the control of the current expenditure, must rest. The action of the Finance Department is limited to the exercise of due care that *primâ facie* the estimates properly exhibit the authorised charges on account of the several services of the year, and that the expenditure is not proceeding at a rate unwarranted by the sanctioned estimates.

7th December 1895. E. H. H. C.

APPENDIX No. 87.

LETTERS from Sir E. COLLEN, supplementing and correcting his Evidence.

No. 1.

To the Right Hon. Lord WELBY, G.C.B., Chairman of the Royal Commission on Indian Expenditure.

Calcutta,
MY LORD, 1st March 1897.

I HAVE received the first report of the Royal Commission on the administration of the expenditure of India, with the minutes of evidence, and I now ask permission to submit to the Commission, memoranda in connexion with my own evidence, and with that which has been given by others in respect to the subjects upon which I was examined.

2. I trust that these memoranda may be laid before the Commission and published in the appendices to the final report.

3. The memorandum which I submit herewith has reference to the effect of short service upon the army in India. I venture to think that there has been some misapprehension in regard to the statistics of invaliding, age, and length of service in India.* At the time of my examination, the statistics which were available were not full or complete. I had the invaliding statistics of 1887-88, which were mentioned in Lord Lansdowne's despatch of the 25th March 1890, but the age statistics were for the 1st January 1895. I pointed out that the years were not comparable, and that I should like to have a further opportunity of going into the question.

4. If my memorandum and the statistics appended thereto are carefully studied, I venture to think that my pleas will be accepted, viz., that the decrease in mortality is not consequent on the introduction of short service, but is the result of measures beneficial to the health of the soldier; that although the general invaliding ratio has been diminished, there has been an increase in the percentage of men and invalids under 25 years of age and under five years' Indian residence; and that the ratio of "constantly sick" has largely increased; finally, that the short service system does

* Qq. 6234-61; 13,141-43; 13,144-46; 13,148-49.

not allow us to retain the men sufficiently long in India; that it does not give a better or healthier army to India than one which would contain a larger proportion of more matured men. If the short service system is to be maintained exactly as it is, under which India does not possess such an efficient army, from the physical point of view, as she might have under other conditions, then I venture to submit this should be taken into account in assessing the charges against Indian revenues.

I have, &c.
EDWIN H. H. COLLEN.

I.

MEMORANDUM.

The health of the army in India may, it is presumed, be judged by—

(1.) Mortality.
(2.) Invaliding.
(3.) The numbers constantly sick.

(1.) Can the decrease of mortality in India be attributed to the short service system?

2. The mortality per 1,000 of European soldiers in India for the period 1800-30 was 84·60; for the period 1830–56 it was 56·70; for the period 1869–78 it was 19·30; for the period 1879–88 it was 16·02; and for 1889–94 it was 15·91. The period 1857–68 has been omitted, as it was that which contained the Mutiny campaigns. Short service began to affect the army in India about 1877, and it will be seen that during the period "long service" flourished, *i.e.*, from 1800 to 1877, the decrease in mortality was from 84·60 to 17·48 in 1875, 15·32 in 1876, 12·71 in 1877 (*see* Table A.). In 1895 it was 15·26.

3. It can hardly be assumed that the decrease in mortality since 1877, when short service began materially to affect the army in India, is due to short service.

It is more reasonable to conclude that it is due to causes, many of which operated before that year, but which year by year are operating more widely and fully; to the soldier being infinitely better housed and cared for, to one-third of the army being stationed in the hills during the hot weather, to better sanitation, to good water supply, to the spread of the temperance movement, more rational clothing, and other causes of a like nature.

(2.) Can the decrease in invaliding be attributed to short service?

4. Taking the period from 1862 to 1876 inclusive, the average is 42·53, and in the period from 1877 to 1895, the average is 29·67 (*see* Table A.).

This is apparently in favour of the army under the short service system. But the question is, how much of this is due to "short service" and how much to all the improvements mentioned under (1)? In my opinion, a great deal is due to the latter causes. There is another reason also which ought to be considered, viz., that younger men often avoid invaliding, because their service is, comparatively speaking, so short in the country; they get a change to the hills, and many are not invalided, as their time is about to expire. But it is not the case that men under 25 years of age are less liable to invaliding than those between 25 and 30.

5. In the ten years 1877–85 (*see* Tables C. and D.), the average percentage of strength under 25 years of age was 41, and the percentage of invaliding of men under 25 years of age was 29.

In the ten years 1886–95, the average percentage of strength under 25 years of age had increased to 51, and the percentage of invaliding under 25 years of age was 53.

In the same periods the average percentage of men of under five years' residence in India had increased from 68 to 78, and the average percentage of invaliding under five years' residence from 66 to 80 in the two periods (*see* explanatory notes following Tables C. and D.).

In the year 1895 the percentage of strength under 25 years of age was 55; the percentage of invaliding under 25 years of age was 66; the percentage of men of under five years' residence in India had increased to 84; and the invaliding of men of under five years' residence to 85.

6. It will be observed that the invaliding among young men under 25 years of age has been gradually and steadily increasing since 1878, when it was 20, to 66 in 1895, the percentage of young men under 25 having increased from 36 in 1878 to 55 in 1895.

There has been a decrease in the total invaliding ratio, but an increase in the percentage of men and invalids under 25 years of age and under five years of Indian residence.

This does not seem to warrant the conclusion that short service, which is to give a residence in India of a little over five years, has decreased the invaliding.

7. The conclusion is rather that invaliding has decreased on account of the diminution of causes which have nothing to do with short service, which operated injuriously in former years, and that the invaliding ratio would have decreased if the army had remained constituted as before. In fact, if the figures mean anything, they mean that invaliding has increased among the more youthful portion of the army, and consequently that short service *per se* has increased, and not decreased, invaliding.

The decrease in the total invaliding ratio is no more due to short service as such, than the decrease in mortality is a consequence of short service.

(3.) Has there been an increase or decrease in the numbers "constantly sick"?

8. There has been a considerable increase. According to Table A. it decreased from 71·35 in 1860, to 55·82 in 1877, when the effect of short service is supposed to have commenced to show itself in India, and it has risen to 93. A good deal of the rise in the "constantly sick" ratio is presumably due to (1) enteric fever; and (2) venereal disease among the youthful fresh arrivals under the short service system. The admissions into hospital for enteric fever (*see* Table B.), increased from 3·1 per thousand in 1870–71, to 26·3 in 1896. Part of this increase is possibly due to imperfect diagnosis in earlier years, and the probability that many enteric fevers were not recorded as "enteric" in those days. Still the increase has been very great. It only increased from 3·1 in 1870–71, to 4·1 in 1877–78, when short service began to take effect. It has risen, with variations, to 26·3 in 1895–96.

9. With regard to (2), venereal disease, the rise in the ratio per 1,000 of admissions into hospital was from 191·2 in 1870–71, to 208·5 in 1877–78, when short service began to have serious effect in India. The lock hospital system and the restrictive regulations were in force during that period. But from 1877–78 to 1887–88, the lock hospital system being still in force during the period, the ratio per 1,000 of admissions had risen from 208·5 to 361·2, a very much higher rise than in the period 1870–71 to 1877–78, viz., a rise of 152·7 in the latter period, against 17·3 in the former period. I do not forget that some lock hospitals were closed in 1885 (they were re-opened in 1887), and that this had some effect on the rise in the venereal ratio, but it cannot account for the total rise in the period from 1877–78 to 1887-88. This was due to the increased youth of the army, from 33 per cent. in the former year to 52 per cent. under 25 years of age in the latter year (*see* Table B.). Since 1887–88, restrictive regulations in conformity with the policy enunciated in the resolution of the House of Commons, have been abolished (*see* Appendix E.), and the rise has been from 361·2 per mille in 1887–88 to 522·3 in 1895–96.

10. Taking the various causes in operation, the only deduction which can be drawn is that "short service" has given us an increasing ratio of "constantly sick."

11. The extract from the annual report of the Sanitary Commissioner with the Government of India for the year 1895 will be of interest to the Commission (Appendix F.).

12. I submit this memorandum and the statistical appendices, which have been very carefully compiled, to the Commission.

13. I venture to affirm that, in the face of these statistics, only one conclusion can be arrived at, viz., that under the short service system India does not get an army which is physically as healthy and as capable of endurance as an army which would contain a larger proportion of men of somewhat longer service.

EDWIN H. H. COLLEN,
Major-General,
Member of the Council
of the Governor-General.

Calcutta, the 1st March 1897.

A.

STATEMENT showing the Death, Invaliding, and Constantly-sick ratios of the British Army in India, year by year, from 1860.

Year.	Death Ratio.	Invaliding Ration.	Constantly Sick Ratio.
1860	32·49	*	71 35
1861	35·07	*	74·89
1862	23·81	28·17	72·59
1863	21·36	34·39	62·63
1864	19·80	37·51	59·31
1865	26·17	40·87	58·91
1866	19·03	48·79	58·42
1867	26·87	48·26	57·44

1890	13·84	25·29	86·98
1891	15·89	26·78	79·11
1892	17·07	24·37	83·61
1893	12·61	25·25	86·54
1894	16·07	25·45	91·55
1895	15·26	23·41	93·68

* Not available.

The figures from 1871 onwards have been given from the Sanitary Commissioner's reports.

The figures before 1871 have been taken from the Army Medical Department reports.

Whether, as here, the ratios be derived from two different series,* or be all (1860–95) taken from the Army Medical Department reports, the general results are the same. In the early years "invaliding" was rising, while "constantly-sick" was falling. But from 1878 onwards there has been a rise in the constantly-sick rate, and from 1880 the invaliding ratios have been lower than before.

The rise in the constantly-sick ratio since 1877 is probably due to the increase of enteric fever and venereal disease among the youthful fresh arrivals under the short service system; those being diseases which keep men comparatively long in hospital. In 1895 the average stay in hospital of a case of enteric fever was 52 days, and of a case of venereal disease 31 days.

* For various reasons, such as the exclusion of men on field service from the Army Medical Department figures, the ratios of the two series for the same year do not usually exactly agree.

B.

The figures are only available for 1877.

Period 1877–85.

AGE.—*Strength.*—41 per cent. of the strength of the army of India under 25 years of age, the maximum being 48 per cent. in 1885, and the minimum 33 per cent. in 1877.

Invaliding.—29 per cent. of the invaliding under 25 years of age, the maximum being 42 per cent. in 1885, and the minimum 16 per cent. 1877.

Invaliding. — The highest ratio of invaliding per thousand of strength was for the age period "40 and upwards," namely, 151 per thousand. To that height the ratio gradually rose in successive age periods from 14 per thousand in "under 20." The same progression is observed in the individual years of the period.

INDIAN RESIDENCE.—*Strength.* — 68 per cent. of the strength, under five years' residence in India, the maximum being 75 per cent. in 1884, and the minimum 56 per cent. in 1877.

Invaliding.—66 per cent. of the invaliding under five years' residence in India, the maximum being 78 per cent. in 1885, and the minimum 53 per cent. in 1877 and 1878.

Invaliding. — The highest ratio of invaliding to strength per thousand, namely, 66 per thousand, was in the period "10 years and upwards." The same is the case in all the individual years except 1881, in which "2–5" had the highest ratio. In four years the period "2–5" came second, and in four years the period "5–10."

The ratio per thousand of total invaliding to the total average strength of the army of India was 36, the maximum being 49 in 1879, and the minimum 23 in 1885.

Summary.—41 per cent. of the strength and 29 per cent. of the invaliding under 25 years of age; 68 per cent. of the strength and 66 per cent. of the invaliding under five years' Indian residence.

This statement shows invaliding by age and by length of residence in India for 10 years.

Under each year are shown—

(1.) The percentage distribution of the strength of the army.

(2.) The percentage distribution of the invaliding of the army.

(3.) The ratio of invaliding of each age or service period per thousand of the strength at each age or service period.

Period 1886-95.

AGE.—*Strength.*—51 per cent. of the army under 25 years of age; the maximum being 55 per cent. in 1895, and the minimum 50 per cent. in 1888, 1889, and 1890.

Invaliding.—53 per cent. of the total invaliding occurred under 25 years of age, the maximum being 66 per cent. in 1895, and the minimum 44 per cent. in 1886.

Invaliding.—The ratio of invaliding per thousand of strength was highest in the men of over 40 years of age; and this was the case also in eight out of the ten individual years.

SERVICE.—*Strength.*—78 per cent. of the army under five years' service in India (34 + 44 = 78); the maximum being 84 per cent. in 1895, and the minimum 72 per cent. in 1887.

Invaliding.—80 per cent. of the total invaliding occurred under five years' Indian service; the maximum being 85 per cent. in 1895, and the minimum 74 per cent. in 1886.

Invaliding.—The ratio of invaliding per thousand of strength was highest between two and five years' service; but this was the case in only four of the individual years. The period above 10 years was highest in three of the years; the period 5–10 in two years; and the period under two in one year.

The ratio of total invaliding per thousand of the total strength of the army was 24; the maximum having been 27 in 1891 and the minimum 21 in 1886.

---

51 per cent. of the army under 25 years of age yielded 53 per cent. of the total invaliding; and 78 per cent. of the army under five years' Indian service yielded 80 per cent. of the total invaliding.

The increased youthfulness of the army has been accompanied by an increase in invaliding from venereal disease:—

1886	2
1887	2
1888	2
1889	2
1890	3
1891	4
1892	3
1893	4
1894	4
1895	5

and also by an increase in the percentage of invaliding from venereal disease to total invaliding :—

1886	7
1887	8
1888	7
1889	8
1890	13
1891	15
1892	13
1893	16
1894	17
1895	21

Again in the ten years the maximum period of venereal invaliding was 25–29 in six years, below that in three years, and only in one year above it.

Looking at the two statements C and D, the following comparison may be made :—

Total invaliding ratio per thousand of strength—

1877–85	36
1886–95	24

——	Percentage of Strength under 25 Years of Age.	Percentage of Invaliding under 25 Years of Age.
1877–85	41	29
1886–95	51	53

——	Percentage of Strength under Five Years' Residence.	Percentage of Invaliding under Five Years' Residence.
1877–85	68	66
1886–95	78	80

Invaliding per thousand of strength at the different Ages.

——	Under 20.	20 to 24.	25 to 29.	30 to 34.	35 to 39.	40 and upwards.
1877–85	14	27	31	36	73	151
1886–95	10	27	23	21	29	38

Invaliding per thousand of strength at different periods of Indian residence.

——	Under 2 Years.	2 to 5.	5 to 10.	10 and upwards.
1877–85	22	39	39	66
1886–95	22	27	22	25

The increase in the percentage of men and of invalids under 25 years of age and under five years of Indian residence has been accompanied by a decrease in the total invaliding ratio, and by a fall, or absence of rise, in the invaliding ratio per thousand of strength at all ages and periods of residence. The diminished liability of the man who has been some time in the country, may perhaps be explained by the fact that an old man or a man who has been long in India must have re-engaged; and he cannot have done so without satisfying not only himself, but medical officers, that he was suitable for further service in India. Somewhat younger men often avoid invaliding, no doubt, simply by the fact that their time of service has expired; and this is probably one of the most important factors in the diminution of the invaliding ratio.

E.

Memorandum.

For many years at nearly all military stations of any importance, "lock hospitals" were established for the treatment of women suffering from venereal diseases. Such women were dealt with under the provisions of the rules framed under the following Acts :—

Bengal Act XXII. of 1864 (reproduced in Act III. of 1880).

Bombay Act III. of 1867.

Madras Act I. of 1866.

Under these rules all prostitutes living in cantonments were registered and subject to medical examination. In many cases special quarters were allotted for them in regimental or cantonment bazars, and women evading the rules were subject to ejectment from cantonments.

2. On the 5th June 1888, however, the following Resolution was passed in the House of Commons :—

"Resolved, that in the opinion of this House, any mere suspension of measures for the compulsory examination of women, and for licensing and regulating prostitution in India, is insufficient, and the legislation which enjoins, authorises, or permits such measures, ought to be repealed."

3. In compliance with this Resolution, the Governor-General in Council issued orders, dated 26th July 1888, with a view of putting an end to any practices which involved the licensing or registration of prostitutes, or the compulsory examination of women in cantonments.

4. In 1889 the new Cantonments Act (XIII. of 1889) was passed, by which the Governor-General in Council was authorised to make rules to provide for "the "prevention and spread of infectious and contagious "disorders within a cantonment, and the appointment "and regulation of hospitals or other places within or "without a cantonment for the reception and treatment "of persons suffering from any disease." And on the 4th July 1890 the Governor-General in Council duly made and published certain rules under the Act, providing amongst other things for the creation of such general hospitals as might be necessary in cantonments for the reception and treatment of persons suffering from any diseases, including infectious or contagious diseases, within the cantonment. These hospitals were designated "Cantonment Hospitals," and certain rules were laid down for their management, &c.

5. In 1891–92, as it was thought the cantonment hospitals were conducted too much on the lines of the old lock hospitals, cantonment general hospitals were established at various stations; but in 1894 the Commander-in-Chief pointed out that the results of the establishment of cantonment and cantonment general hospitals had not been satisfactory, and certain hospitals were closed. The orders which the Government of India issued from time to time had not been wholly carried out in some cantonments; and in February 1895 an order was passed by the Governor-General in Council "providing that no rule made under the "Cantonments Act of 1889 shall contain any regulation "enjoining or permitting any compulsory or periodical "examination of any woman by medical officers or "others for the purpose of ascertaining whether she "is, or is not, suffering from any venereal disease, or "is, or is not, fit for prostitution." Similarly it was provided "that no rule shall contain any regulation "for the licensing or special registration of prostitutes "or for giving legal sanction to the practice of prostitution in any cantonment." This necessitated a revision of the 1890 cantonment rules, and a fresh set of rules was, therefore, drawn up and published for general information in Government General Orders.

6. About the same time it was decided, after much discussion, to close the cantonment general hospitals at a large number of stations; the Native population of cantonments were to resort to civil dispensaries, and in some cases station followers' hospitals were to be provided; in others, the cantonment hospitals were to be converted into out-door dispensaries.

7. Measures have been taken to prevent "solicitation" in cantonments with a view to the suppression of loitering and importuning in the vicinity of barracks, and rules for the suppression of such practices have been incorporated in the new Cantonment Rules.

F.

Extract from the Annual Report of the Sanitary Commissioner with the Government of India, 1895 (issued December 1896).

4. It has been stated that the mortality per 1,000 of European soldiers in India was for the period 1800–30, 84·60; for the period 1830–56, 56·70; for the period 1869–78, 19·30; for the period 1879–88, 16·02.* To this it may be added that the ratio for the period 1889–94 was 15·91.

In paragraph 33 there is a table showing for certain diseases for India the mortality for three periods in-

* Past and present.

cluded in 1870–95; 1870 being the earliest year for which the statistics of India, as a whole, are available. But, as it is of interest to have also older statistics for comparison, the following table has been prepared for the Bengal Presidency from the earliest available year, 1858, up to 1894, the last year in which the Bengal Presidency existed as a separate command.

The year 1858 being still subject to the disturbing influence of the mutiny, it has been kept separate. The next period was chosen because the late Dr. Bryden stated that from 1858–63 no new regiment was added to the garrison of India. In the year 1870 the short service system was inaugurated in England, and is presumed to have begun to affect India seriously from 1877.

In this office there is no record of enteric fever before 1870, but in the "Army Medical Blue Book" it appears from 1861. The ratios given in the second and third periods in the following table have been derived from the blue books; but no deduction has been made from the other fevers, as it could not be discovered from which the deduction should be made.

The high constantly-sick rate in the fifth period is probably due to the causes mentioned in the beginning of paragraph 3.

Leaving aside the cases in which increase or decrease has been fluctuating, it may be said that in the fifth period there was increased admission from enteric fever, ague, alcoholism, and venereal diseases; increased death from enteric fever and respiratory diseases; increased invaliding from mental affections, diseases of the organs of special sense, and injuries; and diminished admission, death, and invaliding ratios under all the remaining and most numerous headings.

The increase of enteric fever and venereal disease is evidently connected with the short service system; and further statistics supporting this view will be found in Table XV.–B. The increase in ague may be due to exposure on active service, and to the addition to the empire of large malarious regions on the north-western and eastern frontiers. The increase in mortality from respiratory diseases is pretty certainly due to the epidemic influenza, which has not left the country since it first appeared in 1890. The decrease in cholera, scurvy, and some other diseases may be put down to improved hygiene. The decrease in remittent and in simple continued fever is probably mostly due to change in diagnosis, and transfer to the head of enteric fever. Hepatitis was shown by Dr. Bryden to be a disease of degeneration, a disease of the old soldier. Its diminution appears, therefore, to be a good result of the short service system.

All causes	43·59	32·52	46·04	41·31	27·85

* Including diarrhœa.
† Including apoplexy up to 1870.

The total fever mortalities of the four forms of fever given in the table are, for the periods given, respectively, 18·57, 4·57, 3·85, 3·28, and 5·80. The total fever mortality has, therefore, risen since the Indian army came under the short service system. But, nevertheless, the total mortality from all causes has been reduced.

In the period 1859–63 the maximum death-rate was 44·77, the minimum 22·49, and the ratios of two of the years were above the period ratio; in 1864–69 the maximum death-rate was 42·89, the minimum 20·11, and two of the years had ratios above the period ratio; in 1870–76 the maximum death-rate was 27·45, the minimum 14·62, and two of the years had ratios above the period ratio; in 1877–94 the maximum death-rate was 44·15, the minimum 11·21, and five of the years had ratios above the period ratio. Very high ratios were, therefore, exceptional in all the periods. The two highest ratios in the last period were those of 1879 and 1880, the years of the Afghan war. The death-rate was at its lowest from 1882 to 1885, cholera, fevers, respiratory diseases, and bowel complaints all giving low mortalities. Since 1885 the death-rates have been higher, the maximum 19·81 and the minimum 14·35. The increase is probably connected with the conquest and occupation of fresh territories on the eastern and north-western frontiers. Some of the years with high ratios, such as 1891, 1892, and 1894, were also distinguished by prevalence of cholera. It is

usual for the Bengal-Punjab death-rate to be higher than that of Madras or Bombay.

* * * *

33. The statistics for 1895 of the chief diseases having been examined, it will be interesting now to compare the mortality of the past five years from some of the principal causes with that of earlier periods:—

Died per 1,000 of strength.

	India.		
	1891–95.	1881–90.	1870–79.
Enteric fever	5·81	3·81	2·03
Cholera	1·38	1·46	3·22
Hepatitis	1·18	1·33	2·19
Dysentery	·65	·80	1·48
Phthisis pulmonalis	·58	·74	1·18
Respiratory diseases	·75	·59	·97
Remittent fever	·53	·52	1·28
Diarrhœa	·06	·09	·12
Total from all causes	15·37	14·24	19·34

* Past and present mortality.

The increase in enteric fever and the decrease in hepatitis are probably due to the influence of the short service system, as is explained in paragraph 4. The diminution of mortality from cholera, dysentery, and diarrhœa may, perhaps, be put down to improved hygiene. The rise in the total death-rate is probably due to the number of military expeditions, and to three out of the five years having been bad cholera years in India. If the period had been ten years the rise would in all likelihood have been obliterated, and perhaps changed into a fall.

No. 2.

To the Right Hon. LORD WELBY, G.C.B., Chairman of the Royal Commission on Indian Expenditure.

MY LORD, Calcutta, March 1, 1897.

IN continuation of my letter No. 1, dated the 1st March 1897, I beg to submit Memorandum No. II.

2. If reference be made to Qq. 6377 and 6685 (page 421, Volume I.), it will be seen that I was asked whether the strength of the British Army in India was not regulated entirely by the Government of India. I replied as follows:—

"I think it is regulated by the Government of India, in so far that if they showed good grounds for an increase, for example, Her Majesty's Government would probably endeavour to meet their wishes. On the other hand, if the Government of India were now to propose a large reduction, it is quite possible that Her Majesty's Government at home would say: 'We cannot accept this'; they might overrule the Government of India in such a matter."

3. It was observed in Q. 6681, that it was entirely in the power of the Government of India to reduce the military force of the country if they thought circumstances permitted. I replied:—

"I do not think that it can be said to rest with the Government of India. I should say that it is Her Majesty's Government which determines the strength."

I was not able to quote the references at the time, but said that I would endeavour to obtain them.

4. In the Memorandum which I now submit to the Commission, I give examples of reductions proposed by the Government of India in 1869 and 1882, which were not fully accepted by Her Majesty's Government. I think, therefore, my evidence was correct.

I have, &c.
(Signed) E. H. H. COLLEN.

II.

MEMORANDUM.

Reductions in 1869.

British cavalry.—The Government of India proposed the reduction* of four regiments, the seven remaining regiments being retained with an aggregate establishment of rank and file equal to eight regiments. The Home Government only sanctioned the reduction from 11 regiments to nine, for the reasons given in Despatch No. 36, dated 10th February 1870, and the reduction both in cavalry and infantry was carried out in a manner different* to that proposed by the Indian Government, as will be seen on reference to the correspondence attached to Despatch No. 133, dated 12th May 1870, from the Secretary of State.

British infantry.—The proposals of the Government of India involved the reduction† of seven regiments, *i.e.*, 52 regiments on the establishment to be reduced to 45. The reduction from 52 to 50 battalions was sanctioned by the Home Government.

Artillery.—A reduction‡ of two brigades of horse artillery and six batteries of that arm, and of two brigades of field artillery with eight batteries, or a total reduction of 14 batteries, was first proposed by the Government of India; but His Royal Highness the Duke of Cambridge having objected to the extent of the reductions and the manner in which it was proposed to carry them out, the Government of India subsequently proposed the reduction of one brigade and five batteries of horse artillery, and one brigade and three batteries of garrison artillery, or a reduction of eight batteries in all.§ This was agreed to by the Home Government, and carried out.

Reductions in 1882.

Proposed by Government of India, the saving estimated being about 20 lakhs a year.

British cavalry.—Establishment of eight instead of nine regiments and an increase of 65 sabres per regiment, giving a total strength of 4,160 sabres against 4,095, the then existing establishment.

British infantry.—An establishment of 46 instead of 50 battalions, the strength of each being increased from 820 to 920, rank and file.

Artillery. — Ten batteries Royal Horse Artillery, instead of 15.

Forty batteries of field artillery instead of 43; 4 heavy artillery, no change; 6 mountain artillery instead of 2, and 17 garrison batteries instead of 22, or a total of 77 batteries instead of 86.

The artillery reductions proposed were carried out, but Her Majesty's Government having decided against the adoption of the cavalry and infantry reductions, the Secretary of State was constrained to accept that decision, reserving, however, the right to again propose this reduction whenever opportunity might offer.

(Signed) E. H. H. COLLEN,
Major-General,
Member of the Council of the Governor-General.

Calcutta, 1st March 1897.

No. 3.

To the Right Hon. Lord WELBY, G.C.B., Chairman of the Royal Commission on Indian Expenditure.

Calcutta,
MY LORD, 17th March 1897.

IN continuation of my letter, No. 2, dated the 1st March 1897, I beg to submit Memorandum No. III., on Section I.—Financial Machinery.

I have, &c.
E. H. H. COLLEN.

III.

MEMORANDUM.

SECTION I.—FINANCIAL MACHINERY.

In my evidence I dwelt more especially upon the position of the Military Member of Council in his fulfilment, to a certain extent, of the functions of a war minister, in connexion with military finance, the

* Saving 175,000*l.* per annum.

administration of the army departments, and the organisation, &c. of the army generally, rather than on his position as a member of the Government. I did not especially allude to his functions as a member of the Governor-General's Council.

13,518. 2. As pointed out by Lord Cromer, it would be a misapprehension of the position to assume that the Council of the Governor-General was composed of mere heads of departments, each interested in pushing forward his own views. The Military Member of Council is a member of the Government, and the Council is collectively responsible for the decisions that are given. Lord Cromer put it very clearly when he said that, as a Financial Member of Council, he was willing, on occasion, to admit that military or foreign 2909. policy might predominate over the financial policy. I cannot agree with Sir Auckland Colvin in his remark that members of Council do not take a general view of the effect of their administration. In my opinion they distinctly take a general view of the effect of their administration, and not only that, but of all the questions which come before them. The Commander-in-Chief and the Military Member of Council are often deeply interested in the civil, political, and financial problems which are placed before the Council for solution, and in those larger questions in which the policy directing the administration of the Public Works Department is involved.

Q. 2123. 3. As regards the question of military policy weakening the Finance Minister, I would venture to point out, as I did in my evidence, that there is no such thing as a "special military policy," or a military party of expenditure. An increase of the army and certain improvements were resolved upon by the Government generally in communication with Her Majesty's Government, and those measures were carried out. On the other hand there have been numerous instances in which, although the Council generally agreed that certain expenditure was essentially necessary, it was decided, and decided frequently on the motion of the Military Member of Council, that the expenditure must be postponed. Thus, it was decided that a reserve of 1,000 horses was necessary for the efficiency of the mounted branches of the army, but this expenditure was put off from year to year, because it was felt that the financial situation did not allow of our incurring it. To take an instance on the other side, when I arrived in India I was confronted with the question of the employment of senior officers of Royal Engineers in India. Those senior officers had been sent out by the War Office to make up the proper proportion of ranks, but the organisation of the Department of Military Works in India did not admit of their being brought in suddenly, as there were no vacancies. I felt that we were bound to take these senior officers, to employ them, and to pay them a fair rate of salary, and not merely their bare military pay. The Financial Member of Council, after a lengthened consultation with me, accepted this view of the case pending the re-organisation of the Royal Engineer service in India, which I had then to take in hand, and this conclusion was ratified by the Council. Again, some time before any official representation reached me, I was aware that there would in all probability be a scarcity owing to the want of rain. I immediately moved the Commander-in-Chief to stop the reliefs as far as possible, and his Excellency entirely supported me. In the same way I begged that a large demand for certain equipment for the British Army might be postponed, as I knew that in all probability the expenditure for next year would have to be restricted, while at the same time I addressed my own department requesting that they would take the greatest care that no proposals for fresh expenditure were countenanced, and that everything should be done in the direction of restricting expenditure. On the other hand, I have been engaged in considering a question which will undoubtedly lead to expenditure, intimately connected with the efficiency and organisation of the native army. I should not, of course, propose an expenditure of this kind unless financial exigencies permitted it; but when those exigencies do permit, I have no doubt that I shall receive the support of my financial colleague on a question of military policy. The Military Member of Council has to deal with all important questions affecting the army and its expenditure, and his duties are not merely confined to those in which financial questions are involved, although, as a matter of fact, nearly all important questions must have a financial aspect, and he is charged with seeing that this is thoroughly apprehended.

4. I have observed a tendency to attribute the cost of expeditions to what is called the efforts of the party of expenditure. It must be remembered what an enormous frontier is possessed by India, and how numerous the frontier tribes are which give trouble at various times. I think that if the reasons for all these expeditions are carefully examined, it will be found that they are never undertaken unless the Governor-General in Council in the Foreign Department requests the Military Department and the Commander-in-Chief to make proposals for carrying them out; and this could not be done unless the necessity for the measure had been discussed and decided in Council. I can speak from my own experience that the Government of India are exceedingly averse from undertaking any military expedition which can possibly be dispensed with. I maintain that the Finance Member's plea for Q. 13,564. not incurring a deficit would have entire support from the whole Council; that financial considerations are weighed by the whole Council; that the principle of endeavouring to balance expenditure and revenue is fully followed; and that the Governor-General does hold the balance in favour of economy.

5. A good deal has been said with reference to the relations of the Commander-in-Chief and the Military Member of Council. I have explained what these Q. 1162. relations are in my evidence, and I cannot admit that the Military Department has two representatives on the Viceroy's Council. The Commander-in-Chief is an Extraordinary Member of Council, and the Military Member of Council is an Ordinary Member. Nor can Q. 1860-61. I agree that the Military Department has two votes in Council. Of course when a proposition for reform or improvement is considered, or for reduction of expenditure, it may happen that the Commander-in-Chief and the Military Member of Council may be in accord. On the other hand, numerous instances might be Q. 3232. quoted where the Military Member of Council does exercise great financial check or control over proposals put forward by the Commander-in-Chief. It is not merely, as has been stated, that the Military Department "check" proposals. It is the business of that department to examine all proposals, and to show their effect, financial and otherwise. Frequently the Commander-in-Chief's views, which are not based specially on financial considerations, have been, and are, modified by the opinions expressed by the Military Member of Council. On various occasions Commanders-in-Chief have expressed a desire to be relieved of this control; they would, in fact, prefer to manage the military finances themselves. I altogether dissent from the idea Q. 13,588. that it would be possible to give the military authorities a certain sum and let them do the best they can. This might last for a year or two, but it would be very soon discovered that they would find sufficient reasons for desiring to exceed that sum. Unless you constantly reduce the strength of your army to counterbalance the increasing expenditure, it must be the case that, with the increase of the expense of war material and the necessity for improving the moral and material welfare of the soldier, British or native, the expenditure of the army must increase, although the desire of a war minister would be to keep that increase down as far as possible, consistent with the army being in a thoroughly efficient condition for the purposes for which it is kept up. As I have remarked before, the great point that the Military Member of Council has to look to is to see that the money is well spent, and that we have an efficient and economical army.

9. In my opinion the Military Member of Council should take up the larger questions under the great heads of army expenditure, and should endeavour to see whether reduction cannot be effected by improvement in administration. It must always be borne in mind that the largest portion of the military expenditure is practically fixed. In connexion with the system of military administration in India, the powers of the Commander-in-Chief, and his relations to the Military Member of Council, I would especially invite attention to the minute of the Marquess of Dufferin and Ava, written in 1888, which I attach to this memorandum. It will be remembered that the Indian Army Commission of 1879 proposed, for the following reasons, that the Commander-in-Chief should not have a seat in Council:—

"The position of the executive Commander-in-Chief as a Member of Council is, in the opinion of the majority, one without precedent in the organisation of any European government or army. It is contrary to one of the most essential and salutary principles of

sound administration; and the common instinct and experience of all administrations, whether representative or despotic, has everywhere rejected it. *Primâ facie*, therefore, the retention of so anomalous an arrangement could only be justified, in any well-considered re-organisation of the Indian army, by strong evidence of special advantages derived from it in this particular case. But the evidence of all Indian experience is, from the positive point of view, opposed to this anomaly, even more strongly than the accepted principles and practice of all European countries are opposed to it from the negative point of view. It has been found to weaken simultaneously the executive initiative of the military, and the financial control of the civil authority, by constantly confounding and confusing their respective spheres of independent activity. It renders practically impossible that continuous personal contact which in every well-organised system of military administration has been found so beneficial, between the supreme executive head of the whole army and the subordinate heads of its various branches and corps. Finally, between the Governor-General, the Commander-in-Chief, and the Military Member, whom it places in fundamentally false relations towards each other, there has been, under each successive administration, since the existence of this ill-advised arrangement, continual friction, or cause for friction."

On the other hand, Lord Dufferin, in his minute of 1888, agrees that the Commander-in-Chief should be in Council, but quite disapproves of the proposal that there should be only one Military Member of Council, viz., the Commander-in-Chief. If this were done, as he said, the revenues of the country would be at his mercy.

7. Another point to be considered is the absolute necessity of interesting the spending authorities of the army in economy. This is carried out to a large extent in India. I have always been of opinion, and have endeavoured to enforce my views, that the more you interest generals commanding and heads of departments in economical results, the better it is for the public service; and I am convinced that in the decentralisation of military business and finance, provided you have some one like the Military Member of Council to lead the way, and the more you can interest the Commander-in-Chief and lieutenant-generals commanding the forces in economy, the better it will be for the army and the State. Much has been done in India in this direction during the last 15 or 20 years, but I feel sure that more is still possible in this direction. My own opinion of the duty of the Military Member of Council in connexion with the army as an administrator, and apart from his other duties as a civil member of the Government of India, is that it is his duty to restrain military expenditure, and to do everything in his power to apply the sums granted in the most economical way, but that he is responsible for the efficiency of the army in the various services controlled by him, and that there may be occasions upon which he is bound to put forward, or support, a policy involving expenditure.

Q. 13,587.

8. In connexion with my own evidence given on the 18th February 1896, and that which has been given by my predecessor, Sir Henry Brackenbury, I wish to submit to the Commission the following statement:—

(1.) In all matters of the least importance the Finance Department always possessed complete control over the expenditure under the direction of the Military Department.

(2.) Strict regulations on this subject have been in force for many years.

(3.) In the general orders drawn up by me in 1888, when the abolition of the Presidential Army system was mooted, a complete, but concise, code of military finance was compiled by the Accountant-General, and attached to these orders. Certain decentralisation in financial matters was effected. These financial regulations were published, and now form the standing instructions. They recognise, in the most emphatic way, the complete control of the Finance Department.

(4.) It is the case that, prior to the rules introduced by Sir Henry Brackenbury, a certain latitude existed:—

(*a.*) The Finance Department gave a somewhat larger discretionary power to the Military Department.

(*b.*) The Military Member of Council delegated a larger power to the Secretary in the Military Department.

(*c.*) Similarly, the Secretary delegated certain minor powers to the Deputy Secretaries.

I was Secretary under Sir George Chesney. Under him I undoubtedly had power to sanction expenditure, but he was perfectly aware that I should never dream of disposing of any question of real importance without his approval. It merely relieved him of a great deal of work which the Secretary was competent to deal with. And the deputy secretaries never abused the powers, after all of a minor kind, with which I entrusted them.

(5.) Sir Henry Brackenbury issued rules which prevented any proposal whatever, involving an increase of 1 rupee in future estimates, being sent to the Finance Department without his orders in writing, or, if in the power of the Military Department, being sanctioned without his authority. He excepted such cases in the latter category which the Secretary might think it unnecessary to refer to the Member of Council. All powers were withdrawn from the deputy secretaries.

(6.) The Military Department had, as a rule, always reserved for consideration with the estimates of the coming year any considerable items of expenditure. But in the case of small items, the Finance and Military Departments had usually, if they accepted the proposal, accepted the expenditure as coming on the estimates of the coming year. Sir Henry Brackenbury decided that every item whatsoever should be held over for consideration with the estimates, *i.e.*, it was to be discussed, and if approved the item was to be considered again, when it would be decided whether the money could be found.

(7.) I proposed that all items under Rx. 500 should be considered and accepted or rejected on their merits. The sum total of these items, apart from any extraordinary expenditure, which, under the previous rules, would always have been dependent on money being available, does not ordinarily amount to Rx. 150,000 on an expenditure of Rx. 16,000,000. I objected to a number of small items being kept back, and believed that there was often a tendency to postpone a thorough consideration of them and to throw them in at the last minute, when the estimates were just closing, and no one had time to look into them. I consider the rule is good in principle, but bad in its over-wide application.

(8.) As to the changes introduced to secure fuller information, we have had for many years complete information of the progress of military expenditure during the year in the record of issues from civil treasuries to the Military Department and in the various statements furnished by the Accountant-General. The statements called for by Sir Henry Brackenbury refer to a small part of the military expenditure, but they are very useful, and conduce to the greater regularisation of financial business in the Military Department. I disapprove of over-centralisation, of withdrawing powers from the Secretary and the deputy secretaries, and I am of opinion that the military financial system as worked under the previous Military Members of Council, Sir Donald Stewart, General Wilson, and Sir George Chesney, with the gradual developments introduced under the latter, is sound, and that it is in force at the present time.

The rules introduced by Sir Henry Brackenbury have, however, improved the knowledge of the Military Member of Council in respect to the progress and prospects of military expenditure, and tend to the more efficient conduct of military business.

(Signed) E. H. H. Collen,
Major-General,
Member of the Council of the
Governor-General.

Calcutta, 17th March 1897.

Minute.

I have read the draft general order in the Military Department which has been drawn up to show the changes in administration and organisation consequent on the proposed withdrawal of the control of the Presidential Armies from the Governments of Madras and Bombay, and of the direct command of the Bengal Army from the Commander-in-Chief in India.

The draft order appears to me to comply with the instructions of Her Majesty's Government that it should be in full detail, as it seems to provide for all the contingencies which must follow on the change contemplated. It is also in harmony with the principles declared by the Government of India in the series of despatches submitted to Her Majesty's Government in

1881 and 1882, which dealt with the Report of the Committee on Army Organistion of 1879. The leading principle of those proposals was that the army administration should be so contrived as to permit decentralisation in such military business as was not of the first importance, while the supreme financial and administrative power should remain in the hands of the Governor-General in Council; and further, that the Commander-in-Chief in India should be placed in command of the whole army of India instead of his powers being confined chiefly to the control of the Bengal Army. In respect to the organisation of the Indian Army, it was desired to maintain, in the most complete form, the separation of the Bengal Army from the armies of Madras and Bombay, and to divide the Bengal Army into two parts, in accordance generally with the recruitment of that army in Hindustan and the Punjab.

I think my colleagues will agree with me that the draft general order has put these principles into practical shape.

In that portion of the Order which deals with finance, the Government of India in the Finance Department is shown to be the highest authority in India on all financial questions; and the present powers of the Military Department are stated. The Commander-in-Chief in India is drawn into closer financial relations with the Government by the provision made that he shall discuss the budget personally with the Member of Council in charge of the Military Department, and by the clause enabling him to consult the Accountant-General on financial questions before submitting proposals for expenditure to the Government of India. In order to diminish references to the Government on matters which are not specially important, or which do not involve financial considerations, the Commander-in-Chief in India is put *en rapport* with the heads of the Army Departments for the transaction of business affecting the troops; and in view of facilitating the disposal of this business, certain financial powers are given to His Excellency.

The Military Department, the office of the Government of India charged with the duty of laying before the Governor General in Council questions of military administration and finance, is shown in the draft order with practically the same strength and constitution as was proposed in the despatches to which I have referred; and the Commander-in-Chief in India is to be assisted by a powerful staff. I observe that the Surgeon-General, Her Majesty's Forces, has been transferred from the Government of India to His Excellency's Staff, and while I do not object to this—although it is so far a departure from the proposals already made by the Government—because I believe the business of this officer is more closely connected with the Commander-in-Chief than with the Government, the change is, I think, only permissible on the distinct understanding that this high medical officer is at the direct disposal of the Government of India, whenever we desire to consult him on questions affecting the medical service in India. I understand that any changes which have been made in the scheme, since it was put forward in 1881, will be brought specially to the notice of the Secretary of State in the forwarding despatch.

Each of the four armies of Madras, Bombay, Hindustan, and the Punjab is to be commanded by a Lieutenant-General Commanding assisted by a strong General Staff. The heads of the local army departments are apparently to act as the advisers and officers of the Lieutenant-General in such matters as come under their control, and the Lieutenant-Generals and the Controllers of Military Accounts are given certain financial powers. These powers are limited to the necessities of the case, but as these officers will have a very considerable influence on the economical administration of the departments and of the troops, we may hope that by a wise and intelligent interest in this matter great good may result to the public service.

It is not necessary for me to enter upon the details of the General Order which relate to the various departments, but it is desirable to bring to the notice of my colleagues that some enlargement of the powers of the Commander-in-Chief is proposed in harmony with the enhancement of His Excellency's financial responsibility.

The Commander-in-Chief in India will deal directly with a certain class of departmental business, but he will now also become Commander in reality, as well as in name, over the whole of the military forces of India, with the single exception of those forces which are, for political reasons, retained under the direction of the Government of India, and instead of commanding one army of 120,000 men, he will now command four armies aggregating 204,000 men. His Excellency will also be charged with all the important questions relating to the discipline, efficiency, equipment, training, education, and mobilisation of the whole Army of India, and, with the additional duties which will now be laid upon him, he will, it appears to me, have such constant and active occupation as could only be possible when combined with a certain freedom from the detailed and executive business of the Bengal Army.

In thus enlarging and exalting the powers of the Commander-in-Chief in India, care has, I think, been shown in the draft general order, to retain the supreme administrative and financial control in the hands of the Governor-General in Council. This appears to me perfectly compatible with the fullest recognition of the sphere of action of the Commander-in-Chief, and I may say at once that the maintenance of this administrative and financial control in the hands of the authority responsible for the whole military administration is to my mind an absolutely essential condition of government in India.

As this may be the last time on which I shall have occasion, as Viceroy and Governor-General of India, to deal with a military subject of such great importance to the welfare of India, I shall take the opportunity of stating my views on on this question of military administration. The form of military government which is in existence in India, is practically that which has always obtained, in principle, since the establishment of British power in this country. The details of the administration may have varied, but there has never been, so far as I am aware, any change in the application of the principle which affirms that the supreme power of Government must be responsible for the military administration, and the Commander of the Forces responsible to that power for the executive command of the army.

The Military Department of the Government of India is the ministerial agency through which the authority of the Governor-General in Council is administered. The department is in charge of a member of the Government who has no military command or executive military functions, and to him the Governor-General delegates powers to deal with, or submit to him, the military business which comes under the cognisance of the Government.

The system of military administration in India seems to me to be well adapted to the circumstances of the country. By it the supreme financial control is retained in the hands of the supreme authority; changes in the organisation of the army can only be undertaken after the proposals have been placed before the Governor-General in Council in all their bearings, both as regards the financial aspects of the question and the effect such changes may have on the army generally. The history of the past is invoked by the department which is concerned with the maintenance of the constitutional and traditional policy of the Government of India, while the purely military view of the matter under discussion is powerfully represented by the Commander-in-Chief both through the medium of his staff, and by his own presence and influence in the Council Chamber. Under such a system I believe there is neither danger of rash innovations being carried by a military chief who from absence from India, or other causes, may not be in sympathy with Indian circumstances and affairs, nor the slightest risk that the Army of India shall be passed in the race of military reforms and inventions.

My opinion is founded upon the experience which I have had during my tenure of the office of Governor-General, and so far from it being apparent to me that the bonds of financial control need to be relaxed, I should hope that the proposals put forward in the general order will result in strengthening the administrative and financial control of the Government of India, while allowing the military authorities, by a more decentralised arrangement than obtains at present, adequate power in all military business, and giving them a greater interest in economy, without the observance of which it will be impossible to maintain the army.

Proposals have, however, been made, as my colleagues are aware, to change the form of military government. It was proposed many years ago that a Minister of War should replace the Commander-in-Chief, and though they did not support this idea, the Army Organisation Commission of 1879 recommended that

the Commander-in-Chief in India should not have a seat in the Council of the Governor-General. Their reasons are stated at length in Chapter V. of their report, which deals with the military administration of India. I recognise the validity of their arguments when they speak of the great authority, power, and duties, possessed by, or assigned to, the Commander-in-Chief in India under the system they proposed, but I am unable to agree in the opinions expressed by that Commission of the disadvantages of the present arrangement, and the proposal was, I think, wisely passed by under the government of my predecessor. On the other hand, I am entirely opposed to the suggestion made in Lord Lytton's Minute of the 16th May 1880, on the report of the Commission, that there should be no military member of Council save the Commander-in-Chief, and that the whole business of military administration and government should be concentrated in the hands of the latter, assisted by a chief of the staff and a financial secretary.

This proposal appears to me to rest upon a misapprehension of the true priniciples of military administration. Under such an arrangement, the executive command of the army, the financial control, and the functions of the administration would be absolutely confused, and the Viceroy would be without any adviser save the representative of the army who would be more specially interested in pressing proposals involving expenditure, or changes in organisation. It is out of the question to suppose such perfection in human nature as would enable one man accurately to weigh military efficiency and financial considerations, to hold the balance between the traditions of the past and economy, and the innovations or expenditure desired; the whole weight of his enormous and uncontrolled authority would be thrown into that side of the scale which represented military power, and to use words which have been employed before against this proposition, the revenues of the country would be at his mercy.

The functions of admistration and of the executive command of the army must be distinct, and the Army Departments, from the operations of which a vast deal of the expenditure of the army proceeds, are rightly placed under the administrative authority. To transfer those departments to the Military Staff would be to burden that staff with duties for which they are untrained and unaccustomed, and would lead to their real and practical work of preparing the troops so as to be fit in all respects to take the field, being obscured and lost sight of. But such a proposal it would be impossible to carry out. No man could undertake the duties of the staff, connected with the army, and at the same time supervise the civil departments of the army. In no army, save one, do we find such a complication of duties attempted. In all the continental armies with which I am acquainted, a very marked line is drawn between the administration and the executive staff work.

It may be admitted, however, that at first sight some support is given to those who desire to see the administrative and financial control merged in the power of the executive military staff, by the spectacle afforded of the recent "re-organisation" of the War Office in England, under which the Commander-in-Chief is apparently vested with greater powers than he has hitherto possessed over the Commissariat, Transport, Ordnance, Military Works, and Remount Departments, and the whole War Office (including the Horse Guards) is now divided into the "Military Department" and the "Civil Department." So many changes and "re-organisations" of the War Office have taken place within the past 20 or 30 years, that this last modification can at present only be regarded as an experiment. This is the attitude with which the reorganisation has been received by the press, and from various sources, especially from the reports of the Select Committee of the House of Commons on the army estimates, there is information to show that the change has been rather nominal than real, and that the Military Chiefs are no more responsible for the final army estimates than they were before. But assuming that the change is of practical importance, it is quite evident that no analogy can be drawn between the circumstances of England and of India. In England, whatever may be the powers of the Commander-in-Chief, they are held "subject to the approval of the Secretary of State for "War and to his responsibility for the administration "of the Royal authority and prerogative in respect of "the Army." The Secretary of State for War is also responsible to Parliament and to the country for the army, and in Parliament we have a controlling force which is very jealous of any undue assumption by the military authorities of financial powers. In addition to this control there is the high official, known as the Financial Secretary, over the whole civil side of the War Office, who reviews every question involving expenditure, and is the adviser of the Secretary of State on all questions of army expenditure. It is unnecessary to point out to my colleagues how entirely different are the circumstances of government in India, and therefore how inapplicable to India is a system of military administration which is framed upon Parliamentary Government, where every transaction and every expenditure is subjected to constant inquiry and criticism.

The administration of the War Office has always been the object of attack to military writers and politicians. I do not stop to discuss whether its reputation is well or ill-founded, and I only express my personal opinion when I say that the decentralisation of military business and the delegation of defined powers to military commanders over portions of the military forces, under a plan similar to that we are now proposing for India, is the real reorganisation which should be achieved. But, however this may be, even if the circumstances of the Government of India permitted it, I think we are entitled to ask that before we are called upon to introduce the slightest change based upon the practice at home, in a single portion of the fabric of the Indian military system, we should be sure we are on safe ground, and that the experiment now being made in England has succeeded, under the rude trial of war, beyond the shadow of a doubt.

The present form of military administration in India, where every Military Department is worked by professional soldiers, has been tried during a century in every conceivable kind of campaign and expedition, and it has not been found wanting. It appears to me that when a force has to be launched on active service, very large powers are possessed by the Military Chiefs, and that the intervention of the Government of India is no more than is absolutely required. Undoubtedly many improvements have taken place and others may be necessary. The labours of the Mobilisation Committee have borne good fruit; correspondence has been lessened, and affairs are now conducted with smoothness and rapidity. In this connexion, I may mention that I learn, with much satisfaction, that the preparations for the Hazara Expedition have proceeded with great regularity and quickness, and without any friction. I have issued instructions that the heads of Army Departments are to be empowered to comply with the Commander-in-Chief's requisitions, and as illustrating my views in regard to the power which should be confided to the executive military authorities, I append to this Minute a copy of a letter I caused to be addressed to the Commander-in-Chief.

It will be seen, therefore, that I hold the strongest opinion that the form of the supreme Military administration in India should not be changed, but that opportunity should be taken to introduce improvements whenever this can be done without impairing the constitutional structure.

In conclusion, I desire to point out to my colleagues that these opinions are founded upon no mere theoretical considerations, but are based upon experience, for it has been my lot to overlook during my tenure of office considerable military operations and to enter upon military questions of great magnitude and importance.

No sooner had I arrived in India than we had to despatch a force to Suakin, and to assist the Imperial Government with large reinforcements of transport; then came the war preparations of 1885, and following immediately on the heels of the latter, the campaign in Burma of 1885-86-87; while the period of my Viceroyalty is closed by the expedition to Sikkim and the coming campaign in Hazara. I have, therefore, had a large experience of the working of the Military Administration during the preparation for, and conduct of, campaigns; and I do not hesitate to say that, although, as in all human systems, there are defects which may be remedied, the Indian Army and its Military Administration will bear comparison with any other army in the world. Many important changes have taken place within the army since 1885; the fighting material has been largely increased, regiments have been linked together, the reserve system has been introduced, the commands and staff of the army have been reorganised, various beneficial reforms have been carried into effect, and the defences of the Empire are

now, I trust, rapidly approaching a satisfactory completion. And lastly, I must mention the great measure of mobilisation, to which I gave my unqualified support from the first, under which it will be possible to put large forces rapidly into the field with less labour than was required a few years back to place on active service mere detachments of troops.

The change in administration and organisation by the abolition of the Presidential Army system, supported by me in 1885, and again in our despatch of May 1888, seems to me to be a complement of all the improvements which the army system in India has of late years undergone. When that has been carried out, as I hope it will be at no distant date, and when the mobilisation scheme has been brought into practical effect, then those who come after us will have but to perfect the military machinery, to assist in maintaining the splendid reputation of the Indian Army, to improve the conditions of military finance, and to preserve the form of military administration which is dealt with in the draft general order now before us.

I must express my sincere thanks to my honourable colleague, General Chesney, for the care and elaboration with which this important document has been prepared, while we are greatly indebted to his Excellency, the Commander-in-Chief, for the cordial advice and able assistance which he has given in this matter. This great reform which, when carried out, will, I believe, conduce to the highest efficiency of the Indian Army, is, as my colleagues are aware, in the largest way a product of the genius and labours of our honourable colleague, General Chesney. It is, I think, 20 years ago since he first presented a comprehensive scheme for the organisation of the Indian armies, similar in all essential particulars to that which is now dealt with in the general order. I congratulate him on seeing the result of his labours in so complete a shape. It is a matter also of congratulation to myself that I have been able, during my term of office, to support and introduce the measure proposed, and I trust that before I leave India it may be my pleasant duty to inform my colleagues that the sanction of Her Majesty's Government has been received to our recommendations.

DUFFERIN.

Simla, 1st October 1888.

No. 4.

To the Right Hon. LORD WELBY, G.C.B., Chairman of the Royal Commission on Indian Expenditure.

MY LORD, Calcutta, March 17, 1897.

IN continuation of my letter No. 3, dated the 17th March 1897, I beg to submit Memorandum No. IV., on Section II.—Progress of Expenditure.

I have, &c.

(Signed) EDWIN H. H. COLLEN.

IV.

MEMORANDUM.

SECTION II.—PROGRESS OF EXPENDITURE.

I should like to supplement the answers I made with regard to the recruiting system in India by saying that the recruits, when obtained by the district recruiting officers or by regiments do not necessarily go to the battalion at the regimental centre in ordinary times, but that on mobilisation the battalion at the centre remains there and collects and trains the recruits and reservists. With reference to question 5402, in respect to the cavalry, I may mention that in 1894–95 about 400 cavalry recruits were enlisted through recruiting officers, and in 1895–96 a larger number. With regard to questions 5407–08, British officers are not sent out to recruit for Native cavalry; (question 5420) the limit of training for a cavalry recruit is one year usually.

2. With respect to Doctor Bahadurji's evidence regarding the Medical Services, I gave the pay when on military duty of the officers doing regimental duty in the Indian Medical Service and Army Medical Staff; but since I gave evidence, the pay of the Army Medical Staff in India has been somewhat increased at a cost of Rx. 13,900 per annum. When these officers of either service rise to be administrative officers, *i.e.*, principal medical officers of districts, they receive the same amount of pay.

3. The question of the status of the Indian Medical Service is of great importance, and I do not at all agree with Doctor Bahadurji in the main part of his evidence. His statements regarding the relations of the medical officers and the sepoys in a Native regiment are not correct. If the hospital assistant treated the sick in hospital, the sepoys would certainly not be as satisfied as they are at present. The hospital assistant in a regimental hospital merely dispenses the prescriptions of the medical officer, distributes the medicine, and assists the medical officer generally. He also prepares the returns, &c. If the Native Army is to be treated by native practitioners, a higher stamp of men will be required than is to be found in the hospital assistant class.

4. The advantages of a special and unified medical service for India are that it attracts the best men and meets the military requirements in providing a large war reserve. We certainly do get a large number of the best men from the schools. The field from which to select embryo specialists is a large one, and we command them in all branches of medical science. It is of course an easy matter to jeer at the varied and manifold duties discharged by commissioned medical officers, but the numbers are large and the men are select, and the scoffers would, I am sure, be surprised at the qualifications of the officers and at the distinctions which they have won during their college career. In such a service there is no difficulty in training specialists.

5. The war reserve is not merely a paper one, as stated by Dr. Bahadurji. In the case of a great emergency 229 officers can be sent from civil employment, out of a strength of 451. In the Chitral expedition all the officers applied for from civil employment by the principal medical officer were transferred to him. They were obtained from Civil Governments in the Bengal Presidency, and none were received from either Madras or Bombay. Dr. Bahadurji's statements on this subject show that he does not fully understand the question.

6. I have not sufficient leisure to enter upon the large question of the organisation, functions, and merits of the Indian Medical Service. Many of the statements made by Dr. Bahadurji can, in my opinion, be refuted; and if the Commission want evidence on the subject, there is plenty to be obtained in England. I said in my evidence that I should be glad to see one medical service for India, and Lord Wolseley has supported that view. But I am distinctly of opinion that it could only be one Indian Medical Service, and that it would be impossible to have a service the members of which were coming and going, and who owed allegiance to the distant military authorities at the War Office. The medical department in both branches, *i.e.*, Indian and British, is responsible for a very large amount of expenditure, and the officers should, in my opinion, be under the Government of India, and the Commander-in-Chief in India.

EDWIN H. H. COLLEN.

Calcutta, 17th March 1897.

No. 5.

To the Right Hon. LORD WELBY, G.C.B., Chairman of the Royal Commission on Indian Expenditure.

MY LORD, Calcutta, March 17, 1897.

IN continuation of my letter No. 4, dated the 17th March 1897, I beg to submit Memorandum No. V., on Section III.—Apportionment.

I have, &c.

(Signed) EDWIN H. H. COLLEN.

V.

MEMORANDUM.

SECTION III.—APPORTIONMENT.

In the present memorandum I submit my remarks on some of the evidence which has been given on the subject of apportionment of charges. I propose to deal with the subjects under the following heads:—

A.—Charges and capitation rates generally.
B.—Details.
C.—Long and short service.
D.—General pleas of the Government of India.
E.—Expeditions.
F.—Miscellaneous, and proposals.

A.—CHARGES AND CAPITATION RATES GENERALLY.

2. A great deal has been said about the cost and training of recruits at Warley. It is not pretended

that Warley was a training depôt as the depôts are now constituted, but the circumstances of the times are changed, and young soldiers receive a far better training than they did in those days. Whether the men now sent to India are trained soldiers, I shall presently
Q. 12557-59. discuss. It is said that 30*l.* was the cost of a recruit sent to India, and that as it usually took three or four months making up a draft of 1,000 men, the average time of training was one-half that time, or at least
Q. 12,564. much less than three or four months. It is also stated that the 30*l.* does not compare so very badly with the charge now made, and that the charge now made works up to something like 32*l.* or 33*l.*, because an allowance for clothing, arms, and accoutrements would have to
Q. 12,574; 12,581. be added to the Warley charge. There are two points here upon which I would remark. First, if only 32*l.* or 33*l.* is paid by India for recruits, how is it we paid so much more for the years which were reviewed in the memorandum of the military department sent home by the Government of India in 1890? Surely, even with the charge for clothing, &c., added to the 32*l.* we should not reach the sums we paid in those years. Secondly, it is quite certain that no allowance for clothing, arms, and accoutrements was added, because it will be remembered that the charges for clothing, arms, and accoutrements for soldiers embarking are, and always have been, a separate charge against India, in addition to charges for training men. It seems almost inconceivable that with business people controlling the affairs of the East India Company, no allowance should have been made for the clothing, arms, and accoutrements, for recruits while at the Warley Depôt, that this fact should have escaped the vigilance of the India Office and War Office members of the numerous committees which have sat, and that the small charge at which recruits were enlisted and sent out to India in the East India Company's service, should have been so persistently brought forward without any effort to detect the alleged error. The cost works out, according to Sir Ralph Knox, at 2*l.* 8*s.* 11*d.* per head on the establishment, *i.e.*, the capitation rate
Q. 12,592. of those days. No one has ever said that it would not be much more than this at the present time, but if we were to add 50 per cent., it would not be an unfair estimate.

Q. 12,596. 3. Sir Ralph Knox says that the Warley charge for a man may have been something like four or five months' pay, but this does not support the idea that a recruit only got on an average two and a half months'
Q. 12,623. training. The present charge is, according to Sir Ralph Knox, 33*l.* for each infantry soldier; for each cavalry soldier, 71*l.* 11*s.*; field artillery, 84*l.* 3*s.*; horse
Q. 12,821 12,829. artillery, 84*l.* 12*s.*; or 44*l.* for all arms. These sums are considerably less than those which are quoted in the memorandum of 1890, and which were the War Office claims against India for the three years mentioned in
Q. 12,830. that memorandum. The charge in those days for
Q. 12,831. Queen's troops was 4*l.* per head. I notice that Sir Ralph Knox states that Colonel Tulloch's estimate of 10*l.*, including colonel's pay and furlough pay, and various charges which are not included in the 7*l.* 10*s.* rates, works out to 6*l.* 7*s.* 6*d.* under the 10*l.* capitation system. On this point it would be interesting to see all the calculations which have been made by the War Office,
Q. 12,834. but it must be remarked that according to Sir Ralph Knox the Warley system cost the Indian Government, worked in the way it was, about 4*l.* a head; while the Imperial Government system cost about 6*l.* 7*s.* 6*d.* per head, which was represented in actual payment by
Q. 12,835. India by 8*l.* Under the 10*l.* capitation rate, eliminating certain items, the charge works out as nearly as
Q. 12,839-27. possible at 7*l.* 3*s.* The cost was, as I have said, 6*l.* 7*s.* 6*d.*, but the bill was for 8*l.*, and this is obtained by comparing, as Sir Ralph Knox says, like with like.

4. I find it very difficult to follow Sir Ralph Knox's evidence on these points, and it is unfortunate that these calculations were not sent to the Government of India long ago, and comparisons made. It would have been possible, one would have thought, to have put forward some intelligible calculations supported by vouchers of cost and actual charges; but the remarkable fact to which I wish to draw attention is that the India Office members of these committees never appear to have admitted the correctness of the calculations on the basis upon which they were drawn up, and that Lord Northbrook, after all his great experience as Chairman of the Commission, said from his place in the House of Lords that he thought a 5*l.* capitation rate would be sufficient.

Q. 12,839; 12,848. 5. Sir Ralph Knox states that the present charge similarly adjusted works out to 6*l.* 14*s.*, and that the infantry charge, 33*l.*, works out far below what the Warley charge is. I regret to say that I find it impossible to accept these calculations unsupported as they are by details of cost. Nor can I even reconcile the different statements made. According to Sir Ralph Knox, the Warley charge came to 26*l.* 7*s.* 5*d.*, but that Q. 12,854. excluded clothing, arms, accoutrements, and barracks. This barrack account he states was 7*l.* 14*s.* per man per annum. I think there is a misapprehension in this matter. In reference be made to Q. 6309, paragraph 281, evidence connected with the report of the Royal Commission on the organisation of the Indian Army, 1858, a statement of the expenses of the depôt at Warley for 1857 will be found. Clothing, repairs to arms, barrack department, repairs to buildings, are included. The charge works out to 16*l.* 11*s.* 10½*d.* per man. I do not say the amount quoted represents the normal annual charge, as within 17 months the Warley depôt sent 10,000 men to India. But at least the statement shows that in 1857 the charges were comprehensive.

6. It is stated by the Chairman that I disputed the Q. 13,062. arithmetical basis of the capitation grant of 7*l.* 10*s.* It will perhaps be remembered that I only had the War Office papers reviewed in the memorandum and despatch of 1890. The Government of India never had a full explanation. I had no special instructions on this point from the Government of India, but the position I took up is explained in the memorandum and in my evidence. When it is said that I disputed the arithmetical basis, I think I should be allowed to explain that I disputed the correctness of the charges upon which that capitation rate was based; that is to say, taking, for example, such a charge as that made for the Royal Military Academy or Staff College, I gave reasons why, in my opinion, India was charged too highly. I did not dispute the arithmetical correctness of the War Office calculations framed on the basis they considered to be correct.

7. As regards recruits from Warley being a poor lot Q. 13,072. picked up anyhow, and the idea of looking back at the old system with affection or longing, I venture to assert that if the regiments were excellent and fine fighting material, as they are allowed to have been, the material must have been fairly good to start with, otherwise they could hardly become excellent regiments in an enervating climate in a country where, it is said, the training is not so good as at home. Undoubtedly Q. 13,075. in those days, when sanitation was very defective in India, and all ranks were imprudent, and when people generally used to drink a great deal more than they do now, the mortality was very great. I remember some of the old East India Company's regiments which had become Queen's regiments, two or three years after the Mutiny campaigns, and certainly a finer set of men I never saw, and my own remembrance is borne out by that of other officers who served in those regiments. Plenty of evidence can be produced to show that the recruits passed into the service from the Warley Depôt were excellent from a physical point of view, that they were drilled well there (on this point, *see* the evidence of the Commandant before the Royal Commission, 1858) for a limited time, and that the European soldiers of the East India Company formed a splendid body of troops.

B.—Details.

(1.) *Capitation rates.*

8. I have already alluded to these rates; and with Q. 13,077. regard to the remark that Sir Ralph Knox's evidence had up to that time not been controverted, that the cost of training a recruit during the existence of the Warley Depôt was if anything (allowance being made for charges included in one case and excluded in the other) higher than at the present time, I would submit that I have shown that the evidence is based on misapprehension and incompleteness of information. It seems to me, as I have already said, that it is impossible that such a strong point on the War Office side could have escaped all the committees. Up to the date of the evidence by Sir Ralph Knox, it was, I understand, admitted by the War Office that the Warley charges were far less than the present charges, admitting, of course, that the length of training at Warley was less than at the present time, and when we have it on Sir Ralph Knox's own evidence that this question of the Warley charge was always being alluded to on behalf of the Government of India, it is incredible the question should not have been more closely investigated.

(2) *Depôts.*

9. I would ask the Commission to notice the statements made in the memorandum of 1890 on this head, and I would also ask their attention to the fact that in Lord Cardwell's evidence before the Select Committee of the House of Commons, he admitted that the cost of providing recruits for India was susceptible of great reduction. I have not this evidence to refer to at this moment, but I venture to think it should be referred to by the Commission. I do not think that Lord Cardwell merely admitted that the expenditure which had been
Q. 12,628. incurred by the British Government during this period of the 10*l.* rate system was excessive.

Q. 12,630. 10. Is there anything to prove that the excess cost of
Q. 12,646. the depôt system was borne by the Imperial Government? It must be recollected that Sir Thomas Seccombe and Colonel Jameson said that the East India Company were able to send efficient artillery and infantry recruits to India at a cost of 26*l.* 5*s.* 7*d.*, and I think some stress should be laid on the fact that Sir Thomas Seccombe, after all his experience and exhaustive inquiries, should, in his very last report on the awards of Lord Northbrook's Commission, have called attention to the excessive cost of the depôts as at present existing.

Q. 12,669. 11. It is stated that the abolition of the cavalry
Q. 12,684-85. depôt is entirely in the interests of India. That is a proposition which, from a study of the propsals for the new organisation of the cavalry, can hardly be accepted. The Commander-in-Chief in India and the Government of India find that there are considerable objections, from the Indian point of view, to the new system. As to the present charge being less than the Warley charge, I have already alluded to this point, and it seems to me to require very definite calculation and comparison.

Q. 12,710. 12. Sir Ralph Knox states that the present depôt system is cheaper, as the waste is absorbed; but I would venture to point out that the waste by desertion and death, &c., is charged against India, and, although I admit that it comes into the charge arithmetically calculated, yet it must be remembered that India has no means of deciding whether these desertions could not be avoided, having regard to the fact that in the days of the Warley Depôt such desertions hardly ever took place. I cannot, therefore, accept the statement that it is a delusion to think the old Indian method of recruiting was cheaper than the present one. The
Q. 12,754. training may be much better at the present day, but that is due to the longer time the men are trained and the better method of training. I quite admit that an establishment which has to maintain a great force would *ceteris paribus* be somewhat more economical than that which is required to maintain a small force.
Q. 13,094. But allowing for the increase in the necessary expenditure of the present day, it seems to me to point to the conclusion that a system of depôts conducted economically and solely for the wants of India should not cost very much more than the old or Warley system.

Q. 13,313. 13. I notice that it is stated in my evidence I said it would be very much cheaper if the Indian depôts were concentrated, and that for one or two depôts the charge would be much lighter.

It can hardly be supposed that I intended to convey the meaning attributed to me. What I meant was, that a system of large depôts would be cheaper to India than the very numerous ones which are now part of the territorial and localisation system of the United Kingdom.

14. As to the administrators in England being the best judge of what is the best organisation, I entirely accept that decision, but I maintain India should not pay for the "best organisation," but for what would suit her requirements. I was not arguing for any change in the system now employed at home; as I shall have occasion to point out under the head of "short service," I was a strong advocate of the territorial system as far back as 1870, and published my views on the subject. But what I endeavoured to convey was that the present depôt system, which is part of a purely home organisation, is not as economical to India as one under which she would obtain her recruits by the method of larger depôts for special Indian service. I quite admit that we should probably not get 30,000 or 40,000 recruits if we did not have numerous depôts, but that is not the number we require for India.

15. With regard to what has been said in respect to the abomination of the Chatham Depôt, I venture to think that this does not affect the case of a well- Q. 13,313.
managed depôt at the present day, and, indeed, it is admitted that it need not be as bad as the large depôts used to be in the past. I happen to know the Canterbury depôt very well. In my humble opinion, it is exceedingly well managed, and the men are very well taught at the present time, while the behaviour of the young soldiers appears to leave nothing to be desired, and during my stay at home I had particular opportunities of observing this.

16. Sir Ralph Knox states that I suggested that Q. 13,399.
there should be one general training depôt. Surely it could hardly be supposed that I really thought that the whole of the drafts for India could be supplied from one depôt. I have already explained my meaning. Whether a general training depôt for cavalry is an Q. 13,400-1.
expensive process in comparison to the system it is desired to introduce, can only be proved by experience. I should have thought that the Canterbury Depôt, in which some economies might still be introduced, was now managed on a fairly economical basis, and I cannot understand how the recruits can be turned out at a less expense to India than under the present system, although I admit that in certain years we paid very highly for them, as I have pointed out in the memorandum of 1890. I have not the least doubt that Q. 13,405.
the men sent out to India are as good as or better than the men remaining at home.

(3.) *Services of young Officers before Embarkation.*

17. On this subject I have nothing to add to what is stated in the memorandum of 1890 and in the evidence I gave. I do not think I said that India should be entirely relieved of the charge of these young officers, but that we ought to receive a drawback for the possible utilisation of their services before they came on the Indian establishment.

(4.) *Educational Establishments.*

18. I have entered at some length, both in the memorandum of 1890 and in my evidence, on the Q. 12,523-24.
calculations made in respect to the charges made against India for the education of officers, and have nothing to add to the explanation given. I do not admit that it is fair to charge India according to the number of officers on the British and Indian establishments, but that India should pay according to the number of officers who are trained for India at the various establishments.

19. With regard to the statement made by Sir Ralph Knox that the charge for the School of Musketry at Hythe was knocked off because we established schools of musketry in India, those were established in the year 1885. The War Office charged India on the proportion of all ranks on the Indian establishment. As I said in the memorandum of 1890, that is not a satisfactory method of calculation, because it cannot be supposed that the officers and men on the Indian establishment with the British Army all went through the School of Musketry, while India had to keep up schools of musketry, and to train in shooting that portion of the British Army which is in India. The charge appeared at 2,422*l.* in the War Office claim for 1887-88. I do not know when that charge was discontinued, but it is evident India must have paid something for Hythe *after* the establishment of schools of musketry in India, so that it can scarcely be said that the charge was knocked off when schools of musketry were established in this country.

(5.) *Expenditure in connexion with Invaliding and Discharges.*

20. I noticed in my evidence that the charges under this head were spoken of as in connexion with men being *discharged.* Although some men who have Q. 12,524.
renewed their engagement may be awaiting discharge, yet the bulk of the men are transferred to the Army Reserve. I must also point out that the men are not now 28 days on board ship. The basis of the present calculation is that India is charged for 60 days for men with regiments and for 36 with detachments. My own opinion is that as India pays for the men from the date they embark from home, it would only be fair that England should pay from the date they embarked from India, or at all events that we should not pay after they land in England and are practically on the British establishment.

21. With regard to invalids, the basis of the present charge is that India pays for 78 days for invalids after they have left India; this is assuming 28 days on the voyage. This is not the case at present, as the number of days is about 21 or 22. If the invalids are treated in hospital for 50 days on an average, it may be right that India should be charged for that amount, although, as I have pointed out, we do not charge England for the number of men who land sick in India, and are therefore non-effective.

(6.) *Rebate.*

Q. 13,678. Q. 13,056. Q. 13,058.

22. I understand that Sir Ralph Knox's contention is that India only pays for six months for an infantry soldier, and that if he comes back to the Reserve India has paid only for four months' training, because India gets a rebate of one-third. It is quite true that the men are trained longer than six months at the present time, that a large number have over 12 months' service, over 18 months, and even over two years, before being sent out, and so far the conditions are favourable to India; but then, on the other hand, it must be remembered that India puts forward the plea that these men form part of the military establishment of England, and would be available in case of emergency. This, however, is a question which I will deal with separately. Our general contention on this point is, that at the present time India only gets the service of the man, unless he extends his service in an exceptional case, when the War Office cannot supply men, for a little over five, and certainly not over six, years, so that he may be said to serve the War Office for more than one-half the period of his service. It was on this ground that in the memorandum of 1890 we considered that one-half instead of one-third should be allowed by the War Office as rebate. But it must be pointed out that we only got one-third of the old capitation rate; we do not get one-third of the total charge for the man.

(7.) *Deferred Pay.*

23. This is a charge which was incurred without the consent of India, for reasons which were, no doubt, very good and sufficient. Many experienced officers believe that it does not tend to stimulate recruiting, and that it is a very doubtful advantage to the soldier. It operates against India when, as has happened, we have had to pay considerable bounties to men to re-engage in India on account of the War Office being unable to supply the number of men we have required. The soldier looks at the deferred pay he would receive in comparison with the bounty that he may get for the re-engagement, and the prospect of possessing a lump sum of 21*l.* is often too much for him. Can it be said that the young men of, say, 25 years of age, of the class from which our men are drawn, are sufficiently prudent to keep the 21*l.* to help them in civil life? I am afraid that most regimental officers would bear witness that the money is spent in a way which is certainly not profitable to the men, and some have denounced the system in very strong terms. I venture to think that it would be far better if, while the man got a small gratuity on passing to the Reserve or on discharge, his reserve pay was somewhat increased. This would keep the wolf from the door when he is trying to find employment; but this is a matter upon which I will remark further on.

C.—Long and Short Service.

24. I must first endeavour to remove the impression that has been apparently created that I am an opponent of short service. So far back as 1870 I published a pamphlet in India, entitled "The British Army and its Reserves," in which I wrote strongly in favour of short service, territorial regiments, and localisation, and the intimate connexion of the Militia and Volunteers with the Line. In that pamphlet I proposed concurrent terms for home and foreign service of six and 12 years with the colours. Again, in 1877, when we were investigating the effect that short service was likely to have upon India, although I was an advocate for a longer service in India than was then given, or is now given, I strongly objected to any action being taken which would materially diminish the Reserve, and I begged the Government of India to consider the proposals I put forward at the time, and not to support any recommendation which would have the effect of greatly lessening the numbers of the Reserve. It can therefore hardly be said that I am an opponent of short service. My whole contention is that short service by itself does not give us, as it is at present worked, a better army in India, and that India should have a longer period of a man's service. I have never said that the young men of the present day who enter the army are inferior to the men who entered the army in the past, although I should doubt whether they are physically equal; but I have always said that they are better behaved, more tractable, and less inclined to intemperance, than the men we had in the past. Much of that, however, is due to the army being regarded as a more respectable profession, to the gradual elimination of the idea that a soldier must necessarily be a blackguard, and also to the better education and progress of the classes from which the army is drawn.

25. I venture to think there has been some misapprehension with regard to the statistics of invaliding, in connexion with the ages of the men serving in India, and the length of service which they put in in that country. I had not at that time any complete statistics to put before the Commission. Such as I had are given in the appendices. I happen to have the invaliding statistics in the Sanitary Commissioner's report in 1887–88, and the ages of the men on the 1st January 1895. I pointed out in my evidence that I should like to have a further opportunity of going into the question, and that the figures for invaliding were for 1887–88, and those regarding the ages for 1895. The years were, therefore, not properly comparable. But I have now obtained more complete information, and I have submitted a separate memorandum to the Commission. Q. 6,234-6,261. Q. 6,261.

26. I will offer some observations upon the evidence which has been given. In the first place, I would remark that from 18 to 20 can hardly be called a man's service, but if service in India could be obtained from 20 to 28 or 30, that would be advantageous to India; and a man with eight years' service in India does not appear to me to be in a worse position to enter upon civil life without a trade, than when he is 25 or 26. The solution of the difficulty is one which I have constantly pressed on the Commander-in-Chief and the Government of India, viz., that we should extend the present system of workshops in India, and should teach men trades or improve them in their own trades, so that they might have some resource when they have passed into the reserve.

27. The average length of service in India was calculated, as I have pointed out in my evidence, by the War Office actuaries to be five years and four months. What may be the case in a particular year is not to the point, as there have been, within recent years, a fair number of re-engagements. Of those occasions India had to pay bounties to induce men to extend their service. It has been declared by the War Office that $5\frac{4}{12}$ years will normally be the limit of a man's service in India, and I do not think it is fair to take abnormal conditions. The period is what the present system will eventually give us.

28. Sir Ralph Knox states that a large number of men are enlisted between 18 and 19, and that the stipulation is that men shall not go out till they are 20. I understood that it was the physical equivalent of 20, and it must be admitted that many of the lads are not 18 when they are enlisted; a considerable number of men also come out with the regiments and batteries in the course of relief. The real object to ascertain is whether there is, or is not, an undue proportion of very young men, and whether the army in India is now composed of well-drilled and seasoned soldiers. Very extensive inquiries were made in 1877—the short service of that time was not so very different from the short service of 1896—and the results of those inquiries will be found among the Proceedings of the Government of India on record in the India Office. I gave an abstract, as put forward by Sir Henry Norman, which represented the opinion of a large number of experienced officers. I also quoted the opinions of Commanders-in-Chief, such as Lord Strathnairn, Sir William Mansfield (Lord Sandhurst), and Lord Napier of Magdala; and Lord Roberts' opinion on the subject is well known. I further drew attention to the War Office letter of the 24th December 1889, which said that a tour of seven years' Indian service should be obtained from every man. Q. 6,111.

29. I would point out that the opinions which I brought forward were not the opinions of a few men only; they were the opinions of a large number of

officers in high positions and of regimental officers. I do not think that the question—Has the short-service system increased the cost of the soldier furnished to India?—has yet been answered. A thousand men used to be required annually to keep up 12,000 of the East India Company's European army; 6,000 would now be required to keep up 72,000 on those terms, but 12,000 are required. This is according to Sir Ralph Knox's evidence; but it must be remembered that in these days a fewer number would be required to keep up a supply of men with longer service, because of the great improvement in sanitary measures conducing to the health of the men in India.

Q. 12,583.

Q. 12,586.

30. Whether the young soldier who is sent out at 20 years of age is fully trained, as alleged, and is a perfectly effective soldier for Indian service, has, I think, to be considered. Sir Ralph Knox states that the soldier gives six or seven years' service in India, and that there is no man in India who is not fit to take his place in the ranks. Statistics do not support the first statement, and as to the second I have made some inquiries on that head. Of 131 commanding officers who were asked, 54 said that the drafts were passed into the ranks at once, and 77 said they had to be under training (from periods under one month and over three months) before being passed into the ranks. We should not feel so strongly on the subject of short service if a man gave seven years' service in India. Sir Ralph Knox states that the short-service system must give rise to an increased charge for raising and training men; and that is precisely the contention we have always put forward. Fifty per cent. more men have to be sent out compared with the ten-years' system, as stated by Sir Ralph Knox. He also says that several military officers have affirmed that the European Army in India is in an absolutely more efficient condition than it has ever been; but it must be recollected that very costly improvements have taken place in India, and in everything connected with the Army. He further states that the reserve is available for both countries. That is a question which must be separately dealt with.

Q. 12,599.

Q. 12,668.

Q. 12,671.

Q. 12,758-59.

Q. 12,764.

31. As to India "wanting to make a good thing of it," when troops are borrowed from India by England, I am unable to follow the argument. Sir Ralph Knox states that it does not require eight years' service in India specially to make a good soldier; but I am not aware that anyone said such was the case. I venture to point out that the quotation from Sir Henry Waterfield's memorandum is a quotation from the despatch of the Government of India in 1890. Sir Ralph Knox states that the War Office are liberal and just to India, but want 500,000*l.* more. A great deal has been said with regard to the large saving on pensions for soldiers, and it is stated that the normal charge to India under long service, *i.e.*, 12 years, with power of re-engagement up to 21 years, would have been 971,000*l.* per annum, and that there is a saving under short service in pensions alone of 669,000*l.* per annum. I submit that these statements cannot be accepted unless the actuaries of the India Office and the Government of India thoroughly examine the calculations. There has, no doubt, been a saving under the head of pensions, but it must be recollected that the number of men who would re-engage for 21 years' service, drawn from the class of men who now enlist, would not have been very numerous, nor would the Government of India have desired that they should be so. It was never contended that men between 12 and 21 years' service are most valuable for the army in India. Many authorities have held that it is a good thing to have a leaven of older privates, and certainly for the non-commissioned officers; but I am not aware that I, or anyone else, put forward the plea that a longer colour service than 12 years was generally advisable, even for troops on foreign stations. The new system, it is understood, will work up to a maximum of 300,000*l.*, and it is stated that deducting 211,000*l.* for deferred pay the saving is 458,000*l.* That can hardly be accepted, because, as I have said, a large number of men would have taken their discharge and might have been passed to the reserves for several years after 12 years' total service, of which, perhaps, 10 might have been spent in India.

Q. 12,774.

Q. 12,789.

Q. 12,793.

Q. 12,794.

Q. 12,942-50.

Q. 12,952.

Q. 12,958.

32. It is said that in 1870–71, 21,000 men were carried to India, and in 1894–95, 29,000, and that the increase is 8,000; that the increased transport charges are 73,000, and that, therefore, when the normal charges have been reached, India will save 400,000*l.* per annum, after deducting transport charges and deferred pay. But I venture to observe that it is impossible to accept a calculation of this kind. The transport charges, as I pointed out in my evidence, have fallen largely, but that is entirely due to economy in the service, and to the fact that the transports which were paid for by India have reached the end of their life. In order to make a fair comparison the charges for transport should be taken as they were in the earlier years. The transport charges would have equally fallen under a system which gave men twice the number of years' service in India which they now spend, and, of course, a larger saving would have been effected, because half the number of men would have to be carried. Sir Ralph Knox points out that he did not say that the cost was higher at the present time, but that the charge to India was more favourable.

Q. 12,961-70.

Q. 13,077.

33. I observe that it is said that we could not now obtain recruits on the old system, that the age was then just as young, and that no trouble was taken to see if the men were really 20 years of age before they came to India. I have already pointed out that there is nothing to prove that with several large depôts the men could not be readily obtained for Indian service, which was popular with the classes from which our men are drawn. The present arrangement, it is said, is to ensure the men being seasoned troops, ready to take the field, and that the actual charge against India is less than it was in the time of Warley. I observe, however, that it is said we take many boys who say they are 18 and who possess the physical qualifications of 18, but that we have good reason to suppose that they are not 18. That bears out what I stated in my evidence.

Q. 13,078.

Q. 13,084.

Q. 13,088.

Q. 13,091-92.

34. It is stated that I argued for 10 years' service in India, and also that younger soldiers are invalided in less proportion than the older ones. On the first point I would remark that I said the Government of India would be very glad if the men had seven years' service in India as the War Office proposed, and as they appear to think they have now, judging from some of the evidence. But so far as the requirements of India are concerned, I am prepared to say that there is no reason why a soldier coming out to India at 20 years of age with two years' service should not serve eight, nine, or even ten years in India, considering that he has during the course of that time changes to the hills. I think I have proved in my separate memorandum that younger soldiers are invalided in a higher proportion than the older ones. The opinion given is that after a man has been eight years in India, the sooner you get rid of him the better for India. This is a matter of opinion, and it is contrary to the opionion of the many experienced officers who have considered this subject.

Q. 13,141.

Q. 13,141.

35. As to the improvement in invaliding being due to the short service system, I have put forward statistics which show that this belief is mistaken. The question of the number of men who are constantly sick, and the increasing ratio, has a very material bearing on the point, and that the native army ratio of constantly-sick is decreasing is a very important factor in the question. It is true that re-engagements show a proportion of older men at the present time, but if these have not to be resorted to in the future, the average must work down to what was calculated by the War Office actuaries, viz., five years and four months' service in India. It cannot be said that the proportion of men invalided over 25 years of age is larger than the proportion of men under 25 years at the present time.

Q. 13,143.

Q. 13,144-48.

Q. 13,149-49.

36. I notice that the chairman says that each recruit under the old system was more expensive relatively than now, but I submit with all deference that in no case is this proved. The statement that we had a less effective army under the old system than the present one is not accepted by those who have held the Command-in-Chief in India. As I have said, we do not require a large number of men of 18 or 19 years' service, though it has been held that the presence of a few privates of that length of service is advantageous to regiments. A man cannot be called an old soldier in years at 28 years of age, although he may be an old soldier in other ways by experience in the field—an experince which he certainly gains in India.

Q. 13,156.

Q. 13,158.

37. The chairman states that, from some of the evidence, it appears as if the disappearance of the old local force was regretted. This, however, is not I think the case, but the Army Commission of 1879,

Q. 13,167.

which was composed of many distinguished officers, made the following statement:—

"High authorities have urged that, although troops of Her Majesty's British Army must be superior in discipline and traditions to a merely local force, yet a local European army would be as good a force as India can afford, and would suffice for, at any rate, half or one-third of the European garrison. We cannot, of course, fail to see that the substitution of local troops for 20,000 or 30,000 of Her Majesty's British troops would cause a saving of from 160,000*l.* to 240,000*l.*; but we feel that any such change would seriously disturb the military system of the parent country, and would deprive a great part of the British Army of the valuable training which Indian service now furnishes. Moreover, such a change in the European garrison of India would no doubt involve some deterioration of discipline and consequent loss of power, and would deprive both India and England of the undoubted advantages which they mutually derive from the employment of a large portion of the Imperial army in India. While, therefore, we concur in the conclusions which were arrived at by the Parliamentary Commission of 1859, that it is not desirable to maintain a local European army for India, we think that the portion of the army employed in this country should be organised and administered with due regard to the interests of the people of India, and not for the purpose of supplying defects in the system of home defence, and above all, that it should not be made the means of obtaining, at the cost of India, advantages for the army at home which do not directly affect the interests of this country.

"In the matter of army organisation, England and India should, we feel, act on strict terms of reciprocity; for there can be doubt that, while India derives great advantages from being garrisoned by a portion of the army of England, and from the reserve which the English army represents, England also derives very considerable benefits from this arrangement, and has, in the native army of India, a great reserve in the case of her being engaged in military operations in the East outside India proper. While, therefore, we fully recognise the fact that the establishment of Her Majesty's British troops serving in India must of necessity be dependent in a great degree on the home organisation, we consider that all possible concessions, not directly and radically inconsistent with that organisation, should be made to the special requirements and circumstances of India. If this principle be not recognised and enforced in a liberal and even generous spirit, it is possible that the advantages which India may hope to derive from the present system may be too dearly purchased, and may become a burthen which the country will be unable to bear. India may thus be driven by sheer necessity to re-establish a local army, which, though less efficient than that now at her disposal, may be sufficient for her purposes and more within her means."

Q. 13,167. 38. It is said in the evidence that if you keep a man in India eight or nine years, you would take out of his life the whole of the best part of it, and would have to give him a pension. This was not, however, done under the 12 years' system. It was added that if you keep a man over seven years in service, certainly beyond eight years, you are bound to give him a pension. At the present time, recruits are enlisted either for long service consisting of 12 years' service with the colours and no reserve service, or for short service, which consists of periods of service with the colours and in the reserve varying in different arms of the service. Enlistments for long service are restricted to the Household Cavalry and a few other corps. It may be said that short service for the army generally is for seven years with five years in the army reserve; or if at the termination of such a period of army service the man is serving beyond the seas, then for a further period of one year, and the remaining portion of the period of 12 years in the 1st class army reserve. For the Foot Guards the service is either seven years' army and five years' reserve service, or three years' army and nine years' reserve service, at the option of the recruit. In the Army Service Corps it is for three years' army service and nine years' reserve service, while in the Royal Engineers the terms are also optional, with certain exceptions. There is one important reservation, however, that if at the expiration of the term of service with the colours, a soldier is required in case of imminent national danger or great emergency, he may be called on to serve in army service to complete the term of 12 years, and for a further period not exceeding twelve months; *i.e.*, as I understand the regulations that if the term of 12 years expires while on service with the regular troops beyond the seas, or while a state of war exists with a foreign power, or while soldiers in the reserve are required by proclamation to continue in or re-enter upon army service, then the soldier may have to serve a further period not exceeding 12 months. Although this proviso has not been put into effect, yet it appears to me that the State does enlist the soldier for 12 years without a pension, and that it contemplates a state of things under which that might be possible, so that Sir Ralph Knox's remarks that it is unfair to take a man for 12 years, and not give him a pension seem to me to be hardly applicable.

Q. 13,168-70 39. The remarks I have made meet, I think, the Chairman's observation that when I was arguing for extended Indian service I did not see that it need entail a system of pensions. I must venture to maintain my opinion that an extension of Indian service need not necessarily entail pensions. I believe that by applying what is now given in deferred pay to increase the reserve pay of the soldier passed to the reserve after 10 or even 12 years' colour service, and combining that with a thorough instruction in trades, we should have far less distress when the men return to civil life than at present. I am aware that statistics have been brought forward to show that a large number of reserve soldiers are employed, yet there are a large number who are discharged as invalids, and also in the reserve, who are not employed, and the people who work among the poor well know what is the case of these men. It is said in the evidence that the maximum term of Q. 13,171. service a man should undergo in India is seven years, but that he is sometimes kept eight years, and that six years would be better. This, however, is not borne out by statistics, as according to the War Office actuaries a man's service in India will not be longer than between five and six years. We should not have so much to complain of if men served even for seven years in India.

D.—General Pleas of the Government of India.

(1.) *Value of India as a Training Ground.*

Q. 13,132 3. 40. The statement that India is a good training ground for British soldiers is objected to in the evidence; it is also affirmed that men are sent out to India as trained soldiers; it is said that for European Q. 13,134-5 warfare, soldiers trained in India are not so good as men trained at home; that India is not so good a training ground for European warfare as Aldershot; that peace training in England goes on all the year round, while in India it only lasts three or four months; that there are false notions in India of active service in Europe, the troops have servants to look after them, and men to cook for them; that officers go into the field with a number of servants, and that they have luxuries unknown in Europe, where the men perform long marches and bivouac in all sorts of bad weather.

41. No one respects more than I do the opinion which is thus given against Indian training, but I must venture to point out that there is a vast body of opinion from the Duke of Wellington downwards, which can be given on the other side. In my own small experience I have seen British regiments without Indian training comparatively very helpless on field service. On the other hand, I have been a witness of the wonderful handiness of men who have been trained on service in India. There is much more camp life in India than at home, and I think it stands to reason that men or more experienced in these matters when trained in India than at home, and I venture to doubt whether the tactical instruction which is given in India is inferior to that given at home. I do not, for a moment, institute any comparison between the Generals and other officers who instruct the troops at home or in India. Given the same quality of instructor, then surely it must be admitted that troops trained in India, marching and manœuvring over a large extent of country, a portion of them inured to exposure and hardship in hill campaigns, must possess a higher degree of training than those who manœuvre in the confined areas at and near Aldershot, every inch of which is known to officers and men.

42. Nor do I think that it can be said that the peace training lasts only three or four months in India. It really goes on all the year round. It is also a mistake

to suppose that officers go into the field with a large number of servants and luxuries. In my first field service (Abyssinia), we were for weeks and weeks without tents, and with nothing but a little biscuit, commissariat beef, and tea; and so far as my reading goes of the various campaigns in the past in Europe, although great hardships have been experienced by want of management both in the English Army, as in the Crimea, and in Continental armies, yet I should say that, as a rule, the hardships experienced in properly-managed armies are less in Europe than in India. Take, for example, the small campaigns of recent years. In the Samana campaign the troops had to bivouac and march in snow. Going to the other extreme, in the expedition to Manipur they had to bivouac in constant rain. As to the number of servants taken by officers on field service, a subaltern in a British regiment is allowed one bâtman and one-third of a general servant (native); in the Native cavalry, for example, one personal servant is allowed, and a syce for each charger; and I would venture to remind the Commission of what Von Moltke said when some of the German officers were discussing that subject, and he pointed out to them that English officers do not usually go to war in first-class railway carriages as in the German Army.

Q. 13,136. 43. It is stated that on active service in India the old soldiers were left behind, and that the young men from 21 to 30 won the battles. With regard to the old soldiers winning the battles in the Punjab campaigns, it must be remembered that when the Duke of Wellington quoted in support of old soldiers the night attack of the 80th Regiment on the Sikh guns at Sobraon, he asked whether such a feat could have been performed, except by old soldiers, and he referred to the opinion of Napoleon with respect to what were then called old soldiers. I think it will be found that the British regiments in the Punjab campaigns had a large proportion of old soldiers. Again, Lord Napier of Magdala, who was Commander-in-Chief in India, in his remarks on the report of Lord Airey's Committee on Army Organisation, dated March 1880, made the following statement:—

"Some commanding officers consider that soldiers of 15 years' service are not fit for the active work required in the tactics of the present day, but others consider them the most valuable part of their regiments.

"We have seen the regiments under the system of 21 years' service, with the regular gradation from the veteran to the recruit, brought to a degree of perfection which has scarcely been equalled in other countries. In good regiments the most perfect bond of union existed between the commanding officer and all ranks under him; the men had entire confidence in their officers and each other; they knew that if they fell in action their families would be taken care of. The experienced non-commissioner officer and the steady old soldier had the most beneficial influence on the younger part of the regiment.

"Under this system the British infantry has accomplished, even in India, marches averaging 20 miles for many days in succession; has advanced steadily in line of battle against entrenched artillery; decimated by cannon shot and musketry, but in its diminished ranks steadily marching on to victory; successful against superior numbers as few other nations have been, and acquiring a glory acknowledged by all the world.

"Unfortunately the necessity for a reserve has obliged us to abandon that system and to adopt a short service, which, making every allowance for exceptional circumstances, has certainly given us too youthful an army."

44. Lord Roberts, who was also Commander-in-Chief in India for seven years, places the highest value on men over seven years' colour service. I have always understood that short service was instituted to obtain men when we could not get them under the previous terms of enlistment, but it was, of course, also instituted in order to create a reserve as stated by Sir Ralph Knox, and, as stated by him, to decrease the charge in pensions.

45. I venture to hold to my opinion, which I put forward in my evidence, and which has been repeatedly put forward both by the Government of India and the Secretary of State for India, that India constitutes an excellent training ground for the British Army, whether for European warfare, or for the warfare in which England is much more frequently engaged, viz., against eastern foes; and that under the present system the soldier is, under normal conditions, returned to England with a little over five years' service, and at an age when he is thoroughly valuable in the army, whether in India or in England.

(2.) *Value of the Indian Army as a reserve army.*

46. I should not have referred to the opinion that Indian troops cannot be placed in front of European soldiers, but that, if accepted, it militates against the plea put forward by the Government of India, the Secretary of State for India, and in my own evidence, that in the Indian Army of British and Native troops, England has a great reserve of military force for employment should the Empire be threatened, Q. 13,236-37.

47. It will be urged that as we require, say, 72,000 British soldiers in India, we should not be able to spare any portion of these troops. There is no doubt that if there were any likelihood of India being attacked, we should not be able to spare a single soldier; but there are certain conditions under which England might enter on a campaign, as in Egypt in 1882, and India might be prepared to help with a contingent of British troops. The development of the volunteer movement in India has done a great deal to supplement the force of British troops stationed in the country. That force of volunteers, valuable, as I pointed out in my evidence, for garrison purposes, could undoubtedly be supplemented by drawing in considerable numbers who have served in the volunteers and who are still in India, and by enrolling a large number of young men who do not yet belong to the volunteer force. With the development of railway communication, provided certain protective measures are taken, we possess a much greater hold of the country than formerly, and, speaking for myself personally, I should never hesitate to assent to the employment of a certain number of British troops out of India, provided that internal conditions were normal, and that there was no chance of India herself being attacked either from the north or from the south.

48. Then turning to the Native troops, it will be said, as I have stated in my evidence, that our establishment is no greater than we require, and that when we send troops out of India we incur a certain amount of risk. On the other hand, it must be recollected that we could raise a very large number of additional Native troops if Imperial necessities required. With regard to the British portion of the Indian Army, it must be remembered that Sir Redvers Buller in his evidence before Lord Wantage's Committee did not consider that a single regiment on the Home establishment was fit to take the field in the event of operations being undertaken out of the United Kingdom, and that all that could be done would be to employ troops quartered in India and in the Colonies and to replace them by regiments from home; so that the Adjutant-General of the Forces at least contemplated the possibility of sending out unfit battalions to India, there to be trained, and to withdraw the trained battalions from India.

49. As to the value of Indian troops opposed to European soldiers, I should like to point out that they have been employed in front of European soldiers, and that Indian officers, many of whom have had experience of European troops, and armies, could not admit that it would be impossible to employ Indian troops, any more than it is impossible for France to employ her Eastern troops. No one, as far as I am aware, has ever proposed that Indian troops should be sent into action against European troops without a proportion of British troops, but I believe Indian troops properly led and with a sufficient number of European officers could cope even with the troops of Continental nations, given the same capacity in the leaders and equal terms in other respects. In my opinion, the Native cavalry of India could cope with a large proportion of the cavalry of Continental powers; but even if it were possible, it would be impolitic and inexpedient not to associate a proportion of British troops with Native troops against an European Army, and this is what we have provided for in our field army in India. But putting aside the historic instance of Native troops crossing bayonets with the French in the early wars of India, may it not be said that Native troops led by Native officers, whether Sikhs or Gurkhas, have fought with the greatest resolution against our own while in the Mutiny campaigns, although under great disadvantages in the want of united action and of leaders, they certainly gave us a great deal of trouble. In conclusion, therefore, I submit my humble opinion that in

the Army of India there is an enormous reserve of military force available to be drawn upon when necessary, and that this plea should have considerable weight in assessing the charges which are to be paid against India.

(3.) *Value of the establishment of troops in England in connexion with the supply of the requirements of India.*

Q. 13,095. 50. It is stated that the recruits at present maintained for Indian purposes in the British Army at
Q. 13,096. home would be a great nuisance in the case of emergency, that they would be useless in riots, and
Q. 13,097. that in the event of an invasion they would be detrimental, as non-commissioned officers and some old soldiers would have to be left behind to look after them; but that with a year's training they would be of use for home defence, that they could be put into forts if invasion threatened, that in a great war, or in some war in which we should have to send a considerable force abroad, all the 80,000 reserves would be called out, that these would be distributed to their various regiments in England, and that the men we should fight with would be the reserves. In passing, I may venture to point out that this rather injures the argument that the reserves are available for Indian
Q. 13,105. purposes. It is said that thousands of boys being trained would not be a great addition to the fighting forces of the country, although after 18 months a recruit would be of use, and after two years a good soldier, but after a year's training they would be put
Q. 13,108. into forts, that in the event of a long war they would
Q. 13,111. not then be sent to India, but to wherever the war was taking place; that if serious emergency took place, we
Q. 13,113. should not send these young men to India, if danger did not particularly threaten India. From this it may be gathered, I think, that the men who are under training for India do possess a certain amount of military value, although it is not placed at a high figure; and it is obvious that if under the present system India is supplied with trained soldiers as alleged, then during part of their training they must be of distinct military value, whether for the defence of the country, or for warlike operations beyond the seas.

Q. 13,119. 51. It is said that a large force of reserves is avail-
Q. 13,123. able owing to the fact that we have a large Indian Army, that we cannot ear-mark 20,000 or 30,000 reserves for India, but that England says, "we will
Q. 13,124. "send you not only 20,000 or 30,000 men if you require "them, but we will send the whole army to India if "necessary for its safety"; that if we had not to recruit for India, England would only have to recruit some 16,000 men that we should get a better stamp of men more easily, and should not spend so much on
Q. 13,127. recruiting establishments; that the extra number of
Q. 13,130. recruits and the extra force in the reserve caused by the army in India is an increase of the Home Army in case of invasion, and that if India requires the reserve, England would have to send it.

52. As regards the relief to the British Army, if England did not recruit for India, I venture to ask whether it can be admitted that better men would be got more easily, and that the expenditure on recruiting would not be as great to the Imperial Government. On the first point, the stamp of man to be got is, I suppose, greatly dependent upon the state of the classes which enlist for the army, and on the length of service. It is quite possible that if the service were three years instead of seven, and there was no obligation to go abroad, a higher stamp of man would be obtained; whether he would be a better soldier is another matter. But improvements in the classes, and improvements in the army, must tend to obtaining a a better stamp of man, and the higher status of the army, and the higher the opinion of the nation regarding it, the better the class of men obtained. With regard to the second point, I do not know that it can be proved that men would be obtained more easily, considering the enormous population of England, Scotland, and Ireland, and the ever increasing competition in the way of making a livelihood. On the third point, as to the money spent on recruiting establishments, I venture to doubt whether this also is susceptible of proof.

53. As regards the reserves being available for India, the circumstances of the time might render it necessary to make military preparations in England, so that although we may rely on the fullest support, we cannot be certain that the demands of India would be
Q. 13,231. met. It can hardly, therefore, be said that the whole of the English Army which is maintained in England as a reserve, would be sent to India whenever India required it, or that one of the many purposes for which
Q. 13,234. a very large army is kept in England is, that it should be available in any case of emergency to send out to put down a mutiny, or to defend the shores or frontiers of India. What is fully understood, I am sure, is that England would give India every possible support, but if England were engaged in a campaign which demanded the employment of the British Army, then it is hardly reasonable to suppose that India would be a primary consideration. Even if India did not exist, Lord Wolseley would not recommend a reduction of troops in England. It cannot, therefore, be said that any portion of the army is really a reserve for India.

E.—Expeditions.

Q. 13,235. 54. It is stated that once in a way India sends one, two, or three battalions from India to a place like Suakin for a few months. The following is a list of the expeditions and of the strength of the troops composing them:—

	Men.
China, 1840	3,600
,, 1860	13,100
Abyssinia, 1897–68	13,700
Perak	1,200
Malta	9,000
Egypt, 1882	7,300
,, 1885	5,500
,, 1896	2,500

It is admitted that when England sends troops to the Colonies in the case of an emergency, England pays the bulk of the expense.

F.—Miscellaneous Proposals.

Non-effective Charges.

Q. 12,883. 55. Up to 1823 or 1824 India paid nothing for non-
Q. 12,888. effective charges. After this India paid 3*l.* per head
Q. 12,891-92. for 20,000 men, or 60,000*l.*; that lasted till 1861–62, when the 10*l.* capitation rate for effectives was introduced. It is stated that from 1834 to 1857 India only paid 2*l.* 10*s.* per head for 24,000 British soldiers, or 60,000*l.*; and the 3*l.* 10*s.* rate lasted from 1861 up to 1870–71. Capitalisation was then introduced, and this went on for 20 years.

Q. 13,187. 56. It is said that if we had no British rule in India
Q. 13,201. we should not have to build batteries and fortifications,
Q. 13,221-24. but that as we have India and these batteries, India must pay for them. Aden, it is said, is not exclusively Indian, and India subscribes little to the English Navy, the English Navy defends Aden, and that it is not a question worth considering. That, however, is not the opinion of the Government of India, and it will be found in the War Office archives, that Aden is looked upon as to be defended on the ground that it is an important coaling station and a harbour for Her Majesty's ships as well as the mercantile trade of the *East*, which is not exclusively Indian.

Q. 13,226. 57. It is also said that India ought to pay every
Q. 13,228. farthing of military cost which our possession of India
Q. 13,229. entails, although it is admitted that we should not be
Q. 13,232. so great a power if we did not hold India. It is also
Q. 13,247. said that the upkeep of a force to defend India is an obligation, to a certain extent, upon the whole Empire, and that India is part of the Empire of England; but that India ought to pay every farthing of military and naval expense, and that the real charge to which India subjects England is the charge which would not be incurred if India did not exist. These considerations do not take into account the enormous value of India to England and to her trade.

Q. 13,275. 58. It is said that Malta and Gibraltar are practically
Q. 13,285. kept up for India, and that if we did not hold India it is doubtful if we should have any troops in Malta. I venture to think that this can hardly be admitted. Malta and Gibraltar are kept up in the general interests of the Empire, especially in regard to the Mediterranean and the Eastern question, and were certainly held and valued, long before the Suez Canal allowed that route to be used in peace time, for the conveyance of troops and merchandise to India and the East generally. It is understood to be a general opinion, that if we were at war with Naval Powers the Suez Canal would be closed and the route to India would be by the Cape. Personally I am of opinion that the Suez Canal could be kept open, but if the Suez Canal is to be closed, and the route is to be by the Cape, then

it is difficult to see what special value Malta and Gibraltar have to India.

Q. 13,316. 59. Some misapprehension appears to have taken place with regard to what I said in respect to localised regiments and long service. The point that I brought forward, without laying it before the Commission as a suggestion of the Government of India, was that the localisation of regiments and batteries in India would conduce to economy, and would admit of longer service being given to India. It is quite a misapprehension to think that such a system would be anything like the old artillery depôt at Dum-Dum for recruits, or equivalent to the restoration of the East India Company's
Q. 13,317. services. I do not entirely share in the condemnation of a local army for India, or that it would be "as bad as bad can be." A reference to the discussions of 1858 in connexion with the report of the Royal Commission on Indian Army Organisation would show that there was a very strong body of opinion received from experienced and distinguished soldiers and statesmen in favor of a local army. A local army at the present day would be a very different thing from a local army of the past, and one effect at all events would be that India would be able to supply her own needs, and would not cause the tremendous strain and disorganisation of the Home army, which the War Office authorities maintain is entailed by the position of India and by the present system. No one can say that the artillery, engineers, cavalry, and infantry of the East India Company's service were not of the best material or that they had not the highest fighting qualities. The Army Commission of 1879, composed of distinguished civilians and soldiers, distinctly referred to the possibility of a local army, if the system of short service were to work as detrimentally as they considered it did to the interests of India in supplying seasoned troops for India. The plan of localisation which I mentioned was not in any way a return to the local army, but is an arrangement under which the head-quarters and the second battalions of regiments, and a certain number of batteries and cavalry regiments, would be permanently in India, the men being enlisted for a longer service than for the Home army, which could then have a service of three years with the colours and thus increase the reserve largely; while the officers would be those who wished to serve in India with the power of being sent to the depôts, as they are now every year, or of effecting exchange to the Home battalion. The battalion would practically change material just as it does now in a certain number of years, and there seems to be no reason why the battalions should not preserve the traditions of the regiments to which they belong; they would be in much the same position as the present British regiments and batteries in India, and would serve under the rules framed by the War Office. The great advantage would be that it would enable India to have a force composed of men of longer service than at present, and it would, if properly worked, obviate all the disadvantages of which the War Office complain. Undoubtedly there are disadvantages to this as to any other plan, but I know that many regimental officers wish that some such plan could be framed, and they deprecate in the strongest way the manner in which the regiments and batteries are now practically broken up on return to England after a very long tour of service in India.

60. I do not concur in the depreciation of Eurasian regiments. We have had very good corps of Eurasians in the Indian Army; I have explained why they have not yet been reconstituted; but I am strongly of opinion that it would be of great advantage to India, and to the Eurasian community if certain regiments and batteries could be used for local service. As to their being miserable and useless, they did admirable service in the mutiny, and I have no doubt that the volunteers, largely composed of Eurasians, would come to the front as before, if the occasion arose. I believe that the Government would render the greatest service to India and to the Eurasian community if some Eurasian corps were raised for service in India. Q. 13,382.

Member of the Council of the
Governor-General,

Calcutta,
17th March 1897.

APPENDIX No. 88.

Provincial Contracts.

Handed in by Sir Charles Elliott, K.C.S.I.

I have been invited by the Royal Commission on Indian Expenditure to submit a Memorandum on the subject of Provincial Contracts; that is, the five-year Contracts made between the Government of India and the Provincial Governments as to the expenditure for which they shall be responsible, and the share in the revenues which they will retain to meet it. I understand that I am asked to speak as the exponent of the official view of the Provincial Governments regarding these Contracts, on the assumption that I may wish to express an opinion less favourable to the financial measures of the Supreme Government than that of Mr. Jacob, and more in accordance with the note struck by the utterances of Sir A. Havelock in Madras, and Sir A. Mackenzie in Calcutta, and with the tenor of the evidence given by the Indian witnesses who have appeared before the Royal Commission.

I wish, therefore, in the first place to state that I consider the evidence given by Mr. Jacob to be eminently fair and accurate, and I am in almost complete accordance with the opinions he has expressed. I hold that the principle on which these Contracts are made is sound, and it is natural that I should hold this view, as I had the principal hand (as President of the Finance Committee in 1886) in framing the Contracts which took effect in 1887, and the Contracts of 1892 were made on the same system, the basis of which was that the actual necessary expenditure of each Province should be ascertained, and a share in the revenue allotted equal to that expenditure, the Province being left to meet any growth in expenditure by the gradual increase in its revenue. There have no doubt been disputes and struggles as to the details involved in the calculations required for striking the initial equilibrium, but I do not think they amount to more than the natural differences of opinion which arise during such a process. As Lieutenant-Governor of Bengal, I protested vigorously against the estimated necessary expenditure which stripped me in 1892 of about 13 lacs of rupees, my principal objection being that the Government of India was at that time fairly prosperous, and under no overwhelming obligation to increase its receipts, and that it ought, *cæteris paribus*, to be content with the automatic growth of its share of the revenue just as the Provincial Governments have to be content with their share. But I did not and do not hold that I had any grievance against the Financial Department of the Government of India because my protest was unsuccessful, or that I was treated in any different way by them from the way in which I myself had to treat the different departmental applicants among whom I had to distribute what remained to me of the provincial revenue. There must always be two sides to such questions, and the ultimate decision must remain in the hands of the final authority. I am far from complaining of the manner in which the Provincial Contracts have been worked on the whole. I wish to take this opportunity of stating my conviction that the adoption of this system has been the greatest, most far-reaching, and most beneficial reform which has taken place during the period of 40 years which comprises my service in India. We owe it mainly to Lord Mayo, General Sir G. Chesney, Sir John and Sir Richard Strachey, and almost everything that has been done to decrease initiating correspondence, to relieve the Supreme Government of a burden it was unable to carry, to increase the power and responsibility of local governments, and to place the care of supervising both

the collecting and the spending departments in the hands of an authority directly interested in their good management, has flowed more or less distinctly from his decentralising reform.

At the same time there remains in it an elementary weakness which is not essential to the system, and which has lately been a ground of justifiable complaint, arising from the shortness of the period of the contract, and the frequent recurrence of the occasions for disputes over its revision. It is of this, as I understand, that Sir A. Havelock complained in Madras, and to this that Sir A. Mackenzie referred when he spoke of "the "provincial sheep being thrown on its back, close-"clipped, and shorn of its wool, and turned out to "shiver till its fleece grows again."* And again he said, "The normal history of a Provincial Contract is "this, two years of screwing and saving and postpone-"ment of works, two years of resumed energy on a "normal scale, and one year of dissipation of balances "in the fear that they will be annexed by the Supreme "Government." This complaint is unquestionably sound, and leads one to seek for a remedy in the prolongation of the Contract.

Mr. Jacob's evidence seems to me to avoid this point, and I do not find that he either directly pointed out the difficulty, or addressed himself to the question of how to meet it. The statistics given by him show how far it may be accurately said that the provincial expenditure is cut down by the revision of the Contract. For convenience sake I extract here his figures for the three great provinces for the two sets of years, 1886-7 and 1891-2, the last years of an expiring Contract, as contrasted with 1887-8 and 1892-3, the first years of a new Contract.

* Speech in Supreme Legislative Council, March 26th, 1886.

					BENGAL.						
1886-87	175	795	167	470	337	140	33	2,208	276	768	3,252
1887-88	172	794	153	480	352	145	34	2,222	276	645	3,143
1891-92	191	848	202	599	366	165	37	2,502	333	832	3,667
1892-93	195	853	211	611	359	171	37	2,531	338	775	3,644

The table shows that in Bombay expenditure was cut down by the Contract of 1887 by 73,000 Rx., which was almost entirely taken out of Public Works. In 1892 the expenditure was cut down by 104,000 Rx., 101,000 Rx. of which was taken out of Public Works. In Madras the expenditure of the province was not reduced by either of these Contracts, so no restriction was necessary, only a slackening of the general rate of growth. Bengal lost 109,000 Rx. in the first, and 23,000 Rx. in the second Contract, the reduction in both cases falling on the expenditure on Public Works. So far, then, as these figures go, they indicate that the department which has positively suffered by reduction has been that of Public Works; and that the expenditure on civil departments (cols. 2 to 10), was not actually cut down to any material extent, its normal growth was however arrested for the time. The result is not quite so accentuated as Sir A. Mackenzie's protest would lead one to expect, but the arrest or reduction of expenditure is a serious misfortune to a province, and the uncertainty of mind created by the prospect of such a revision is an evil in itself, and is hostile to the undertaking of any considerable plans of reform or expansion.

For many years I have urged that this defect in the system of framing provincial Contracts should be cured by making the Contract a continuing one, not subject to periodical ruptures and renewals, unless some grave cause for alteration arose. As President of the Finance Committee, I drew up in 1886, a scheme for altering the system in this respect, which was supported by some of the members and opposed by others, notably by Sir J. Westland, and the decision of the Government of India was that the subject was too large and required too careful discussion to be dealt with at the time, and that the Contracts about to be framed must be on the old basis.

In 1888, when I was a member of Council, I revived the plan, and Sir J. Westland, who was then Financial Member, agreed with me for the most part; the suggestion was made to the Provincial Governments, but was not, I believe, accepted by them, or by most of them, but I have not got and do not remember seeing their replies. This is, I presume, the scheme which has been referred to by the Indian witnesses, Messrs. Surendranath Banerjee, Gokhale, and others, though in what form it was published, or how it came to their ears, I do not know. The main outlines of the scheme were these: All departments were to be classed as either Imperial or Provincial. The Imperial Government was to retain the charge of the Imperial Departments, both revenue and expenditure. The Provincial Governments were to receive charge of the provincial departments, both revenue and expenditure; but were to pay out of the surplus of the revenue a contribution to the Imperial Government equal to the deficit on the Imperial Departments, so that both should be placed in equilibrium. The contribution would necessarily bear a certain percentage to the Provincial Revenue, and this would be set down as the initial and standard ratio. Thus, at the starting point, the financial position would be the same as that now occupied at the beginning of every five years' Contract, the revenue and expenditure, Imperial and Provincial, being in equilibrium under either system. But my scheme postulated that there would be no periodical revision: the relation thus established once for all should continue to run on until disturbed by any catastrophe or convulsion, such as war or famine, or any considerable loss by exchange. The Imperial Government should, in my opinion, be under similar restraints as to the growth of its expenditure to those to which the Provincial Governments are subject. Just as the Provincial Government which desires to incur larger outlay on its police, or on education, or any other head, has to look to the growth of its revenue to provide it with the means for so doing; so the Imperial Government, if it desires to spend more on the improvement of the army, the post, the telegraph, or any other department, should look to the increase of its own revenue, and of the share it takes of provincial revenue, to provide the necessary funds. Thus in the parting speech made by me in

1895, which Mr. Surendranath Banerjee quotes, I said that in the five years 1892–7 the Government of India received from Bengal (1) the special benevolence of 10 lacs, (4) the amount by which they cut down our Contract at revision, about 13 lacs, which in the five-year period came to 67 lacs, (3) their share in the steady growth of revenue, which I calculated at 51 lacs. My contention was that they ought to be satisfied with (3), and that as we had to meet the gradual expansion of expenditure in Provincial Departments out of our share in the growth of revenue, 51 lacs, or whatever the figure was, so the Supreme Government ought to be satisfied with 51 lacs drawn from us, together with what it drew from other provinces, and from the departments administered by itself, to meet expansion in its own sphere of expenditure. From my point of view they ought not to have taken (1) and (2) at all, unless under the pressure of some abnormal necessity. Such necessity was likely to occur from time to time in the shape of war, famine, and loss by exchange. In such cases, according to my scheme, the Government of India would proceed, not in the crude way, classed above as (1), by annexing the balances of any provinces wealthy enough to have such an accumulation, nor in the arbitrary way, classed as (2), by "lowering the adjusting grant," so as to leave the province with a lessened income, but by enhancing the ratio of the provincial contribution all round. Thus, to quote the instance given in my minute of 28th May 1888, the figures for 1886–7 stood as follows:—

Imperial expenditure, 54,126; revenue, 35,328; deficit, 18,790.

Provincial expenditure, 22,997; revenue, 42,009; surplus, 19,012.

The provincial contribution was Rx. 19,012, or 45·2 per cent. of their revenues. This ratio was not to be altered from year to year, nor at the close of every five years, but was to hold good as long as conditions remained normal, both Imperial and Provincial Governments being forced to confine their expenditure within the limits of the growth of their respective revenues. But, if abnormal conditions intervened and the Imperial Government was compelled to find increased resources to meet inevitable increase of expenditure, then it would be justified in calling on the provinces to supply its wants by raising the ratio of contributions from 45·2 to whatever might be necessary, and at the same time practicable, to meet the deficit. The increase in each case being the same, there would no longer be jealousies created (as now) from the belief that one province was being more harshly treated than another, or called on to pay a larger contribution than is fair. Revision carried out in this way would still produce a check in the development of the Provincial Departments, but it would be more willingly submitted to when it was seen to be the result of a calamity which had befallen the Central Government, in which all Provincial Governments would feel that they ought to share.

One objection raised to this scheme at the time, was that some provinces being poor, and some being rich, it would not be fair to impose an equal turn of the screw on all alike. I do not, however, think that this has any practical validity. No province thinks itself rich, when its responsibilities are weighed against its resources, and each resents the imposition on itself of a larger share of the Imperial deficit than is borne by others. No attempt has ever been made to compare the wants of one province with another on a theoretical basis, and to establish them all on a common footing of financial prosperity. In each Contract the existing status has been taken as a starting point, and some addition, greater or smaller, has been made to their existing income or expenditure; it is, therefore, no argument against my scheme that it does not seek to remedy existing inequalities, but accepts the actual position and the actual ratio. Except in 1886, no attempt has been made to argue out with each province the data for the future Contract, and to convince them that the proposals of the Government of India are fair; and even then, no opportunity was given to any province to compare the proposals which concerned its finances with the terms offered to other provinces. In 1891, when Bengal was called on to surrender 13 lacs from its income, no argument was adduced to show why the Government of India should need that 13 lacs for enlarged expenditure on its departments more than Bengal needed them for its own departments. It was the arbitrary character of the demand, and the despotic manner in which a so-called, but involuntary Contract was forced on an unwilling Government, which gave especial offence; and this offence my scheme would avoid. I assume that the Government of India would come forward with the proof that, on account of war, famine, or exchange, a deficit of so many crores had accrued. They would say, "we propose to meet so much of the deficit by loans, or by fresh taxation, as the case may be; but so much of it remains, which we call on you, on account of your solidarity with us, to share," and it would only be necessary to see that that amount was one which the provinces could bear without serious injury. I assume that the Government of India would not call on them to pay more than they have paid in similar financial crises; only it would exact it in a more definite and logical way, after giving proof of the necessity for its action.

I will not attempt to recapitulate all the arguments, *pro* and *con.*, which were brought forward during the discussion of 1888, for they are borne on the official records, and many of them seem now to be obsolete or trivial. I will only refer to those objections which were urged by Sir J. Westland in his speech on the 26th March 1897, in answer to the complaints made by Sir A. Mackenzie and other speakers. His principal objection was based on the uncertainty of the future, and he argued that if the periodical revision were abandoned and a permanent Contract made, it must be an entirely one-sided one. "It is a Contract which "must be based on these terms, that if everything is "successful, and if the Local Government finds its "revenues sufficient for the increase of its expenditure, "then the Contract would remain good. But if the "Local Government through any calamity loses its "revenue or finds an excess of expenditure over "revenue, which is perfectly unavoidable, then the "Government of India would have to come forward "to help it. The Contract can be permanent only in "the cases in which its permanency favours the Local "Government." I know not what scheme Sir J. Westland had before his mind at the time he spoke these words, but it certainly was not my scheme, for I advocate, not a permanent Contract, but one which endures only while conditions remain practically unchanged: and I make special provision for the necessity of revision under the stress of calamity. The cases I have mentioned are those where the deficit occurs in the Imperial Exchequer, as this is the ordinary case; but if the deficit occurs in the Provincial Exchequer, the same principle of the treasury fund could be applied, only the fund would turn in the opposite direction; or, if relief were wanted not by all provinces alike but only by one, special temporary arrangements could be made for relaxing the ratio of contribution for a time and restoring it to its old figure when the difficulty had passed away.

I will only add here that I trust such a retrograde step will not be taken by the Government of India as that indicated in Sir J. Westland's speech on page 165 of the Blue Book of 4th May, 1897. He said, "It "strikes me that it would be well to separate off the "whole of this class of expenditure" (viz., for sanitary improvements) "whether it is inclusive of local "taxation or out of the general revenue, into a sepa-"rate account, and in respect of that separate account "to make a permanent assignment from general "revenues to the Local Government." To do this would be to go back to the principle of the first Contract, when certain spending departments were made over to the Local Governments and a lump sum given to cover their expense. Now great as was the advance made by the first Contract over the previous state of things, it was hardly greater than that made by the second Contract (1877), when revenue was made over as well as expenditure, and the Local Governments were encouraged by personal interest to watch over the growth of the one as well as to restrict the growth of the other. I trust that no attempt will be made now to throw back to a system of Contract which has long been condemned and superseded.

I will only say in conclusion that my object is not to bring forward my own special theory, but to urge that, whether in this or in some better way, the two reforms most needed in the mode of framing the Provincial Contracts should be carried out. First, the period of

the Contract should be made much longer than five years, and if possible its basis should be permanent, subject only to revision of the ratio of contribution when proved necessity exists. Second, the Imperial Government should submit itself to the same financial exigencies as the Provincial Governments are subjected to, *i.e.*, it should in ordinary cases meet the growth of expenditure in Imperial Departments out of the growth in Imperial revenue plus provincial contributions.

APPENDIX No. 89.

MR. JACOBS' EVIDENCE TENDERED ON THE 21ST JULY 1897.

(A rejoinder by Mr. D. E. Wacha.)

Q. 20,186.—In reply to my answer to Question No. 17,150, as regards the great delay on the part of the Indian Government to make available to the public the annual Civil Estimates, Mr. Jacob observed that "the statement is not correct" and that "the volume containing all the Civil Estimates is published about June." By June, I presume, is meant the month of June following the presentation of the annual Financial Statement made in March. Mr. Jacob then gives the respective dates on which the Civil Estimates of each Presidency and Province for 1896-97 were "printed off."

In the first place, "printing off" the several estimates for the different provinces is one thing and publishing and making them *available for the public* is a different thing. Because the Government "printed off" the different estimates on the dates mentioned, it does not necessarily follow that the public could buy them.

In the second place, it is somewhat difficult to understand what Mr. Jacob means when he says "the volume containing all the Civil Estimates is *published* about June." Taking the sense of the word "published" in its ordinary acceptation, I presume that when the volume is published, it is immediately made available to the public. If it be published but *not* made available to the public, then it cannot be said to be published in the ordinary English sense of the word. Assuming that "published" means made available to the public, I may inform the Commission that the only way in which the public, including my own Association, can ascertain the fact is by a constant reference to the advertisements for sale of all official publications of the Government of India in the columns of the *Gazette of India* from week to week. It is *the* only paper in which such publications are offered for sale. A reference to this *Gazette of India* shows that the following are the dates on which the volume of Civil Estimates for the four years ending 1896-97 were for the *first time* advertised:—

For 1893-94 on 2nd September 1893.
" 1894-95 " 12th October 1895.
" 1895-96 " 21st December 1895.
" 1896-97 " 19th June 1897.

It will be seen that the volume for 1893-94 was advertised for the *first time* as being available to the public about *three months later* than the month in which Mr. Jacob states the Civil Estimates are usually published. The volume for 1894-95 was similarly advertised for sale for the *first time* on 12th October 1895, that is, *sixteen months after date*. The volume, according to Mr. Jacob, should have been ready for *public use* in June 1894. As a matter of fact it was not so ready till 12th October 1895! Again, that for 1895-96 was published for the *first time* on 26th December 1895, that is, *six* months after date. Lastly, the volume for 1896-97 was *first* advertised on 19th June 1897 or fully twelve months later. The volume for the current financial year (1897-98) is *not yet* published. My Association had lately written to the Superintendent of the Government of India Printing Press to be furnished with it, along with other publications. In sending his bill for other publications, he referred in a note as follows regarding the Civil Estimates for 1897-98:—

"Civil Estimates for 1897-98 have not yet been published."

Up to the date of forwarding this paper the Estimates for 1897-98 had not been advertised for sale.

Under the circumstances the Commission will no doubt admit that my complaint that the Civil Estimates are not made available to the public for well nigh a year is more than justified. In two out of the four instances they were retarded for fully 16 and 12 months!

As I am on this subject I may be permitted to remark that Mr. Jacob does not seem to have offered any explanation on behalf of the Government of India regarding the Military Estimates, of which, too, I had complained in my examination-in-chief. These are not made available at all. If stores estimates, telegraph estimates and public works estimates (military) are made available, why not the Military Estimates? if in England these estimates are published for general information, and could be had for a few shillings, what is there to prevent the Government of India following that example? It would be idle to allege that the publication is withheld in public interests when those very interests loudly demand them, bearing in mind the annually increasing cost of the army charges which have been the principal cause of the embarrassed condition of Indian finances for the past few years. Or is it that the estimates are withheld to prevent public criticism?

Q. 20,187.—With reference to Mr. Jacob's answer to this question, I beg to recall to the mind of the members of the Commission question No. 17,234 put to me by Mr. Courtney. I am sorry that the real gravamen of my answers in reference to my suggestion for an exchange reserve fund should have been so greatly misunderstood, as is evidenced by Mr. Jacob's reply. I never said that Finance Ministers had been too sanguine in taking the rate of exchange in the annual budget from 1872 to 1893. This allegation of sanguineness is not mine but Mr. Courtney's. It was he who put me the question, though I had nowhere made the statement. My answer to question 17,234 is clear. And I made it clearer still in my subsequent replies on the same subject, as will be seen on a reference to them. The gist of my observations was that inasmuch as Finance Minister had in recent years bewailed the fluctuations of exchange, to which they generally attributed either deficits or surpluses over budget estimates, it would be more prudent to take exchange at as low a rate as was possible, taking past years' experience into consideration, so that it may not lie in the mouth of these high officials to attribute every disturbance in the budget chiefly to exchange. In support of this statement I quoted Sir Auckland Colvin's metaphor about the lodging house cat. I must, therefore, repudiate the meaning which Mr. Jacob has endeavoured to attach to this part of my evidence. Hence also the table he submits in support of it is simply superfluous and has no bearing on my point. The same observations are equally applicable to Mr. Jacob's reply to question No. 20,188. When he remarks on my selection of the year 1896-97 as being "unfortunate," and when he quotes an extract from the Financial Statement he is simply labouring under a misapprehension, if not somewhat leading the Commission astray. The year 1896-97 was pointed out by me as an illustration *not* of the rate of exchange being taken high or low, but of the practice of prematurely disposing of a surplus chiefly arising from a better realised rate of exchange or "improvement," as it is styled in official parlance. This will be clear if the Commission would carefully go over my whole reply to questions No. 17,253 and 17,254. I there pointed out an instance of the evil arising from such a disposal. No sooner was half a crore remitted on cotton duties and half a crore voted away for mobilization than the Government had to contend with a deficit arising from famine. Moreover, in giving that illustration I was only supporting the statement almost to the same effect of no less a witness than Sir David Barbour, an ex-

Finance Minister, that there was a desire to utilise rather very prematurely so-called surpluses. (*See* Q. 1928-9.)

But there is one statement at the very conclusion of Mr. Jacob's reply to question No. 20,188 on this point to which I beg to submit a rejoinder. Mr. Jacob, while admitting the disposal of the improvement of a crore, says half was utilised in reducing taxation (reduction of import duty on cotton goods from 5 to 3½ per cent.) and the other half "assigned to meet a charge which had long been pressed upon the Government, and which was not of a recurring nature, so that it did not affect the financial position beyond the current year." As to the remission of the duty of 1½ per cent. on cotton goods, I observed, in my reply to question No. 17,253 hat it was in defiance of the entire public opinion of India, European and Native. There was absolute unanimity that the cotton duty should not be reduced. Surely a better example of hasty and ill-considered sacrifice of revenue could not have been shown in support of my contention. And as to the half a crore voted away on mobilisation, it is no answer to my contention to say that it was not to be a recurring charge and that it only affected the finances for a year. Whether it affected it for a year or ten years is not the point at issue. The point is whether even that vote was justifiable in a year in which the Government, according to its own interpretation of the country's need, but not of the public, reduced the famine grant by half a crore. Was it not a charge which could have been suspended till more pressing demands had been satisfied? But it is notorious that the half a crore was given away because the military advisers of the Government were trying to have a permanent occupation of the Chitral valley which has since been the scene of heavy carnage and has led to another large sacrifice of revenue by way of an expedition against the Swats. But I go further and say that it is not even correct for Mr. Jacob to observe that this was a "charge which has been long pressed" upon the Government. This mobilisation finance has a history of its own, which I will briefly recapitulate here for the information of the Commission. It was in the Financial Statement of 1888-89 that Rx. 203,500 were put down for mobilisation which was an entirely new expenditure. Sir David Barbour, the then Finance Minister, observed as follows in reference to its necessity:—"The Rx. 203,500 on account of mobilisation is intended to meet the cost of purchasing transport animals, provisions and equipment, so that in case of need, an army corps may be in a position to take the field promptly * * *The greater portion of the cost will be incurred once and for all and will not recur*? And yet what happened? The grant proved insufficient and straightway another sum of Rx. 60,000 was voted in the budget of the following year, apart from the justification of this expenditure on which Military experts are divided, many holding it to be a pure waste of public funds, like all other expenditure on punitive expeditions and military railways hither and thither. Then was again voted Rx. 80,000 in the revised estimates for 1891–92 for "additional transport mules," Rx. 52,100 for "remount and ordnance mules," and Rx. 213,500 for "expenditure in India in preparations to facilitate mobilisation." As if this sum of Rx. 345,600 was not enough, after the previous outlay above referred to, the Financial Statement for 1892-93 voted Rx. 61,600 for further "measures intended to facilitate the speedy mobilisation of the army." And yet three years later we see this half a crore again noted! If may be reasonably asked, from the taxpayer's point of view, what became of the Rx. 609,100 sanctioned between 1889–90 and 1898–93? Has the Government and account to give of the transport, provisions any equipment purchased with that sum? The statemen that the charge of half a crore last voted is "not of a recurring nature" is liable to be accepted with entire scepticism after the recurring expenditure which has been going on since 1888-89, despite the solemn assurance that it was not to be of a recurring nature. Sir James Westland has said the same, but I leave it to the Commission to infer from the above facts whether the last expenditure should have been so hastily voted on an object which appears to be quite open to serious poubts as to its utility. And it may be further asked whether there is any guarantee at all that expenditure of a like character will not recur?

Q. 20,193.—As to Mr. Jacob's reply to this question and the table submitted by him in support of it, regarding the discrepancy in my own figures of army net charges (exclusive of exchange) during the 10 years ending 1894-95, I may here state how I arrived at the total of Rx. 37,494,770. I should have easily furnished the particulars now submitted had Mr. Jacob asked an explanation in reference thereto. No doubt he did ask for explanation regarding certain other figures, both verbally and in writing, and I dare say he would be the first to admit that I readily offered explanation on all items which needed elucidation. But so far as my recollection goes, I am not aware of his having requested me to give any explanation on these figures. Even assuming for a moment that he did, and that it escaped me, nothing could have prevented his sending me a reminder, as my address was known to him. So also the fact I was not to leave London till the end of June.

Now as to the figures themselves. Here they are:—

NET ARMY CHARGES (EXCLUSIVE OF EXCHANGE) FOR 1894–95 to 1895-96.

	Net Charges for a year. Rx.	Rx.
(1) Army Charges, Effective	156,185,735	
(2) Do. Non-Effective	28,865,736	
(3) Military Works - -	10,729,160	
	195,780,631	= 19,578,063
(4) Special Defences in 9 years = Rx,	3,721,748	= 413,527
Total net per year		= 19,991,590

NET ARMY CHARGES IN 1884-85, EXCLUSIVE OF EXCHANGE.

	Rx.	
(1) Effective - - -	120,48,207	
(2) Non-Effective - -	3,134,674	
(3) Military Works - -	909,232	
		= 16,092,113
Difference (being increased) per annum		= 3,899,477
	Rx. 3,899,477 × 10	= 38,994,770
Deduct about Rs. 1,500,000, estimated in round numbers for increase (in 10 years) of exchange of soldiers' pay on the normal army expenditure as it was in 1884–85 - -		1,500,000
Balance - -		37,494,770

These totals, of course, show a difference of Rx. 3,556,770, compared with those given by Mr. Jacob in his table. I attribute the discrepancy chiefly to the item of exchange on deferred pay of British troops. It is for the Commission to take that into account or not. I thought I was fairer in excluding it, as the point I made out in my reply to Question No. 17,347 would be *more favourable* to the Government than it would otherwise be. But, assuming that it should be taken into account, then I may observe that my point in no way loses its emphasis. That point, as the Commission is, no doubt, aware, is this: that but for the disturbing factor of increased military expenditure, the revenue might have fairly borne the annually increasing burden of exchange without the imposition of any new taxation. This point does not lose its value even if Mr. Jacob's figures of net military expenditure, without exchange, are accepted by the Commission. My table, as amended, would then stand as follows:—

		Rx.
Net expenditure in 10 years - -		548,854,292
Deduct increased Army expenditure over 1884–85, exclusive of Exchange (according to Mr. Jacob's figures) -		33,938,000
		514,916,292
	Rx.	
Net revenue in 10 years -	540,319,618	
Deduct new taxation (according to Mr. Jacob's figures) - - -	22,316,000	
		524,003,618
Net Surplus -		9,087,326

Thus the net surplus would come to Rx. 9,087,316, against Rx. 8,553,153, as per my original figures. But in those figures I deducted from the total revenue not only the amount of new and enhanced taxation, but also the famine grants suspended and the provincial balances which were not refunded. These amount to Rx. 5,410,114. If this sum were added to the amount of increased taxation, according to Mr. Jacob's figures, the total to be deducted from the total revenue would be 27,726,114 (22,316,000 + 5,410,114). In that case the accounts would stand thus:—

	Rx.
Net Expenditure in 10 years, less net increased Army expenditure, without exchange - - - -	514,916,292
Net revenue in 10 years, less taxation, suspended famine grants, and provincial balances not refunded -	518,593,504
Net Surplus -	3,677,212

My statement, that but for the increased Military charges the burden of increasing exchange could have been fairly borne by the revenue without taxation, may be demonstrated in another way, on the basis of the figures given by Mr. Jacob in his reply to Question No. 20,193.

	Rx.
Firstly, the total Military expenditure during the decade, *including* exchange, was - - - -	220,541,000
But the total *Net* Military expenditure, *excluding* exchange, was - -	193,168,000
Difference, being exchange on Army Charges - -	27,373,000

This amount was owing to increased Army Charges. Now, had the Army charges remained at the figures they were in 1884–85, the total Army exchange in 10 years would have been as shown below:—

	Rx.
Army Charges, *including* exchange -	17,058,000
,, *excluding* ,, -	15,923,000
Difference, being exchange -	1,135,000
This is the exchange for one year. For 10 years it would be - - -	11,350,000
Add, at a rough estimate, the additional charge for lower exchange during the decade on the Army Charges as they stood in 1884–85 - - -	1,500,000
Exchange which would have been payable on the basis of Army Charges in 1884-85 - - - - -	12,850,000

Thus:—

Increased exchange on account of increased Army Charges during the decade is - - - -	27,373,000
Increased exchange on Army Charges as they stood in 1885 would have been -	12,850,000
Difference, being increased Army exchange over 1884-85 - -	14,523,000
Total increase of exchange on all heads during the decade - - -	43,276,000
Deduct increase of exchange on account of increased Military expenditure -	14,523,000
Net burden of exchange which the revenues might have borne without new taxation - - -	28,753,000
I have stated above that new and enhanced taxation and suspended famine grants plus provincial balances encroached amount to - - -	27,726,114
While the net burden of exchange, as above, would have been - -	28,753,000
Difference - - -	1,026,886

The difference which might have been met is small indeed, only 102,688 Rx. for a year, so that it will be readily conceded that practically revenue and expenditure during the decade would have been met without any extra taxation or other financial shuffling.

Q. 20,203.—I am afraid there has been some confusion in reference to what I observed to the Commission in reply to Question 17,474 on the final results of the working of railways. Mr. Jacob is right in observing in his reply (Q. 20,203) that the figures of the Railway Administration Report agree with those of Finance and Revenue accounts. At the time that I made my reply I was under the impression that the net losses on Railways worked out in the Administration Report were somewhat different from those which I worked out from the Parliamentary Return of Revenue and Expenditure of 27th March 1896. I formed this impression because at the time I had not tallied the latter with the former figures. The impression, however, was originally formed on account of the manner in which the losses were worked out in the table at page 708, appended to the Report of the East India Railway Committee of 1884. In his evidence (Q. 9640 to 9644) Mr. Jacob, when asked to state what the actual loss the Government had incurred on all railways from the date of their construction (1848) replied that he was not aware. He could only give information from 1858. The Commission thereupon asked him to refer and give the necessary figures later on. Having read this evidence, I recollected all about this table, presented to the Parliamentary Committee of 1884, which I had formerly perused. When I gave my evidence, I was not aware of the tables on this subject which Mr. Jacob had later on furnished, and which formed one of the appendices. In fact, it was Sir J. Peile who drew my attention to it during the course of my evidence. The remarks made by me in reply to question No. 17,477 were, therefore, made in consequence of the original impression I had formed from the Parliamentary Committee table. My only regret is that I did not tally the Parliamentary figures in the Return of March 27, 1896, with those of the Railway Administration reports. I was misled by the Parliamentary table of 1884, as it seems the later accounts have been made up somewhat differently.

As to Mr. Jacob's further observation (same question No. 20,203) that the figures given by me in reply to Question 17,480 are incorrect, I beg to differ from him. The figures are correct, but the mistake on his part has arisen from his taking my figures as if they related to all the railways, whereas I referred only to the Guaranteed State railways.

Q. 20,205.—Here, also, Mr. Jacob says that I am not correct in the statement I made in reply to Question 17,568, that the Government has not borrowed at 9 per cent. The highest rate at which it has borrowed was 5½ per cent. I maintain that I am perfectly correct in my statement. The Chairman in his question Nos. 17,566 and 17,567 had been "referring to current rate of interest in India": and I replied to him that the Government had never borrowed loans at 9 per cent., which is an absolute fact. But Mr. Jacob says the Government had borrowed at 6 per cent. True, but surely that borrowing has not been within recent times? I know at this rate the Government borrowed about 25,000,000 Rx. in the years 1820–21 and 1822, and again about 350,000 Rx. in 1855–6, 1857, and 1858. But no borrowings have been effected at 6 per cent. during the last 40 years. If the Chairman had asked me whether *at any time* in British Indian history Government had borrowed at that rate, I should have replied in the affirmative. But, as I understood him, and the tenor of the question is quite plain, that he only asked whether in *recent* times loans had been taken at the rate, I replied in the negative. My reply is absolutely correct.

APPENDIX No. 90.

MR. JACOB'S EVIDENCE, tendered on 21st July 1897.

(A rejoinder by Mr. G. K. Gokhale.)

The first half of the additional evidence, tendered by Mr. Jacob on 21st July 1897, deals with the subject of Provincial Finance, and is intended to be a defence of the existing system from the point of view of the Government of India. There is little or nothing in this portion which directly challenges anything I have said on the subject, but as Mr. Jacob's statement of the case is likely to lead to conclusions conflicting materially with those which I have endeavoured to press on the attention of the Commission, it is necessary for me to offer the following criticism on this portion of Mr. Jacob's supplementary evidence.

Replying to the criticisms of the Indian witnesses generally, Mr. Jacob contends that the existing contract system has, on the whole, worked satisfactorily, and in support of his contention, puts in two tables, comparing the growth of Imperial and Provincial expenditure during the past 15 years, and showing as a general result that while the Imperial net expenditure has grown but 7·7 per cent., the Provincial net exhibits an increase of 19·6 per cent.—*exchange being excluded from the account.* Evidently with such results before us, argues Mr. Jacob, it is correct to say that the Provincial services have been starved under the system. And he claims that as far as the resources of the Government have been available, the figures show that the Provincial Governments have had their full share of them.

I submit, however, that Mr. Jacob's comparison is not a fair one, for the following reasons:—

(*a.*) I think that Mr. Jacob's contention, that exchange ought to be excluded for purposes of this comparison, is not a sound one. Mr. Morgan Browne has already shown satisfactorily, in his evidence, that although exchange is responsible for some deterioration in the financial position of the Government of India, the increase in military and other expenditure is even more responsible for the result. From the taxpayer's point of view, moreover, it is the same thing to him whether his rupee is spent by the Government of India in meeting loss by exchange or in defraying the expenses of some frontier expedition. All he sees is that of the total amount that he contributes to the Government Exchequer, a continually increasing proportion is appropriated by the Imperial Government in whose expenditure his interest is comparatively remote, and that a continually diminishing proportion falls to the lot of the Provincial Government in whose expenditure he feels a direct and immediate interest. If exchange is not omitted from the account, it will be seen that the Imperial net expenditure has grown by 24 per cent. as against a growth of 19·6 per cent. in the Provincial net.

(*b.*) Assuming, however, for the sake of argument, that exchange, as given by Mr. Jacob in his reply to Q. 19,887, is rightly excluded from the calculation (though even then the criticism must remain that Government might have kept down the charge by avoiding, as far as possible, increase of sterling liabilities and home charges), there can be no justification for leaving out of account the railway and irrigation net charges. However these services may be financially regarded, the net loss accruing to the State on their account year after year is not debited to the capital account of the works but is paid out of the current revenues of the country. And if this charge is to be left out of account in making the comparison, almost every other charge might be omitted on the same principle.

The following Table (A) gives the net result of the Railway and Irrigation Account for the three quinquenniums from 1882 to 1896:—

TABLE A.

RAILWAY AND IRRIGATION ACCOUNT.

Net Result.

Year.	Gross Expenditure.	Receipts.	Net Expenditure, or Loss or Gain to the State.	Average.	Increase.	Net.
1882-83	13·59	12·49	− 1·10			
1883-84	12·81	13·56	+ ·75			
1884-85	15·19	13·57	− 1·62			
1885-86	16·71	15·27	− 1·44			
1886-87	17·97	16·13	− 1·84			
Total	—	—	− 5·25	1·05		
1887-88	19·11	16·24	− 2·87			
1888-89	20·37	17·42	− 2·95			
1889-90	21·11	18·59	− 2·51			
1890-91	20·66	19·40	− 1·25			
1891-92	23·19	22·21	− ·98			
Total	—	—	− 10·56	2·12		
1892-93	23·86	21·49	− 2·37			
1893-94	24·69	22·59	− 2·10			
1894-95	26·54	23·58	− 2·96			
1895-96	26·45	24·15	− 2·29			
1896-97 (Revised.)	26·22	23·36	− 2·86		1·05	1·46
Total	—	—	− 12·58	2·51	2·51	

(*c.*) Further, Mr. Jacob's comparison is rendered unjustifiably unfavourable to the Provincial administrations by the inclusion of two items of expenditure in the Imperial expenditure table, which, fairly speaking, ought not to be there, viz., *Interest* and *Famine Relief and Insurance.* Interest is a diminishing charge, owing (1) to conversion operations rendered possible by favourable conditions of the money market, and (2) owing to a feature of the Indian accounts which take all Public Works grants from annual revenues in reduction of rupee-debt. As to famine insurance, Government itself has so often described it as being in the nature of a surplus reserve (to be provided only when there is a surplus) and it has been so changing in amount, that it is manifestly unfair to include it when exchange has been excluded. The Provincial Government, it should be borne in mind, have no such elastic and variable items of expenditure.

The following Table (B) gives the figures of Imperial net expenditure *minus* net interest and famine charges for the three quinquenniums:—

TABLE B.

NET IMPERIAL EXPENDITURE.

In Millions and Decimals of Millions.

Years.	Imperial Net Expenditure, excluding Exchange.	Net Interest and Famine Charges, included in (2).	Imperial Net Expenditure, excluding Exchange and Interest and Famine Charge.	Quinquennial Average.

1895-96	1·26			·56		
1896-97 Revised	·79			1·55		

Mr. Jacob's table for Imperial expenditure—corrected as suggested above, *i.e.*, by the inclusion of railway and irrigation net charges on the one hand, and by the exclusion of interest and famine expenditure on the other, would show, as per Table C., that the Imperial net expenditure has risen from 23·91 crores to 29·45 crores during the past 15 years, which gives an increase of 5·54 *crores on* 23·91 *crores, or fully* 23 *per cent.*, as compared with the provincial net, which has increased from 11·53 *crores to* 13·79 *crores, or* 19·6 *per cent.*

And this is excluding the exchange given by Mr. Jacob in his reply to *Q.* 19,887.

These per-centages of proportional growth of Imperial and Provincial expenditure are, however, a matter of secondary importance. The important question for the Commission to consider is, whether the distribution of services between the Imperial and Provincial Governments being what it is, the present distribution of the national resources between them is just and equitable. It is suggested in one place by the chairman, that if the Imperial Government imposes extra taxation and thus increases its revenues, the Provincial Government have no right to expect a share in the proceeds of the extra taxation. If the questions were to be considered solely from the points of view of the Imperial or Provincial Governments, there would be considerable force in such an argument. But there is another standpoint from which also the question has to be looked at, viz., the taxpayer's standpoint. And as long as he considers that Provincial expenditure is more intimately connected with his welfare than Imperial expenditure so long the objection to increased Imperial expenditure, no matter how met, must remain.

TABLE C.

IMPERIAL NET EXPENDITURE.

In Millions and Decimals of Millions.

Quinquenniums.	Quinquennial Average as per Table B. (1.)	Railway and Irrigation Account, Quinquennial Average as per Table A. (2.)	Total of 1 and 2. (Net Results.)
1882-3–1886-7	22·96	1·05	23·91
1887-8–1891-2	25·27	2·12	27·39
1892-3–1896-7	26·94	2·51	29·45

1st Quinquennium - -	23·91
3rd „ - - -	29·45
Increase - -	5·54, or 23 per cent.

Q. 19,981.—Mr. Jacob mentions an increase of 39 per cent. in the expenditure on education in 14 years, I have not got his Table A. before me, and so I have some difficulty in understanding his figures, which do not tally with those given in the statistical abstracts. Mr. Jacob's figures are larger than those which denote purely Government expenditure on education, and smaller than those which represent Government and local rates expenditure added together. I imagine his figures are net and are obtained after deducting miscellaneous educational receipts from the total Government and local rates expenditure on education. If Mr. Jacob's totals be divided into Government expenditure and local rates expenditure, I feel confident the former will show a much smaller per-centage of growth than 39 per cent. In this connexion, I am surprised at Mr. Jacob stating that the existing provision for the education of the people in India is in excess of the requirements of the people, and is not fully availed of by them. Mr. Jacob says he speaks from personal experience in the matter. All I can say is that my own experience, and the experience of many others directly connected with the work of education, is diametrically opposed to that of Mr. Jacob, who will, moreover, see that his views on the subject are in direct conflict with the opinion emphatically expressed by Lord Ripon's Education Commission. This Commission, after a most elaborate inquiry, recorded that the educational expenditure of the country was wholly inadequate to meet its needs, and appealed in such earnest terms to the Government of Lord Ripon to increase its educational grant, that his Lordship issued special instructions to the Provincial Governments calling upon them to increase their allotments to education, and promising, where

necessary, aid from the Imperial Treasury for the purpose. This beneficial policy was, however, practically reversed four years later by the Government of Lord Dufferin, in a resolution to which I have already called the attention of the Commission.

Q. 24,005 *and following.*—Here Mr. Jacob indicates in rough outline to the Commission a proposal of the Government of India, which, if adopted, is, I fear, likely to throw back rather than advance matters. He suggests that what is purely local expenditure (*i.e.*, education, medical relief, roads, &c.) should be separated from the total of Provincial expenditure, and that a permanent grant from the Imperial revenues might be assigned in aid of such expenditure, a grant not to vary or increase with the increasing revenues of the country, but a fixed and permanent grant, and that it may be advantageously arranged that any further increase in the existing expenditure should be met from local resources. Such an arrangement, in respect of such important service, must, I submit, either lead to all stoppage of progress or necessitate additions to local burdens, though it will, no doubt, give relief to the Imperial Treasury. Neither result would be desirable, and independently, it would seem most unfair and inequitable to shut off such services from all participation in the benefit of the expending resources of the Empire.

Q. 20,044 *and following.*—With reference to Mr. Jacob's answers to these questions, the following figures will be of interest. They show that there is much more in the contention of the local Governments than what Mr. Jacob admits. The effects of a constant backward and forward movement in Provincial expenditure must be prejudicial to the real interests of economy and efficient administration.

CONTRACT OF 1882.

Year.	Total Revenue.	Total Export.	Surplus or Deficit.	Closing Balance.	Rx. (000s. omitted).
1882–83	16,334	17,235	−901	2,648	
1883–84	16,484	16,669	−185	2,115	
1884–85	17,557	17,488	69	1,862	
1885–86	18,186	17,577	609	2,237	
1886–87	18,201	18,025	176	2,126	
Total -	86,762	86,994	−232	—	
Average	*17,352*	*17,398*	—	—	
1887–88	17,534	17,265	269	2,395	
1888–89	17,839	17,634	205	2,600	
1889–90	18,341	17,849	492	3,092

Q. 20,050–52.—With reference to Mr. Jacob's answers to these questions, and in further support of what I have already said on the subject, I beg to submit the following table to the Commission. The Commission will see from it how the different provinces stand at the present moment, in regard to the revenue they enjoy for Provincial purposes, and in regard to what they have to surrender to the Imperial Exchequer:—

Province.	Population.	Revenue, except undistributable. Imperial, Opium, Salt, Customs, Tributes, &c.	Provincialised, 1895–96. (000s omitted).	
			Revenue.	Expenditure.
		Rx.	Rx.	Rx.
Central Prov.	10,784,294	1,464,172	823	803
Burma - -	7,605,560	4,576,838	2,207	1,981
Assam -	5,476,833	1,171,685	669	639
Bengal - -	71,346,987	9,554,370	4,585	4,435

Bombay -	18,901,123	7,977,549	4,280	4,179
Total -	—	Rx.48,498,000	20,806	20,382

Q. 20,054–50,171. — These questions are directed to ascertaining the position which natives of India occupy in the matter of employment in the higher branches of the public service. In his replies to these questions, Mr. Jacob has quoted the latest orders of the Government of India in regard to the various branches, and he has told the Commission what would happen when full effect was given to these orders. The interest attaching to his statement of the case is, however, largely diminished by the admission that "in every case some years must elapse before the "scheme can be introduced in its entirety, and in "some cases the period may extend to 20 or 30 years." As no one can guarantee that the present intentions of Government will not change in the interval, and in one case at any rate, they have so changed in the past, viz., in the matter of the statutory service, a discussion of what will be our position 20 or 30 years hence is likely to appear to some more academic than practical. A better way would, I think, have been for Mr. Jacob to state the present numbers of natives in the higher branches of the various departments, and then indicate how matters would improve for them, as greater effect was given to existing orders.

With due deference to Mr. Jacob, I submit that the manner in which he has presented his facts in this portion of his evidence is calculated to obscure the true issues involved in the controvery on this subject. This controversy is about the *higher posts* in the different branches of the public service, an expression not easily capable of an accurate definition, but perfectly intelligible to all in this country who take an interest in such questions. I do not think I should be assisting the Commission much if I were to say that the natives have a practical monopoly of everything which it is not worth an Englishman's while to have. And yet Mr. Jacob appears to me in several places to come perilously near such a statement of the case. The only posts which are of value and of which we may be said to have a monopoly are the deputy collectorships and the subordinate judgeships; and Mr. Jacob naturally makes a great deal of this point. But these posts have long been ours, and I am not aware of any controversy having been raised about them. Barring these posts, there are few appointments in the lower branches of the public service which it would be worth an Englishman's while to have, and all these, therefore, necessarily fall to the share of the natives of the country. But the controversy that has gone on now for a good many years is not about these ministerial posts or about deputy collectorships or subordinate judgeships. It is about the class of appointments to which the 93 posts specified by Mr. Jacob in his reply to *Q.* 20,055 belong in the judicial and executive branches, and to posts in the special departments corresponding to these and indeed many much lower than these. These are the posts from which all but a very few natives find themselves practically excluded, and their grievance is in respect of such appointments. In my evidence already recorded by the Commission, I have indicated how we stand in reference to these appointments in the different departments of the Bombay Presidency.

In *Q.* 20,087, the chairman asks Mr. Jacob if the new scheme of setting apart 93 posts (95 is evidently a misprint) for the Provincial service is not a more restricted one than the old scheme of the statutory service, Mr. Jacob says, in reply, that the objection is in the main a matter of sentiment. As a matter of fact, however, the *main* objection to the new scheme is that it gives us a considerably smaller proportion of the

"reserved" posts than had been secured to us by the Statutory rules of 1879. A very simple arithmetical calculation will make this clear. The rules of 1899 had secured to us *one-sixth* of the total recruitment for the Indian Civil Service, that for five men entering by the competitive door of London, one native was to be appointed to the service in India. It is clear that under this scheme, one-sixth of the total strength of the Civil Service would have ultimately Indians, and this leaves out of account those Indians who might get in by the London door. Now, in *Q.* 20,091 Mr. Mowbray quotes from a despatch of the Government of India that the Civil Service is recruited to fill 898 posts. And as the total strength has to be kept about 20 per cent. in excess of the posts, so as to provide for those who are sick or on leave, this gives a total strength of nearly 1,100 for the Civil Service. As I have therefore already stated in my evidence, we should have ultimately had at least one-sixth of these men Indians if the old scheme had been allowed to continue, which gives about 180 men out of nearly 1,100. Instead of this, we now have 93 posts set apart for us. I may add that the Public Service Commission itself had recommended the setting apart of 108 posts, but the Government of India and the Secretary of State between them reduced the number to 93.

With reference to the Special Departments, partly owing to the wide meaning given to the term "Natives of India" and partly owing to Mr Jacob's omission to State the present proportion of natives, as ordinarily understood, in the different grades, it is very difficult to have a clear idea of the existing situation. Meanwhile, the analysis submitted by the native witnesses for the different provinces tells its own tale. In this connexion, I would only repeat here what I have already urged on the attention of the Commission, that while restrictions on the extended employment of Indians in the executive branch of the Civil Service, as also in the Military Department and in quasi-military departments like the Police, are intelligible, there can really be no justification for shutting all but a few of them from such departments as the Survey, Opium, Finance, Customs, Telegraph, Forest, Public Works, and others. In fact in these departments the employment of natives, as children of the soil, should be the rule and the employment of Europeans the exception. As regards the acquiring of the necessary special skill in some of these departments, it is for the Government to provide facilities in the country itself, and then he would be a bold man who would assert that duly qualified natives would not still be forthcoming in much larger numbers than required.

Q. 20,173-85.—I now come to the special criticism which Mr. Jacob offers on my own evidence. His replies to *Q.* 20,174–5–6–7 may be taken together. From these replies it appears that Mr. Jacob does not share the views of men like Sir C. E. Trevelyan as regards the financial administration of the East India Company, and he compares the civil and military expenditure of the closing years of its rule with what it is now. Unfortunately, he does not go into any fuller statistical analysis, and it is not clear why he takes the troubled years 1856–57–58 for comparison. The point, however, is a most interesting one, and certain figures which I have worked out yield very striking results.

It may be stated that our complaint about the course of Indian expenditure is mainly in reference to recent years. During the first 25 years following the Mutiny, the progress of *civil* expenditure was, on the whole, not unsatisfactory, while the military factor was well kept within limits. But since 1884–85, military considerations, as Sir A. Colvin puts it, have acquired such a preponderance in the financial administration of the country, that whereas military expenditure has grown and is growing enormously, civil charges exhibit but a meagre advance. The following figures will suffice to bring out the point:—

First Period (1844–45 to 1855–56).

Year.	In Crores.	
	Civil Expenditure.	Military Expenditure.
1844–45	5·18	10·78
1855–56	7·21	11·95
Increase	2·03	1·17

These closing 12 years of the Company's rule were a most troubled and anxious period—a period of war and conquest, annexation, and political change (Sikh and Burmese wars, Oude and Nagpore annexations), and yet while civil charges were allowed to expand from 5·18 crores to 7·21 crores, or *full* 37 *per cent.*, military expenditure was well kept under control, and increased only 10 per cent.

Second Period (1862–63 to 1872–73).

Leaving out the five years (1856–62) of the Mutiny period, we come to 1862–63, when things quieted down and, so to say, returned to the normal.

Year.	In Crores.	
	Civil Expenditure.	Military Expenditure.
1862–63	8·50	14·89
1872–73	12·63	15·50
Increase	4·13	·61

In other words, while the civil charges increased by *nearly* 50 *per cent.*, the military expenditure was allowed to grow by *only* 4 *per cent.*

Third Period (1884–85 to 1895–96).

Leaving out the period from 1873 to 1884 as for the most part an abnormal period of famine and war, and making allowance for the time taken by the country to recover from the effects of those calamities, we come to the third period, and we have the following figures:—

Year.	In Crores.	
	Civil. Expenditure.	Military Expenditure.
1884–85	17·47	16·00
1895–96	21·50	22·25 (Exclusive of exchange.)
Increase	4·03	6·25

These figures yield a per-centage of 23 as the increase in civil charges and 38 as the growth in military expenditure.

The per-centages of growth for the three periods are gathered together below.

	Increase in Civil.	Increase in Military.
First period (1844–45 1855–56).	37 per cent.	10·78 per cent.
Second period (1862–63 to 1872–73).	50 „	4 „
Third period (1884–85 to 1895–96).	23 „	38 „

These figures more than justify the criticism, that during the last 12 years military considerations have been allowed to overshadow all other considerations.

Mr. Jacob's table (*Q.* 20,174) compares net charges except under Army and Land Revenue for 1856–7 with gross for 1895–6, which is open to objection. The figures, as given in Sir H. Waterfield's memo. of 1880, are as follows:—

1856–57.	£
Law and justice	2,812,407
Education	246,607
Medical	99,886

In such comparisons, due allowance has to be made for the difficulties of a Government which was just emerging from the distracting struggles of a hundred years, and had but short intervals of breathing time to conceive and carry out measures for the internal

development and progress of the country, and it is manifestly ungenerous to compare the small beginnings of a period of storm and stress with the larger developments of more peaceful times.

Mr. J. S. Mill's memo., however, on administrative improvement during the last 30 years of the Company's rule (Bluebook, February 9th, 1858), gives a record of sustained progress of which any Government might be proud. The Judicial and Police Establishments were revised and placed on an improved basis; a large scheme of police reform was being vigorously pushed through. Education was well taken in hand; and medical relief was not neglected. As regards public works, a large beginning was made. Irrigation works, including the Jumna and Ganges Canals, were carried out and several new ones projected. Railway construction had a fair commencement; negotiations with six railway companies were complete, and 4,158 miles were sanctioned. The question of the extended employment of natives in the higher branches of the public service long engaged the serious attention of the Company's Government. The creation of native courts of justice was a great step in this direction, and in Bengal and Bombay, the entire original jurisdiction in civil suits was in the hands of the native judges, and so, too, to some extent, in Madras. Natives were also largely employed in the administration of criminal justice and in the revenue department. (*Vide* Mill's memo.)

Q. 20,177*a.*—In this question, Mr. Jacob seems to have altogether missed the point of my reply to *Q.* 18,335. My words to which he refers were these:—"I do not "know a single instance where native services have "ever clamoured for increased pay or pensions, or ever "got any concessions." It will be seen that Mr. Jacob has not quoted me correctly, as a reference to my reply to *Q.* 18,335 will show. Now my point there was, "that "the European services were so powerful, that when-"ever they made up their minds to secure a concession, "their clamour generally compelled the Government "eventually to yield. The Native services, on the "other hand, from the very nature and the very "helplessness of their position, never *clamoured* for "anything or got anything as a *concession* to their "demand." I was pointing out a moral evil inseparable from the powerful position which the European services naturally occupied in the country. I think my replies to *Q.* 18,334 and 18,335 ought to leave no doubt in anybody's mind on the point.

Q. 20,178.—Here I would only remark that the suggestion of the Calcutta Chamber was in respect of High Court Judges only, whereas the criticism of the Bombay Chamber applied to the whole Civil Service. The latter body had, moreover, suggested that even the pensions of these officers should be paid in rupees. It is true that when the Bombay Chamber made their proposal, exchange was at about 1*s.* 6*d.*, but it had been steadily falling already, and surely a body of merchants like the Chamber was not likely to overlook the probability of a further fall.

Q. 20,179-83.—Here Mr. Jacob seems to consider that the increase in forest revenue justified the increase in the expenditure. But the increase in the revenue itself is open to serious objection, and is a necessary evil of constituting a separate forest department. My views on this subject are so fully expressed in my previous evidence that I do not think it is necessary for me to say more here on the subject.

Q. 20,184.—The proportion of Native and European police inspectors that I gave in my reply to *Q.* 18,493 was only an impression based on what I then recollected of Poona. I was careful to add "I am not quite sure, "but it would be like that." The statement is correct so far as the higher class of inspectors, those drawing Rx. 200 a month and upwards, are concerned. The latest civil list gives six inspectors on 200, of whom three are Europeans. Also four on 250, of whom two are Europeans. The grades below 200 a month are manned almost exclusively by natives, and to this extent I beg to modify my statement.

Q. 20,185.—Our settlements are for 30 years, as I have already explained, and then a revision takes place, leading to an increase in Government assessment, the proceeds of the one-anna cess also increase to that extent. And as revision operations have gone on over so many parts of the Presidency during the last few years, it was natural that there should be some increase in the proceeds of the cess. But now, for nearly 30 years, there would be very little revision. Moreover, an increase of 8 lacs in 20 years does not appear to me to be so striking as to deserve special mention. I need hardly add that my argument about the non-progressive character of the one-anna cess for periods of 30 years at a time is entirely unaffected by the increase mentioned by Mr. Jacob.

Ferguson College, Poona, 15th October 1897. G. K. GOKHALE.

APPENDIX No. 91.

Mr. Banerjea's Reply to Evidence given by Mr. Jacob, C.S.I.

The Provincial Contract.

I do not see how Mr. Jacob's statement at all traverses the position we took up. Admitting that the Imperial expenditure, exclusive of exchange, has, during the last three quinquenniums, increased by only 8 per cent., our contention remains unaffected. What we have urged, and what we still desire to urge, is, that the bulk of the national revenue is absorbed in Imperial expenditure, to the detriment of the most pressing domestic improvements. Mr. Jacob does not dispute the fact. It can not, indeed, be disputed, seeing that two-thirds of the entire revenue of the country are devoted to Imperial expenditure, and only one-third to provincial purposes; in Bengal it has been less than one-fourth under the last two provincial contracts. The question is not one of the per-centage of increase since the time the provincial contract system has been introduced, but of the per-centage of the entire revenue which is respectively spent upon Imperial and upon provincial purposes. The question is one of the adequacy of provincial allotments for provincial purposes. Whatever may be the per-centage of increase in provincial allotments since 1882, the one crucial question by which they are to be tested is whether they are adequate for the purposes for which they are assigned? The best judges in the matter are undoubtedly the high and responsible officers who are entrusted with the administration of these funds. From all parts of the country—from Bengal, Madras, Bombay, and the North-Western Provinces, comes the same complaint that the funds are absolutely inadequate to meet the growing requirements of a progressive community. This singular unanimity of testimony, coming from the highest officials, intrusted with the government of great provinces and the welfare of millions, cannot, I venture respectfully to submit, be ignored by the Commission, whatever Mr. Jacob may say to belittle their testimony by comparing them to heads of departments in England. It is worthy of note that men like Sir Charles Elliott, Sir Alexander Mackenzie, Sir Antony Macdonnell, who have all complained against the present system, were connected with the Government of India, and in much more responsible positions than that which Mr. Jacob holds before they became Lieutenant-Governors, and therefore might be presumed to be fully sensible of the difficulties of the Indian Government, and yet they loudly complained of the system. Nor is it the language of vague and irresponsible clamour in which they indulge. There are definite allegations made of the inadequacy of provincial allotments under specific heads. The Honourable Mr. Stevens, the present officiating Lieutenant-Governor of Bengal, complained from his place in the Supreme Legislative Council, that provincial finance had been so crippled by the provincial contract of 1897 that the salaries of ministerial servants which were fixed long ago can not be raised, that the lower ranks of the police can not be adequately paid, and that the claims of sanitation cannot be properly attended to, and that, too, at a time when the country is menaced with the plague. The responsible representatives of the people complained from their places in the Council Chamber that the educational needs of the country are not properly met, that the expenditure on education, as estimated per head of the population, is the lowest in any part of the British Empire or of the civilised world, and that the law's delays, due to an inadequate number of judges, are disastrous to the ends of justice and demoralising to the people.

Then there is that question of the separation of judicial and executive functions. The combination of these functions in one and the same officer is a serious defect in the administration of criminal justice in India, and has led to grave scandals. It has attracted the attention of successive Secretaries of State, who have all condemned it. Lord Cross, when Secretary of State, said he thought the subject to be so important that he was anxious to deal with it himself, and Lord Kimberley observed that the combination of these functions was "contrary to right and good principle." The carrying out of this much-needed reform, in regard to which there is a remarkable consensus of opinion among the highest official authorities and the leaders of public opinion, is, as was remarked by the Chairman of the Commission, mainly one of expense, as will be seen from the reply given by Lord Kimberley to a question put by Lord Stanley of Alderley in the House of Lords. Lord Stanley of Alderley asked "Whether, in view of the unsatisfactory state of "criminal administration in India, Government was "prepared to effect a separation between the judicial "and the executive functions?" In reply to this the Earl of Kimberley said: "Though the proposal was "most desirable, yet Government was unable to enter-"tain it, as it would require double the staff at present "to do so." Mr. R. C. Dutt, C.I.E., one of the ablest members of the Bengal Civil Service, has shown that the expense would be much less. However that may be, if the necessary funds were available it is very evident that the higher authorities would be prepared to deal with this much needed reform.

It is no answer to these definite and specific allegations to say that the per-centage in the growth of provincial expenditure is 20 as against 8 in the growth of Imperial expenditure. In all directions provincial expenditure on most useful and important purposes is starved to meet the growing expenditure of the Imperial Government upon an army which, in the opinion of competent authorities, is in excess of the requirements of the country, and upon the prosecution of a forward policy about the wisdom of which there are serious differences of opinion. If there had been no increased charge for exchange, and no increase in any expenditure, then upon Mr. Jacob's own showing there would have been a considerable surplus, which might have been devoted to the most useful domestic purposes. Mr. Jacob is constrained to admit, in reply to a question put by the Chairman, that he would not bind himself down to the statement that he considered the 20 per cent. share as meeting "fully" "the legitimate demand of the Provinces"; and further, that if there had been no increase in the charge of exchange, and no increase in the army, he had no doubt the Government of India would have increased the expenditure on education. It may be true that in 40 years the expenditure on education has grown six times as much as it was before, but has it been commensurate to the growth of the population, the expansion of the Empire, or the increasing needs of the community? The fact remains that the expenditure on education is the lowest in India, as compared with that of any other part of the British Empire, and the Hindoos are a people whose keen intelligence makes them specially fit to be benefited by the advantages of education.

Mr. Jacob says that full advantage is not taken of the existing expenditure on education, and he appeals to his

own experience as a district officer. I claim to have some experience as an educationalist, and also as one entrusted with the administration of a local body which deals with educational institutions of a certain class within that area, and I venture to say this, that nothing is more remarkable than the volume and intensity of the educational movement in Bengal, which gathers strength every year. When I was an undergraduate the number of students in the B.A. classes could be counted on one's fingers. They are now to be counted by hundreds. The number of candidates who appear for the different examinations in connexion with the Calcutta University alone come up to nearly ten thousand every year, and this, notwithstanding the fact that in recent years the colleges in the Punjab and the North-Western Provinces have been separated from the Calcutta University, and have been affiliated to the newly created Universities of Lahore and Allahabad. Nothing is a more constant source of friction between the non-official chairmen of our municipalities in the interior and the official divisional commissioners, who, under the law, control the working of these bodies, than the demand for increased grants for education on the part of the chairman and the unwillingness too often shown by divisional commissioners to comply with such demands. If Mr. Jacob says that full advantage is not taken in Bengal of the educational grants, all that I can say is that either his experience is unique or that it is out of date. So great is the importance attached to education — the traditionary instincts in favour of it are so strong that, in Bengal (and I think this is true of the rest of India, wherever Hindoo civilization has ever held sway), education is the mark of respectability, and that it is considered positively disgraceful for a man in a respectable position in life not to have received some sort of education. There are admirable materials for education all over India. It is the want of funds due to the operation of the existing provincial system which precludes local governments from doing justice to the educational needs of their respective provinces and makes India, educationally speaking, one of the most backward countries in the world.

Nor is the fact to be overlooked that in judging of the growth of provincial expenditure we have to bear in mind, the words of Sir Richard Temple, who, with Lord Mayo, was the framer of the provincial system, that the branches of civil expenditure which the provincial governments were required to deal with under the provincial contract were the very branches indeed where, from the progressive spirit of the age, the demands for increased outlay have most risen and would most arise. They are intimately connected with the advancement of the country; and I venture to say, with great deference, that it is a serious reflection upon any administration that the bulk of the revenues of the country should be devoted to purposes other than those intimately connected with the prosperity, happiness, and contentment of the people.

It would seem, from Mr. Jacob's own figures (*vide* tables at pages 2 and 3), that the average provincial expenditure per year for the quinquennium ending in 1886-87 (the preceding quinquennium for obvious reasons, cannot be taken into account) was Rx. 11,537,000, the average for the succeeding quinquennium was Rx. 12,273,000, representing an increase of a little over half a million tens of rupees (the exact figure being Rx. 736,000). The average for the next quinquennium was Rx. 13,795,000, representing an increase of about a million and a half of tens of rupees. In other words, the increase over the three quinquenniums was less than three millions, or on an average less than a million per quinquennium, or less than two hundred thousand tens of rupees per year over a population of more than two hundred millions, or an increase of less than one thousandth part of ten rupees, or of a hundredth of a rupee per head, spent each year on the most urgent domestic improvements. Whether this rate of progress in expenditure, almost infinitesimal in its character when looked at from the point of view of yearly progress in connexion with matters upon which the prosperity and happiness of the people of India depend is in keeping with the traditions of a civilised Government, it is not for me to say. Now contrast this expenditure for domestic purposes with expenditure upon Imperial matters, in which, of course, military expenditure looms so prominently on the view. The average of Imperial net expenditure per year, as given in Mr. Jacob's table for the quinquennium ending in 1886-87, was Rx. 29,990,000, the average for the next quinquennium was Rx. 32,789,000, representing an increase of little less than three million tens of rupees, as against an increase of little over half a million tens of rupees spent upon domestic purposes during the same quinquennium (the exact figure being Rx. 2,799,000). The average per year for the next quinquennium ending in 1896-97 was Rx. 37,261,000, representing an increase of nearly four and a half million tens of rupees (the exact figure being Rx. 4,472,000). Over the three quinquenniums the increase therefore comes up to Rx. 7,271,000, as against Rx. 2,294,000, the increase on provincial expenditure. The increase in Imperial expenditure per head of the population during the three quinquenniums would, roughly speaking, taking the population at two hundred millions, be about one thirtieth of ten rupees, or one third of a rupee against an increase of less than one hundredth part of a rupee per head of the population upon expenditure in connexion with provincial domestic improvements.

Further, in judging of the growth in the per-centage of provincial expenditure, we have to bear in mind the fact to which I have already adverted, that these branches of expenditure are precisely those which are most expansive in their character. Nor do I see why loss by exchange, incidental to Imperial expenditure, should not be deemed to be a part of such expenditure. Without entering into the considerations which surround the exchange question it is indisputable that it is the large payments in gold which the Indian Government has to make chiefly in connexion with the Imperial expenditure and the charges due to the forward policy which have accentuated the gravity of the position and have added to the difficulties of the Government. If the increased charges in exchange are taken into account, as they should be, I think the per-centage of increase in Imperial expenditure would be much more than right during the three quinquenniums from 1882 to 1897. Taking Mr. Jacob's figures and not excluding exchange we find the average for the quinquennium ending in 1886-87 to be Rx. 29,993,000, the average for the quinquennium ending in 1891-92 to be Rx. 32,789,000, and the average for the quinquennium ending in 1896-97 to be Rx. 37,261,000. Thus the increase in Imperial expenditure during the three quinquenniums from 1882 to 1897 came up to 24 per cent., which is in excess of the growth of provincial expenditure.

In the course of my examination I observed:—"What "is still worse, each time the contracts are revised, a "reduced scale of expenditure is adopted on which "to base quinquennial assignments, and only moderate "increase above the scale are permitted. Thus every "fifth year the provincial resources are cut down and "provincial progress is sensibly thrown back." With reference to these observations, apparently, Mr. Jacob replied as follows:—"If the figures are looked at it "will be seen that there is no such great difference "between the expenditure in the last year of one "contract and the first year of the succeeding contract." The figures to which Mr. Jacob refers are not before me. Probably they are given in the Appendix, which has not been sent to me. But I must say I am unable to reconcile this statement with the following observations of Mr. Jacob at page 17, where he admits that at the beginning of each contract "there is an immediate "cutting down of provincial resources" "to an appreciable extent." "Then impressed as they are with the "importance of these projects they find their resources "cut down, for, undoubtedly at the time of revision there "is an immediate cutting down of provincial resources, "not indeed to the same level as at the beginning of the "previous contract, but to an appreciable extent as com-"pared with the resources which were in the hands of the "provincial government in the previous year." I desire to submit in this connexion a statement which shows, to quote my words, that the re-adjustments are followed by curtailment of domestic expenditure, and, by the time the former level is reached and the contract period expires a fresh adjustment takes place leading to a fresh curtailment of expenditure. The process continues to the detriment of domestic interests of the country, and it leads to considerable irritation between the Imperial and the local governments. I am not able to reconcile this table with Mr. Jacob's table at page 2. Apparently Mr. Jacob excludes some expenditure. He admits including railway and irrigation accounts. My summary is an exhaustible statement on provincial expenditure.

SUMMARY of PROVINCIAL FINANCE.

Rx. in Crores.

Years.	Revenue.	Expenditure.
1882–83	16·3	17·2
1883–84	16·4	16·6
1884–85	17·5	17·4
1885–86	18·1	17·5
1886–87	18·2	18·0
1887–88	17·5	17·2
1888–89	17·8	17·6
1889–90	18·3	17·8
1890–91	18·0	18·3
1891–92	20·8	20·4
1892–93	19·5	19·8
1893–94	—	—
1894–95	19·6	20·0
1895–96	20·8	20·3

The statement is complete, except for the year 1893–94, the figures for which I have not been able to procure. It will be seen from the table that the expenditure for the last year of the quinquennium ending in 1886–87 was 18·0 (crores), the expenditure for the first year of the succeeding quinquennium was reduced to 17·2, and the figure of the last year of the preceding quinquennium was not attained till 1890–91, that is to say, till two years before the expiry of the next succeeding quinquennium. The figures for the succeeding quinquennium, 1892–93 to 1896–97, are even still more striking. The expenditure of the last year of the quinquennium ending in 1891–92 was 20 4 (crores). The expenditure of the first year of the succeeding quinquennium was 19·8 (crores), and the level of the last year of the quinquennium ending in 1891–92, was not attained, if indeed it was fully attained till the last year but one of the succeeding quinquennium.

At page 18, Mr. Jacob, referring to an extract which I quoted from Sir Charles Elliott's resolution of the 5th November 1895, read an extract from the same resolution, which, he said, "is in immediate continuation of what Mr. Banerjea quoted," giving a résumé of administrative improvements which were carried out under Sir Charles Elliott's administration. The extract which he read was not "in immediate continuation of my extract." Three somewhat significant lines coming between the two extracts are omitted. I say these lines are significant because they repeat the complaint about the drain of provincial resources owing to the demands of the Imperial Government, and suggest the inference that but for this drain the improvements would have been still more remarkable. With these observations I quote the lines which are "in immediate continuation" of my extract, but which Mr. Jacob has omitted. "Notwithstanding this drain upon the provincial resources, the Lieutenant-Governor is glad to be able to look back upon a substantial array of administrative improvements which have been carried out within the period under review."

Mr. Jacob enters upon a complete vindication of the present system of provincial contracts, but as a matter of fact Sir James Westland himself is not satisfied with the existing system, although he energetically defended it from his place in the Supreme Legislative Council. "I feel," said the Finance Minister, "with his Honour the Lieutenant-Governor, that the present system is one which cannot last" (page 191 of the "Gazette of India," of the 27th March 1897), and hence he suggests an alteration in some respects of the present provincial system Mr. Jacob refers to in his statement. The system consists in making a permanent assignment from general revenues to the local government in respect of expenditure for medical purposes, for education, for roads, and for sanitary improvements. Such a permanent grant would be devoid of the elements of elasticity, and the branches of expenditure to which this permanent grant would be assigned are precisely the branches which, in the words of the Government of Lord Mayo, "are the very branches, indeed, where from the progressive spirit of the age the demands for increased outlay have most arisen, and would most arise." The assignment being fixed, the expenditure expansive, fresh taxation would be necessary, and yet the Government insists upon maintaining the present system of revision of the contract at the end of every five years, on the express ground that it may have it in its power the means of affording relief to the taxpayer by the remission of taxes. If Sir James Westland's scheme is carried into effect an increase of local taxation would be inevitable; and the chief object which the Government of India has in view in maintaining its present control over provincial finance would be frustrated. For these reasons I venture once again to recommend to the favourable consideration of the Commission the scheme of provincial decentralisation which was recommended by Sir Charles Elliott ("a Governor so well informed," in the words of Mr. Jacob), as President of the Finance Committee, and which received the support of such distinguished men as Sir William Hunter, Sir Henry Cunningham, and Mr. Justice Ranade. I will here set forth the chief provisions of that scheme:—

"We recommend (1) that there be no divided departments, but that those departments of receipts and expenditure which are now wholly or almost wholly Imperial, or which it may be found convenient to make Imperial, should be set on one side for Imperial purposes, and that the receipts and expenditure of the provincialised departments should be entirely provincial; (2) that whatever the sum be by which the Imperial expenditure exceeds the income from those sources of revenue which are not provincialised, that sum should be declared the first charge on the provincial revenues; (3) that the provincial surplus which arises from the excess of receipts over expenditure should be the fund from which, in the first place, all Imperial necessities should be met, before any increase can take place in provincial expenditure; (4) as to the future growth of revenue, we recommend that it should, as far as possible, be divided equally between provincial and Imperial; but that if Imperial exigencies should require it, the Imperial share should be increased and the provincial share reduced."

But if for any reasons it should be found impracticable to give effect to these recommendations, then I would repeat the suggestions which I have already made in this connexion, viz., that the period of contract should be raised from five to ten years, and the terms of the contract on the occasion of each revision should be laid before the provincial councils for discussion before final submission to the Supreme Government, the council being empowered to move amendments in connexion with the proposals submitted, and that if the Government of India should be unable to accept the terms to any serious extent (say, within 50,000 rupees), the matter should be referred to the Secretary of State for final decision. As for allotments, they should be made with due regard for provincial needs and wants, and not with reference to past expenditure or past allotments.

THE PUBLIC SERVICES.

I desire to submit the following observations in connexion with that part of Mr. Jacob's statement dated the 21st July, which affects the Services:—

I note that Mr. Jacob does not call in question the facts and figures which the other Indian witnesses and myself have adduced. His contention is that much has been done within the last 20 years and more will be done within the next few years. Our contention is that although ten years have elapsed since the Public Service Commission have made their report, yet in several important departments, such as the Public Works, the Forest, the Telegraph, the Post Office, the Survey, the Customs, the Opium, and the Police, very little progress has been made towards giving effect to the recommendations of the Commission, and no serious effort has been put forth in that direction. With Mr. Jacob's contention, as affecting each of these departments, I will deal in detail under their respective heads. But when he refers to the statement which I made and from which I do not withdraw, viz., that we regard the Indian Government as a progressive government but that we do not consider the progress made as adequate to meet the requirements of the country; it is only right and proper that I should point out that the statement is to be taken only in a general sense, and not applicable to each department; for there are departments in which instead of progress there has been retrogression as regards the employment of the people of the country in the higher offices. Take, for instance, the Medical Department in Bengal, in regard to which Mr. Jacob is discreetly silent. In this department within the last

20 years our countrymen have lost ground. I will reproduce here an extract from my evidence, which entirely bears out this view of the matter, and which has not been challenged by Mr. Jacob :—

" In 1877 there were 67 commissioned medical officers, of whom 5 were Indians. There were in addition to the above, 28 uncovenanted medical officers. Of these 7 were apothecaries (all Europeans) and 3 were Indians. In 1887 there were 62 commissioned medical officers, of whom only 6 were Indians. There were 29 uncovenanted medical officers of whom only 4 were natives of India, the other 25 were Europeans and Eurasians (13 apothecaries and 12 non-military medical men). There were 142 assistant surgeons. In 1897 there were 66 commissioned medical officers of whom only 4 were Indians. Thus, practically, the number of commissioned officers on the Bengal establishment who were natives of India remained stationary for a period extending over 20 years—from 1877 to 1897. In fact, the number in 1897 was slightly less. In 1897 there were 36 uncovenanted civil medical officers, of whom only 4 were Indians, the rest were Europeans and Eurasians, 25 were apothecaries, and 7 non-military Europeans. . . . It will thus be seen that while the number of apothecaries holding the higher appointments has increased by over 300 per cent., the number of natives of India employed has actually decreased."

It is also worthy of note that Mr. Jacob has nothing to say with regard to the Customs Department, although it so happens that, with one exception, the superior appointments in the Customs Department in Calcutta are filled by Europeans, and it is a department for which, according to the testimony of Sir Charles Trevelyan, natives of India are specially qualified.

The Public Service Commission Report.

As I have said, our complaint is that in regard to several of the great departments of the State little or nothing has been done towards giving effect to the recommendations of the Public Service Commission. Mr. Jacob's explanation is that we have to wait for vacancies occurring. I cannot admit that this is a full explanation. Vacancies have occurred in the office of Under-Secretary to the Government in Bengal more than once, yet not a single native of India has ever been appointed Under-Secretary to Government, although in Sir Ashley Eden's time (1877–82) a Bengalee gentlemen, Babu Rajendra Nath-Mitler, acted with credit as Assistant-Secretary to Government. Vacancies have more than once occurred in the office of Accountant-General of Bengal, yet not a single native of India has been appointed Accountant-General, although there are several natives of India who have acted with credit as Deputy Comptroller-General and Deputy Accountant-General. Both these are appointments to which natives of India under the recommendations of the Public Service Commission are eligible. A reduction in the number of new recruits every year would tend to the more speedy carrying out of the proposals of the Public Service Commission. I may here notice that in Bengal with one exception (that of Mr. U. C. Batabyal) not a single member of the Provincial Service has been appointed under the recommendations of the Public Service Commission to any office hitherto reserved for members of the Covenanted Service, and even Mr. Batabyal is not really a member of the Provincial Service. He was a member of the Statutory Service, but elected to belong to the Provincial Service. I more than once called attention to this matter in Council, and I was told in reply that the prior claims of the Statutory Service must first be satisfied before the claims of the Provincial Service can be dealt with. In the North-Western Provinces, however, where they had a Statutory Service similar to what we had in Bengal, several members of the Provincial Service hold appointments hitherto reserved for the Civil Service. Why the members of the Provincial Service in Bengal should be placed in a worse position is what I cannot understand.

And here I must refer to an inaccuracy in Mr. Jacob's statement of a sufficiently important character to call for justice. At page 23, in commenting upon his table, Mr. Jacob remarks: " Besides the appointments shown " above and actually listed for the Provincial Service, " members of that Service are eligible for higher posts, " such as High Court judgeships, Commissionerships, " and those of members of the Board of Revenue."

Membership of the Board of Revenue is one of the highest executive appointments under the Government. In provincial administrations it is only next in importance to that of a Lieutenant-Governorship, carrying a higher salary than that of a High Court judge. (In Bengal the salary is 50,000 Rx. a year.) Now, it is not the case, as stated by Mr. Jacob, that a membership of the Board of Revenue is one of the offices to which a member of the Provincial Service is eligible. The Public Service Commission indeed made the recommendation, but the Government of India declined to accept this part of the recommendation of the Commission, and Sir Andrew Scoble, a member of the Commission, was a member of that Government. I quote from paragraph 13 of the despatch of the Government of India (No. 58 of 1888, dated Simla, the 9th October 1888) :—

" In the first place, we are of opinion that it is not advisable to exclude from the schedule one member of the Board of Revenue in Madras, Bengal, and the N.-W. Provinces, and Oudh, and one Financial Commissioner of the Punjab. . . . From our views upon this point, our honourable colleague, Sir Charles Aitchison desires to dissent, for the reasons given on page 74 of the Report."

[*The bulk of the Executive and Judicial Departments must be Englishmen.*]

Mr. Jacob suffers, as it seems to me, under a more serious misapprehension when he says that " the Public " Service Commission laid great stress upon the fact " that the bulk of the executive and judicial depart- " ments must be Englishmen trained in English " principles."

This is certainly not the recommendation of the Public Service Commission. The gist of their recommendations may be summarised as follows :—

That indigenous agency should be more largely employed in the public service, that the recruitment of the official staff in England should be curtailed, and advantage taken of qualified agency obtainable in India. In other words, the Provincial Service recruited in India should be the back-bone of the administrative agency, subject to European supervision and control. " Considerations of policy and economy alike require," observed the Commission in their Report, page 152, " that so far as is consistent with the ends of good " government, the recruitment of the official staff in " England should be curtailed and advantage taken of " qualified agency obtainable in India."

Again, when discussing their proposals regarding the formation of an Imperial Service, the Commission observe :—" Under this arrangement the Covenanted " Civil Service reduced to a *corps d'élite* and its members " limited to what is necessary to fill the chief adminis- " trative appointments of the Government, and such a " number of smaller appointments as will ensure a " complete course of training for junior civilians, will " continue as hitherto to be recruited by open competition " in England only," &c. (page 68 of the Public Service Commission Report). Thus so far from laying stress upon the fact that " the bulk of the executive and " judicial departments must be Englishmen," the Public Service Commission recommended " the limiting of the " recruitment in England to such a strength only as is " required to fill the highest and leven the upper ranks " of the Service," so that " an opportunity of advance- " ment to places of trust and responsibility is afforded to " those whose scruples debar them from competition in " England" (page 50, Public Service Commission Report). The Commission did not, indeed, recommend that the bulk of executive and judicial appointments should be held by Englishmen. Their recommendations involved the reservation of about one-sixth of the appointments hitherto held exclusively by members of the Civil Service for the Provincial Service ; and my contention is that in the executive and judicial departments, the ruling departments as Mr. Jacob puts it, their recommendations have only been partially carried out, and in the special departments to which I shall presently refer, they have been, if not totally ignored, at all events even more inadequately given effect to.

The Special Departments.

And yet in connexion with these special departments Mr. Jacob observes in his evidence : " Of course in " other departments, which are not concerned with " the government of the country, you may say, such " as the Public Works Department and the Accounts " Department, and others, a very much larger pro- " portion of natives can be employed even in the higher " grades, and will be so employed." As a matter of fact they are not so employed. As a matter of fact the exclusion of natives of India from the higher offices

in the special departments (as I have already shown from the figures I have quoted in my evidence) is even more complete. The House of Commons, in their resolution of the 2nd June 1893, laid down:—"That "all open competitive examinations heretofore held in "England alone for appointment to the Civil Services "of India shall henceforth be held simultaneously "both in India and England. Such examinations in "both countries being identical in their nature, and "all who compete being finally classed in one list "according to merit." It will be thus seen that the House of Commons, by the above resolution affirmed the principle of holding simultaneous examinations, not only with regard to the Indian Civil Service, but with regard to all Civil Services. The examinations for the higher offices in the Forest Service, the Telegraph Service, the Public Works Department, the Police Department are now held in England, and in England alone. Whatever political reasons there may exist for not holding simultaneous examinations for the Indian Civil Service (and Indian public opinion firmly holds that no such reasons exist), it cannot be urged, with the shadow of a shade of reason, that there are any political grounds for not holding simultaneous examinations for recruitment to the higher offices in the special departments. It will be seen, on a reference to the Blue-book presented to both Houses of Parliament, in 1894, containing "Papers relating to the question "of holding simultaneous examinations in India and "England," that these despatches deal exclusively with the question of holding simultaneous examinations for the Indian Civil Service, and that not a single local government, nor even the Supreme Government, recorded any opinion adverse to the proposal for holding simultaneous examinations for the minor Civil Services. There is no official opinion on record against it. There is the resolution of the House of Commons in favour of it. There are no political considerations against it. Mr. Jacob, the mouth-piece of the Government, himself, says that natives of India can well be largely employed in these departments. Under the circumstances, I would respectfully press the view which I have ventured to put forward, in favour of holding simultaneous examinations in India and England for recruitment to the special departments, for the favourable consideration of the Commission. There can be no practical difficulties in the way of holding such examinations, for the London University, till recently, held its examinations in Calcutta, Bombay, and other centres. In his Budget speech, Lord George Hamilton referred to the necessity of encouraging technical education in India, as a means of developing the wealth of the country and of ameliorating the condition of the masses. I have no hesitation in saying that the holding of examinations in India for the selections of probationers for the special departments which require technical knowledge would give a great impetus to technical education in India. The colleges will make arrangements for these examinations. The youth of the country will be drawn by the prospect of high office towards the study of these technical sciences necessary for these examinations.

I now pass on to consider Mr. Jacob's observations under each special department.

Opium Department.

It would seem from Mr. Jacob's statement that the Government of India has declined to accept the recommendation of the Public Service Commission in favour of the adoption of the principle of "equality of "treatment of all classes of Her Majesty's subjects," in regard to their appointment to offices in this department, the reason assigned being that natives have so recently been introduced into the higher appointments in the Opium Department that it is not deemed advisable at present to increase their employment. Natives of India have been employed in the higher appointments in this department since 1886. Thus, for more than ten years, their fitness has been tried, and surely the Government ought to be in a position to say whether they are qualified or not for the higher offices in this department. Further, if natives of India have been found qualified for some of the highest executive and judicial offices (such as those of district magistrate, High Court judge), it would be almost too absurd to hold that they cannot be trusted to discharge with ability some of the higher appointments in the Opium Department. After all, what does the recommendation of the Public Service Commission come up to? "Equality of treatment among all classes of "Her Majesty's subjects" is what they advocate, In other words, natives of India shall be placed on the same footing with Europeans and Eurasians, if they have the requisite qualifications—that mere race shall be no bar to their employment in the higher offices of the Opium Department. Let the Government of India fix the qualifications—intellectual, moral, and physical, and let all be equally allowed to compete, irrespective of race. That is obviously the sense of the Public Service Commission's recommendation, but apparently the Government of India would keep up the present state of thing, make race a disqualification, and would on no account allow more than one out of the four yearly recruits to be a native of India. The Government of India would find it very difficult to justify this policy before public opinion. In this department alone the recommendations of the Public Service Commission have been bodily rejected by the Government of India, for reasons with which the public are unacquainted.

Forest Service.

Ten years ago the Public Service Commission recommended the formation of a Provincial Service in connexion with the Forest Department, the Imperial branch of the Forest Service being, in the words of the Public Service Commission, "limited to the number of "officials necessary to fill the superior controlling "appointments, and such proportion of the assistant "conservator's posts as will ensure the complete "training of the junior officers." It will thus be seen that the Provincial Service was to be the backbone of forest administration. Ten years have now elapsed, and yet the provincial branch, which is to play such an important part in the arrangements for the wider employment of the children of the soil, in this department has not yet been formed. The Indian public have a right to complain that it has not yet been formed, but so it is with regard to most schemes for the wider employment of the people in the higher offices of the State. We do not know when this provincial branch of the Forest Service will be formed. We have waited ten years and we do not know how long we will have to wait. All this is in corroboration of my remark that the Government of India ought to move much faster than it does. If I may be permitted to say so without disrespect, I will venture to add that Mr. Jacob's remarks under this and other heads of the public Services are made, not so much in respect of things as they are but in respect of things as they will be. They are undertakings given on behalf of the Government. I am bound to say that we have had painful experience of these promises in the past. The Duke of Argyle, speaking as Secretary of State observed: "We have not kept our promises" to the people of India. Lord Lytton, speaking as Viceroy of India, observed: "The "promises of the Queen (as contained in the Proclamation) remain inadequately redeemed." The Indian public can only hope that Mr. Jacob's promises, made on behalf of the Government, will be more speedily realised.

Postal Department.

In regard to the Postal Department, Mr. Jacob's observations apply to what will happen eventually. The gist of my contention is not assailed, viz., that notwithstanding the orders of the Government of India of 1879, and the distinct finding of the Public Service Commission that "in this department opportunities "have been afforded to natives to show their fitness for "supervisional offices and for posts of the highest "responsibility," the bulk of the higher appointments in the department are still held by Europeans. I need not repeat the figures which I have already given, and which entirely bear out my position.

Police.

In the Indian Civil Service somewhat less than one-sixth or 16 per cent. of the appointments are held by natives of India. In the police in Bengal, less than 7 per cent. of the superior appointments are held by natives, and yet the Civil Service governs the country and the district magistrates, who is a member of the Civil Service, controls the District Superintendent, the official head of the District Police. Mr. Jacob admits the irritating and invidious distinction to which I called attention in my evidence, viz., that from the competitive examinations held in London for recruitment to the higher offices in the police, natives of India are excluded, for no other reason than because they are

natives. Their race constitutes their disability, contrary to the clear and distinct pledges contained in the Queen's Proclamation, which laid down that merit, and not race, was to be the sole test of qualification. Mr. Jacob says that the local governments are free to promote native inspectors to the higher rank in the Police Service. I protested against one system being employed for the recruitment of Europeans and another for natives of India. I protested against the system of appointing old and worn-out inspectors as District Superintendents of Police. I desire respectfully to renew my protest. The circumstance has a bearing upon the advancement of natives of India in the Police Service which is not to be overlooked. Under the 55 years' rule every uncovenanted servant of Government must retire from service at the age of 55, unless extension is given to him. Such extension is ordinarily given for one, and seldom exceeds five years. The result of these old men being promoted to the office of District Superintendent is that they never rise to the higher grades. The system has thus contributed to keep the native District Superintendents in the lower grades, promotion for the most part being by seniority. There has not been a single native of India who has ever been a first-grade District Superintendent of Police in Bengal. The present system of recruitment, therefore, directly interferes with the advancement of natives of India to the higher grades in the Police Department.

The Education Department.

I desire in the first instance to correct a mistake of fact in Mr. Jacob's statement. Mr. Jacob says that under the scheme now introduced the local recruitment for Bengal will come up to 113, representing an advance of 13 upon the existing number which, as given in his table, is 100. As a matter of fact the permanent local recruitment under the new scheme will be 104, and not 113 as stated by Mr. Jacob; 113 is the number fixed temporarily and on personal grounds. Let me quote from the supplement to the "Calcutta Gazette" of 27th March 1897, which contains the resolution of Government on the re-organisation of the superior Service of the Education Department:—"The inclusion "in the Provincial Service on personal grounds of nine "other officers has received the sanction of the "Secretary of State, and the number in that Service "was in this way to be brought up *temporarily* to "113." I have italicised the word temporarily. Mr. Jacob seems to think that in Bengal under the new scheme an addition will be made to the local recruitment, suggesting a wider employment of the people of the country. Nothing could be further from the actual facts of the case. I desire to call the attention of the Commission to the Bengal Civil List for January 1897. (I take this Civil List as the one which was current at the time when the new education scheme was framed.) At page 177 there is a list of officers belonging to the Education Department not within the classified list. Now the additions to the Provincial Service, and also, I may add, to the Indian Educational Service (which is the highest Educational Service) have been made by the classification for the first time of officers—some in the Indian Educational, and others in the Provincial Service, and also by the election of some members of the Bengal Educational Service (now the Indian Educational Service) to serve in the Provincial Service. Let me state the facts. Ray Radhika Prosonna Mukherjee Bahadoor and Ray Dina Nath Sen (inspectors of schools), who in the Civil List are put down in the fourth class of the Bengal Educational Service (page 176), have elected to serve in the newly organised Provincial Service, and figure in the first class of that Service (see page 1191 of the supplement to the "Calcutta Gazette" of the 27th March 1897). Then again Messrs. Tate, Gillharde, Annoda, Prosad Bagchi, Shaw, Stark, Haro Prosad Shastri, Jofalla Chander Roy, Projendra Nath Dasgupta, Debendra Nath Mullik, Purnanda Chatterjee, Mohmnoon Ghose, Kumudini Kauta Bauerjee, Holland, and Byers, who are not within the classified list (see page 177, Bengal Civil List for January 1897), have now for the first time been brought within the classes of the Provincial Service. They were already in Government Service. A Provincial Service having now for the first time been created in connexion with the Education Department, they have been graded in that Service. Mr. Tate has the sixth place given to him in the third class of the new Provincial Service. Mr. Gillharde, Dr. P. C. Roy and Mr. I. N. Dasgupta have the sixth seventh, and eighth places given to them in the fourth class of the Provincial Service. Messrs. Shastri, Stark, and Mullik occupy the eighth, ninth, and tenth places in the fifth class. Dr. Purnananda Chatterjee, Mr. Kumudini Kauta Bauerjee, and Mr. Monmohon Ghose are in the sixth class of the Provincial Service, while Mr. Byers heads the seventh class of the Provincial Service (see pages 1192 and 1193 of the supplement to the "Calcutta Gazette" of the 27th March 1897). It will thus be seen that no real addition has been made to the Provincial Service in Bengal in the sense that it affords a wider employment to the people of the country; and the fact remains that the Service, as organised in regard to its lower grades, has elicited a strong protest from the Lieutenant-Governor, Sir Alexander Makenzie, to which I have already referred in my evidence. While there has been no addition to the Provincial Service, the rules practically preclude the admission of natives of India into the superior grade of the Service. I need not repeat the reasons which, as I think, irresistibly point to this conclusion. Mr. Jacob's statement does not traverse that view of the matter. What he practically says is this: Natives of India may be excluded from the higher grades, but they have a wider opening in the Provincial Service. This last position, I have just shown, is untenable. Thus the new educational scheme, instead of being an advantage, must seriously interfere with the prospects of natives of India in regard to their employment in the highest grades of the Educational Service, from which they will now be practically excluded.

Public Works Department.

In dealing with the Public Works Department, Mr. Jacob quotes a table at page 29 of his evidence, which represents the ultimate distribution of the superior grades of the department in accordance with the Public Works Despatch, No. 65, dated the 22nd October 1890. Under this arrangement there will eventually be 730 engineers representing the full strength of the superior grades of the Public Works Department. Out of the 730 engineers, 130 will be Royal Engineers, 300 will be European civil engineers, and 300 Indian civil engineers. Our complaint is that we are as yet very far from this consummation, and little or no progress has been made within the ten years since the submission of the report of the Public Service Commission, or within the seven years which have elapsed since the despatch of the Government of India of 1890. At the time when the Public Service Commission reported, out of 1,015 officers in the superior engineers' establishment, so many as 810 were non-domiciled Europeans, 119 Europeans domiciled in India, including Eurasians, and only 86 were natives. At present there are 800 engineers of the superior establishment, of whom only 96 are Indians. In ten years the number of Indians has risen from 86 to 96; in how many years will the number rise to 300, the maximum to be reached under the Government scheme?

In this connexion I desire to call attention to the new rules which have been issued by the authorities of the Thomason Civil Engineering College, at Rurki, in the North-Western Provinces. The Rurki College is perhaps the greatest institution in the country for the training of engineers. Hitherto, all natives of India, as defined by statute, were eligible to the guaranteed appointments of the college. Under the new rules issued in 1897 all natives of India, except natives of the Punjab and the North-Western Provinces, where the college is situated, are excluded from competing for these appointments. These appointments are now reserved for Europeans and Eurasians, and for such natives of the Punjab and the North-Western Provinces as may qualify themselves for them. A Eurasian born in Bengal, or the son of European parents born in Bengal, may compete for these guaranteed appointments, but the Hindu and Mahommedan youth of Bengal, the Indian subjects of Her Majesty in the province, are precluded from the privilege. While Mr. Jacob gives an undertaking before the Commission on behalf of the Government for the wider employment of the people in the higher office in the Public Works Department, the authorities of the most important engineering institution in India establish a disqualification on the ground of race, against the vast majority of the native population in India, and would exclude them from competing for some of these high appointments. I place side by side, for comparison, an extract from the rules for 1896 and from the new rules for 1897, to enable the Commission to form their own inferences.

AN EXTRACT from the RULES for 1896.

1. Candidates for admission to this class must be statutory natives of India, and not under 17 or above 21 years of age at date of entry to college. No candidate will be examined more than twice, and no one who has studied for more than three months in any class of the college is eligible for admission as a candidate for a Government appointment.

2. Candidates who have not passed the entrance examination may be admitted for education, and to obtain certificates as assistant engineers, provided that (*a*) accommodation is available; (*b*) they possess the educational qualifications specified in Rule 7, can produce the certificates specified in Rules 4 and 5, and can satisfy the Principal that their knowledge of English is sufficient to enable them to pass through the college course; (*c*) they pay a fee to be fixed by the committee of management so as not to exceed Rs. 100 per mensem. If, in addition, they conform to the age limits laid down in Rule 1, they may compete for the guaranteed appointments. No scholarships will be paid to these students.

AN EXTRACT from the RULES for 1897.

1. Candidates for admission to the class through the entrance examination must be statutory natives of India, other than natives of pure Asiatic descent whose parents or guardians are domiciled in Bengal, Madras, and Bombay, and must not be under 17 or above 21 years of age at date of entry to college. No candidate will be examined more than twice, and no one who has studied for more than three months in any class of the college is eligible for admission as a candidate for a Government appointment.

2. Candidates, including natives of pure Asiatic descent whose parents or guardians are domiciled in Bengal, Madras, and Bombay, may be admitted without an entrance examination for purposes of education, and to obtain certificates as assistant engineers, provided that (*a*) accommodation is available; (*b*) they possess the educational qualifications specified in Rule 8, can produce the certificates specified in Rules 5 and 6, can satisfy the Principal that their knowledge of English is sufficient to enable them to pass through the college course; and (*c*) that they pay a fee of Rs. 40 per mensem during the session. If, in addition, they conform to the age limits laid down in Rule 1, and are statutory natives of India, they may compete for the second and third years' scholarships, *vide* Rule 11, and if not natives of pure Asiatic descent whose parents and guardians are domiciled in Bengal, Madras, and Bombay, they may also compete for the guaranteed appointments.

Telegraph Department.

With reference to the Telegraph Department, Mr. Jacob says that the recruitment is so arranged that three-sevenths of the department will eventually belong to the Provincial Service. The total strength of the service being 84, the distribution will eventually be 48 Imperial and 36 Provincial Service. As a matter of fact, as I have already, pointed out, there are only two Indians in the superior grade; and in how many years will the 2 rise to 36? The Public Service Commission recommended, 10 years ago, the gradual reduction of the staff recruited in England, and the recruitment of a superior local Telegraph Service in India from classes established at one or more of the Indian engineering colleges; this has not been done. I desire to call attention to the fact that Mr. Jacob has not given a single word of explanation with regard to the invidious and irritating distinction between Indian and European and Eurasian telegraph masters and signallers in the matter of house allowance, which is given to Europeans and Eurasians but is withheld from natives of India.

Mr. Jacob's Table.

Mr. Jacob sets out a table at page 31 of his evidence, with a view to show that within the last 20 years the employment of natives of India in the higher offices has steadily increased. For facility of reference I reproduce the table in this place.

A.

	1877, April 1st.			1887, April 1st.			1897, April 1st.		
	Bengal, N.W.P., Punjab, Central Provinces.	Madras and Bombay.	Total.	Bengal, N.W.P., Punjab, Central Provinces.	Madras and Bombay.	Total.	Bengal, N.W.P., Punjab, Central Provinces.	Madras and Bombay.	Total.
Above Rs. 2,000 - -	1	—	—	3	3	6	11	5	16
From Rs. 1,500 to below Rs. 2,000	—	—	—	4	2	6	4	1	5
From Rs. 1,000 to below Rs. 1,500	7	—	—	19	8	27	33	25	58
From Rs. 750 to below Rs. 1,000	28	—	—	46	16	62	62	36	98
From Rs. 500 to below Rs. 750 -	121	—	—	221	100	321	243	112	355
From Rs. 250 to below Rs. 500	595	—	—	868	339	1,207	1,132	446	1,578
Total - - -	752	—	752	1,161	468	1,629	1,485	625	2,110

It will be seen that in 1877, in 1887, and again in 1897 the bulk of the increase has taken place in respect of the lowest grade of appointments, carrying salaries from Rs. 250 a month to below Rs. 500 a month. In 1877, out of a total of 752 appointments, 595 were appointments of this class. In 1887, out of 1,629, 1,207 were appointments of this class, and in 1897, out of a total of 2,110 appointments, no less than 1,578 were appointments of this class. If we take the scale just above the lowest and add it to the lowest grade, the paucity of the higher appointments held by natives of India will be still more remarkable. It will be seen that, in 1877, out of 752 appointments no less than 716 appointments carried salaries from Rs. 250 to below Rs. 750 a month. In 1887, out of 1,629 appointments, no less than 1,528 appointments were of this class, and in 1897, out of 2,110 appointments, no less than 1,933 appointments carried salaries varying from Rs. 250 to below Rs. 750. In 1897 we find 16 appointments carrying salaries of over Rs. 2,000. The matter admits of an easy explanation. There are nine Indian judges at the High Courts all over India, and they draw salaries of over Rs. 2,000 a month. The increase which has taken place in the two lowest grades has been largely due to the wider employment of natives of India in the subordinate judicial and executive services owing to the growing administrative needs of the country. In Bengal, the number of munsiffs (civil judges of the first instance) have increased from 262 in 1890 to 289 in 1893, and a further increase in their number took place in 1894 (*vide* Bengal Council Proceedings for 1895, page 185). There is not a single European or Eurasian in the judicial branch of the Provincial Service in Bengal, for the simple reason that no qualified European would serve as a munsiff, the lowest appointment in the service, on the pay of a munsiff, which is Rs. 250 a month. That I am right in this view of the matter, viz., that the bulk of the increase has taken place in the subordinate judicial and the executive appointments will appear from some

figures which appear in the Public Service Commission Report, to which I desire to call attention. It would appear that the grand total of appointments in the executive and judicial services (the uncovenanted or subordinate judicial and executive services are referred to) at the time when the Public Service Commission reported, was 2,588, out of which 2,449 were held by natives of India, and only 139 were held by Europeans and Eurasians (page 37, Report of the Public Service Commission). Now the grand total for 1897 in Mr. Jacob's table is 2,110. This total must include all appointments in the subordinate judicial and executive services, carrying salaries of Rs. 250 a month and upwards. It would therefrom follow that there would be a very large number of appointments in the judicial and executive services in Mr. Jacob's total, and that there would be a small per-centage of appointments in other departments. Even in regard to the offices in the judicial and executive services I have shown in my evidence that the recommendations of the Public Service Commission have not yet been given effect to, though ten years have elapsed since the Commission have made their report.

As regards the minor Civil Services, Mr. Jacob does not meet the allegation which has been made, viz., that there are whole departments from the higher offices of which natives of India are practically excluded. When the complaint made is that natives of India are excluded from the more responsible offices in the Survey Department, the Customs, the Opium Department, the Forest Department, the Police, or the Telegraph Department, it is no answer to say that a large number of offices are held by them in the subordinate judicial and executive services. When again it is urged that the recommendations of the Public Service Commission have not been given effect to in regard to these great departments, the objection is not met by saying that in connexion with the subordinate judicial and executive services these recommendations have been to some extent complied with. When Mr. Jacob analyses the figures, showing the rate of increase of appointments given to Indians under the scales of salaries taken by him, he does not show the departments where that increase has taken place. If he did so, the progress made or the want of all progress would be demonstrated. It was in his power to have made this detailed analysis. That he did not do so must create a presumption against his view of the matter, and must weaken the effect of his vindication. If he did so, I am sure it would be seen that there are whole departments where natives of India have not been employed on a larger scale than before, that indeed there are departments where natives of India have lost ground, where a lesser number of them are now employed in the higher offices than they were employed 20 years ago. I have already referred to Mr. Jacob's silence about the Medical Department. I have analysed the figures of this department, and have shown that fewer natives of India are now employed in the higher offices in this department. There is no lack of qualified natives of India in this department; but there is a growing unwillingness on the part of the Government to employ them in high office. I may here mention only one instance. Surgeon-Lieutenant Colonel R. L. Dutt, now chief surgeon of Hoogly, twice officiated as professor in the Medical College of Calcutta (a professorship in the Medical College is considered a prize appointment). On the office, in which he has twice officiated, becoming permanently vacant, his claims were overlooked, and an English medical officer was appointed.

Conclusion.

In concluding his evidence, Mr. Jacob observes: "I "may perhaps add, with reference to the Chairman's "remark, that there are several criticisms that might "be made on the evidence of Mr. Banerjea and Mr. "Iyer, but I have not submitted a formal note about "them, because most of the points have been covered "by the general evidence which I have given on the "working of the provincial contract system, and the "employment of natives in the public Service. There "are a few other cases in which their figures are in-"correct, but I do not think it is necessary to point "them out in detail."

None of us can claim to be free from mistakes, especially in regard to matters pertaining to the administration, where the sources of information are official. Even Mr. Jacob, with all the sources of official information behind him, is not above committing mistakes. When Mr. Jacob comes to enlighten the Commission about the employment of Indians in the public Service he ought to have known that the important office of a member of the Board of Revenue is not open to the Provincial Service, and that the Public Service Commission did not recommend that the bulk of executive and judicial appointments should be held by Englishmen. A little examination would also have shown him that in the re-organised educational scheme for Bengal, the Provincial Service does not make a permanent provision for the number of appointments (113) that he sets down, and that it has not created fresh appointments for natives of India. When I urge that the provincial governments are starved in the matter of domestic improvements, and that the bulk of the revenue is spent upon Imperial expenditure, all that Mr. Jacob says in reply is that the per-centage of increase of provincial expenditure is higher than the per-centage of Imperial expenditure exclusive of exchange, and that as much is given to the provincial governments as the funds would allow. The question of the per-centage in the growth of provincial expenditure was a matter about which I was questioned by the Chairman. My answer then is the answer which I now give. Without disputing the growth in provincial expenditure, I maintained that it was wholly inadequate for the purposes for which the revenue was assigned, and in this view I am supported by the opinions of the responsible heads of the administration. With the permission of the Commission I will reproduce this part of my examination.

"19,312. Wait a moment, it is 1 in 10 or 10 per cent. Sometimes we hear of India as a poor country; if you could get every five years an increase of 10 per cent. I do not think that that characterises even a poor country, it is a very well-to-do country?—I do not know whether your Lordship has taken that view of the matter. For instance, when the first contract was entered into, the expenditure was actually cut down to the level of the expenditure which had been incurred ten years ago, 1863-64; the expenditure under those heads which were made over to the provincial governments came up to 6,000,000 in 1868 and in 1864 they came up to only 5,000,000; in 1871, when the contract was entered into, they were cut down to the tune of 5,000,000, and then again a further reduction was made to the extent of one third of a million.

"19,313. If these figures are correct, what you get is that in the third quinquennial period you have an increased amount to the provincial governments equal to 33 per cent. upon the whole period?—Yes.

"19,314. And what I call your attention to is that there has been such an increase, which it may be quite possible for you to show is utterly inadequate, but still there is that increase?—I do not dispute the fact of the increase; even in Bengal, in 1892-93, the provincial share was 4 crores 16 lakhs, it is now 4 crores 54 lakhs. I do not dispute the fact of the increase, but what I do contend for is that the increase has not been adequate to the wants of the province."

When Mr. Jacob speaks of "a few other cases in "which our figures are incorrect" it is only due to us that he should have specified those cases. This he has not done. I do not, indeed, find in Mr. Jacob's statement which has been sent to us that he has challenged any of my figures. He has sought to draw conclusions favourable to the view which he supports upon the basis of figures supplied by himself. I have not been provided with a copy of his Appendix.

APPENDIX No. 92.

A FEW NOTES on Mr. S. JACOB'S SUPPLEMENTARY EVIDENCE; by Mr. G. SUBRAMANIA IYER.

My opinions on the provincial contract system were based chiefly on those expressed with striking unanimity by provincial Governments, and on the figures given in Sir Henry Waterfield's tables. The figures of Mr. Jacob differ from those of Sir Henry, and the difference between the two sets of figures is reconciled by Mr. Jacob in his "Table A." But as I do not find this Table A. in the copy of Mr. Jacob's supplementary evidence sent to me by the Commission, I am not able to comment on Mr. Jacob's reconciliation.

According to Mr. Jacob's statement, while the increase in the provincial expenditure since the second quinquennium has been 19·6 per cent., that in the Imperial expenditure has only been 7·7 per cent. If this were so, the complaints of the provincial Governments that the system operates harshly on them would be unfounded. It is to be remembered, however, that the heads of these Governments are responsible administrators—not mere "dabblers in politics"—and it may be assumed that they had fair ground for their complaints. There must be something wrong, therefore, between the two methods of presenting the effect of the system. It is to be regretted that the Commission have not before them the evidence of representatives of provincial Governments.

From the Imperial net expenditure Mr. Jacob excludes the charges on account of exchange. To this I object, because the increase in the charges for exchange is due greatly to increase in the sterling expenditure of Government, and the Chairman of the Indian Parliamentary Committee, Sir W. Wedderburn, has proved in a representation to this Commission that if only the Government of India had exercised in its expenditure that economy which it was bound to exercise, the whole charges of exchange could have been met without fresh taxation. "Looking at these figures" (para. 13, page 101, vol. II., first instalment of the Commission's Report), "it is clear that the cost of exchange has not "outstripped the increase in the revenues. Indeed, "during these 10 years the increase in the revenues "has been nearly enough to pay the increased loss by "exchange twice over. It is therefore obvious that "Mr. (Sir) James Westland is in error when he "asserts that the one and only cause of the existing "financial trouble is exchange." It is not a fact that the difficulties of exchange were beyond the control of the Government. They were anticipated fully before the period of increase in military expenditure. In the face of these known difficulties, the Government of India deliberately increased the army, and plunged into a series of costly military enterprises. I fully agree with the contention of the Bombay Presidency Association, in a memorial which it addressed to Government in March 1894, that the true causes of the financial difficulties have been: "The appalling growth "of military expenditure in all its ramifications during "the past eight years, in the increased charges or "army services, arms, and ammunitions, stores, military roads, special and strategetic railways." "The "large growth again," this Association added, "of the "charges on account of civil salaries and establishments must be next held responsible. Upper Burma "is a third cause which has grieviously burdened the "general revenues of the Empire. And, lastly, the "unjust compensation allowance to the services." The Government of India deliberately misused its resources, and cannot be allowed to escape from the responsibility of its action. I therefore hold that it is unfair to the taxpayers, and to provincial Governments, to treat the loss on exchange as some Heaven-sent calamity which could not be foreseen, and against which no precaution was possible. From the net expenditure of the Government of India, the expenditure on account of exchange should not be omitted. If these latter amounts were included, the figures would be as follows:—(Tables I. and XXI. of Sir H. Waterfield.)

Year.	Total Net Expenditure.	Provincial Net.	Imperial Net.
	In Crores of Rupees	In Crores of Rupees.	In Crores of Rupees.
1882–83	41·79	10·98	30·81
1883–84	49·66	10·83	30·83
1884–85	41·90	11·62	30·28
1885–86	45·43	12·27	33·16
1886–87	44·55	12·12	32·43
1887–88	47·37	12·35	35·02
1888–89	46·44	12·52	33·92
1889–90	47·34	13·10	34·24
1890–91	45·66	12·64	33·02
1891–92	49·50	13·60	35·90
1892–93	52·43	13·40	39·03
1893–94	51·87	13·33	38·54
1894–95	52·74	13·13	39·61
Increase in 1894–95 over 1882–83	10·95	2·15	8·80

Mr. Jacob says: "As far as the resources of the "Government have been available, the provincial "Governments have had their full share of them." But I submit all the resources that might have been made available were not made available. The system of provincial finance should be so designed as to secure, among other objects, the object of placing a check on the extravagance of the supreme Government, and this end will not be attained if the supreme Government spends its revenues as it likes, and tells the provincial Governments that no more resources are available for their benefit.

If the taxes imposed for Imperial purposes are not to be shared with provincial Governments, then those taxes which are not imposed for Imperial purposes should not be claimed by the Imperial Government. Such a division of the taxes will lead to a declaration—which is very desirable—that certain sources of revenue are Imperial and other sources are provincial. If such a division could be made, and if the Imperial Government could be confined to the resources thus set apart, plus any contribution in a lump that may be necessary from provincial Governments, we shall arrive at a satisfactory system which, while giving more scope for the development of the provinces, will bring home to the Imperial Government more closely than the present system does, its responsibility for the contentment and prosperity of the people.

Mr. Jacob says that if the army expenditure had not been increased, and low exchange had not crippled the resources of Government, taxation would have been reduced and further expenditure incurred for internal improvements. Now, since the army expenditure was increased additional taxes have been imposed, and exchange which was the Government's old enemy has been its friend these three years. The revenues have increased, and the expenditure has been reduced. But has there been a relaxation in the strain on the finances? If the silver rupee has risen in value, famine has intervened, and the frontier war is in full swing. The effect of these two events on the finances will continue for some years, and by the time the financial position becomes stable, another war or famine or some unforeseen calamity might occur, and the period of depression will again commence. The fact is, the Government is going on without a margin even in ordinary times, and, in the face of the least disturbance, it is helpless, and gets embarrassed. To provide some means by which an effective check can be exercised on the financial administration from year to year is the only remedy. An improved system of

provincial finance, on the lines suggested by the Indian witnesses, would be one means of exercising this check on the Government of India.

In reply to Questions 19,942–43, Mr. Jacob makes a quotation from a letter of the Government of India to the Madras Government, which is as follows: "A view " of Indian finance which regards the sums appro- " priated to such purposes as (1) the maintenance of " the Madras army; (2) the payment of leave allow- " ances and pensions of Madras officers; (3) the loss " upon the Madras Railway; (4) the Carnatic and " Tanjore stipends, and other numerous similar " charges, as a Madras contribution to the Imperial " fisc, is one so essentially erroneous, that the Govern- " ment of India take for granted that the Govern- " ment of Madras do not use this expression in the " sense in which it is often publicly used." It is to be regretted that Mr. Jacob was not asked what was the Madras Government's reply to this letter. I do not quite understand in what sense the items of expenditure mentioned above can be called provincial. Mr. Jacob admitted that in so far as "they are incurred and " charged against the Imperial Government directly," they are Imperial expenditure. I may add all control over this expenditure is vested in the Government of India, provincial Governments have nothing to do with it. It is indeed quite possible that certain expenditure which is now, for political or other special reasons, shown under Imperial, might be transferred to provincial, and the Carnatic and the Tanjore stipends are of this kind. But in what sense the payment made to meet the loss of the Madras Railway, of which the local Government had nothing to do with the financing, the construction, or the management, can be called provincial I do not understand. The payment made will be consumed in England. Similarly, the Madras army is only a conventional name; it is not maintained exclusively or chiefly for any purpose connected with Madras. Of course, the Madras army would be serviceable in quelling a disturbance in Madras. But that is only incidental, and the local Government could prevent such disturbances if it is allowed to do so. In no sense can the Madras army be said to be maintained as much for the sake of Madras as for the Empire as a whole. The Madras army served in the Burmese wars, and it is now engaged on the frontier. The Madras Government cannot increase or decrease the expenditure, and cannot transfer a portion of it to any other object.

The fact of the matter is, India is too big an empire —and it is becoming bigger and bigger—for its finances to be controlled satisfactorily from one centre. The provincial Governments cannot possibly understand or sympathise with all the needs of the supreme Government. It is very easy for the supreme Government to snub the subordinate Governments when they clamour for increased allotments and explain away their pressure by analogies with the Home Government or by attributing it to human nature. But so long as the system remains on its present basis, it will continue to cause irritation and have the demoralising effect to which his Excellency the Governor of Madras referred. "It must be borne in mind," Mr. Jacob said, "that at " the revision the provincial Governments are arguing " for an increase of the share of the total resources at " the disposal of the Government of India. They have " constantly brought before them important projects " of expenditure, and these are pressed upon them now- " a-days, not only by the heads of Governments, but " by the members of the Legislative Councils, who, in " recent years, have become in a much more indepen- " dent position than they were a short time ago. Sir " James Westland referred, in the last Budget debate, " to the pressure which was put on provincial Govern- " ments in this way as a danger to provincial finance " under existing circumstances. Then, impressed as " they are with the importance of these projects, they " find their resources cut down, for, undoubtedly, at " the time of revision there is an immediate cutting " down of provincial resources, not indeed to the same " level as at the beginning of the previous contract, " but to an appreciable extent as compared with the " resources which were in the hands of the provincial " Government in the previous year. This reduction " of resources looms large before the head of a spending " department or of a province, and obscures his vision " of the very real progress which has been made in " the past, and of the higher standard from which each " fresh revision starts." This is Mr. Jacob's explanation of the state of things. But this is only an explanation and contains no remedy for improvement. The sense of injustice, the feeling of irritation, and on the whole the demoralising effect, that the present system produces, mark a condition of things which cannot be allowed to remain for ever.

The only remedy is to divide the responsibility for, and control over, the expenditure of the empire between the Government of India on one side and the provincial Governments on the other. For the raising of certain revenues and the expenditure of them the provincial Governments should be entirely responsible within a sphere carefully defined, and for all Imperial needs the Government of India should depend as a rule on the resources assigned to it. Whatever may be the case with other provinces, so far as the Madras Presidency is concerned, it will derive material benefit from a self-acting system such as I propose. I entirely concur in Sir Arthur Havelock's opinion that "the financial " condition of this Presidency will never be satisfactory " until a larger degree of financial independence and " control is conceded to the provincial Government, " and until some arrangement more constant and " permanent and less one-sided than the present " contract system has been adopted." Sir James Westland says: "Where the revenues progress at a " reasonable rate and thus provide sufficiently for " the requirements of administrative expenditure, a " permanent contract might remain in force; but " where this is not the case, and especially where " famine and other abnormal disaster occurs, the " Government of India must step in and relieve the " provincial Governments by additional assignments." But the revenues do not provide sufficiently for the expenditure, because the Government of India is subject to no check in its expenditure. If it were limited to certain well-defined sources of revenue which it should not exceed by encroaching on provincial resources, it would be more careful in its expenditure. Famine and abnormal disasters occur no doubt, but advanced provinces like Madras are well able to meet them from their own resources. Much of the evil arises from the Government of India having to meet the wants of the undeveloped provinces from the resources of other advanced provinces. The principle laid down by Lord Elgin that the same body that imposes the taxation must be responsible for the expenditure is sound, but the provincial Governments might be given the responsibility for taxation and expenditure alike. Surely the provinces of Bengal, Bombay, and Madras are advanced enough for a large degree of financial independence.

Sir James Westland says in his last financial statement that Government looks to the wealthy maritime provinces of Bengal, Bombay, and Madras for obtaining the means for that redistribution of resources, which is one of the objects of the quinquennial revisions. If such is the object of the quinquennial revisions, these provinces would cry, "save us from these revisions." There is no reason why Peter should be robbed to pay Paul; why the people of Madras should be taxed in order that Burma, Beluchistan, or even the Punjab may be prosperous. The chief principle should be that each province should rely on its own resources for its advancement. It is enough that the different provinces constituting the Empire have to pay for the common needs of the Empire, for its protection against foreign invasion and for its internal peace and order, for its common indebtedness and for such other purposes as involve the common well-being of the whole. But if the Punjab wants more money for its education, or Burma for its railways, or the Central Provinces for some other purpose, it is absolutely unreasonable that Madras, Bombay, or Bengal should be made to find the money. England's empire in Asia will go on expanding on all sides, and is the ryot of Madras to be taxed to find the cost of developing every fresh acquisition? How do the native states develop? The Imperial Government gives them no help. For their railways, for their public works, for all the needs of their progressive administration, they find the money from their own unaided resources. Why should not the different British Indian provinces get on likewise?

I shall make a few remarks on the proposals which Sir James Westland made while speaking in the Viceregal Legislative Council in March last with a view to place the system of provincial finance on a more satisfactory basis. To these proposals Mr. Stephen Jacob referred in his supplementary evidence before the Indian Expenditure Commission, and said that though they were in an embryo state, and the Government had not adopted them, they would certainly receive consideration. It is very important that these proposals

should be considered by the Commission and that their defects noted. They were laid down by Sir James Westland himself as follows:

"Now it strikes me that it would be well to separate off the whole of this class of expenditure, whether it is met out of local taxation, or whether it is, as at present, largely met out of the general revenues, into a separate account, and, in respect to that separate account, to make a permanent assignment from general revenues, to the local Government. There would be no revision wanted in a contract of that kind. If, for example, we found that we could separate off the whole of that expenditure as it stands in Bengal, we would say that for this expenditure a certain definite sum fixed once for all would be given out of general revenues, in addition to local taxation, to cover the whole amount; then we might make that portion of the account an absolutely separate one. We would treat it as a separate branch of finance under the local Government and under the local councils. The result would be that the local councils, when they pressed, as they are constantly pressing (and I do not in the least degree wish to indicate that their action in pressing is unreasonable on their part), but when they press for expenditure of that kind they would know that they would have to find the means for it by some sort of local taxation. That is the theory of financial control and responsibility; the whole theory is that those who press for expenditure should know that they will have to bear the burden of it."

The theory, no doubt, is sound, and I think the local Governments would be perfectly satisfied if they were given a fair scope for the exercise of the responsibility they are willing to bear. It is because they are given the responsibility for the progress and well-being of their provinces—a responsibility which has been made considerably keener since the recent reconstitution of the Legislative Councils—and are refused adequate resources to meet that responsibility from, than the existing system has caused such general dissatisfaction. Let me consider whether the present proposals are calculated to do full justice to the provincial Governments as chief guardians of the civil welfare of the population within their jurisdiction. Under the proposed arrangements the provincial revenue and expenditure would be separated in every province into two classes, one being the general account, that is, the provincial branch of the Imperial account, and the other the local account. In regard to the general account, the existing system will continue, that is, the revenue and expenditure represented in this account, will be subject to periodical revision as at present. But in regard to the local account, the revenue will consist of the proceeds of certain entirely local taxes and a lump assignment from the Imperial revenues subject to no periodical increase or decrease. Local taxes are now levied for local purposes, but the provincial revenue, as well as the purely local revenue, is applied for these purposes. Local boards bear only a portion of the expenditure for medical purposes, for educational purposes, for roads, and various other things, and this is the class of expenditure, Sir James Westland reminds us, in which local councils are most urgent. It includes a class of expenditure which is most urgent in many provinces, namely, that of sanitary improvement. But, as matters stand at present, the local taxation is nowhere equal to meet the whole of this expenditure, and the consequence is, Sir James Westland points out, that when the local Governments are pressed to find funds for this class of expenditure, they demand increased assignments from the revenues at the disposal of the supreme Government. This Sir James Westland wants to stop. If more funds be wanted, he would drive the local Governments and local councils to local taxation and to increased burdens on local boards, the contribution from the supreme Government for this class of expenditure being fixed and permanent.

Now, these proposals are good so far as they go, but they certainly do not go far enough, and would not meet the objections which the local Governments have raised against the existing system. These Governments are at present responsible, not merely for the class of expenditure specified by Sir James Westland, but also for other heads of expenditure, either wholly or partially, such as land, revenue, stamps, excise, customs, assessed taxes, forest, registration, general administration, law and justice, police, jails, famine relief, irrigation, &c. And it is obvious that so far as these heads of expenditure go, the defects of the present system will remain, under Sir James Westland's proposals, unremedied. In calculating, however, the expenditure in which local Governments are pressed by local public opinion for constant increase, we do not think Sir James Westland has erred on the side of liberality. The local public are no doubt deeply interested in expenditure on education, medical relief, and sanitation, but they are equally interested in a cheap and improved system of judicial administration, in an honest and efficient police, in a popular system of forest administration, in prompt and effective measures of relief in times of famine which unfortunately recur at short intervals, and in the extension of a certain class of irrigation works. The local Governments should be placed in possession of funds sufficiently elastic for these purposes; and in regard to these, as well as the others indicated by Sir James Westland, these Governments should be given greater independence. The fixed assignment in a lump, as proposed by the Finance Minister, would be, we suppose, available only for the purposes specified, and the local Government will have its scope considerably narrowed for the efficient discharge of its general responsibility. The proposals would have the effect of the local Government being constantly tempted to have recourse to increased taxation, while it will have no scope for counteracting, by remission of taxation, the unpopularity it will necessarily incur. Increased expenditure can be met, not merely by adding to the burden of taxation, but by effecting economies and adopting retrenchments in expenditure. The proposals under consideration place at the disposal of the local Government the odious method, that of adding to the burden of taxation, but withholds the other two popular means of finding money. The radical defect in Sir James Westland's plan is that he assumes that it is the provincial Governments that require to be checked against undue increase of expenditure. But, as a fact, these Governments are more amenable to public opinion, and command greater confidence. The people understand better the purposes for which local Governments spend money, and are, therefore, in a better position to pass effective criticisms on these branches of local administration. It is not, therefore, the local Governments, but it is the supreme Government that is in need of the check which an improved system of financial administration will impose on the expenditure of public funds. Instead of the provincial Governments receiving, in addition to certain sources of revenue declared wholly provincial, a fixed grant in lump from the supreme Government, it is to the latter that a system of this kind should be made applicable, so that whenever it makes up its mind to undertake costly military enterprises, it should have no resource but borrowing or additional taxation to fall upon; it should have no famine protection fund to misappropriate, no provincial balances to sweep away, and as few heads of expenditure as possible to contract in order to squeeze out the required money.

G. SUBRAMANIA IYER.

21st October 1897,
Madras.

APPENDIX No. 93.

NOTE ON SIR J. WESTLAND'S BUDGET, 1895–6.

Handed in by Mr. Morgan-Browne.

1. In the summer of 1894 this Committee drew up a Note on Mr. (now Sir James) Westland's Budget for 1894–5. That Note was submitted to all members of the House of Commons, and widely circulated in India. Sir Auckland Colvin, an ex-Finance Minister of the Government of India, in an article in the *Nineteenth Century* for October 1894, gave it as his opinion "that "there are good grounds for the assertion in the "recent 'Note' presented to Parliament by Sir "William Wedderburn, that it is more the growth of "expenditure than the fall in Exchange which has led "to the present difficulties" (*Nineteenth Century* for October 1894, p. 662). This Note was largely founded on a memorial drawn up by the Bombay Presidency Association, and submitted to the Government of India at the time of the Budget debate in the Viceroy's Council at Calcutta in 1894. Two criticisms alone of those passed by Sir J. Westland on the figures thus presented appear to call for comment. One (*a*) relates to the methods pursued in presenting the accounts; the other (*b*) to the dates selected for comparison.

2. As to (*a*) the methods pursued. Speaking in the Viceroy's Council on March the 28th last, and referring to the documents above mentioned, Sir J. Westland said that there was one "gigantic blunder which appeared in the very first page of it." He then continued: "What they wished to prove was that expen- "diture had increased from other causes than "Exchange; what they actually did was to pick "out the figures which are placed in the column of "Exchange in the Annual Statement of Accounts, and "deducting them, to compare the others. . . . The "fall of the rupee, however, directly increases our "expenditure under many other items. For example, "we are bound to pay to the British soldier his pay in "sterling. That expendiuure, however, is paid in "rupees, and the whole of it is shown in the rupee "column and not in the Exchange column at all. Then "there is also the Exchange Compensation. . . . . "That expenditure also is one that is shown in the "rupee column and not in the Exchange column. . . . "The result is that, if any person desires to prove that "the expenditure has risen from other causes than "Exchange, he has to allow not only for the figures "which are entered in the Exchange column of our "estimates, but also for those direct increases due to "this cause which are entered in the rupee column." The answer to this criticism, which in itself is a severe if unintentional condemnation of the methods adopted by the Government of India in presenting their accounts, is that the tables at pp. 6 and 16 of the Note (upon which the conclusions in the Note were principally based) were drawn up by strict adherence to the figures and methods of presentation used by the Government of India in their Financial Statement.

3. As we understand it, the sole object of the column headed "Exchange" in the Accounts of the Government of India is to show exactly the burden placed upon Indian Expenditure which may be properly attributed to the fall in Exchange. If the sterling pay of the British soldier causes an increased rupee expenditure through the fall in Exchange, upon what grounds is this increased expenditure not shown in the Exchange column? Similarly, if Exchange Compensation Allowance is an expense which is entirely due to the fall in exchange, and varies directly with exchange, why is not the expenditure in connection therewith shown in the column headed "Exchange"? For it must be remembered that, so far as the Indian taxpayer is concerned, *all* the expenditure of the Government of India has ultimately to be met by rupee payments—the Secretary of State's bills being merely a convenient medium for paying the rupees in England. It is for Sir J. Westland to explain upon what grounds these two items of expenditure are not shown in the Exchange column.

4. The fact that analytical statements of account prepared with the utmost care from official figures are liable to attack because they have followed too faithfully the tables submitted to Parliament and the public by the Government of India, is no mean indication of the insufficiency and intricacy of the accounts of the Government of India. When, too, an examination of former financial statements shows that a Finance Minister of India—Sir James Westland himself—prepared and published a table compiled from the Government accounts which exhibits the same "gigantic blunder," it is clear that the accounts must at any rate lend themselves to variety of treatment, if not to obscurity of interpretation. At p. 8 of the Financial Statement of the Government of India for 1888–9 is a table which was submitted to the Viceroy's Council by Sir James (then Mr.) Westland, when introducing a Bill to provide for the levy of a customs duty on petroleum. Referring to this table, he used the following words: "The abstract I now put forward will "be very easily traced back into its component figures "in the published accounts; its main peculiarity is "that, besides showing the expenditure heads net "instead of gross, I have separated the exchange "figures, so that I may show first how the comparison "would have stood had there been no alteration in the "exchange, and I have then shown in a separate "figure the extra charge falling upon us on this "account." In this abstract the amount due to the loss by exchange on the sterling pay of the British soldier has been included in the net army expenditure (excluding exchange), although for the three years shown this amounted, according to a recent Parliamentary return, to Rx. 46,000, Rx. 184,000, and Rx. 437,000 respectively. Here are the figures as given in Sir J. Westlands's Table, and corrected so as to exclude exchange altogether:—

	Accounts, 1883–4.	Accounts, 1884–5.	Budget Estimate 1887–8.
	Rx.	Rx.	Rx.
Net Army Expenditure *excluding Exchange*) as shown in Sir J. Westland's Table - -	16,019,000	15,200,000	16,907,000
Deduct:—Rupee Expenditure (due to fall in Exchange on sterling pay of British troops) improperly included in above -	46,000	184,000	437,000
Corrected figures (Exchange altogether excluded) - -	15,973,000	15,016,000	16,470,000

5. As to (*b*) the dates adopted for comparison. In the discussion on the Financial Statement which took place in the Viceroy's Council on the 27th March, 1894, Sir J. Westland, referring to some recent criticisms on the Budget, made the following remarks: "As regards "military expenditure, I think there is some mis- "apprehension of the argument I used on 1st March. "The increase of military expenditure I admitted, "but I pointed out that it had its origin before 1888. "My argument was that that increase had been met "by the fiscal steps we had recourse to in 1888, and "that the new necessities that arose since 1888 were "due to Exchange, and Exchange alone." In this present Note it is proposed to meet this criticism, partial as it is, by adopting the accounts for 1888–9 as a starting point, and comparing them with the Budget estimate for 1895–6. Even taking the year 1883–9 as the starting point, it will be seen that loss by Exchange is not the sole cause of the existing financial difficulties, but that the increase in civil and military expenditure is the true source of the present embarrassment in Indian Finance.

6. Before proceeding to discuss Sir J. Westland's Budget, it is necessary first to deal with a remarkable Statement of Account which Sir J. Westland had prepared for the Budget debate in the Viceroy's Council. In this statement Sir J. Westland has taken the net income and expenditure for 1883–4 onwards, and con-

verted it from rupees into pounds sterling, with the not unnatural result that as 500 million rupees then were worth far more in English money (*but not in Indian produce*) than even 650 million rupees now, an apparent but utterly illusory decrease in net Indian revenue and expenditure is shown. The fallacy of such a table is almost too obvious to need exposure, were it not that an Indian Finance Minister produces it in all seriousness as a proof, that in spite of additional taxation to meet an increasing expenditure which is outstripping the natural increase in the revenues, the Indian taxpayer is contributing less, and the Indian civil and military services are spending less, than they were only eleven years ago. Here are Sir J. Westland's words:—"There is first of all the head of Military "Services, in which we are told such an immense "increase of expenditure has taken place. The state- "ment I have drawn up carries on the expenditure "from the time before the increase of the native and "British army in 1886. It will be seen that the "expenditure upon the army at the beginning of the "period was about 14 millions sterling. It has now, "notwithstanding that increase, come down to 13½ "millions sterling." Then, with reference to the Civil Services, he said:—"Here also I would wish to "point out that the expenditure has decreased. In "the first three years it was 15·2 millions sterling, "now it has come down to 11·8 millions. So that here, "if you take the measure in sterling, the other ser- "vices of the Government in all departments have "immensely decreased in their burden. The result of "all this naturally is that we have been lightening the "incidence of the revenue and taxation." Finally, he put forward this claim:—"I think that the Govern- "ment of India can show by the account I have to-day "presented, that it has practised most marvellous "economy, and has been able to meet this perpetually "increasing demand without throwing correspondingly "enhanced burdens upon the taxpayer."

7. Sir J. Westland states for the purposes of this table that "a rupee of burden now is less than what a rupee of burden used to be." The annual averages of prices current in British India given at pp. 278–293 of the last Statistical Abstract for British India (1894) do not bear out this statement. If "a rupee of burden now is less than what a rupee of burden used to be," a rupee would represent a smaller amount of produce now than it did formerly. For instance, if this statement be true, where a man had formerly to sell, say twelve measures of corn to get a rupee, he would now have to sell only ten. This is the same thing as saying that prices of commodities must be higher than they were: in other words, prices must have gone up in terms of the rupee. But prices have done nothing of the kind. Looking at these tables we are at once struck by the immense fluctuations from year to year, and as between district and district; but in no case is there a steady progressive rise of prices which could be said to correspond with the fall in Exchange. To take a few prominent examples. Bengal has more acres under rice than all the other provinces of India taken together, yet in 1879, when exchange was at 1*s.* 8*d.*, we find that in Calcutta the rupee would purchase 10·83 seers of rice; and in 1892, when exchange was at 1*s.* 3*d.*, the rupee would purchase 10·9 seers, or practically the same amount. Taking the same two years, we find that wheat has either remained stationary or slightly fallen in price throughout the whole of India, in spite of a growing export trade; while such typical staples as jowar and bajra have generally declined in price throughout Bombay, Madras, the North-West Provinces, and the Punjab

8. The meaning of this is clear. A rupee of revenue now paid by the Indian taxpayer represents, roughly speaking, the same amount of produce (and in some cases rather more) than a rupee of revenue used to represent before the great fall in Exchange. So far as agricultural statistics prove anything, they prove an absolute want of correspondence between the purchasing power of the rupee in India and its exchange value with foreign countries using a gold standard. Further, these average annual prices seem to point irresistibly to the conclusion, that over a long series of years a rupee of burden now is *not* less than a rupee of burden used to be.

9. The fallacy, then, is the assumption that with a low exchange the Indian taxpayer can get more rupees for his rice, wheat, or other produce, because an English banker can get more rupees for his sovereigns than formerly. As between England and India the rupee merely represents so much silver, the value of which in England is liable to be affected by the fluctuations of supply and demand; but in India the rupee is the only legal tender, and therefore the only standard of the value of the whole produce of the country. In England silver has fallen in value in relation to gold, but in India the rupee has not materially changed in value in relation to produce; consequently the value of the rupee in pounds sterling in England has no connection with its value in produce in India.

10. In order to show how misleading such methods of comparison may be, let us see what would be the effect of converting Imperial Expenditure or the National Debt into rupees in 1883–4 and 1893–4, at the exchange of those years respectively. The results of this comparison are sufficiently startling, as the following figures indicate:—

Imperial Expenditure (Net) 1883–4.—75,000,000*l.*=(at Rs. 12=1*l.*) Rx. 90,000,000*l.*

Imperial Expenditure (Net) 1893–4.—79,000,000*l.*=(at Rs. 16=1*l.*) Rx. 126,400,000*l.*

Increase in ten years.—4,000,000*l.*, *or* Rx. 36,400,000*l.*

To complete the calculation, if we now re-convert the increase of Rx. 36,400,000 into sterling at the rate of the year (Rs. 16=1*l.*) we find that our expenditure really increased during the decade by 22,750,000, although a benighted system of keeping the accounts only disclosed an increase of 4,000,000*l.* Again,—

National Debt, 1883–4. 746,000,000*l.*=(at Rs. 12=1*l.*), Rx. 895,200,000.

National Debt, 1893–4. 666,000,000*l.*=(at Rs. 16=1*l.*), Rx. 1,065,600,000.

Decrease or increase—80,000,000*l.or* +Rx. 170,400,000.

Again re-converting we find that while Englishmen were under the mistaken impression that during these ten years the debt had been *reduced* by 80,000,000*l.*, it had in reality been *increased* by no less than 106,500,000*l.*

11. It is well known that Indian Accounts do not lend themselves readily to comparisons from year to year. Changes in the form of presenting those accounts, the fluctuating value of the rupee, and the fact that the Government of India engages in large commercial undertakings, such as the railways and irrigation, all tend to make hasty comparisons illusory. Attempts have been made from time to time with more or less success to meet these difficulties. Thus the principal effects of a falling Exchange may be now clearly discriminated from 1875–6 onwards, thanks to a table prepared by the Government of India and published as Appendix III. of the Financial Statement for 1886–87, the accounts of later years being all presented in the same form. As has been noted, however, the cost of Exchange Compensation Allowance and of the sterling pay of the British soldier, which automatically increase with the falling rupee, are not yet differentiated in the tabular statements of account. The desirability of showing the net income and expenditure of the Government of India in a more rational form than that formerly adopted in Appendices to succeeding Financial Statements has been recognised by the issue of a "Return of the Net Income and Expenditure of British "India under certain specified heads for the ten years "from 1883–4 to 1892–3," dated India Office, 13th July, 1894. This Return, however, issued on Mr. Fowler's motion, is not altogether satisfactory. The principal Tables in this Note have been prepared to a large extent in the form therein adopted, but in some of the items of account considerable modifications have been made with a view to giving a more accurate statement of the Net Income and Expenditure of the Government of India. The reasons upon which these modifications are based are given in a Memorandum appended to this Note (Appendix A.).

12. To come now to the Budget for 1895–6. In the last seven years the gross Revenue and Expenditure of British India have increased by about 15¼ millions of tens-of-rupees as the following figures show:—

	Accounts, 1888–9.	Budget, 1895–6.	Increase.
	Rx.	Rx.	Rx.
Gross Revenue -	81,696,678	96,924,300	15,227,622
„ Expenditure -	81,659,660	96,878,100	15,218,440
Surplus - -	37,018	46,200	9,182

During that same period the increase in Net Revenue and Expenditure, according to statements E. and F., published on pp. 86, 87, of the Financial Statement for 1895–6, and founded on Mr. Fowler's Return above mentioned, was about 8¼ millions of tens-of-rupees.

	Accounts, 1888–9.	Budget, 1895–6.	Increase.
	Rx.	Rx.	Rx.
Net Revenue	55,616,588	63,741,100	8,124,512
„ Expenditure	55,579,570	63,694,900	8,115,330
Surplus	37,018	46,200	9,182

Or according to the statement of Net Revenue and Expenditure prepared for this Note and given below, the increase in the last seven years has been Rx. 8,076,503 in Net Revenue and Rx. 8,067,321 in Net Expenditure.

	Accounts, 1888–9.	Budget, 1895–6.	Increase.
	Rx.	Rx.	Rx.
Net Revenue	57,325,997	65,402,500	8,076,503
„ Expenditure	57,288,979	65,356,300	8,067,321
Surplus	37,018	46,200	9,182

13. The following Tables give in sufficient detail the differences between the net revenue and expenditure of British India, as shown in the Accounts for 1888–9, and as estimated by the Finance Minister for 1895–6. The amounts given include expenditure in England and that on account of Exchange.

TABLE I.—Showing the NET REVENUE of the GOVERNMENT of INDIA under certain specified heads, as shown in the Budget Estimate for 1895–6, compared with that shown in the Accounts for 1889. [Rx. 1=Rs. 10.]

	Accounts, 1888–9.		Budget, 1895–6.		Increase (+) or Decrease (−).	
	1.	2.	3.	4.	5.	6.
I. Land Revenue: (Less Refunds and Drawbacks)	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
1. Land Tax	22,970,289		26,322,800		+3,352,511	
2. Forest	1,347,174		1,639,900		+292,726	
		24,317,463		27,962,700		+3,645,237
II. Opium: (Less Refunds and Drawbacks)		8,562,270		6,860,500		−1,701,770
III. Taxation: (Less Refunds and Drawbacks)						
1. Salt	7,630,297		8,658,600		+1,028,303	
2. Stamps	3,883,338		4,596,200		+712,862	
3. Excise	4,678,961		5,505,300		+826,339	
4. Provincial Rates	3,037,374		3,648,000		+610,626	
5. Customs	1,301,861		4,676,900		+3,375,039	
6. Assessed Taxes	1,504,588		1,785,200		+280,612	
7. Registration	330,758		421,400		+90,642	
		22,367,177		29,291,600		+6,924,423
IV. Miscellaneous:						
1. Tributes	745,233		789,500		+34,267	
2. Gain by Exchange	951,453		88,400		−863,053

TABLE II.—Showing the Net Expenditure of the Government of India under certain specified heads, as shown in the Budget Estimate for 1895–6 compared with that shown in the Accounts for 1888–9. [Rx. 1=Rs. 10.]

	Accounts, 1888–9.		Budget, 1895–6.		Increase (+) or Decrease (−).	
	1.	2.	3.	4.	5.	6.
I. Collection of Revenue: (including Assignments and Compensations)	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
1. Land and Forest	5,338,098		6,299,200		+961,102	
2. Opium	2,599,574		2,760,300		+160,726	
3. Other heads	1,571,606		1,896,300		+324,694	
		9,509,278		10,955,800		+1,446,522
II. Debt Services		3,870,437		3,310,400		−560,037
III. Civil Services:						
1. Civil Departments	11,505,582		13,749,300		+2,243,718	
2. Miscellaneous Charges	4,425,452		5,648,000		+1,222,548	
3. Buildings and Roads	3,640,317		4,044,100		+403,783	
		19,571,351		23,441,400		+3,870,049
IV. Military Services:						
1. Army	19,239,478		24,341,500		+5,102,022	
2. Military Works	1,065,662		1,120,500		+54,838	
		20,305,140		25,462,000		+5,156,860
V. Commercial Services:						
1. Post Office and Telegraphs	22,856		−119,600		−142,456	
2. Mint	−121,171		−3,900		+117,271	
3. Railways	2,233,392		2,148,200		−85,192	
4. Irrigation	722,246		566,200		−156,046	
		2,857,323		2,590,900		−266,423
VI. Special Services:						
1. Famine Relief	78,336		55,000		−23,336	
2. Construction of Railways	22,401		9,400		−13,001	
		100,737		64,400		−36,337
VII. Special Defence		789,595		154,700		−634,895
VIII. Provincial Surplus or Deficit		+285,118		−623,300		−908,418
GRAND TOTAL		57,288,979		65,356,300		+8,067,321

14. In order to understand the full significance of the above tables it will be necessary to find out in the case of the increase in the Revenues how much is due to increased taxation; and in the case of the increase in the expenditure, how much is due to the increased cost of exchange. While it will also be necessary to note under what heads of expenditure the increase (apart from that due to exchange) has taken place.

15. After the new taxation imposed in January, 1883 —namely, (1) an enhancement of the Salt Tax; (2) an import duty on petroleum; and (3) the extension of the Income Tax to Lower Burma—no new taxation of importance was resorted to until the recent imposition of general import duties, including, still more recently, those on cotton goods. These new import duties together account for about Rx. 3,000,000 of the total increase in the revenues of about Rx. 8,000,000 (Financial Statement, 1895-6, p. 10, para. 35), leaving about Rx. 5,000,000 as the net increase in the net revenues in seven years on the basis of taxation existing in 1888-9. Three points only in connection with this increase require special notice:

1. The large increase in the land revenue of Rx. 3,645,237 is largely due to enhancement of assessments as the product of active settlement operations, and also, as to about Rx. 200,000, to a new Patwari cess in the North-West Provinces and Oudh.
2. The increase of Rx. 1,028,303 in Salt is partly due to the fact that the new duty materially checked consumption in the first year of its imposition (Financial Statement, 1888-9, pp. 9–10).
3. The large decrease in Miscellaneous Receipts of Rx. 791,387 is due to the fact that in 1888-9 a large gain was made in Exchange upon heavy remittance transactions of the subsidized Railway Companies (Financial Statement, 1889-90, p. 10). This is very much a matter of account.

16. With regard to the increase of Rx. 8,067,321 in the net expenditure the first thing to notice is that this is a net increase—certain heads of expenditure having largely increased while others have materially decreased. The following figures will bring out the significance of this point:—

Increases.	Rx.
Collection of Revenue	1,446,522
Civil Services	3,870,049
Army Military Works	5,156,860
	Rx. 10,473,431

Decreases.	Rx.
Debt Services	560,037
Commercial Services	266,423
Special Services	36,337
Special Defence Works	634,895
Change from Provincial surplus to deficit	908,418
	Rx. 2,406,110
Net increase as above	Rx. 8,067,321.

Three points must be borne in mind with reference to these decreases:

1. The decrease in expenditure of over Rx. 826,460 in connection with the debt and commercial services is in spite of, and covers, a heavy additional increased cost of exchange under those two heads amounting to no less than Rx. 3,435,379.
2. The original programme of special defence works is approaching completion; hence the large saving of expenditure under this head, although the ordinary military expenditure continues its alarming rate of increase.
3. The improvement of expenditure by Rx. 908,418 under provincial surpluses or deficits simply means that nearly a million of the increased expenditure on the Civil Services will be met for this year by consuming the accumulated surpluses of the Provincial Governments, *i.e.*, the unspent portions of their allotments in former years.

17. It is now necessary to ascertain the part which Exchange has played in different ways in bringing about this composite increase in the expenditure. The following figures show, with reference to the whole of the expenditure shown in Table II., the net cost of Exchange shown in the column headed Exchange in the Finance Accounts for the years 1888–9 and 1895–6:

Net cost of Exchange, 1888-9	Rx. 6,819,550
,, ,, 1895–6	Rx. 13,118,400
Increase in the 7 years	Rx. 6,298,850

In addition to this Exchange added directly to the burdens of the Indian Exchequer under the head of Exchange Compensation Allowance and additional rupee pay to the British soldier (whose pay is on a sterling basis), items, however, not shown separately in the Finance Accounts, as already explained. These further additions together account for a sum of Rx. 2,110,900, made up as follows:

—	1888-9.	1895-6.	Increase.
Exchange Compensation Allowance.	Rx. Nil	Rx. 1,456,500	Rx. 1,456,500
Additional payment to British soldiers (approximate).	502,000	1,156,400	654,400
	Rx. 502,000	Rx. 2,612,900	Rx. 2,110,900

The total increased expenditure upon Exchange is therefore Rx. 8,409,750 made up as follows:—

(i.) Increase shown in "Exchange" column	Rx. 6,298,850.
(ii.) Increase not shown in ,, ,,	Rx. 2,110,900.
Total	Rx. 8,409,750.

18. Before analysing this increased cost of Exchange in relation to the increased expenditure two important points must be noted:—

1. The increase of Rx. 6,298,850 in (i) is not entirely due to the fall in the Exchange value of the rupee but is partly due to an increase of £1,085,317 sterling in the net Home Charges (sterling expenditure less sterling receipts) *i.e.*, part of the increased cost of Exchange is simply the Exchange on additional remittances of gold. The following figures make this clear.

—	1888-9.	1895-6.	Increase.
Net Home Charges	£14,656,783	£15,742,100	£1,085,317
Cost of Exchange on £14,656,783.	Rx. 6,819,550	Rx. 12,213,970	Rx. 5,394,420

The cost of Exchange for 1895–6, as shown in the "Exchange" column of the Accounts, is therefore made up thus:—

Increased cost on— £14,656,783	(Home Charges 1888–9)— = Rx. 5,394,420
Actual cost on— £1,085,317	(Increase for 1895–6)— = Rx. 904,430
Total £15,742,100	Rx. 6,298,850

Thus Rx. 904,430 of the increased cost of Exchange is due to the increase of £1,085,317 in the Home Charges.

2. The increase of Rx. 2,110,900 in (ii) is chiefly due to Exchange Compensation Allowance, which was not a matter outside the control of the Government of India, and is in reality a distinct increase of expenditure by no means automatic in its character. Further, even granted that some compensation was imperative, it might certainly be questioned whether in the existing state of Indian Finance such indiscriminating compensation allowance, which by reason of its indiscriminate nature has added so largely to

Indian expenditure, was either wise or necessary.

19. We are now in a position to show the exact effect which the heavy fall in the value of the rupee since 1888-9 has had upon the increase in Indian expenditure. The following Table III. which analyses the various increases and decreases shown in Table II. will make this clear.

TABLE III.—Showing under certain specified heads the Increase, or Decrease (—), both in India and in England, of the Net Expenditure of the Government of India in the Budget Estimate of 1895-6 as compared with the Accounts for 1888-9 (as shown in Table II.), classified as to, A, Civil and Military Expenditure and, B, Other Expenditure. Showing also the exact operation of Exchange in various forms in making up the total difference under these heads. [£ = Rx. = Rs. 10.]

HEADS OF EXPENDITURE.	Increase or Decrease, excluding Exchange.		Total Increase or Decrease, excluding Exchange. (Total of cols. 1 and 2.)	Increase in Cost of Exchange properly due to the fall in Exchange since 1888-9.	Increase due to (a) Exchange Compensation Allowance and (b) sterling pay of British troops.	Increase or Decrease due to Cost of Exchange on Increase of Sterling Charges.	Total Increase or Decrease in any way due to Exchange. (Total of cols. 4, 5, and 6).	Total Increase or Decrease in Net Expenditure, as shown in Table II., col. 6. (Total of cols. 3 and 7.)
	INDIA.	ENGLAND.

GRAND TOTAL -	−1,427,746	£1,085,317	−342,429	5,394,420	2,110,900	904,430	8,409,750	+8,067,321

NOTE.—The total amount for Exchange Compensation Allowance in 1895-6, namely, Rx. 1,456,500, is taken from a Table given at para. 145 of the F.S. 1895-6. Its distribution among the heads of expenditure in this Table has been roughly estimated by reference to the Table above mentioned and more complete Tables given at paras. 75 and 113 of the F.S. 1894-5. Note also in this connection para. 18, section 2.

20. The above table in conjunction with Tables I. and II. summarises while it analyses the increase in Indian expenditure during the last seven years. The large differences in the results shown compared with those given in Table II. of the Note on Sir J. Westland's previous Budget, namely, that for 1894-5, are chiefly accounted for by the fact that the present comparison is made with the year 1888-9, when net civil and military expenditure had already increased by nearly 5½ millions (only half of which might be said to be due to Exchange in some form or another) over the standard of comparison then taken, namely, the average of the years 1882-3 to 1884-5. The more complete apportionment of increase due to Exchange, and the fall of 1½*d.* in Exchange from 14½*d.* (the average rate shown in the Financial Statement for 1894-5) to 13·09*d.*, the actual rate estimated for the year 1895-6, have also materially affected the figures. Nevertheless this present table fully supports and confirms the main propositions deducted from the examination of last year's Indian Budget. Those propositions are as follows: "Loss by Exchange is not the sole (or even the principal) cause of the existing financial difficulties," but "the increase in military and civil expenditure is the true source of the present embarrassment."

21. We will now put the facts which Table III. discloses into a series of propositions. There is, however, one paramount fact which must never be lost sight of in discussions on Indian Finance—one vital consideration of policy, the suicidal neglect of which, more, perhaps, than any wilful extravagance, has brought Indian Finances into their present perilous position. That fact is this, Exchange has long ceased to be an uncertain element in Indian Finance. For the last 10 years at least Indian financiers have known, or ought to have known, that they could not rely upon the maintenance of the Exchange from year to year, or even from month to month. A fall in Exchange with its added burdens upon the Indian Exchequer was a thing to be taken seriously into account by every prudent Finance Minister—and not merely a matter for complaint, as the Act of Providence which no strong measures might forestall. For the last 10 years the Government of India have been in the position of a householder who, in addition to the growing charges of a growing family, has to face with an income which does not grow in sufficient proportion, a steady rise in the prices of the necessaries of life. Obviously the only proper way in which to meet such a case is by economy. But if under these circumstances the householder, refusing to economize, increases his expenditure, he must soon be involved in bankruptcy, and has no right to complain of a misfortune which he would thus have deliberately invited. Nor would it avail him anything to urge that this fresh expenditure was eminently useful and desirable, or even necessary for a man in his position. He should cut his coat according to his cloth.

22. But this adaptation of expenditure to revenue is what the Government of India will not do. It would almost seem that the great spending departments make up their estimates on the Exchange of the previous year, and after absorbing any increase of Revenue, look to the Finance Minister to provide for any additional charge, due to the probable fall in Exchange, by additional taxation. In the last 10 years of falling Exchange, the Government of India have added more than 1,500,000*l.* to the Home Charges, which, with the rupee approaching 1*s.*, means an additional charg upon the Revenues of India of about Rx. 3,000,000—roughly speaking, the amount of the new import duties. Here, at any rate, we have a very tangible result:—the trade of England and India hampered because the Government of India would not realise that it is unsound finance to increase the gold liabilities of a silver-using country in a time of falling Exchange. This of course is leaving out of account all the money which the yearly addition to the Home Charges has taken from the Indian taxpayer. The

Government of India will say that this increase was necessary, in the sense of being useful. But Governments, like individuals, cannot exempt themselves from certain fundamental economic principles, and the Government of India, if it is to act from motives of common prudence, must, like the householder, learn to cut its coat according to its cloth.

23. Table III. then appears to establish the following propositions:—

1. During seven years the expenditure on the civil and military services alone has increased by Rx. 5,429,034, quite apart from any increase due to Exchange; and if we add the Rx. 848,768 due to Exchange on the increase sterling charges, which is an increase within the control of the Government of India, we find that the increase on the Services amounts to the enormous total of Rx. 6,277,803, besides Rx. 4,195,628, which may be said to be due to the fall in Exchange.
2. While the expenditure on the Civil and Military Services has been increasing by about Rx. 6,000,000 (leaving out of account the increases in the cost of collection of the Opium and Customs Revenue) other expenditure, apart from the question of exchange, has decreased to to the extent of about Rx. 5,750,000.
3. In Civil and Military Expenditure we find, instead of economies to meet the heavy burden of Rx. 4,195,628 due to the fall in Exchange, Rx. 6,277,803 of additional expenditure—in other words, for every rupee of additional burden entailed by the fall in Exchange, the Services add another rupee and a half on their own account.
4. In other expenditure we find the heavy burden of Rx. 3,309,692, due to the fall in exchange, completely wiped out by reduced charges or increased profits amounting in the aggregate to Rx. 5,715,802 (*i.e.*, Rx. 5,771,463—Rx. 55,661), leaving expenditure less, in spite of exchange, by Rx. 2,406,110—in other words, every rupee of additional burden entailed by the fall in exchange is met by a saving of a rupee and three quarters.
5. The enormous increase in seven years of nearly Rx. 10,500,000 in Civil and Military Expenditure (of which about two-fifths can be said to be due to the fall in Exchange) has (i.) comsumed all the natural increase in the revenues of about Rx. 5,000,000; (ii.) used up all the decrease in other expenditure of about Rx. 2,500,000 (obtained, after paying for Rx. 3,300,000 due to exchange, partly by reduction of charges, partly by increase of profits, partly by starving useful and reproductive services, and partly by meeting the expenditure of the year out of past savings; and (iii.) further necessitated the imposition of fresh taxation to the extent of Rx. 3,000,000 as shown by the following figures:—

	Rx. (000's omitted)
Increase in Civil and Military Expenditure	6,250
Add—Exchange	4,250
TOTAL	10,500

	Rx.	Rx. (000's omitted)
Increase in Revenue		5,000
Decrease in Expenditure	5,750	
Deduct—Increase in Exchange	3,250	
Net Decrease in Expenditure		2,500
New Taxation		3,000
TOTAL		10,500

24. Now it is certain that the Government of India will have a reason, good or bad, for every increase of expenditure; it is probable that with regard to some of the items they will be able to show a supreme necessity; but the advisability of an increase here or the necessity of an increase there is not the question at issue. It may be admitted at once that a certain amount of increased expenditure by the Government of India was not only necessary but desirable in the interests of good government, and even legitimate under all the circumstances. The real point, however, is that the Government of India have not been content with a moderate increase of expenditure, but have continued, in reckless disregard of the capacities of Indian Revenues, to increase expenditure on the Civil and Military Service (however useful and desirable that expenditure may be) at a rate which under all the circumstances is absolutely unjustifiable.

25. For let us examine the position of affairs in the light of the tables which we have given, and let us see what increase of expenditure was possible to the Government of India in the last seven years, without the help of new taxation, and supposing counsels of ordinary prudence to have prevailed. With the help of the Patwari cess (Rx. 200,000) and a small tax on beer and spirits (Rx. 100,000) the Government of India, without resorting to the new Import Duties, would have had an increase of Rx. 5,000,000 in net revenue to deal with. In addition to this, they would have had, without taking into account the doubtful expedient of absorbing provincial deposits—in fact, keeping a provincial surplus of about Rx. 250,000—a saving in expenditure of about Rx. 1,500,000 (after meeting a considerable portion of the increased charge due to Exchange). This would give them Rx. 6,500,000 available for increased expenditure on the Services.

26. How might the money have been spent? Under no circumstances should an increase of over £1,000,000 in the Home Charges, making with the ruinous rate of Exchange a charge on Indian Revenues of about Rx. 2,000,000, have been incurred in seven years of falling Exchange. We have then the Rx. 6,500,000 to meet the cost of Exchange on Civil and Military Expenditure, and the increased expenditure on the Services. Exchange would have absorbed about Rx. 4,250,000 of this amount, and the charge for collection of Revenue might be fairly expected to show a large increase (though not so large as actually took place) say, Rx. 750,000. We have thus left Rx. 1,500,000 (with Exchange provided for) available for increased expenditure, if absolutely necessary, on the Services—representing an increase of nearly 4½% in seven years, apart from the increase entailed by Exchange.

27. But we would go further and insist upon the fact that a time of financial stress and difficulty is not a time for any increase of expenditure that can possibly be avoided, least of all for increased expenditure on an army which is already the heaviest financial burden, in proportion to Net Revenue, of any government in the world. In 1884-5, apart from any charge due in any way to Exchange and excluding expenditure on Special Defence Works, the ordinary expenditure on the Military Services was Rx. 16,000,000: in 1888-9 it was Rx. 18,000,000; and in 1895-6 it is Rx. 20,000,000. Be it remembered that in these increases Exchange played no part in any shape or form. If the increase of Rx. 2,000,000 in the four years was due to the large increase in the Army, against which many of those best qualified to judge so strongly protested, what plea can be put forward in justification for a further additional charge of Rx. 2,000,000 in the last seven years. In Appendix B will be found a more detailed examination of Indian Military Expenditure from 1875-6—1892-3, with reference to a Parliamentary Return recently issued on the subject.

APPENDIX A.

——————M on the NET REVENUE and EXPENDITURE of the GOVERNMENT OF INDIA.

1. At pp. 86 and 87 of the Financial Statement of the Government of India for 1895-6 two statements (E and F) are given, purporting to show the net income and expenditure of the Government of India in India and England for certain specified years. These statements are, with some modifications, founded upon a Parliamentary Return moved for by Mr. Fowler, and are framed on practically the same principles with regard to Indian Finance as those of a former return of Mr. Fowler's with reference to the accounts of the United Kingdom.

2. In presenting the accounts of a Government the object in view is to show the real cost of Government to the people. It is important on the one hand that every penny received, either by way of taxes, or by way of profit to the Government as owner of State property or contractor for State service, should be shown in full, and on the other hand, that the expenditure should not be unduly swollen by charges which are not a burden on the taxpayers of the country.

3. It is presumably with this object that these statements have been drawn up, and it is to the apparent failure of these statements in certain important particulars to exactly achieve this object that it is here proposed to direct attention. As they are of most practical moment, it will be convenient to take the figures for 1895-6 (Budget Estimate), given in Statement E; two tables are appended, showing the corrections which it is suggested should be made in the figures.

PART I.—INCOME, 1895-6.

4.—I. LAND REVENUE, &c.—

In this are included—1. Land Revenue, 2. Forest, and 3. Tributes from Native States with a total of Rx. 28,752,200, from which is deducted Rx. 1,115,000 on account of assignments from land revenue, &c., giving a net total of Rx. 27,637,200 as the land revenue.

Now, in the first place, it is submitted that the tributes from Native States should not be classed as land revenue. In the second place, assignments ought not to be deducted. This latter sum, which consists chiefly of payments made in return for lands of which the revenue has been surrendered to the Government, ought not to be treated as a set-off to revenue, but should appear on the expenditure side as part of the expenses incurred in raising the revenue from land. For instance, the Rx. 800,000, or so, paid in the Bombay Presidency to Inamdars and other grantees, is in no sense a refund of revenue collected, but an allowance by way of purchase of a certain amount of revenue which had formerly been granted away by the State for service done. To deduct a large sum like Rx. 1,115,000 from the land revenue in these circumstances is misleading, for every rupee of this amount is actually paid in land tax to the Government, and it is no relief to the cultivators of the soil to pay land tax to Government where before they paid rent or land dues to State assignees.

5.—II. and III. OPIUM AND TAXATION—

As in the case of land revenue, assignments and compensations ought not to be deducted from income, but should appear as part of the cost of getting in the revenue. Of the Rx. 419,000 deducted as assignments and compensations under "other heads" of revenue, about Rx. 100,000 represents compensation for sayer or transit dues, abolished 1834-41; and about Rx. 300,000 represents salt compensation to various States, and under conventions with the French Government, the Sambhar Lake Treaty, &c., all of which, as necessary to maintain the Government's salt monopoly, is obviously a part of the cost of producing the salt revenue.

6.—IV. COMMERCIAL SERVICES—

This is a difficult heading to deal with. It is obviously an inconsistency in the statement, which purports to give net income and expenditure, to show amounts on both sides of the account under a general heading of commercial services. For the whole commercial services of the Government cannot be carried on both at a profit and a loss; and if some services are profitable and others the reverse, then it is a question whether a general heading should be retained. There are really four distinct commercial services—the post office and telegraph, the mint, the railways, and irrigation. If the general heading of commercial services, with a general total, is to be retained, then the net profit or loss from all four services should appear on one side of the account alone; if the general heading is to be discarded, then each service will appear as revenue or expenditure according as it yields a profit or loss to the Government. On the whole, the better course appears to be to retain the general heading with the general total, showing clearly how this result is arrived at. There seems to be no object in swelling the receipts by profits on some commercial transactions, if the general commercial enterprise of the Government results in a charge on the national income, and is a burden, however advantageous may be the results, on the taxpayers of the country.

7.—V. MISCELLANEOUS RECEIPTS—

1. *Mint.*—This is clearly a commercial service, and none the less so because a strict Government monopoly, like the post office.

2. *Gain by Exchange.*—This is largely a matter of account, and properly treated as a portion of miscellaneous receipts.

3. *Miscellaneous.*—The treatment of this sub-head is somewhat misleading. It is a fallacy to assume that miscellaneous receipts and miscellaneous expenditure have anything in common which justifies the setting off of one against the other. As a matter of fact, the miscellaneous receipts consist principally of the following:—Unclaimed deposits, premium on bills, rents, fees, fines and forfeitures, percentages on European stores; whereas the miscellaneous expenditure is chiefly made up of charges for remittance of treasure, donations for charitable purposes, rewards for destruction of wild animals, petty provincial and local establishments, rents, rates and taxes, unforeseen charges. If these various items cannot be placed under more specific headings, there is no objection to their being classed as miscellaneous; but the two totals being made up of different and unrelated amounts, must appear on each side of the account, *i.e.*, Rx. 409,800 as miscellaneous receipts, and Rx. 245,600 as miscellaneous charges.

PART II.—EXPENDITURE, 1895-6.

8.—I. and II. DEBT AND MILITARY SERVICES—

No remark, but *see* para. 12.

9.—III. COLLECTION OF REVENUE—

The figures require correction by the addition under *Land, Opium*, and *Other Heads* of the amounts for assignments and compensations being Rx. 1,115,000, Rx. 5,100 and Rx. 419,200 respectively. (*See* above, paras. 4 and 5.)

10.—IV. COMMERCIAL SERVICES—

The figures require correction, as explained in paras. 6 and 7.

11.—V. CIVIL SERVICES—

The arrangement of this heading and the figures given seem open to serious objection.

1. *Civil Departments* and, 5. *Civil Works.* — No remark.
2. *Miscellaneous Civil Charges.*—To this must be added the gross total of miscellaneous charges referred to in para. 7, *i.e.*, Rx. 245,600.
3. *Famine Relief and Insurance.*—Whether this is regarded as a separate fund, or as a special application of a compulsory surplus, it has obviously no place under a general heading of civil services.
4. Similarly, *Railway Construction* is a matter totally distinct from civil service expenditure.

Both 3 and 4 are items of expenditure which, rightly or wrongly, fluctuate enormously; and to include these under a general heading like civil services is to render the totals under that heading misleading when comparisons are instituted between different years, while

at the same time no advantage whatever is derived from such a system.

12. The following tables, showing what would be the result of making the foregoing corrections, have been arranged with a slightly different order in the heads of account, and a re-arrangement of some of the sub-heads. Thus, as a matter of logical presentation, the charges for collection of revenue should appear first in a summary statement of expenditure, followed by the debt services, as in fact they do in the accounts of the Government of India. Then, as to re-arrangement: The cost of special defence works is put under a separate heading altogether, just as war expenditure should be, so that the total ordinary military expenditure may be easily compared with years when there were no special defence works to swell the total. Again, the adjustment of the Imperial account by means of the provincial surplus or deficit is shown quite separately, so that the actual total expenditure on the civil services may be clearly seen from year to year.

STATEMENT IF AMENDED AS SUGGESTED.

PART I.—INCOME (NET).

			Budget, 1895-6.
I. Land Revenue	Rx.		Rx.
1. Land	26,322,800		
2. Forest	1,639,900		
		27,962,700	
N.B.—Tributes transferred to Miscellaneous; and Assignments, which are deducted in the Statement, have been transferred to Expenditure.			
II. Opium		6,860,500	
N.B.—Assignments, which are deducted in the Statement, have been transferred to Expenditure.			
III. Taxation		29,291,600	
N.B.—Assignments, which are deducted in the Statement, have been transferred to Expenditure.			
N.B.—Commercial Services resulted in a net loss, and therefore all appear on the Expenditure side of the account.			
IV. Miscellaneous.	Rx.		
1. Tributes from Native States	789,500		
2. Gain by Exchange	88,400		
3. Miscellaneous	409,800		
		1,287,700	
N.B.—Mint transferred to Commercial Services on the Expenditure side of the account.			
GRAND TOTAL		Rx. 65,402,500	

PART II.—EXPENDITURE (NET).

				Budget, 1895-6.

		Rx. 65,402,500

APPENDIX B.

INDIAN MILITARY EXPENDITURE, 1875–6—1892–3.

1. There was issued in June, 1894, an important Parliamentary Return, which professes to show the Military Expenditure of the Government of India in India and England for each year, from 1875–6 to 1892–3, and purports to explain the increase of Rx. 7,717,214 in this expenditure during these 18 years.

2. The first criticism which we have to offer is that this is only a partial Return; it does not show *all* the Military Expenditure of the Government of India—the important items of Military Works and Special Defence Works having been completely ignored. It is not easy to understand upon what principle expenditure so exclusively Military as this has been left out in a Return of Indian Military Expenditure. In 1875–6 the Indian Government had not yet begun to spend lakhs of rupees on so-called Special Defence Works, and the net amount spent on Military Works was Rx. 1,321,260: in 1892–3 the total Net Expenditure on Military and Special Defence Works was Rx. 1,609,585, showing an increase of Rx. 288,325.

3. In the next place, the figures given in the Return relate to Gross Expenditure, whereas Net Expenditure, *i.e.*, the amount spent less the Military receipts under the various headings, is obviously a more accurate statement of the Cost of the Military Services to the Government of India. Moreover, owing to the fact that receipts on account of Military Services, &c., have diminished, due probably to changes of system, the figures for the earlier years are relatively higher than those for the later years; thus the receipts in aid, as we may call them, for the Army, amounted in 1875–6 to Rx. 1,057.377, and in 1892–3 to Rx. 864,320, or a decrease of Rx. 193,057, which would mean so much more increase of net Expenditure between the two years taken.

4. Now if we take the figures of the Return and make the additions and corrections here indicated, instead of an increase of Rx. 7,717,214, as shown therein, we shall find that the true increase in Indian Military Expenditure as between the years 1875–6 and 1892–3, amounts to Rx. 8,198,596, or Rx. 481,382 over and above that shown in the Return.

5. The third criticism we have to make relates to the method adopted in dealing with the figures. Expenditure on Military operations, &c., is classed in the Return as exceptional; but it is a little confusing to find it also included under the ordinary headings of effective Expenditure in India, and indistinguishable, except as to that charged under Military operations in Afghanistan and Egypt, and Mobilisation, among such items as Regimental Pay, Commissariat Establishments, &c. The disadvantage of this is great. It renders extremely difficult, if not altogether impossible, any attempt to make comparisons between different years under special headings, while by producing large fluctuations in the charges under any given heading it tends to conceal the true state of the case, which is in almost every item a steady increase all along the line. For instance, in 1891–2 the return classes nearly Rx. 1,500,000 as exceptional Expenditure out of a total of Rx. 14,800,000 for effective Army Services in India, but it is impossible from the Return to find out under what headings of Expenditure this total of Rx. 1,500,000 should be distributed.

6. Nevertheless this is a very valuable Return so far as it goes, for it places on record in an accessible form, the cost of those vague things "Military operations" and "Scientific frontiers," showing on the Government of India's own admission that during the eight years ending 1892–3 these costly abstractions have consumed more than Rx. 11,000,000. But perhaps the most important fact which this return brings to light is the ease with which the burdens of military aggressions beyond the frontier are smothered under general headings of ordinary military expenditure. The process serves a double purpose; in the first place it conceals the cost of a forward policy, in the second place it affords the Government of India a convenient plea for discouraging comparisons founded on the official accounts.

7. Let us, however, examine the Government of India's War Bill for the 18 years covered by the Return; here it is:—[N.B.—The heading "Quetta" is to some extent misleading, as it imparts a merely local significance to what was in reality an Imperial matter. The Rx. 2,288,071 under this head was mainly, if not wholly, a charge for preparations against Russia—war preparations—in 1885.]

	Rx.
Afghanistan	18,190,132
Egypt	1,224,016
Burma	6,073,500
Quetta	2,288,071
Hazara	311,032
Lushai and Chin Hills	839,774
Sikkim	285,916
Manipur	323,407
Miranzai	196,536
Minor operations	326,553
Mobilisation	405,945
Camps of exercise	146,227
Total	Rx. 30,611,109

It is not generally known that during the eight years ending 1892–3, Rx. 11,032,781 were spent on expeditions and warlike preparations which were not deemed worthy of separate headings in the ordinary accounts as they come before the public scrutiny.

8. Now it is a noteworthy fact that apart from the Afghan and Egyptian wars practically the whole of these exceptional payments on account of these "operations" are concentrated into the eight years ending 1892–3, during which time the expenditure on this account was never less than Rx. 750,000 and was as high as nearly Rx. 3,000,000, averaging about Rx. 1,500,000 in each year. Moreover this is only a part of the truth which this return brings to light. For when we come to look at the figures more closely we find that the period of 18 years naturally divides itself into two periods, one of 10 years and the other into 8 years; and that the first and longer period was one of comparative stability in the normal military charges, exhibiting, as shown in the Return, an increase of only Rx. 1,250,000, of which considerably more than

Rx. 750,000 was due to increased cost of Exchange; while the second and shorter period exhibits, again according to the Return, the large increase of Rx. 6,500,000, of which less than Rx. 2,500,000 was due to increased cost of Exchange, leaving over Rx. 4,000,000 added Military expenditure in eight years.

9. Here, then, is the cardinal fact which this Return discloses. On a review of Military Expenditure for the 18 years ending 1892–3 we find that out of a total increase of 7¾ crores of rupees no less than 6½ crores took place in the last eight years, a period which exactly coincides with a chronic state of expeditionary activity upon the frontiers of British India, rendered possible, if not directly induced, by a large and, in the eyes of some of the highest authorities, absolutely unnecessary increase in the strength of the Army. This is what the Return discloses; but if we go a little further and give the true facts of the case by adding the increased expenditure on military works of all kinds and by ascertaining the net expenditure, the result is even more startling. In the 18 years the total net increase becomes Rx. 8,198,596, of which Rx. 7,106,511, or seven-eighths of the whole is crowded into the last eight years. The two following Tables show how these results are arrived at, the first giving the figures of the Return, the second showing the true increase in total net Military Expenditure:—

TABLE I.—INDIAN MILITARY EXPENDITURE (Gross Amounts shown in Parliamentary Return dated 8th June 1894) IN Rx. and £.

Gross Expenditure.	1875–6.	1884–5.	1892–3.	Increase 1st Period of 10 Years.	Increase 2nd Period of 8 Years.	Total Increase 18 Years.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
India - - -	11,725,264	12,023,629	15,589,091	298,365	3,565,462	3,863,827
England - - -	3,583,194	3,974,421	4,888,794	391,227	914,373	1,305,600
Exchange - - -	393,437	965,752	2,941,224	572,315	1,975,472	2,547,787
Total - -	15,701,895	16,963,802	23,419,109	1,261,907	6,455,307	7,717,214

TABLE II.—INDIAN MILITARY EXPENDITURE, SHOWING THAT ON ACCOUNT OF ALL MILITARY WORKS (Net Amounts taken from the Financial Statements of the Government of India, the figures for 1875–6 and 1884–5 being taken from Appendix 3 to the Financial Statement for 1886–7 when the Accounts were finally recast in their present form) IN Rx. and £.

Net Expenditure.	1875–6.	1884–5.	1892–3.	Increase 1st Period of 10 Years.	Increase 2nd Period of 8 Years.	Total Increase 18 Years.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
A. Army:						
India - - -	10,786,800	11,292,633	14,799,018	505,833	3,506,415	4,012,248
England - -	3,476,048	3,906,703	4,842,420	430,655	935,717	1,366,372
Exchange - -	381,672	949,297	2,913,323	567,625	1,964,026	2,531,651
Total - -	14,644,520	16,148,633	22,554,791	1,504,113	6,406,158	7,910,271
B. Military Works:						
India - - -	1,321,260	902,929	1,342,177	−418,331	439,248	20,917
England - -	—	5,071	166,960	5,071	161,889	166,960
Exchange - -	—	1,232	100,448	1,232	99,216	100,448
Total - -	1,321,260	909,232	1,609,585	−412,028	700,353	288,325
C. Total Military Expenditure:						
India - - -	12,108,060	12,195,562	16,141,225	87,502	3,945,663	4,033,165
England - -	3,476,048	3,911,774	5,009,380	435,726	1,097,606	1,533,332
Exchange - -	381,672	950,529	3,013,771	568,857	2,063,242	2,632,099
Grand Total -	15,965,780	17,057,865	24,164,376	1,092,085	7,106,511	8,198,596

10. Table II. shows us many things. Amongst others we may note the following:—

1. From 1876 to 1885 the cost of the Army in India increased by only half a crore of rupees, or at the average rate of 5 lakhs a year. From 1885 to 1893 it increased by 3½ crores, or at the average rate of 43¾ lakhs a year, a rate of increase nearly nine times as great.
2. From 1876 to 1885 the increased cost of the Army in India was almost counterbalanced by a diminished expenditure on military works, so that the increase in net military expenditure in India during the 10 years was only 8¾ lakhs of rupees; whereas from 1885 to 1893 the increased expenditure in the Army was supplemented by renewed activity on military works, with the result that during these latter eight years net military expenditure in India increased by nearly four crores of rupees, or at an average rate of 50 lakhs a year.
3. From 1876 to 1885 the sterling charges on account of military expenditure increased by 435,000*l.*; but from 1885 to 1893 they increased by 1,097,000*l.*, or an average annual increment in the first period of 43,500*l.*, and in the second period of 137,000*l.*, or a rate of increase more than three times as great.
4. We find that during the first and longer period the total net military expenditure in India and England increased by about Rx. 500,000, and that during the second and shorter period it increased by about Rx. 5,000,000 (including about Rx. 400,000 due to increased rupee pay of British troops), or just ten times as much in eight years of nominal peace as it had increased in 10 years which were disturbed by the Afghan and Egyptian wars. This means that in every one of the eight years after 1885 net Indian military expenditure increased on the average by more than the whole increase during the 10 years before 1885.

11. It would be unprofitable and futile to attempt to follow the Return in the "explanation" it offers of the admitted increase of Rx. 7,717,214 in Indian military expenditure. As we have explained in paragraph 5 the

Return is so made that it is impossible to ascertain the increases under particular headings apart from exceptional payments, which, of course, renders any such comparisons untrustworthy, and effectually prevents our checking or criticising in detail the explanation. We may, however, make a few general remarks thereon.

Out of the Rx. 7,717,214 the Return mentions specific increases under 10 different headings to account for Rx. 7,200,723, leaving Rx. 516,491, which is explained in a general way. Of this Rx. 7,200,723, the most noteworthy items given as follows:—

	Rx.	Rx.
Increase of troops—		
British - -	958,092	
Native - -	659,246	
		1,617,338
Loss by Exchange—		
On pay of British soldiers - -	592,000	
On sterling expenditure - - -	2,547,787	
		3,139,787
Increase in Home Pensions		829,822
		5,686,947

12. With regard to the loss by Exchange on sterling expenditure it must be borne in mind that this is not all due to a falling rupee, a large proportion of it being the loss by Exchange on new sterling charges. Thus in the 18 years the expenditure in England increased by 1,305,600*l.*, taking the figures of the return (which represents about 26¼% of the total amount given for 1892–3, consequently 26¼% of the total cost of Exchange in 1892–3 had nothing to do with a depreciated rupee so far as a comparison with the year 1875–6 is concerned. This means that the increased cost of Exchange is really made up as follows:—

Increased loss by Exchange on sterling expenditure—	
(*a.*) Due to depreciation of the rupee - - -	Rx. 1,761,010
(*b.*) Due to increased charges -	Rx. 786,777
	Rx. 2,547,787

13. The loss by Exchange on fresh sterling charges was naturally largely foreseen, and cannot be properly called a loss by Exchange. It was in addition to the burdens of the Indian taxpayer which ought not to have been incurred with a falling rupee; and in any case the fall in the exchange, so far as these additional charges are concerned, cannot be urged as the cause of the increased cost of making remittances to England. The same remarks apply to the amount stated to be loss by Exchange on the pay of British soldiers; a portion of this is due to the increase in the army and not primarily to the fall in Exchange.

14. Finally, here is the startling fact. During the eight years ending 1892–3 net Indian military expenditure increased by no less than Rx. 7,106,511, which, broadly speaking, may be accounted for as follows:—

EIGHT YEARS' INCREASE IN TOTAL NET INDIAN MILITARY EXPENDITURE (1884–5 to 1892–3).

	Rx.
Increase of troops - - -	1,617,338
Increased rupee pay to British soldiers (on account of low Exchange) - -	408,000
(N.B.—In 1884–5 this already amounted to Rx. 184,000.)	
Increased cost of Exchange on Home charges as in 1884–5 (*i.e.*, 3,911,774*l.*) due to the depreciation of the rupee	1,400,213
(N.B.—The amount of the Home charges in 1885 was about 78% of the Home charges in 1893, consequently about 22% of the total loss by Exchange in 1893 is the direct result of increased sterling expenditure and not primary accountable to Exchange.)	
Balance of increased expenditure due to augmented pensions, Burma, Frontier expeditions, added sterling charges, new military works, &c., &c. - - - - -	3,680,960
	Rx. 7,106,511

APPENDIX A.

Scope of the Reference.

National Liberal Club, London,
17th October 1895.

Dear Lord Welby,

1. I beg to place before you and other Members of the Commission a few notes about the scope and importance of its work.

2. The Reference consists of two parts. The first is: "To inquire into the Administration and Manage- "ment of the Military and Civil Expenditure in- "curred under the authority of the Secretary of "State for India in Council, or of the Government of "India."

3. This inquiry requires to ascertain whether the present system of the administration and management of expenditure, both here and in India, secures sufficiency and efficiency of services, and all other satisfactory results at an economical and affordable cost; whether there is any peculiar inherent defect, or what Mr. Bright called "fundamental error"* in this system, and the necessity or otherwise of every expenditure.

4. I shall deal with these items as briefly as possible, simply as suggestively and not exhaustively:—

5. *Sufficiency.*—The Duke of Devonshire (then, 1883, Lord Hartington) as Secretary of State for India has said†: "There can, in my opinion, be very little doubt "that India is insufficiently governed."

6. Sir William Hunter has said‡: "The constant "demand for improvement in the general executive "will require an increasing amount of administrative "labour."

7. *Efficiency.*—It stands to reason that when a country is "insufficiently governed," it cannot be efficiently governed, however competent each servant, high and low, may be. The Duke of Devonshire assumes as much in the words, "if the country is to be better governed." So does Sir William Hunter: "If we are to govern the Indian people efficiently "and cheaply." These words will be found in the fuller extracts given further on.

8. *Economical and Affordable Cost.*—The Duke of Devonshire has said§: "The Government of India "cannot afford to spend more than they do on the "administration of the country, and if the country is "to be better governed, that can only be done by the "employment of the best and most intelligent of the "Natives in the Service."

9. Sir William Hunter, after referring to the good work done by the Company, of the external and internal protection, has said‖: "But the good work thus "commenced has assumed such dimensions under the "Queen's Government of India that it can no longer "be carried on, or even supervised by imported "labour from England except at a cost which India "cannot sustain," . . . "forty years hereafter we "should have had an Indian Ireland multiplied fifty- "fold on our hands. The condition of things in India "compels the Government to enter on these problems. "Their solution and the constant demand for improve- "ment in the general executive, will require an in- "creasing amount of administrative labour. India "cannot afford to pay for that labour at the English "rates, which are the highest in the world, for official "service. But she can afford to pay for it at her own "native rates, which are perhaps the lowest in the "world for such employment." "You cannot work "with imported labour as cheaply as you can with "Native labour, and I regard the more extended em- "ployment of the Natives not only as an act of justice "but as a financial necessity." "The appointment "of a few Natives annually to the Covenanted Civil "Service will not solve the problem. . . . If we "are to govern the Indian people efficiently and "cheaply, we must govern them by means of them- "selves, and pay for the administration at the market "rates of Native labour."*

10. *Any Inherent Defect.*—Mr. Bright said†: "I must "say that it is my belief that if a country be found "possessing a most fertile soil, and capable of bearing "every variety of production, and that notwithstanding "the people are in a state of extreme destitution and "suffering, the chances are there is some fundamental "error in the government of that country."

11. I take an instance: suppose a European servant draws a salary of Rs. 1,000 a month. He uses a portion of this for all his wants of living, comfort, &c. All this consumption by him is at the deprivation of an Indian who would and could, under right and natural circumstances, occupy that position, and enjoy that provision. This is the first partial loss to India, as, at least, the services enjoyed by the European are rendered by Indians as they would have rendered to any Indian occupying the position. But whatever the European sends to England for his various wants, and whatever savings and pension he ultimately, on his retirement, carries away with him, is a complete drain out of the country, crippling her whole material condition and her capacity to meet all her wants—a dead loss of wealth together with the loss of work and wisdom—*i.e.*, the accumulated experience of his service. Besides, all State expenditure in this country is a dead loss to India.

12. This peculiar inherent evil or fundamental error in the present British Indian administration and management of expenditure, and its consequences have been foretold more than a hundred years ago by Sir John Shore (1787): "Whatever allowance we make for "the increased industry of the subjects of the State, "owing to the enhanced demand for the produce of it "(supposing the demand to be enhanced), there is "reason to conclude that the benefits are more than "counterbalanced by evils inseparable from the system "of a remote foreign dominion."‡ And it is significantly remarkable that the same inherent evil in the present system of administration and management of expenditure, has been, after nearly a hundred years, confirmed by a Secretary of State for India. Lord Randolph Churchill has said in a letter to the Treasury (1886)§: "The position of India in relation to taxation "and the sources of public revenue is very peculiar, "not merely from the habits of the people and their "strong aversion to change, which is more specially "exhibited to new forms of taxation, but likewise from "the character of the Government which is in the "hands of foreigners, who hold all the principal adminis- "trative offices and form so large a part of the army. "The impatience of the new taxation which will have to "be borne wholly as a consequence of the foreign rule "imposed on the country, and virtually to meet addi- "tions to charges arising outside of the country, would "constitute a political danger, the real magnitude of "which, it is to be feared, is not at all appreciated by "persons who have no knowledge of or concern in the "Government of India, but which those responsible "for that Government have long regarded as of the "most serious order."

13. Lord Salisbury, as Secretary of State for India, put the same inherent evil in this manner: "The injury "is exaggerated in the case of India, where so much of "the revenue is exported without a direct equivalent.' And he indicates the character of the present system of the administration and management of expenditure as being that "India must be bled."‖ I need not say more upon this aspect of the inherent evil of the present system of expenditure.

§ Parliamentary Return [C. 4868], 1886.
‖ Parliamentary Return [C. 3036—1], 1881, p. 144. Minute, 29/4/75.

14. "The necessity or otherwise" of any expenditure is a necessary preliminary for its proper administration and management, so as to secure all I have indicated above. You incidentally instanced at the last meeting that all expenditure for the collection of revenue will have to be considered—and so, in fact, every expenditure in both countries will have its administration, management, and necessity, to be considered.

---

15. The second part of the reference is "the apportionment of charge between the Governments of the "United Kingdom and of India for purposes in which "both are interested."

16. What we shall have to do is, first to ascetain all the purposes in which both countries are interested, by examining every charge in them, and how far each of them is respectively interested therein.

17. In my opinion there are some charges in which the United Kingdom is almost wholly or wholly interested. But any such cases will be dealt with as they arise.

18. After ascertaining such purposes and the extent of the interest of each country, the next thing to do would be to ascertain the comparative capacity of each country, so as to fix the right apportionment according to such extent of interest and such capacity.

19. I shall just state here what has been already admitted to be the comparative capacity by high authorities. Lord Cromer (then Major Baring) as the Finance Minister of India, has said in his speech on the Budget (1882):—"In England the average income per "head of population was 33*l.* per head; in France it "was 23*l.*: in Turkey, which was the poorest country "in Europe, it was 4*l.* per head." I may add here that Mulhall gives for Russia above 9*l.* per head. About India Lord Cromer says: "It has been calculated that "the average income per head of population in India "is not more than Rs. 27 a year; and though I am "not prepared to pledge myself to the absolute "accuracy of a calculation of this sort, it is sufficiently "accurate to justify the conclusion that the taxpaying "community is exceedingly poor. To derive any very "large increase of revenue from so poor a population "as this is obviously impossible, and if it were possible "would be unjustifiable." "But he thought it was "quite sufficient to show the extreme poverty of "the mass of the people." I think the principles of the calculation for India and the other countries are somewhat different; but that, if necessary, would be considered at the right time. For such large purposes with which the Commission has to deal, these figures might be considered enough for guidance. I then asked Lord Cromer to give me the details of his calculations, as my calculations, which, I think, were the very first of their kind for India, had made out only Rs. 20 per head per annum. Though Rs. 27 or Rs. 20 can make but very small difference in the conclusion of "extreme poverty of the mass of the people," still to those "extremely poor" people whose average is so small, and even that average cannot be available to every individual of them, the difference of so much as Rs. 7, or nearly 33 per cent., is a matter of much concern. Lord Cromer himself says: "He would ask "honourable members to think what Rs. 27 per "annum was to support a person, and then he would "ask whether a few annas was nothing to such poor "people."

20. Unfortunately Lord Cromer refused to give me his calculations. These calculations were, I am informed, prepared by Sir David Barbour, and the results embodied in a note. I think the Commission ought to have this note, and details of calculations, and also similar calculations, say for the last five years or longer, to the latest day practicable. This will enable the Commission to form a definite opinion of the comparative capacity, as well as of any progress or otherwise in the condition of the people, and the average annual production of the country.

21. The only one other authority on the point of capacity which I would now give is that of Sir Henry Fowler as Secretary of State for India. He said*: "Now as to the revenue, I think the figures are very "instructive. Whereas in England the taxation is "2*l.* 11*s.* 8*d.* per head; in Scotland, 2*l.* 8*s.* 1*d.* per "head; and in Ireland, 1*l.* 12*s.* 5*d.* per head; the "Budget which I shall present to-morrow will show "that the taxation per head in India is something like "2*s.* 6*d.*, or one-twentieth the taxation of the United "Kingdom and one-thirteenth of that of Ireland." And even this very small capacity of 2*s.* 6*d.* per head is most burdensome and oppressive is admitted on all hands, and the authorities are at their wits' end what to do to squeeze out more. So far back as 1870,* Mr. Gladstone admitted about India as a country "too much burdened," and in 1893,† he said: "The Expen- "diture of India, and especially the Military Expendi- "ture, is alarming."

22. Sir David Barbour said‡: "The financial position "of the Government of India at the present moment "is such as to give cause for apprehension." "The "prospects of the future are disheartening."§

23. Lord Lansdowne, as Viceroy, said‖: "We should "be driven to lay before the Council so discouraging "an account of our Finances, and to add the admis- "sion, that, for the present, it is beyond our power to "describe the means by which we can hope to extricate "ourselves from the difficulties and embarrassments "which surround us." "My hon. friend is, I am "afraid, but too well justified in regarding our position "with grave apprehension." "We have to consider "not so much the years which are past and gone as "those which are immediately ahead of us, and if we "look forward to these, there can be no doubt that we "have cause for serious alarm."¶

24. Many such confessions can be quoted. And now, when India is groaning under such intolerable heavy expenditure, and for the relief of which, indeed, this very Royal Commission has come into existence, the utmost that can be squeezed out of it to meet such expenditure is 2*s.* 6*d.* per head. Thus, by the statement of Sir H. Fowler, as Secretary of State for India, the relative capacity of poor India at the utmost pressure is only one-twentieth of the capacity of the prosperous and wealthy United Kingdom. But there is still something worse. When the actual pressure of both taxations as compared with the respective means of the two countries is considered, it will be found that the pressure of taxation on "extremely poor" India is much more heavy and oppressive than that on the most wealthy country of England.

25. Even admitting for the present the overestimate of Lord Cromer of Rs. 27 income, and the underestimate of Sir H. Fowler about 2*s.* 6*d.* revenue raised, the pressure of percentage of the Indian revenue, as compared with India's means of paying, is even then slightly higher than that of the United Kingdom. But if my estimates of means and revenues be found correct, the Indian pressure or percentage will be found to be 50 or more per cent. heavier than that on the United Kingdom.

26. You have noticed a similar fallacy of regarding a smaller amount to be necessarily a lighter tax, in the Irish Royal Commission.

27. "2613.** You went on to make rather a striking comparison between the weight of taxation in Ireland and Great Britain, and I think you took the years 1841 to 1881. In answer to Mr. Sexton, taking it head by head, the incidence of taxation were comparatively very light, I may say, in 1841, and very heavy, comparatively in 1881?—Yes.

28. "2614. I would ask you, does not that want some qualification? If you take alone without qualification the incidence of taxation upon people, leaving out of view entirely the fact whether the people have become in the interval poorer or richer, will you not get to a wrong conclusion. Let me give you an instance of what I mean. I will take such a place as the Colony of Victoria. Before the gold discoveries you had there a small, sparse, squatting population, probably very little administered, and paying very few taxes. Probably in such a case you would find out that the incidence of taxation at that time was extremely small?—Yes.

29. "2615. But take it 30 or 40 years later, when there was a greater population, and what I am now dwelling upon, an improvement in wealth, you would find out that the incidence of taxation was very much

** Parl. Return [C. 7720-1], 1895. Lord Welby.

heavier per head, for instance, perhaps 5*s.* per head at first, and perhaps 2*l.* in the second, but it would be wrong to draw the conclusion from that fact that the individuals were relatively more heavily taxed at the later period than the first. Would it not?"

30. Similarly, it would be wrong to draw the conclusion that the individuals of England were more heavily taxed than those of India, because the average of the former was 2*l.* 11*s.* 8*d.* and that of the latter was 2*s.* 6*d.* An elephant may carry a ton with ease, but an ant will be crushed by a quarter ounce.

31. Not only is India more heavily taxed than England to supply its expenditure, but there is another additional destructive circumstance against India. The whole British taxation of 2*l.* 11*s.* 8*d.* per head returns entirely to the *people themselves* from whom it is raised. But the 2*s.* 6*d.* so obtained out of the poverty-stricken Indians does not all return to them. No wonder that with such a destructive and unnatural system of "the "administration and management of expenditure" millions perish by famine and scores of millions or—as Lord Lawrence said (1864)—"the mass of the people "enjoy only a scanty subsistence." Again in 1873, before the Select Committee of the House of Commons, Lord Lawrence said: "The mass of the people of India "are so miserably poor that they have barely the "means of subsistence. It is as much as a man can "do to feed his family, or half-feed them, let alone "spending money on what may be called luxuries or "conveniences." I was present when this evidence was given, and I then noted down these words. I think they are omitted from the published report, I do not know why and by whom. In considering, therefore, the administration and management of expenditure, and the apportionment of charge for common purposes, all such circumstances are most vital elements, the importance of the attention to which cannot be over-estimated.

32. The "Times" of 2nd July last, in its article on "Indian Affairs," estimates the extent and importance of the work of the Commission as follows: "Great "Britain is anxious to deal fairly with India. If it "should appear that India has been saddled with "charges which the British taxpayer should have "borne, the British taxpayer will not hesitate to do "his duty. At present we are in the unsatisfactory "position which allows of injurious aspersions being "made on the justice and good faith of the British "nation, without having the means of knowing whether "the accusations are true or false. Those accusations "have been brought forward in the House of Lords, "in the House of Commons, and in a hundred news-"papers, pamphlets, and memorials in India. Individual "experts of equal authority take opposite sides in "regard to them. Any curtailment of the scope of "the Royal Commission's inquiry which might debar "reasonable men from coming to a conclusion on "these questions would be viewed with disappoint-"ment in England, and with deep dissatisfaction "throughout India."

33. Now what are the "accusations" and "injurious aspersions" on the justice and good faith of the British nation? Here are some statements by high authorities as to the objects and results of the present system of the administration and management of expenditure of British Indian revenues.

34. Macaulay pointed out: "That would, indeed, be "a doting wisdom, which, in order that India might "remain a dependency, would make it a useless and "costly dependency—which would keep 100 millions "of men from being our customers in order that they "might continue to be our slaves."*

35. Lord Salisbury says: "India must be bled."†

36. Mr. Bright says: "The cultivators of the soil, "the great body of the population of India, are in a "condition of great impoverishment, of great dejec-"tion, and of great suffering."‡

37. "We must in future have India governed, not for a handful of Englishmen, not for that Civil Service whose praises are so constantly sounded in this House. You may govern India, if you like, for the good of England, but the good of England must come through the channels of the good of India. There are but two modes of gaining anything by our connexion with India. The one is by plundering the people of India, and the other by trading with them. I prefer to do by trading with them. But in order that England may become rich by trading with India, India itself must become rich."*

38. "I say that a Government put over 250,000,000 of people, which has levied taxes till it can levy no more, which spends all that it can levy, and which has borrowed 100,000,000*l.* more than all that it can levy —I say a Government like that has some fatal defect, which, at some not distant time, must bring disaster and humiliation to the Government and to the people on whose behalf it rules."†

39. Mr. Fawcett said: "Lord Metcalf had well said "that the bane of our system was that the advantages "were reaped by one class and the work was done by "another."‡

40. Sir George Wingate§ says with regard to the present system of expenditure: "Taxes spent in the "country from which they are raised are totally "different in their effect from taxes raised in one "country and spent in another. In the former case "the taxes collected from the population . . . . are "again returned to the industrious classes. . . . . "But the case is wholly different when the taxes are "not spent in the country from which they are raised. ". . . . . They constitute . . . . . an absolute "loss and extinction of the whole amount withdrawn "from the taxed country, ... might as well "be thrown into the sea. . . . . Such is the nature "of the tribute we have so long exacted from India "." . . . From this explanation some faint con-"ception may be formed of the cruel, crushing effect "of the tribute upon India." "The Indian tribute, "whether weighed in the scales of justice, or viewed "in the light of our own interest, will be found to be "at variance with humanity, with common sense, and "with the received maxims of economic science.

41. Lord Lawrence, Lord Cromer, Sir Auckland Colvin, and others declare the extreme poverty of British India, and that, after a hundred years of the administration of expenditure by the most highly-praised and most highly-paid service in the world—by administrators drawn from the same class which serves in England.

42. Sir John Shore, as already stated, predicted a hundred years ago that under the present system the benefits are more than counterbalanced by its evils.

43. A Committee of five members‖ of the Council of the Secretary of State for India said, in 1860, that the British Government was exposed to the charge of keeping promise to the ear and breaking it the hope; and Lord Lytton¶ said, in 1878, the same, with greater emphasis, in a Minute which it is desirable the Commission should have.

44. Lord Lytton said**: "The Act of Parliament is "so undefined, and indefinite obligations on the part "of the Government of India towards its Native "subjects are so obviously dangerous, that no sooner "was the Act passed than the Government began to "devise means for practically evading the fulfilment "of it. Under the terms of the Act, which are studied "and laid to heart by that increasing class of edu-"cated Natives, whose development the Government "encourages without being able to satisfy the aspi-"rations of its existing members, every such Native, "if once admitted to Government employment in posts "previously reserved to the covenanted service, is "entitled to expect and claim appointment in the "fair course of promotion to the highest post in that "service. We all know that these claims and expec-"tations never can or will be fulfilled. We have had "to choose between prohibiting them and cheating "them, and we have chosen the least straightforward "course. The application to Natives of the competi-"tive examination system—as conducted in England— "and the recent reduction in the age at which candi-"dates can compete, are all so many deliberate and "transparent subterfuges for stultifying the Act, and

§ "A Few Words on our Financial Relations with India." (London, Richardson Bros., 1859.)
‖ Sir J. P. Willoughby, Mr. Mangles, Mr. Arbuthnot, Mr. MacNaughton, Sir E. Perry.
¶ Report of the first Indian National Congress, p. 30.
** I believe this to be in a Minute 30/5/1878 (?) to which the Govern. ment of India's Despatch of 2/5/1878 refers. Parl. Return [C. 2376, 1870. p. 15].

" reducing it to a dead letter. Since I am writing " confidentially, I do not hesitate to say that both the " Governments of England and of India appear to me, " up to the present moment, unable to answer satis- " factorily the charge of having taken every means in " their power of breaking to the heart the words of " promise they had uttered to the ear."

45. The Duke of Argyll said:* " I must say that we " have not fulfilled our duty or the promises and " engagements which we have made."

46. When Lord Northbrook pleaded† (1883) the Act of Parliament of 1833, the Court of Directors' explanatory despatch and the great and solemn proclamation of 1858, Lord Salisbury in reply said, " My Lords, I " do not see what is the use of all this political " hypocrisy."‡

47. The Duke of Devonshire pointed out that it would not be wise to tell a patriotic Native that the Indians shall never have any chance " except by their " getting rid in the first instance of their European " rulers."§

48. From the beginning of British connexion with India up to the present day, India has been made to pay for every possible kind of expenditure for the acquisition and maintenance of British rule, and Britain has never contributed her fair share (except a small portion on few rare occasions, such as the last Afghan War) for all the great benefits it has always derived from all such expenditure from the revenues of India. And so this is a part of the important mission of this Commission, to justly apportion charge for purposes in which both countries are interested.

49. Such are some of the " accusations " and " in- " jurious aspersions being made on the justice and good " faith of the British nation," while truly " Great " Britain is anxious to deal fairly with India." Justly does the " Times " conclude that " any curtailment of " the scope of the Royal Commission's inquiry which " might debar reasonable men from coming to a con- " clusion on these questions, would be viewed with dis- " appointment in England and with deep dissatisfaction " throughout India."

50. The " Times " is further justified when Sir Henry Fowler himself complained of " a very strong indict- " ment of the British Government of India " having been " brought before the House and the country."* And it is this indictment which has led to the inquiry.

51. Sir Louis Mallet ends his Minute of 3rd February 1875, on Indian Land Revenue, with words which deserve attention as particularly applicable to the administration, management, and necessity of Indian expenditure.† He says: " By a perpetual inter- " ference with the operation of laws which our own " rule in India has set in motion, and which I venture " to think are essential to success—by a constant habit " of palliating symptoms instead of grappling with " disease—may we not be leaving to those who come " after a task so aggravated by our neglect or timidity " that what is difficult for us may be impossible for " them?"

52. I understand that every witness that comes before the Commission will not be considered as of any party, or to support this or that side, but as a witness of the Commission coming for the simple object of helping the Commission in finding out the actual whole truth of every question under consideration.

53. I shall esteem it a favour if at the next meeting you will be so good as to place this letter before the Commission. I may mention that I am sending a copy to every member of the Commission, in order that they may be made acquainted beforehand with its contents.

Yours truly,
DADABHAI NAOROJI.

APPENDIX B.

CORRESPONDENCE WITH THE INDIA OFFICE REGARDING STATISTICS SHOWING THE POVERTY OF THE INDIAN MASSES.

(Figures and Statements showing the extreme Poverty of the Indian Masses, analysed by the India Office, with Mr. Naoroji's rejoinder).

National Liberal Club,
DEAR LORD WELBY, 4th December 1895.

1. REFERRING to the first part of the reference to our Commission, it it necessary to know—as one of the most important tests—the results of the present system of the administration and management of expenditure in the moral and material condition of India. With this view Parliament itself enacted (1858) 21 & 22 Vict. c. 106. s. liii.) to lay before it "a statement prepared "from detailed reports from each Presidency and "District in India, in such form as shall best exhibit "the moral and material progress and condition of "India in each such Presidency."

2. On some aspects of this branch of the inquiry, viz., results, I beg to place before you and the Commission, my correspondence with the Secretary of State for India. In my first letter, para. 6, I have referred to and forwarded with it, some papers read by me in 1876. These papers are on the subject of the poverty of India.

3. The reply of the Secretary of State for India refers to an enclosure in it of statistics. These statistics are not printed in the enclosed book. I, therefore, send herewith the only copy I have.

4. I shall feel much obliged by your kindly placing this letter and the enclosures before the Commission at the next meeting. In the meantime I shall send a a copy of this letter and the book to every member of the Commission.

Yours truly,
DADABHAI NAOROJI.

THE CONDITION OF INDIA.

CORRESPONDENCE with the SECRETARY OF STATE FOR INDIA, by DADABHAI NAOROJI, Esq.

To the Right Hon. the MARQUIS OF HARTINGTON, the Secretary of State for India, India Office.

32, Great St. Helens, London,
MY LORD, 24th May 1880.

5. I BEG to submit a series of tables, working out in detail the total production of the Punjab for the year 1876-7.

6. My objects in troubling your Lordship are as follows:—

In 1876 I read some papers on the "Poverty of India" before the Bombay Branch of the East India Association. These papers are published in the *Journals* of the Association, and I send herewith a copy (Vol. IX., pages 236 and 352; Vol. X., pages 83 and 133). At pages 237-9 I have explained how the mode of taking the averages adopted in the various Administration Reports of India was quite wrong. When preparing my papers on the "Poverty of India," I had not sufficient time to work out all the averages for all the provinces in detail. I have now worked out in detail the averages of all the production tables of the Administration Report of the Punjab for 1876-7. I request now that the different Governments in India may be directed to supply their tables of production as fully as are prescribed by the Statistical Committee of Calcutta, that the averages may be correctly taken, as I have done in the enclosed tables, and that, in addition to the tables prescribed, may also be given a summary of the total agricultural production, like the one given in my tables, a summary of the whole production (agricultural, manufactures, and mines) as in my tables, and a table of the absolute necessaries of life for an agricultural labourer, as in my tables.

7. It is only when such complete information is furnished by the Indian authorities that any true conception can be formed of the actual material condition of India from year to year, and our British rulers can only then clearly see, and grapple with effectually, the important problem of the material condition of India, and the best means of improving it.

8. I have also to solicit your Lordship to submit my tables to the Statistical Department of the India Office, and to direct it to oblige me by pointing out any mistakes of facts or figures there may be in them.

9. In troubling your Lordship with these requests, I have no other object than to help, as far as my humble opportunities go, to arrive at the real truth of the actual material condition of India; for it is only natural that without the knowledge of the whole truth on this most important subject, all efforts, however well and benevolently intentioned, must generally result in disappointment and failures.

10. I also earnestly desire and solicit that your Lordship will kindly take into your consideration the representations I have urged in my papers on the "Poverty of India."

I remain, &c.
DADABHAI NAOROJI.

India Office, S.W.,
SIR, 9th August 1880.

11. I AM directed by the Secretary of State for India to acknowledge the receipt of your letter of the 24th May, enclosing a table of statistics relating to the value of the production of the Punjab for the year 1876-7.

12. In reply, I am to thank you for your communication, but with reference to your request that the several Governments in India may be directed to supply similar statistics of production, I am to remark that as regards the important province of Bengal, means do not exist of supplying the information you desire; whilst as regards those provinces for which such information does already exist, it appears very questionable whether the results given, owing to the absence of any sufficient machinery for their preparation, can be relied upon as trustworthy. Your letter and its enclosure have, however, been sent out to the Government of India.

13. I enclose herewith for your information copy of a memorandum upon your letter, and also copies of statistics similar to those compiled by yourself, which have been recently prepared in this Office.

I am, &c.,
Mr. Dadabhai Naoroji. LOUIS MALLET.

(Enclosure.)

MEMORANDUM on a LETTER from Mr. DADABHAI NAOROJI, dated 24th May 1880.

14. In this letter Mr. Dadabhai Naoroji requests that the several Governments in India may be instructed to furnish statistical information regarding the agricultural, mining, and manufacturing produce of their respective administrations, and that a summary may also be given, similar to one which he has prepared for the Punjab, and which he submits with his letter, in order that "a true conception may be formed of the actual material condition of India from year to year." He also asks that his tables may be submitted to the Statistical Department of the India Office, and that any mistakes of facts or figures may be pointed out to him.

15. In January, 1879, I made calculations for the greater part of India, similar to those made by Mr. Dadabhai Naoroji for the Punjab; copies of these are attached.* I do not, however, put much faith in the

* I have not inserted these tables, as those concerning Punjab are nearly similar to mine.

accuracy of the figures from which these calculations are made. The agricultural statistics of India, as they are published, can hardly be very reliable, as they are based upon averages, each average referring to a very large area, in which there may be, and probably are, many variations of conditions and circumstances; whilst in parts, such as the large and wealthy Presidency of Bengal, no statistics of agricultural produce are available.

16. In examining Mr. Dadabhai Naoroji's paper, it appears that in his calculations he has omitted to make any allowance for the value of straw, and he has made no attempt to estimate the value of the increase of agricultural stock, but he has added an arbitrary sum for the latter and for other omitted items.

17. Having, however, arrived at some figures supposed to represent the value of the produce of a certain district, the question arises as to how these figures should be applied in order to show the comparative prosperity or otherwise of the people in that district. Mr. Dadabhai has adopted the principle of equally apportioning the value of agricultural produce and manufactures, as ascertained by him from the statistics available, amongst the whole population, without distinguishing how many are agriculturists, how many mechanics, and how many belong to other trades and professions, or possess property, and whose incomes, therefore, are derived directly neither from agriculture nor from manufactures. Thus he omits all reference to railway wealth, Government stock, house property, profits of trade, salaries, pensions, non-agricultural wages, professional incomes, and returns to investments, and all other sources from which a man who does not grow food himself, may obtain the means of purchasing it.

18. From the Census Report of 1871, it appears that, out of a total population of 17,611,498 under British administration in the Punjab, 9,689,650 are returned as agriculturists, 1,776,786 male adults, equivalent to about 4,500,000 population, as engaged in industrial occupations; thus leaving a population of nearly 3,500,000 directly dependent neither upon agriculture, manufactures, nor mining, and who must therefore derive their means of subsistence from other sources.

19, Mr. Dadabhai makes out the total value of the agricultural produce of the Punjab to be Rs. 27,69,71,976,* and that from manufactures and mines Rs. 4,11,40,058. To this he adds, to meet any omissions, a further margin of 3½ crores, making the whole produce of the Punjab 35¼ crores of rupees, "which, for a population of 17,600,000, gives Rs. 20 "per head per annum at the outside for the year "1876–7," to which year the figures he has taken refer. At pages 151, 152, of his tables he shows that the cost of absolute necessaries of life of an agricultural labourer is Rs. 34 per annum, but he omits to explain how, under these circumstances, the people of the Punjab managed to live, and leaves the reader to draw his own conclusions how, with only Rs. 20 per annum, he can provide for an expenditure of Rs. 34.

20. Adopting Mr. Dadabhai's figures, with regard to which I will take no exception, I think it may be shown, by another process of reasoning than that which he adopts, that they point to the Punjab agriculturist being in good condition of prosperity rather than the reverse. First, I think it must be admitted that the agricultural produce belongs in the first instance to the man who grows it. From it he and his family will first provide themselves with food, and the remainder he will sell, either for money to enable him to pay his assessment, &c., or in barter for clothing and other necessaries, whilst a part will go to pay wages for labourers and others dependent upon him.

21. Now, if these premises be admitted, it may be shown that, allowing three-fourths of a seer (1½ lb.) of grain per head per day, according to the calculations given by Mr. A. P. Macdonnel in his "Food Grain Supply and Famine Relief in Behar and Bengal" (p. 8), or, say, 550 lbs. per annum per head of agricultural population, and allowing 6½ per cent. of the gross produce for seed, an equal quantity for cattle-feed, and 2 per cent. for waste, or together 15 per cent., the value of the surplus agricultural produce is sufficient to yield Rs. 24 per head per annum for other requirements, and Rs. 22 per head after deduction of the land revenue demand, or, say, 8*l.* 16*s.* per annum per family of four persons.

22. The other population of the Punjab (omitting Native States) numbers 7,921,848, for whom the remaining food grain grown, after allowing for the food of agriculturists, cattle, seed, waste, &c., amounting to 5,401,151,059 lbs., is sufficient to provide them with an average rate of over 600 lbs. per head per annum. To supply them with 550 lbs. per head per annum would take 4,357,016,400 lbs., leaving a surplus of 1,044,134,659 lbs., or over 450,000 tons for export. The food grain grown in the Punjab is, therefore, apart from other food supplies, more than sufficient to feed the whole population, and it is well known that considerable quantities of wheat are exported thence.

23. The numbers engaged in manufactures in the Punjab I have stated to be about 4,500,000. The net value of manufactures, after deducting the value of raw material, is given by Mr. Dadabhai as only Rs. 4,08,40,058, or about Rs. 9 per head per annum of the population engaged therein. This, I think, sufficiently shows that there must be some error in the value given.

F. C. DANVERS.

India Office, 28th June 1880.

32, Great St. Helens, London,

SIR, 12th August 1880.

24. I HAVE received your letter of the 9th inst., and I tender my sincere thanks to his Lordship the Secretary of State for India for the kind attention he has given to my letter of the 24th May last, and for forwarding it to the Government of India.

25. The necessity for having correct information about the material condition of India is so very great, both to rulers and the subjects, that I venture to say that any reasonable and well-directed expenditure for this object would be productive of great good; and that, therefore, the Government of India may be requested to improve the existing machinery as much as it may be needed to obtain from the different Governments the tables of production and consumption with as much approximate accuracy as possible. The tables, even so far as are at present supplied, are useful, and I cannot think that it would be difficult for the different Governments to improve the existing arrangements, so as to get sufficiently approximate results for the guidance of the legislation and administration of the country with the greatest practical good, and without the commission of such mistakes as are unavoidably made in the ignorance of the actual state and wants of the country.

26. For Bengal, also, I hope some means may be devised to obtain such information.*

27. It does not remain for me now, with the evidence of your present letter and its enclosures before me, to impress upon the India Office the great importance of these statistics; for I find that when I commenced working at these tables, about the beginning of last year, the India Office had already got these very tables prepared for their use, and I cannot but express my gladness to find such to be the case.

28. I am sorry I am not at present well able to give such attention to the enclosures of your letter as I desire, as I am not in good health and am under medical treatment.

I remain, &c.

Sir Louis Mallet, DADABHAI NAOROJI.
Under Secretary of State for India.

32, Great St. Helens, London,

SIR, 13th September 1880.

29. IN continuation of my letter of the 12th ult., I now beg to submit, for the consideration of his Lordship the Secretary of State for India, the accompanying memorandum on Mr. Danver's two papers of 4th January 1879, and 28th June 1880, and I hope his Lordship will give it the same kind attention that was shown to my former letter.

30. I request that copy of this letter and memo. be sent to the Indian Government, as I think that views similar to those of Mr. Danvers more or less prevail in India also.

* There was an error in my table; this amount should be Rs. 27,72,56,263.—D. N.

* For Bengal also some tables are being supplied (*see* App. C., para. 15).

31. I shall esteem it a great favour if it is pointed out to me that I am mistaken in any of my views now put forth. My only desire is to find out the truth, and that India may receive and enjoy the blessings and benefits which the British nation is really capable of bestowing on her, if once British statesmen give their usual conscientious attention to her concerns.

I remain, &c.

Sir Louis Mallet, DADABHAI NAOROJI.
Under Secretary of State for India.

MEMORANDUM on Mr. DANVER'S PAPERS of 28th June 1880, and 4th January 1879.

32. Mr. Danvers says: "In examining Mr. Dadabhai "Naoroji's paper, it appears that in his calculations "he has omitted to make any allowance for the value "of straw, and he has made no attempt to estimate "the value of the increase of agricultural stock, but "he has added an arbitrary sum for the latter and for "other omitted items."

33. I have omitted not only straw, but also grass, cotton seed, and any fodder or other food for animals which I have not taken in my tables; and further, I should also omit all that portion of the inferior grains which I have shown in my table—of about 30 per cent. of the whole acreage of grains and which is grown for the food of animals.

34. The reason is this: the principle to be considered is—first, either the whole *gross* annual production of the country may be taken (including straw, grass, &c., &c.), and from this *gross* production, before apportioning it per head of human population, a deduction should be made for the portion required for all the stock, which, in the case of the Punjab, are above 7,000,000 large cattle and near 4,000,000 sheep and goats; or, second, all straw, grass, and every production raised for animal food should be left out of calculation, and only the rest of the production which is and can be turned to human use should be apportioned among the human population. Mr. Danvers may adopt either of the above two methods, whichever he may consider would give most correctly the actual production for human use. It would not be correct to include the produce raised for animal use, and then not to make the necessary deduction for such use. I would put this matter in another form.

35. Suppose on the 1st of January 1880, we have in India a certain amount of material wealth in all its various forms, and we take complete stock of it; that during the year following, the country works in all its varieties of ways, consumes for all its various human, animal, and instrumental wants from the store existing on the 1st January 1880; and that after the end of the year, on 1st January 1881, we gather together or take stock of every possible kind of material production (agricultural, mineral, and manufacturing, and addition from profits of foreign trade) during the year. This production during the year will have to meet all the wants of the next year. If this production prove less than what would be wanted for the next year, then there would be a deficiency, and either the original wealth or capital of the country will have to be drawn upon, or the people will be so much less supplied with their wants in some shape or other; in either way showing a diminution of prosperity, both as property and capacity. If, on the other hand, the whole material production of the year prove more than what would be necessary for the next year for all ordinary or usual wants, then a surplus would accrue, and so far, in some permanent form, add to the capital of the country and increase its prosperity.

36. I request, therefore, that Mr. Danvers may be asked to work out the total production and wants of India for, say, the last dozen years, on correct principles of calculation, from such materials as are already available at the India Office, supplementing such information as may be deficient by asking from India and from experienced retired officials who are now in this country. Such tables will show what the actual material condition of the country is, and whether it is increasing or diminishing in prosperity. Unless such information is obtained, the Government of the country will be blind and in the dark, and cannot but result in misery to India, and discredit to the rulers, their best intentions notwithstanding. It is hopeless to expect an intelligent government without the aid of such important information annually.

37. I am glad Mr. Danvers has made an estimate of the annual increase of agricultural stock in his paper of 4th January 1879, and as I have to say something upon this paper further on, I do not say anything here upon the subject of stock.

38. Mr. Danvers says: "Mr. Dadabhai has adopted "the principle of equally apportioning the value of "agricultural produce and manufactures, as ascer-"tained by him from the statistics available, amongst "the whole population, without distinguishing how "many are agriculturists, how many mechanics, and "how many belong to other trades or professions, or "possess property, and whose incomes, therefore, are "derived directly neither from agriculture nor from "manufactures. Thus he omits all reference to "railway wealth, Government stock, house property, "profits of trade, salaries, pensions, non-agricultural "wages, professional incomes, and returns to invest-"ments, and all other sources from which a man who "does not grow food himself may obtain the means of "purchasing it.

39. "From the Census Report of 1871 it appears that, "out of a total population of 17,611,498 under British "administration in the Punjab, 9,689,650 are returned "as agriculturists, 1,776,786 adult males, equivalent "to about 4,500,000 of population, as engaged in "industrial occupations, thus leaving a population of "nearly 3,500,000 directly dependent neither upon "agriculture, manufactures, nor mining, and who "must therefore derive their means of subsistence "from other sources."

40. I take each of the items:—

1st. *Railway Wealth.*—I am not sure what Mr. Danvers means by "railway wealth." In his paper of 4th January 1879 he regards railways as "enhancing "the value of food grains and adding, *pro tanto*, to "the wealth of the districts through which they run." If he means in the above extract, by "railway wealth," something different, then that needs to be explained. In the meantime, I adopt the interpretation as I make out with the aid of his paper of 4th January 1879.

41. Suppose 100 maunds of wheat exist in the Punjab, and its cost to the producer, say, is Rs. 100—suppose that this wheat is carried by railway to Bombay, and its value at Bombay is Rs. 125, does Mr. Danvers mean that this circumstance has *added* Rs. 25, or anything at all, to the existing wealth of India?

42. If so, then no such thing has happened. The 100 maunds of wheat existed in the Punjab, and the Rs. 125 existed in Bombay, before the wheat was moved an inch. After the movement the only result has been change of hands. The wheat has gone to Bombay, and the Rs. 125 are distributed between the owner at Punjab, who receives Rs. 100, and the railway owners and workers, and the merchant who carried through the transaction, who between them divide the Rs. 25. By the mere fact of the removal of the wheat from the Punjab to Bombay not a single grain of wheat nor a single pie of money is *added* to what already existed in India before the wheat was touched. Such "railway wealth" does not exist. If the mere movement of produce can *add* to the existing wealth, India can become rich in no time. All it would have to do is to go on moving its produce continually all over India, all the year round, and under the magic wheels of the train, wealth will go on springing till the land will not suffice to hold it. But there is no royal (even railway) road to material wealth. It must be produced from the materials of the earth till the great discovery is made of converting motion into matter. I should not be misunderstood. I am not discussing here the benefits of railways, whatever they are, to any country or to India. To show that the people of India are not deriving the usual benefits of railways, I give hereafter a short separate section. Here it is enough for me to state that railways are, in a way, an indirect means of increasing the material production of any country, but that, whatever that "means" is, its result is fully and completely included in the estimate of the actual annual production of the country, and that there is nothing more to be *added* to such actual material production of the year.

43. 2nd. *Government Stock.*—Suppose I hold a lakh of rupees of Government 4 per cent. rupee paper. It does not, from itself, produce or create or make to

grow out any money or food or any kind of material wealth for me. It simply means that Government will give me Rs. 4,000 every year, and that, not by creating anything by any divine power, but from the revenue of the country; and this revenue can be got from only the actual material production of the year. So, in reality, my income of Rs. 4,000 from "Government stock" is nothing more nor less than a share out of the production of the country, and is, therefore, fully and completely included therein. No addition has to be made from "Government stock" to the actual material production of the year. No such addition exists at all.

44. 3rd. *House Property.*—Suppose I have taken a house at a yearly rental of Rs. 1,000. The house does not grow or create the rent by the mere fact of my occupying it. I have to pay this amount out of my income of Rs. 4,000 from Government stock, and so the house-owner receives through me and the Government his share out of the production of the country. The discussion of the other items further on will show that, be my income from any of the various sources Mr. Danvers suggests, it is ultimately and solely derived from, and is included in, the yearly production of the country, and the owners of "house property" simply take their share, like everybody else from this same store.

45. 4th. *Profits of Trade.*—I take, first, foreign trade. Mr. Danvers is quite right that the foreign trade of a country adds to its annual income or production.* But, unfortunately, the case of India is quite otherwise. The present system of British administration not only sweeps away to England the whole profits of the foreign trade, but also drains away a portion of the annual production itself of the country. So that, instead of India making *any* addition from its "profits of foreign trade" to its yearly production, a deduction has to be made from such production in estimating the actual quantity that ultimately remains for the use of the people of India. A portion of the actual production, through the channel of foreign trade, goes clean out of the country to England, without an atom of material return. The manner in which the foreign trade of India becomes the channel through which India's present greatest misfortune and evil operate, I treat further on in a separate section, to avoid confusion. It is enough for me to say here that, as matters actually stand, instead of there being, as should be, any addition from foreign trade to the annual production of India, there is actually a diminution, or drain of it clean out of the country to England, to the extent of some 18,000,000*l.* a year, together with, and over and above, all its "profits of trade." I grieve, therefore, that I have nothing to *add* from "profits of trade," as Mr. Danvers suggests, but much to *subtract*.

46. I take next the internal trade. Resuming the illustration of the 100 maunds of wheat at Punjab, say a merchant buys at Rs. 100 and sends it to Bombay, where he gets Rs. 125. The result simply is that the wheat is still the same 100 maunds, and the Rs. 125 that existed in Bombay are still Rs. 125, but that out of Rs. 25 the merchant receives his "profit of trade," and the railway its charges for carrying. Not a single atom of money or wheat is added to the existing wealth of the country by this internal trade; only a different distribution has taken place. I should not be misunderstood. I am not discussing here the usefulness of internal trade, whatever it is; I am only pointing out that any increase in the material income of the country by the mere transactions of the internal trade is a thing that does not exist, and that whatever benefits and "profits of trade" there are from internal trade, are fully and completely included in the ultimate result of the actual material production of the year.

47. 5th. *Salaries and Pensions.*—These will be official and non-official. Official salaries and pensions are paid by Government from revenue, and this revenue is derived from the production of the country; and so from that same store are all such salaries and pensions derived. For non-official salaries or pensions the phenomenon is just the same. I pay my clerks or servants either from my profits of trade, or interest of Government stock, or from rent of my house property, or from any of the sources which Mr. Danvers may suggest, but one and all of these incomes are drawn from the same store—the annual material production of the country. All salaries and pensions are thus fully and completely included in the estimate of the production.

48. But this is not all. In these salaries and pensions, &c., do we come to the very source of India's chief misfortune and evil, which, as I have already said, works through the medium of the foreign trade. It is the salaries and pensions, and all other expenditure incident to the excessive European agency, both in England and India, which is India's chief curse, in the shape of its causing the exhausting drain which is destroying India. In the ordinary and normal circumstances of a country, when all the salaries, pensions, &c., are earned by the people themselves, and remain in the country itself to fructify in the people's own pockets, there is no such thing as an addition to the annual production of the country from "salaries and pensions." But as far as India is concerned, the case is much worse. All salaries and pensions, &c., paid to Europeans in England and India, beyond the absolute necessity of the maintenance or supervision of British rule, are actually, first, a direct deprivation of the natural provision for similar classes of the people of the country, and, second, a drain from the property and capacity of the country at large. So, unfortunately, is there nothing to be *added*, as Mr. Danvers asks, from "salaries and pensions," but much to be *subtracted*, that is either spent in England or remitted to England from the resources of India, and for which not a particle returns, and what is enjoyed in India itself by the Europeans.

49. Mr. Danvers may kindly consider his own salary. It is derived from the production of India. It is brought to England, and not a farthing out of it returns to India. Even if it returned it would be no *addition* to the wealth of India: but as it does not return, it is so much actual *diminution* from the means of the subsistence of the people. I should not be misunderstood. That for a good long time a reasonable amount of payment for British rule is necessary for the regeneration of India is true, and no thinking Native of India denies this. It is the evil of excessive payment that India has to complain of. But what I have to point out here is that salaries and pensions, even to the Natives themselves, are no addition to the wealth, and much less are those which are not paid to the people of the country. The increase supposed by Mr. Danvers does not exist. There is, on the contrary, much diminution.

50. 6th. *Non-Agricultural Wages.*—A person employed by a farmer, say as a labourer, upon building his house, is paid from the farmer's agricultural income. A person employed by merchant, a householder, a stockholder, a pensioner, or a salaried man, or on a railway, is paid from their income, which, as I have explained, is derived from the only great store—the annual material production of the country. In short, every labourer—mental or physical—has his share for his subsistence, through various channels, from the only one fountain-head—the annual material production of the country. There is no source outside the production (including any addition to it from profits of foreign trade) from which any individual derives his means of subsistence.

51. 7th. *Professional Incomes.*—I consult a doctor, or a solicitor. The mere act of my consulting these professional gentlemen does not enable me to create money to pay them. I must pay them from my income as an agriculturist, or a miner, or a manufacturer, or a stockholder, or a householder, &c.; and my such income is all and solely derived from the material production of the country.

52. I need not now go any further into a repetition of the same argument with regard to—

53. 8th. "Returns to investments and all other "sources from which a man who does not grow food "himself may obtain the means of purchasing it;" or leaving a population "directly dependent neither upon "agriculture, manufactures, nor mining, and who must "therefore derive their means of subsistence from other "sources."

54. There *do not exist* any such "other sources," except profits of foreign trade. But, unfortunately for India, instead of foreign trade bringing any profits, it is actually the channel by which, in addition to all such profits, a portion of the production itself is also swept away. So India exhibits the strange phenomenon, that her people cannot get any benefit from profits of foreign trade, and cannot enjoy for their subsistence

* Taking the aggregate wealth of the world, foreign trade even adds nothing. It simply then becomes internal trade, and is mere change of hands, as explained further on.

even their own production, fully or adequately. The result of all the different influences—forces, labour, knowledge, land, climate, railways, or all other kinds of public works, good government, justice, security of property, law, order—and all the above eight and other so-called sources of income, is *fully and completely* comprised in the *ultimate resultant* of all of them—viz., the actual material income of the year. Its increase or decrease every year is, in fact, *the* test of the ultimate and full result of all the above direct and indirect means of the production of a country. If the material income of the year does not suffice for all the wants of the whole people for the year, the existing "capital"-wealth of the country is drawn upon, and, so far, the capital and the capacity for annual production are diminished.

55. I submit, therefore, that Mr. Danvers' argument of the "other sources" has to be laid aside.

56. Mr. Danvers says: "Mr. Dadabhai makes out the "total value of the agricultural produce of the Punjab "to be Rs. 27,72,56,263, and that from manufactures "and mines, Rs. 4,11,40,058. To this he adds, to meet "any omissions, a further margin of 3½ crores, making "the whole produce of the Punjab 35½ crores of rupees, "'which, for a population of 17,600,000, gives Rs. 20 "'per head per annum at the outside for the year "'1876-7,' to which year the figures he has taken refer. "At page 152 of his tables he shows that the cost of "absolute necessaries of life of an agricultural labourer "is Rs. 34 per annum, but he omits to explain how, "under these circumstances, the people of the Punjab "managed to live, and leaves the reader to draw his own "conclusions how, with only Rs. 20 per annum, he can "provide for an expenditure of Rs. 34."

57. Why, that is the very question I want Government to answer: How can they expect people to manage to live, under such circumstances, without continuously sinking into poverty? The first real question is, Are these facts or not? If not, then what are the actual facts of the "means and wants" of the people of India? If they are, then the question is for Mr. Danvers and Government to answer, how people can manage to live. The answer to the question is, however, obvious—viz., that as the balance of income every year available for the use of the people of India does not suffice for the wants of the year, the capital-wealth of the country is being drawn upon, and the country goes on becoming poorer and poorer, and more and more weakened in its capacity of production; and that the American War, for a little while, gave, and the various loans give, a show of prosperity, to end in greater burdens and greater destruction by famines.

58. These facts of the insufficiency of the means for the wants go to prove the late Lord Lawrence's statements, made in 1864, as Viceroy, and in 1873, before the Finance Committee. In 1864, he said that India was, on the whole, a very poor country, and the mass of the people enjoyed only a scanty subsistence; and, in 1873, he repeated that the mass of the people of India were so miserably poor that they had barely the means of subsistence; that it was as much as a man could do to feed his family, or half feed them, let alone spending money on what might be called luxuries or conveniences. Such, then, is the manner in which the people of India manage to live: scanty subsistence, and dying away by millions at the very touch of drought. In the case of the Punjab, as the latest British possession, and least drained, and from other circumstances noted below,* the people have had, as yet, better resources, in their "capital" wealth, to draw upon; but taking India as a whole, Lord Lawrence's words are, most deplorably, but too true.

59. I need not discuss Mr. Danvers' paper of 28th June 1880 any further. The fallacy of "other sources" besides agriculture, mines, manufactures, and foreign trade, pervades his whole argument; and in the latter part of the paper two different matters are mixed up, a little misapprehension has taken place as to my meaning, and some part is irrelevant.

60. The whole question now before us is simply this:—

First, what the whole actual, material, annual income of India is, as the ultimate balance of all sources and influences; that is available for the use of the *whole people of India.*

Secondly, what the absolutely necessary wants and the usual wants of all classes of the people are; and

Thirdly, whether the income of India is equal to, less, or more than such wants.

61. By carefully ascertaining these facts every year, shall we ever be able to know truly whether India is progressing in prosperity, or sinking in poverty, or is in a stationary condition. This is the whole problem, and it must be boldly faced and clearly answered if the mission of Britain is the good of India, as I firmly believe it to be.

62. As to the question, how and by whom, directly or indirectly, the income is actually produced, and how and by whom, and through what channels this income is distributed among the whole people, that is an entirely different matter, and, though important in itself and involving much legislation, is quite separate from the first and fundamental question of the whole total of the means and wants of India.

63. I may explain the misapprehension to which I alluded above. In my tables for consumption, in taking "the cost of absolute necessaries of life of an agricultural labourer," I meant him as merely representing the lowest class of labourers of all kinds, so as to show the lowest absolutely necessary wants of the people.

64. I am under the impression that there is a Statistical Committee at Calcutta, which has existed for the past 20 years, and I hope it will adopt means to give complete tables of the wants and means of India.

65. As I am requesting his Lordship the Secretary of State for India that Mr. Danvers be asked to work out the wants and means of the people of India during the last 12 years, and that the Government of India may adopt means to perfect the machinery for getting complete information for the future, I submit a few remarks on Mr. Danvers' tables of January 4, 1879, so kindly sent to me. As I have my Punjab tables only for comparison, I examine Mr. Danvers' Punjab tables only.

66. In his table of quantities of all the inferior grains, Mr. Danvers has taken the crop per acre of only some of the grains whose average is 510 lbs. per acre. But the produce of makai and gram, which are included by Mr. Danvers in the inferior grains, is larger, and the result is a large error. The acreage of makai is 1,054,339 acres, and the average produce per acre is 1,500 lbs., so that this produce is under-estimated to the extent of taking only about one-third of the actual quantity. The average produce of gram is 645 lbs. per acre, and the acreage is 2,272,236 acres. On this large acreage there is nearly 26 per cent. of under-estimate. The result of the whole error in the table of inferior grains is that the total quantity is taken by Mr. Danvers as 6,504,880,162 lbs., when it actually is 7,371,110,343 lbs., or above 866,200,000 lbs. more.

67. In the prices of inferior grains it is necessary to make proper allowance for the lower prices of such grains as moth, kangni, chiná, matar, and masur, which are nearly 25 per cent. lower than the other grains—jowár, bájrá, másh, mung, and arhar. This makes an over-estimate of 240,000*l.* The prices for makai, jow, and gram are given in the Report, and separate estimates should, therefore, be made of the values of these grains, to obtain all possible approximation to truth and accuracy.

68. The total under-estimate by Mr. Danvers is 1,300,000*l.* in the value of inferior grains.

69. In "other crops" the value assumed by Mr. Danvers is nearly only one-fourth of what I make, by taking every item separately—*i.e.*, I make Rs. 19,16,294 against Mr. Danvers' Rs. 4,73,200.

* The Punjab is favoured by nature and by circumstances. By nature, inasmuch as it is one of the most fertile parts of India. It is "Punj-aub," the land of the five waters, and it has both natural and artificial irrigation. It is favoured by circumstances, inasmuch as that (excepting Bengal, in its special fortunate circumstances of the permanent settlement) Punjab pays the least land revenue, viz., the Punjab pays Re. 1-2-2 per head per annum, the North-West Provinces pay Re. 1-6, Madras Re. 1-7, and Bombay Rs. 2-4-3 (*see* my tables page 150). I have taken these figures for 1875-6; those for 1876-7 would be unfair and abnormal, on account of the Bombay and Madras famines. Further, the Punjab has been further favoured by other circumstances in the following way:—

The Administration Report of 1856-8 says: "In former reports it was "explained how the circumstance of so much money going out of the "Punjab contributed to depress the agriculturalists. The Native "regular army was Hindustani; to them was a large share of the "Punjab revenue disbursed, of which a part only was spent on the spot, "and a part was remitted to their home. Thus it was that, year after "year, lakhs and lakhs were drained from the Punjab, and enriched "Oudh. But within last year, the Native army being Punjabi, all such "sums have been paid to them, and have been spent at home. Again, "many thousands of Punjabi soldiers are serving abroad; these men "not only remit their savings, but have also sent a quantity of prize "property and plunder—the spoils of Hindustan—to their native "villages. The effect of all this is already perceptible in an increase "of agricultural capital, a freer circulation of money, and a fresh "impetus to cultivation."

It will be seen that the Punjab has more capital to draw upon, and has some addition to its resources at the expense of the other provinces, to make up for some of its deficiency of production.

70. In the following articles Mr. Danvers has adopted the average given in the Report, which, as pointed out by me on previous occasions, is taken on the fallacious principle of adding up the produce per acre of the districts and dividing by the number of districts, without any reference to the quantity of acreage of each district.

Produce.	Incorrect Average.	Correct Average.	Error. Correct Average. More per cent.	Error. Correct Average. Less per cent.
Vegetables - -	4,008	4,753	18½	—
Sugar* - -	440	646	44	—
Cotton* - - -	102	105	3	—
Tobacco - -	325	846	2½	—
Fibres - - -	322	366	13¾	—
Indigo - -	47	31	—	33
Opium - - -	10	12·5	25	—

* As to some probable errors in these two articles in the Report, I have already given my views in my tables.

71. In the case of indigo, cotton, tobacco, and hemp, the error has not been large, as the incorrect average is adopted by Mr. Danvers for a few districts only. I notice such differences as 2½ and 3 per cent. also, because in dealing with figures of hundreds and thousands of millions, these percentages, singly as well as collectively, seriously disturb the accuracy of results. It is very necessary to avoid, as much as possible, all *avoidable* errors, large or small, so that then reliance can be placed upon the results.

72. The Report gives the price of first sort sugar only, but which, applied to the whole quantity of all kinds, makes the value of nearly two-thirds of the whole quantity quite two-and-a-half times greater than it actually is; the overestimate comes to nearly 1,800,000*l.*

73. The price of indigo, as ascertained by me (Rs. 60 per maund), is nearly 20 per cent. higher than that assumed by Mr. Danvers (Rs. 50 per maund).

74. Mr. Danvers has taken a seer = 2 lbs., when in reality it is nearly 6 per cent. of a pound larger, which becomes a serious error in the large amounts to be dealt with.

75. Mr. Danvers has adopted the prices of 1st January 1877, only, instead of taking an average of the prices of the four periods given in the Report, to represent the whole year.

76. In his remarks at page 16, Mr. Danvers makes no allowance for seed, which is an important item. He includes straw, all inferior grains, and cotton seed, and yet makes no allowance at all for the feed of animals (some 7,000,000 large cattle, and near 4,000,000 sheep and goats) before apportioning the produce per human head. Grass being not taken, makes some allowance for animals so far.

77. I cannot say on what grounds (page 16) 4 per cent. is assumed for annual increase of large cattle, and 15 per cent. of sheep and goats. I have not got the Report for 1878–9, when the next quinquennial enumeration of stock must have been made, but on comparing the numbers of the last two enumerations of 1868–9 and 1873–4, the result is as follows :—

—	1868–9.	1873–4.	Increase.	Decrease.	Per cent.
Cows, bullocks, and buffaloes.*	6,797,561	6,570,212	—	227,349	3¼
Horses - - -	96,226	84,639	—	11,587	12
Ponies - -	51,302	51,395	93	—	—
Donkeys - -	257,615	288,118	30,503	—	11·8
Camels - -	148,582	165,567	16,985	—	11·4
Total - -	7,351,286	7,159,931	=	191,355	
Sheep and goats -	3,803,619	3,849,642	46,023	—	1¼

* In the report of 1868-9 the heading is only "cows and bullocks," while, in 1876-7, it is given as "cows, bullocks, and buffaloes." Now if buffaloes are not included in 1868-9, the diminution in cattle will be very much larger. Most probably buffaloes are included in 1868-9 figures. But this must be ascertained. It is a serious matter.

78. From this comparison it appears that in the important items of cows, bullocks, and buffaloes, instead of any increase, there is actually a decrease of 227,349, or 3¼ per cent. during the five years. In horses, also, there is a decrease of about 2½ per cent. every year, instead of 4 per cent. increase. In ponies the increase is hardly ⅙ per cent. in five years, in donkeys about 11 per cent., and in camels about 11 per cent. in all the five years, or about 2¼ per cent. per year, instead of 4 per cent. In sheep and goats the increase is hardly 1¼ per cent. in five years, instead of 15 per cent. per year. For cows and bullocks, and sheep and goats, there is one allowance to be made—viz., for what are killed for food. To make out the increase in cows, &c. of 4 per cent. every year, nearly 4¾ per cent. must have been killed every year for food, and for sheep and goats the percentage of killed should be nearly 14¾ per cent. per annum. Is it so?

79. Mr. Danvers has assumed ghi produced in the Punjab to be four times as much as imported (52,303 maunds) into it, and he thus makes the quantity produced to be 209,212 maunds. Now the value of the imported ghi is also given in the Report as Rs. 9,64,028, which, taken four times, would be 385,611*l.* But Mr. Danvers has overlooked this actual price, and adopted the fallacious average of the table of prices in the Report, which makes the price 1s. 12c. per rupee. At this incorrect price the value will be 478,198*l.*, or nearly 25 per cent. more than the actual value given in the Report. But not only has there been this incorrect increase thus made, but, by some arithmetical mistake, the value put down by Mr. Danvers is above three times as much as even this increased amount—*i.e.*, instead of 478,198*l.*, Mr. Danvers has put down 1,501,096*l.* If this be not merely an arithmetical mistake, it requires explanation.

80. Mr. Danvers has taken the import of ghi from "foreign trade" only, and has overlooked a further quantity of import, "inter-provincially," of 16,312 maunds, of the value of 34,741*l.*, which, taken four times, would be 138,964*l.*, making up the total value of the assumed produce of ghi in the Punjab to be 385,611*l.* + 138,964*l.* = 524,575*l.*

81. Working upon Mr. Danvers' own assumption, and what information I have been at present able to obtain, it appears that the assumption of four times the import, or 525,000*l.*, will be an under-estimate by a good deal. I am not at present able to test the accuracy of Mr. Danvers' assumption of the produce of milk, nor of the information I am using below, but I give it just as I have it, to illustrate the principle. I adopt Mr. Danvers' assumption of 10 per cent. of the whole cattle to be milch animals. The number then will be 657,000. Of these, cows may be taken, I am told by a Punjabi, as 75 per cent., and buffaloes 25 per cent. This will give 164,250 buffaloes and 492,750 cows. Each buffalo may be taken, on an average, as giving 6 seers of milk per day for six months in the year, and each cow about 3 seers. The quantity of milk will then be—

164,250 × 6 seers × 180 days = 177,390,000 seers.
492,750 × 3 seers × 180 days = 266,085,000 seers.

Total - - 443,475,000 seers.

82. Mr. Danvers assumes for milk used in the province to be about Rs. 10 per annum from each of the 10 per cent. of the cattle, and, taking the price of milk to be 16 seers per rupee, the quantity of milk used would be 657,000 × 160 = 105,120,000 seers. This, deducted from the above total produce of milk, will give (443,475,000—105,120,000) 338,355,000 seers as converted into ghi. The produce of ghi is about ⅛th to $\frac{1}{16}$th of milk, according to quality. Assuming $\frac{1}{12}$th as the average, the total quantity of ghi will be about 28,196,250 seers = 704,906 maunds, or, allowing a little for wastage, say 700,000 maunds, which, at the import price (Rs. 13,11,445 for 68,615 maunds) of Rs. 19 per maund, will give about 1,339,300, or nearly 2¾ times as much as Mr. Danvers has assumed. I have endeavoured in a hurry to get this information as well as I could, but it can be obtained correctly by the officials on the spot. My object at present is simply to show, that calculated on Mr. Danvers' assumption of milch-cattle and milk used, how much ghi should be produced in the country, if the information I have used be correct.

83. For hides and skins the export only is taken into account, but a quantity must be consumed in the province itself, which requires to be added.

84. The value assumed, Rs. 100 per horse, is rather too high. Rs. 60 or Rs. 70, I am told, would be fairer; so also for ponies, Rs. 25 to Rs. 30, instead of Rs. 35; and camels, Rs. 60 or Rs. 70 or Rs. 75, instead of Rs. 100. For sheep, &c., Rs. 1½ instead of Re. 1 would be fairer.

85. But, as I have said above, officials in India can give all this information correctly for every year, and I do not see any reason why this should not be done. I urgently repeat my request that the wants and means of the last 12 or 15 years may be ordered by his Lordship the Secretary of State to be carefully worked out, as far as practicable, and that future Reports should be required to give complete information.

Railways.

86. I may take railways to represent public works. The benefits generally derived from railways are these: they distribute the produce of the country from parts where it is produced, or is in abundance, to the parts where it is wanted, so that no part of the produce is wasted, which otherwise would be the case if no facility of communication existed. In thus utilising the whole produce of the country, the railway becomes directly a saving agent, and indirectly thereby helps in increasing the production of the country.

87. It brings the produce to the ports at the least possible cost for exportation and commercial competition for foreign trade, and thus indirectly helps in obtaining the profits of foreign trade, which are an increase to the annual income of a country.

88. Every country, in building railways, even by borrowed capital, derives the benefit of a large portion of such borrowed capital, as the capital of the country, which indirectly helps in increasing the production of the country. Excepting interest paid for such borrowed capital to the foreign lending country, the rest of the whole income remains *in the country*.

89. But the result of *all* the above benefits from railways is ultimately realised and comprised in the actual annual income of the country.

90. The misfortune of India is that she does not derive the above benefits, as every other country does.

91. You build a railway in England, and, say, its gross income is a million. All the employés, from the chairman down to common labourer, *are Englishmen*. Every farthing that is spent from the gross income is so much returned to Englishmen, as direct maintenance to so many people *of England*, and to England at large, as a part of its general wealth. Whether the shareholders get their 5 per cent., or 10 per cent., or 1 per cent., or 0 per cent., or even lose, it matters not at all to the whole country. Every farthing of the income of the million is fully and solely enjoyed by *the people of the country*, excepting only (if you borrowed a portion of the capital from foreign parts) the interest you may pay for such loan. But such interest forms a small portion of the whole income, and every country with good railways can very well afford to pay. All the benefits of railways are thus obtained and enjoyed by *the people of the country*.

92. Take the case of the United States. India and the States are both borrowers for their railways (the latter only partially), and they both pay interest to the lending countries. They both buy, say, their rails, machinery, &c., from England, the States buying only a portion. So far, they are under somewhat similar circumstances; but here the parallel ends. In the United States, every cent of the income of the railway (excepting the interest on the foreign loan) is the income of *the people of the country* — is a direct maintenance for the people employed on it, and an indirect property of the whole country, and remaining *in* it.

93. In India the case is quite different. First, for the directors, home establishments, Government superintendence, and what not, in England, a portion of the income must go from India; then a large European staff of employés (excepting only for inferior and lowest places or work left for Natives) must eat up and take away another large portion of the income and to the rest of the people of the country are welcome, with the result that, out of their production which they give to the railways, only a *portion* returns to them, and *not the whole*, as in all other countries (except interest on foreign loan), and the diminution lessens, so far, the capacity of production every year. Such expenditure, both in England and India, is so much direct deprivation of the natural maintenance of as many people of India of similar classes, and a loss to the general wealth and means of the people at large. Thus the whole burden of the debt is placed on the shoulders of the people of India, while the benefit is largely enjoyed and carried away by the people of England; and yet Englishmen raise up their hands in wonder why India should not be happy, pleased, and thankful! Some years ago, I asked Mr. J. Danvers to make a return, in his annual Railway Report, of the salaries and every other kind of disbursement on Europeans, both in England and India. If I remember rightly (I cannot just now lay my hands on the correspondence), he was kind enough to promise he would try. But I do not know that this information has been given. Let us have this information, and we shall then know why India does *not* derive the usual benefits from railways; how many Europeans displace as many Natives of the same class, and deprive them of their natural means of subsistence (some 3,600 in India, and all those in England), and what portion of the income the people of India do not see or enjoy a pie of.

94. Instead, therefore, of their being any "railway wealth" to be added to the annual production or income of India, it will be seen that there is much to be deducted therefrom to ascertain what *really* remains for the use of its own people; for the income of railways is simply a portion or share of the production of the country, and what is eaten up and taken away by Europeans is so much taken away from the means of the people.

95. It is no wonder at all that the United States have their 70,000 or more miles of railways, when India, under the *British Government*, with all its wonderful resources, with all that good government can do, and the whole British wealth to back, has hardly one-tenth of the length, and that even with no benefit to the people of the country. In short, the fact of the matter is that, as India is treated at present, all the new departments, opened in the name of civilization, advancement, progress, and what not, simply resolve themselves into so much new provision for so many more Europeans, and so much new burden on exhausting India. We do pray to our British rulers, let us have railways and all other kinds of beneficial public works, by all means, but let *us* have their natural benefits, or talk not to a starving man of the pleasures of a fine dinner. We should be happy to, and thankfully pay for such European supervision and guidance as may be absolutely necessary for successful work; but do not, in Heaven's and Honesty's names, talk to us of benefits which *we do not* receive, but have, on the contrary, to pay for from our own. If *we* are allowed to derive the usual benefits of railways and other public works, under such government as the British—of law, order, and justice — we would not only borrow 200,000,000*l.* but 2,000,000,000*l.*, and pay the interest with as many thanks, with benefit both to ourselves and to England, as India would then be her best and largest commercial customer.

96. The real important question, therefore, in relation to public works is, not how to stop them, but how to let *the people of the country* have their full benefits. One of the most important parts of England's great work in India is to develop these public works, but to the *people's* benefit, and not to their detriment—*not that they should slave, and others eat.*

Foreign Trade.

97. Resuming our illustration of the 100 maunds of wheat from the Punjab, arriving at Bombay, costing to the Bombay merchant Rs. 125, we suppose that this merchant exports it to England. In ordinary course and natural conditions of trade, suppose the Bombay merchant, after two or three months, gets his net proceeds of Rs. 150 either in silver or as a bale of piece-goods, which could be sold at Bombay for Rs. 150. The result, then, of this "foreign trade" is that, before the wheat left Bombay, there were 100 maunds of wheat costing Rs. 125 at the time of export, and *after* the operation, India has either Rs. 150, or a bale of cotton goods worth Rs. 150. There is thus a clear "profit of trade" of Rs. 25, or, in other words, an addition of Rs. 25 worth, either in silver or goods, to the annual income or production of the country. This, in ordinary commercial language, would be: India exported value Rs. 125, in the shape of wheat, and imported value Rs. 150 in the shape of silver or merchandise, or both, making a trade profit of Rs. 25.

98. Under ordinary natural circumstances, such is the result of foreign trade to every country. I shall take the instance of the United Kingdom, and we may see what its ordinary foreign trade profits have been during a few past years—say from 1871 to 1878.

PROFITS OF FOREIGN TRADE OF THE UNITED KINGDOM.

Imports.				Exports.				
Years.	Merchandise.	Treasure (Gold and Silver).	Total.	Years.	Merchandise.	Treasure (Gold and Silver).	Total.	Foreign Trade Profits.	Per Cent.
	£	£	£		£	£	£	£	
1871	331,015,480	38,140,827	369,156,307	1871	283,574,700	33,760,671	317,335,371	51,820,936	
1872	354,693,624	29,608,012	384,301,636	1872	314,588,834	30,335,861	344,924,695	39,376,941	
1873	371,287,372	33,599,231	404,886,603	1873	311,004,765	25,899,285	339,904,050	64,982,553	
1874	370,062,701	30,379,188	400,461,889	1874	297,650,464	22,853,593	320,504,057	79,957,832	
1875	373,939,577	33,264,789	407,204,366	1875	281,612,323	27,628,042	309,240,365	97,964,001	
1876	375,154,703	37,054,244	412,208,947	1876	256,776,602	29,464,082	286,240,684	125,968,263	
1877	394,419,682	37,152,799	431,572,481	1877	252,346,020	39,798,119	292,144,139	139,428,342	
1878	368,770,742	32,422,955	401,193,697	1878	245,483,858	26,686,546	272,170,404	129,023,293	
	Grand Total		3,210,985,926		Grand Total		2,482,463,765	728,522,161	= 29·34

99. The result of the above table is, that during the eight years the United Kingdom has received as trade profits 29·34 per cent. This result requires the following further consideration. It includes the results of all money-trade or loans to and from foreign countries. Suppose England has lent 100,000,000*l.* to foreign countries; that forms a part of exports. Suppose it has received in interest, say, 5,000,000*l.*; that forms a part of the imports, and unless any portion of the principal of the loan is returned, the whole or balance (if a portion is paid) of the loan remains outstanding, and is so much more to be added to the above figure of trade profits. Again, there is the political profit from India of some 27,000,000*l.* a year (as shown further on). That forms a part of the import, and has to be deducted from the figure of trade profits. England contributes to the expenses of the colonies. This is a part of its exports. Thus the formula will be:—728,522,161*l.* + outstanding balance of loans of the 8 years — the political drain from India to England (216,000,000*l.*) + contributions to the colonies = the actual profits of all commercial and monetary transactions with the world; or, in other words = the actual profits of the foreign trade of the eight years.

100. Now the figure 728.522,161*l.* is 29·34 per cent. The political drain of India forms nearly 9 per cent. out of this. There remains above 20 per cent. + the amounts of balance of loans and contributions to the colonies, as the actual rate of profits of the foreign trade of the United Kingdom.

101. I may fairly adopt this rate, of at least 20 per cent., for the profits of the foreign trade of India; but, to be quite under the mark, I adopt only 15 per cent.

102. Now we may see what actually happens to India, taking the same period of 1871–8.

	£	
The actual Exports (excluding Government Stores and Treasure), Merchandise and Gold and Silver	= 485,186,749	
Take Profits only 15 per cent.	= 72,778,012	
The Imports as they *ought to be* *Actual* Imports (excluding Government Stores and Treasure), Merchandise and Gold and Silver	557,964,761	342,312,799
Deficit in Imports, or what is drained to England (*i.e.*, nearly 27,000,000*l.* a year.)		215,651,962
Again, taking actual Exports		485,186,749
And also actual Imports		342,312,799
Abstraction from the *very produce* of the country (besides the whole profits) is	= 142,875,950	

in eight years, or nearly 18,000,000*l.* a year, or 29·4 per cent.

103. Thus, with all the advantages of good government, law, order, justice, &c., railways and every other influence of a civilised rule, the actual result is that not only does India *not* get a *single farthing* of the 15 or 20 per cent., or whatever it be, of the profits of her foreign trade, but actually has a further amount of nearly 30 per cent. of her exports kept away from her. This is not all. There is, moreover, the halter round her neck of the accumulated railway debt of nearly 100,000,000*l.*, held in England (from which her people have not derived the usual benefits), about 60,000,000*l.* of public debt (out of 134,000,000*l.*—mostly owing to wars) held in England, and 5,000,000*l.* spent in England on account of State public works. And yet Englishmen wonder why India is poor, and her finances inelastic! Good heavens! when will this bleeding to death end?

104. Keeping as much as possible on the right side, we find some 18,000,000*l.* from the production itself swept away from India, besides all her profits, and besides what Europeans enjoy in India itself, to the so much exclusion and deprivation of her own people. But this item of 18,000,000*l.* would be found much under the mark. For instance, all duty-articles imported into India are, I believe, valued at 10 per cent. more than their laying-down value. If so, roughly taken, the customs revenue being 2,500,000*l.*, represents roughly a duty at 5 per cent. on 50,000,000*l.*; and to make up this 50,000,000*l.*, with 10 per cent. extra, requires an addition to the actual value of imports of about 5,000,000*l.* If so, then there will be this much above 18,000,000*l.* taken away from the actual production of India, besides the whole trade profits, maintenance of Europeans in India, debts, &c.

105. The real abstraction from the very *produce* of the country is, most likely, much above 20,000,000*l.* a year, and the whole loss above 30,000,000*l.* a year, besides what is enjoyed in India itself by Europeans.

106. Under such circumstances, it is no wonder at all that famine and finance should become great difficulties, and that finance has been the grave of several reputations, and shall continue to be so till the discovery is made of making two and two equal to five, if the present unnatural treatment of India is to continue.

107. Far, therefore, from there being anything to be added to the annual income of India, as Mr. Danvers thinks, from the "profits of trade," there is the deplorable fact of much to be deducted in the case of India; and the consequences of such abstraction, in impoverishment and destruction by famines, &c., lay mostly at the door of the present unnatural policy of the British Administration. Let our rulers realise this fact intelligently, and face it boldly, in a way worthy of the British moral courage and character, and the whole scene will be entirely changed—from deplorable poverty to prosperity, from the wail of woe to joy and blessing. Our misfortune is that the great statesmen of this country have not the necessary time to see into Indian matters, and things are allowed to drift blindly, or England would never become, as she

unwittingly is at present the destroyer of India. Her conscience is sound.

108. It is natural that in all discussions on finance, curtailment of expenditure and economy are, at first blush, recommended—to cut the coat according to cloth. But, unfortunately, no one asks the question why the cloth is short; why, under such rule as that of the English, India should not do well, if not quite as well as these islands, but should be only able to pay the wretched revenue of some 6*s.* a head, and that even after "wringing out the last farthing."

109. No doubt vigilance for economy will always be a necessity in the best of States (not excepting England, as debates in Parliament testify) as long as the world lasts. But the real question, the most important question of all questions, at present is, not how to get 60,000,000*l.* or 100,000,000*l.*, for the matter of that, if that be necessary, but how *to return to the people* what is raised from them.

110. There is no reason whatever why India, with all her vast resources, the patient industry of the people, and the guidance and supervision of British high officials, should not be able to pay two or three times her present wretched revenue, say 100,000,000*l.* or 150,000,000*l.* for efficient administration by her own people, under British supervision, and for the development of her unbounded material resources. Is it not unsatisfactory, or even humiliating, that British statesmen should have to confess that they have hopelessly to depend for about a sixth of the net revenue on supplying opium to another vast human race; and to ask despairingly what they were to do to get this amount of revenue from India itself? Then again, nearly as much more income has to be raised by an oppressive and heavy tax on salt; so that between a third and a fourth of the net revenue has to be derived —a part by pinching and starving the poor millions of India in one of the absolute necessaries of life, and the other part by poisoning and demoralising the millions of China. Surely, that a great people like the English, with their statesmanship of the highest order, and with all their genuine desire to do good to and advance mankind, should not be able to get the necessary revenues from India, from her own healthy and natural prosperity, is a strange phenomenon in this advanced age.

111. Only restore India to her *natural* economical conditions. If, as in England, the revenue raised from the people *returned to the people*—if the income of railways and other public works taken from the people, returned to the people, to fructify in their pockets, then would there be no need for anxiety for finance or famines, nor for pinching in salt, nor poisoning with opium, millions of the human race. India would then pay with ease 100,000,000*l.* or 200,000,000*l.* of revenue, and would not be the worse for it. It would be far better also, which would then be the case, that India should be able to purchase 1*l.* or 2*l.* worth a head of British manufactures, and become England's best and largest customer, instead of the wretched one she is at present.

112. I repeat, therefore, with every earnestness, that the most important question of the day is, how to stop the bleeding drain from India. The merit or good of every remedy will depend upon and be tested by its efficacy in stopping this deplorable drain, without impairing the wants of the administration, or checking India's natural progress towards prosperity.

113. There is a deep conviction among educated and thoughtful Natives that if there is any one nation more than another on the face of the earth that would on no account knowingly do a wrong to or enslave, degrade, or impoverish a people, and who, on feeling the conviction of any injury having been unintentionally done by them, would at once, and at all reasonable sacrifice, repair the injury without shrinking, that nation is the British nation. This conviction keeps the thinking Natives staunch in their loyalty to the British rule. They know that a real regeneration, civilization, and advancement of India, materially, morally, and politically, depends upon a long continuance of the British rule. The peculiarly happy combination of high civilization, intense love of liberty, and nobility of soul in the British, cannot but lead them to the desire of the glory of raising a vast nation, instead of trampling upon them. This noble desire has found expression from some of their best men.

114. The English people have a task before them in India for which there is no parallel in the history of the world. There has not been a nation who, as conquerors, have, like the English, considered the good of the conquered as a duty, or felt it as their great desire; and the Natives of India may, with the evil of the present drain stopped, and a representative voice in their legislation, hopefully look forward to a future under the British rule which will eclipse their greatest and most glorious days.

115. May the light of Heaven guide our rulers!

DADABHAI NAOROJI.

116. India Office, S.W.,
15th October 1880.

SIR,

I AM directed to acknowledge the receipt of your letter of the 13th September, which, together with its enclosure, has been duly laid before the Secretary of State for India.

I am, &c.
LOUIS MALLET.

Mr. Dadabhai Naoroji.

---

117. 32, Great St. Helen's, London,
16th November 1880.

SIR,

THANKING you for your letter of the 15th ultimo, informing me that my letter of 13th September, with enclosure, had been duly laid before his Lordship the Secretary of State for India, and hoping that the same kind attention will be given to it as to my previous letter, and that if I am wrong in any of my views I would be corrected, I beg to submit for his Lordship's kind and generous consideration the accompanying Memorandum No. 2, on the "Moral Poverty of India, " and Native Thoughts on the British Indian Policy."

I am, &c.
DADABHAI NAOROJI.

Sir Louis Mallet,
Under Secretary of State for India,
India Office, London, S.W.

MEMORANDUM No. 2.

The Moral Poverty of India and Native Thoughts on the Present British Indian Policy.

16th November 1880.

118. In my last paper I confined myself to meeting Mr. Danvers' line of argument on the question of the material destruction and impoverishment of India by the present British Indian policy. I endeavoured to show that this impoverishment and destruction of India was mainly caused by the unnatural treatment it received at the hands of its British rulers, in the way of subjecting it to a large variety of expenditure upon a crushing foreign agency both in India and England, whereby the children of the country were displaced and deprived of their natural rights and means of subsistence in their own country; that, by what was being taken and consumed in India itself, and by what was being continuously taken away by such agency clean out of the country, an exhaustion of the very life-blood of the country was unceasingly going on; that not till this disastrous drain was duly checked, and not till the people of India were restored to their natural rights in their own country, was there any hope for the material amelioration of India.

119. In this memorandum I desire to submit for the kind and generous consideration of his Lordship the Secretary of State for India, that from the same cause of the deplorable drain, besides the material exhaustion of India, the moral loss to her is no less sad and lamentable.

120. With the material wealth go also the wisdom and experience of the country. Europeans occupy almost all the higher places in every department of Government directly or indirectly under its control. While *in* India, they acquire India's money, experience, and wisdom; and when they go, they carry both away with them, leaving India so much poorer in material and moral wealth. Thus India is left without, and cannot have, those elders in wisdom and experience who in every country are the natural guides of the rising generations in their national and social conduct, and of the destinies of their country; and a sad, sad loss this is!

121. Every European is isolated from the people around him. He is not their mental, moral, or social leader or companion. For any mental or moral influence or guidance or sympathy with the people, he might just as well be living in the moon. The people know not him, and he knows not, nor cares for, the people. Some honourable exceptions do, now and then, make an effort to do some good they can, but in the very nature of things these efforts are always feeble, exotic, and of little permanent effect. These men are not always in the place, and their works die away when they go.

122. The Europeans are not the natural leaders of the people. They do not belong to the people; they cannot enter their thoughts and feelings; they cannot join or sympathise with their joys or griefs. On the contrary, every day the estrangement is increasing. Europeans deliberately and openly widen it more and more. There may be very few social institutions started by Europeans in which Natives, however fit and desirous to join, are not deliberately and insultingly excluded. The Europeans are, and make themselves, strangers in every way. All they effectually do is to eat the substance of India, material and moral, while living there, and when they go, they carry away all they have acquired, and their pensions and future usefulness besides.

123. This most deplorable moral loss to India needs most serious consideration, as much in its political as in its national aspect. Nationally disastrous as it is, it carries politically with it its own Nemesis. Without the guidance of elderly wisdom and experience of their own natural leaders, the education which the rising generations are now receiving is naturally leading them (or call it misleading them if you will) into directions which bode no good to the rulers, and which, instead of being the strength of the rulers, as it ought to be and can be, will turn out to be their great weakness. The fault will be of the rulers themselves for such a result. The power that is now being raised by the spread of education, though yet slow and small, is one that in time must, for weal or woe, exercise great influence; in fact, it has already begun to do so. However strangely the English rulers, forgetting their English manliness and moral courage, may, like the ostrich, shut their eyes, by gagging, acts or otherwise, to the good or bad influences they are raising around them, this good or evil is rising nevertheless. The thousands that are being sent out by the universities every year find themselves in a most anomalous position. There is no place for them in their mother-land. They may beg in the streets or break stones on the roads, for aught the rulers seem to care for their natural rights, position, and duties in their own country. They may perish or do what they like or can, but scores of Europeans must go from this country to take up what belongs to them, and that in spite of every profession for years and years past and up to the present day, of English statesmen, that they must govern India for India's good, by solemn Acts and declarations of Parliament, and, above all, by the words of the august Sovereign herself. For all practical purposes, all these high promises have been hitherto, almost wholly, the purest romance, the reality being quite different.

* * * *

124. The whole duty and responsibility of bringing about this desired consummation lies upon the head and in the hands of the Indian authorities *in England*. It is no use screening themselves behind the fiction and excuse, that the Viceroys and authorities in India are difficult to be got to do what they ought, or that they would do all that may be necessary. They neither can nor will do this. They cannot go against Acts of Parliament on the one hand, and, on the other, the pressure of European interests, and of European selfishness and guidance, is so heavy in India, that the Viceroys in their first years are quite helpless, and get committed to certain courses; and if, in time, any of them, happening to have sufficient strength of character and confidence in their own judgment, are likely to take matters in their own hands, and, with any moral courage, to resist interests hostile or antagonistic to the good of the people, the end of their time begins to come near, their zeal and interest begin to flag, and soon they go away, leaving India to roll up Sisyphus's stone again, with a new Viceroy. It is the highest Indian authority here, the Secretary of State for India, upon whom the responsibility wholly rests. He alone has the power, as a member of and with the weight of the British Cabinet, to guide the Parliament to acts worthy of the English character, conscience, and nation. The glory or disgrace of the British in India is in his hands. He has to make Parliament lay down, by clear legislation, how India *shall* be governed for "*India's good.*" or it is hopeless for us to look forward for any relief from our present material and moral destruction, and for future elevation.

* * * *

125. In my last paper I said the thinking Natives were as yet staunch in their loyalty to the British rule, as they were yet fully hopeful of the future from the general character and history of the English people. They believe that when the conscience of the English nation is awakened, it will not be long before India receives full and thorough redress for all she has been suffering. While thus hopeful of the future, it is desirable that our rulers should know and consider what, as to the past, is passing in many a thinking Native mind.

126. They are as grateful as any people can be for whatever real good of peace and order and education has been done for them; but they also ask what good, upon the whole, England has done to India. It is sadly poor, and increasing in poverty, both material and moral. They consider and bewail the unnatural treatment India has been receiving.

127. They dwell upon the strange contrast between the words and deeds of the English rulers; how often deliberate and solemn promises are made and broken. I need not here instance again what I have at some length shown in my papers on the Poverty of India* under the heading of "Non-Fulfilment of Solemn "Promises."†

128. I would refer here to one or two characteristic instances only. The conception for an Engineering College in London was no sooner formed than it became an accomplished fact; and Mr. Grant Duff, then Under-Secretary of State, in his place in Parliament, proclaimed what great boons "we" were conferring on the English people, but quite oblivious at whose sacrifices. It was an English interest, and the thing was done as quick as it was thought of. On the other hand, a clause for Native interests, proposed in 1867, took three years to pass, and in such a form as to be simply ineffectual. I asked Sir Stafford Northcote, at the time of the proposal, to make it some way imperative, but without effect. Again, after being passed after three years, it remained a dead letter for seven years more, and might have remained so till Doomsday for aught any of the Indian authorities cared. But, thanks to the persevering exertions of one of England's true sons, Sir Erskine Perry, some steps were at last taken to frame the rules that were required, and it is now, in the midst of a great deal of fine writing, making some, though very slow, progress. For such, even as it is, we are thankful; but greater efforts are necessary to stem the torrent of the drain. Turning to the Uncovenanted Service, Sir Stafford Northcote's despatch of 8th February, 1868, declared that Europeans should not be allowed in this service to override "the inherent "rights of the Natives of the country." Now, in what spirit was this despatch treated till very lately? Was it not simply, or is it not even now, almost a dead letter?

129. In the matter of the load of the public debt of India, it is mainly due to the wars of the English conquests in India, and English wars abroad in the name of India. Not a farthing has been spent by England for its British Indian Empire. The burden of all England's wars in Asia has been thrown on India's shoulders. In the Abyssinian War, India narrowly and lightly escaped; and in the present Afghan War, her escape from whatever portion she may be saved is not less narrow. Though such is the character of nearly the whole of the public debt (excluding for public works), being caused by the actions by which England has become the mistress of a great Empire, and thereby the first nation in the world, she would not move her little finger to give India any such help as is within her power, without even any material sacrifice to herself—viz., that of guaranteeing this public debt, so that India may derive some little relief from reduced interest.

* *Journal of the East India Association*, Vol. IX., pages 375 to 405.

† The Duke of Argyll, as Secretary of State for India, said in his speech of 11th March, 1869, with regard to the employment of Natives in the Covenanted Service: "I must say that we have not fulfilled our "duty, or the promises and engagements which we have made."

130. When English interests are concerned, their accomplishment is often a foregone conclusion. But India's interests always require long and anxious thought—thought that seldom begins, and when it does begin, seldom ends in any thorough good result. It is useless to conceal that the old pure and simple faith in the honour and word of the English rulers is much shaken, and were it not for the faith in the conscience of the statesmen and people in *this* country, any hope of good by an alteration of the present British Indian policy would be given up.

* * * * * *

131. In the case of former foreign conquests, the invaders either retired with their plunder and booty, or became the rulers of the country. When they only plundered and went back, they made, no doubt, great wounds: but India, with her industry revived and healed the wounds. When the invaders became the rulers of the country, they settled down *in* it, and whatever was the condition of their rule, according to the character of the sovereign of the day, there was at least no material or moral drain in the country.* Whatever the country produced remained in the country; whatever wisdom and experience was acquired in her services remained among her own people. With the English the case is peculiar. There are the great wounds of the first wars in the burden of the public debt, and those wounds are kept perpetually open and widening, by draining away the life-blood in a continuous stream. The former rulers were like butchers hacking here and there, but the English with their scientific scalpel cut to the very heart, and yet, lo! there is no wound to be seen, and soon the plaster of the high talk of civilisation, progress, and what not, covers up the wound! The English rulers stand sentinel at the front door of India, challenging the whole world, that they do and shall protect India against all comers, and themselves carry away by a back-door the very treasure they stand sentinel to protect.

* * * *

132. No doubt the exertions of individual Europeans at the time of famines may be worthy of admiration; the efforts of Government and the aid of the contributions of the British people to save life, deserve every gratitude. But how strange it is that the British rulers do not see that, after all, they themselves are the main cause of the destruction that ensues from droughts; that is the drain of India's wealth by *them* that lays at their own door the dreadful results of misery, starvation, and deaths of millions! England does not know famines, be the harvest however bad or scanty. She has the means of buying her food from the whole world. India is being unceasingly deprived of these means, and when famine comes, the starving have to be taxed so much more to save the dying.

* * * *

133. Of all countries in the world, if anyone has the greatest claim on England's consideration, to receive the boons of a constitutional representative government at her hands, and to have her people governed as England governs her own, that country is India, her most sacred trust and charge. But England, though she does everything she can for other countries, fights shy of, and makes some excuse or other to avoid, giving to the people of India their fair share in the legislation of their country. Now I do not mean to say that India can suddenly have a full-blown Parliament, and of such wide-spread representation as England enjoys. But has England made any honest efforts to gradually introduce a true representation of the people, excepting some solitary exceptions of partial municipal representation? I need not dwell upon the present farce of the nomination system for the Legislative Councils, and of the dummies that are sometimes nominated. I submit that a small beginning can be well made now. I would take the Bombay Presidency as an instance. Suppose the present Legislative Council is extended to twenty-one members, thirteen of these to be nominated from officials and non-officials by the Government, and eight to be elected by the principal towns of the Presidency. This will give Government a clear majority of five, and the representative element, the minority, cannot do any harm, or hamper Government; in England, the majority determines the Government. In India this cannot be the case at present, and so the majority must follow the Government. It would be, when something is extremely outrageous, that the minority would, by force of argument and truth, draw towards it the Government majority; and even in any such rare instance, all that will happen will be that Government will be prevented from doing any such outrageous things. In short, in such an arrangement, Government will remain all-powerful, as it must for a long time to come; while there will be also independent persons, actually representing the people, to speak the sentiments of the people; thereby giving Government the most important help, and relieving them from much responsibility, anxiety, and mistakes. The representative element in the minority will be gradually trained in constitutional government. They will have no inducement to run wild with prospects of power; they will have to maintain the reasons of their existence, and will, therefore, be actuated by caution and good sense. They can do no harm, but a vast amount of good, both to the Government and the governed. The people will have the satisfaction that their rulers were doing their duty, and endeavouring to raise them to their own civilization.

134. There are in the Bombay Presidency the following towns of more than 50,000 population. Bombay having by far the largest, and with its importance as the capital of the Presidency, may be properly allowed three representatives.

The towns are—

*Bombay.	Poona.	Ahmedabad.	Surat.	Kurrachi.	Sholapore.
644,405	118,886	116,873	107,149	53,536	53,403

135. Thus, Bombay having three, the Gujerati division of the Presidency will be represented by Ahmedabad and Surat, the Maratha portion by Poona and Sholapore, and Sind by Kurrachi, making altogether eight members, which will be a fair, though a small, representation to begin with. Government may with advantage adopt a larger number; all I desire and insist is, that there must be a fair *representative* element in the Councils. As to the qualifications of electors and candidates for election, Government is quite competent to fix upon some, as they did in the case of the Bombay Corporation, and such qualifications may from time to time be modified as experience may suggest. With this modification in the present Legislative Council, a great step will have been taken towards one of the greatest boons which India asks and expects at England's hands. Without some such element of the people's voice in all the Legislative Councils, it is impossible for Englishmen, more and more estranged and isolated as they are becoming, to be able to legislate for India in the true spirit and feeling of her wants.

136. After having a glorious history of heroic struggles for constitutional government, England is now rearing up a body of Englishmen in India, trained up and accustomed to despotism, with all the feelings of impatience, pride, and high-handedness of the despot becoming gradually ingrained in them, and with the additional training of the dissimulation of constitutionalism. Is it possible that such habits and training of despotism, with which Indian officials return from India, should not, in the course of time, influence the English character and institutions? The English in India, instead of raising India, are hitherto themselves descending and degenerating to the lower level of Asiatic despotism. Is this a Nemesis that will in fulness of time show to them what fruit their conduct in India produced? It is extraordinary how nature may revenge itself for the present unnatural course of England in India, if England, not yet much tainted by this demoralization, does not, in good time, check this new leaven that is gradually fermenting among her people.

* * * *

* Sir Stafford Northcote, in his speech in Parliament on 24th May 1867, said:—"Nothing could be more wonderful than our Empire in "India but we ought to consider on what conditions we held it, and "how our predecessors held it. The greatness of the Mogul Empire "depended upon the liberal policy that was pursued by men like "Akbar availing themselves of Hindu talent and assistance, and "identifying themselves as far as possible with the people of the "country. He thought that they ought to take a lesson from such a "circumstance, and if they were to do their duty towards India, they "could only discharge that duty by obtaining the assistance and "counsel of all who were great and good in that country. It would "be absurd in them to say that there was not a large fund of states-"manship and ability in the Indian character."—*Times*, of 25th May 1867.

* "Statistical Abstract of British India, 1879," page 21.

137. There is the stock argument of over-population. They talk, and so far truly, of the increase by British peace, but they quite forget the destruction by the British drain. They talk of the pitiless operations of economic laws, but somehow they forget that there is no such thing in India as the natural operation of economic laws. It is not the pitiless operations of economic laws, but it is the thoughtless and pitiless action of the British policy; it is the pitiless eating of India's substance in India, and the further pitiless drain to England; in short, it is the pitiless *perversion* of economic laws by the sad bleeding to which India is subjected, that is destroying India. Why blame poor Nature, when the fault lies at your own door? Let natural and economic laws have their full and fair play, and India will become another England, with manifold greater benefit to England herself than at present.

138. As long as the English do not allow the country to produce what it can produce, as long as the people are not allowed to enjoy what they can produce, as long as the English are the very party on their trial, they have no right, and are not competent, to give an opinion whether the country is over-populated or not. In fact, it is absurd to talk of over-population—*i.e.*, the country's incapability, by its food or other produce, to supply the means of support to its people—if the country is unceasingly and forcibly deprived of its means or capital. Let the country keep what it produces, for only then can any right judgment be formed whether it is over-populated or not. Let England first hold hands off India's wealth, and then there will be disinterestedness in, and respect for, her judgment. The present cant of the excuse of over-population is adding a distressful insult to agonising injury. To talk of over-population at present is just as reasonable as to cut off a man's hands, and then to taunt him that he was not able to maintain himself or move his hands.

* * * *

139. It is useless for the British to compare themselves with the past Native rulers. If the British do not show themselves to be vastly superior in proportion to their superior enlightenment and civilisation, if India does not prosper and progress under them far more largely, there will be no justification for their existence in India. The thoughtless past drain we may consider as our misfortune, but a similar future will, in plain English, be deliberate plunder and destruction.

140. I do not repeat here several other views which I have already expressed in my last memorandum.

* * * *

141. By all means, let Englishmen be proud of the past. We accord them every credit for the order and law they brought about, and are deeply thankful to them; but let them now face the present, let them clearly realise, and manfully acknowledge, the many shortcomings of omission and commission by which, with the best of intentions, they have reduced India to material and moral wretchedness; and let them, in a way worthy of their name and history, repair the injury they have inflicted. It is fully in their power to make their rule a blessing to India, and a benefit and a glory to England, by allowing India her own administration, under their superior controlling and guiding hand; or, in their own oft-repeated professions and words, "by governing India for India's good."

142. May the God of all nations lead the English to a right sense of their duty to India is my humble and earnest prayer.

DADABHAI NAOROJI.

---

143. 32, Great St. Helens, London,
SIR, 4th January, 1881.

I BEG to request you to submit the accompanying memorandum, No. 3, on some of the statements in the "Report of the Indian Famine Commission, 1880," to his Lordship the Secretary of State for India, and I hope his Lordship will give his kind and generous consideration to it.

I am, &c.
DADABHAI NAOROJI.

Sir Louis Mallet,
the Under-Secretary of State for India,
India Office, London, S.W.

APPENDIX C.

Statistics required by the Act of 1858 but not supplied by the Government of India—Trade and Population, &c. Statistics.

National Liberal Club,
London, S.W.,
9th January 1896.

DEAR LORD WELBY,

1. I NOW submit to the Commission a further representation upon the most important test of the present "administration and management of expenditure," viz., its results.

2. Kindly oblige me by laying it before the Commission at the next meeting. I shall send a copy of it to every member of the Commission. As the reference to the Commission embraces a number of most vital questions—vital both to England and India—I am obliged to submit my representation in parts. When I have finished I shall be willing, if the Commission think it necessary, to appear as a witness to be cross-examined upon my representations. If the Commission think that I should be examined on each of my representations separately, I shall be willing to be so examined.

3. In the Act of 1858 (sec. liii), Parliament provided that among other information for its guidance, the Indian authorities should lay before it every year "a "statement prepared from detailed reports from each "presidency and district in India, in such form as "shall best exhibit the moral and material progress "and condition of India in each such presidency." Thereupon such reports were ordered by the Government of India to be prepared by the Government of each presidency.

4. As a beginning, the reports were naturally imperfect in details. In 1862 the Government of India observed: "There is a mass of statistics in the administration reports of the various local governments . . . . but they are not compiled on any "uniform plan . . . . so as to show the statistics "of the Empire (Fin. Con., June 1862)." The Statistical Committee, which the Government of India had organised for the purpose, prepared certain forms of tables, and, after receiving reports on those forms from the different governments made a report to the Government of India, with revised forms of tables (Office Memorandum, Financial Department, No. 1,043, dated 28th February 1866). The members of this Committee were Mr. A. Grote, president, and Messrs. G. Campbell, D. Cowie, and G. Smith.

5. I confine myself in this statement to the tables concerning only the material condition of India or what are called "production and distribution."

The following are the tables prescribed:—

PRODUCTION AND DISTRIBUTION.

FORM D.—AGRICULTURE.

Under a former section provision is made for information regarding soils so far as nature is concerned, and we have now to do with what the soil produces, and with all that is necessary to till the soil, all of which is embraced under the heads—Crop, Stock, Rent, and Production.

CROPS CULTIVATED IN ACRES, ACTUAL OR APPROXIMATE.—1.

Name of District.	Rice.	Wheat.	Other Food Grains.	Oil Seeds.	Sugar.	Cotton.	Opium.	Indigo.	Fibres.	Tobacco.	Tea.	Coffee.	Vegetables, &c.
Total													

STOCK.—2.

District.	Cows and Buffaloes.	Horses.	Ponies.	Donkeys.	Sheep and Goats.	Pigs.	Carts.	Ploughs.	Boats.
Total									

RATES OF RENT AND PRODUCE.—3.

Average Rent per Acre for Land suited for

District.	Rice.	Wheat.	Inferior Grains.	Indigo.	Cotton.	Opium.	Oil Seeds.	Fibres.	Sugar.	Tobacco.
General Average										

Average produce of Land per Acre in lbs.

District.	Rice.	Wheat.	Inferior Food Grains.	Indigo.	Cotton.	Opium.	Oil Seeds.	Fibres.	Sugar.	Tobacco.	Tea.	Coffee, &c., &c.
General Average												

FORM E.

Price of Produce and Labour at the end of the Year.

PRODUCE.—1.

Price of Produce per maund of 80 lbs.

District.	Rice.	Wheat.	Linseed.	Jute.	Cotton.	Sugar.	Salt.	&c., &c.
General Average								

Prices—*continued.*				LABOUR.—2.						
				Wages per diem						
Plough Bullocks each.	Sheep each.	Fish per seer.	Iron per maund &c., &c.	District.	Skilled.	Unskilled.	Cart per day.	Camel per day.	Donkeys per score per day.	Boat per ditto.
General Average										

NOTE.—The general character of the staple of the district should be stated as "Cotton, Indigenous," "Cotton, New Orleans," "Sugar, Raw," "Sugar, Refined," "Salt, Rock," "Salt, Samber Lake," and so on.

FORM F.

MINES AND QUARRIES.

Where Situated.	Mineral produced.	Number of Mines.	Annual Produce.	Remarks.

FORM G.—MANUFACTURES.

	CLASS OF MANUFACTURES.								
	Silk.	Cotton.	Wool.	Other Fibres.	Paper.	Wood.	Iron.	Brass and Copper.	Building, &c., &c.
Number of mills and manufactories									
Private looms or small works									
Number of workmen in large works { Male / Female }									
Number of workmen in small works or independent artizans									
Number of European superintendents in large works									
Value of block in ditto									
Estimated annual outturn of all works									
Total									

6. It will be seen from these tables that they are sufficient for calculating the total "production" of any province, with such additions for sundry other produce as may be necessary, with sufficient approximacy to accuracy, to supply the information which Parliament wants to know about the progress or deterioration of the material condition of India.

7. Sir David Barbour said, in reply to question put by Sir James Peile:

"2283. It does not by any means follow that people are starving because they are poor?—Not in the least. You must recollect that the cost of the necessaries of life is very much less in India than it is in England."

8. Now the question is, whether, even with this "very much less cost" of the necessaries and wants of life, these necessaries and wants of life, even to an absolute amount, few as they are, are supplied by "the "production of the year." Sir D. Barbour and others that speak on this point have not given any proof that even these cheap and few wants are supplied, with also a fair reserve for bad seasons. It is inexplicable why the Statistical Committee failed to prescribe the tables for the necessary consumption—or, as the heading of Form D, called "Distribution"—if they really meant to give Parliament such full information as to enable it to judge whether "the mass of the people," as Lord Lawrence said, "lived on scanty subsistence" or not. The Statistical Committee has thus missed to ask this other necessary information, viz., the wants of a common labourer to keep himself and his family in ordinary healthy, working condition—in food, clothing, shelter, and other necessary ordinary social wants. It is by the comparisou of what is *produced* and what is *needed* by the people even for the absolute necessaries of life (leave alone any luxuries) that anything like a fair idea of the condition of the people can be formed. In my first letter to the Secretary of State for India, of 24th May 1880, I have worked out as an illustration all the necessary tables both for "production" and "distribution," *i.e.*, absolute necessaries of life of a common labourer in Punjab.

9. If the demands of Parliament are to be loyally supplied, there is no reason whatever why the information required is not fully furnished by every province. They have all the necessary materials for these tables, and they can easily supply the tables both for "production" and "distribution" or necessary consumption, at the prices of the year of all necessary wants. Then the Statistical Department ought to work up the average per head per annum for the whole of India of both "production" and "distribution." Unless such information is supplied, it is idle and useless to endeavour to persuade the Commission that the material condition of the people of British India is improving. It was said in the letter of the Secretary of State for India to me of 9th August 1880, that in Bengal means did not exist of supplying the information I desired. Now that may have been the case in 1880, but it is not so now; and I cannot understand why the Bengal Government does not give the tables of production at all in its Administration Report. The only table, and that the most important one, for which it was said they had not the means, and which, though not given in the Administration Report, is given in detail in the "Statistical Abstract of British India for 1893-94" (Parl. Ret. [C. 7,887] 1895), pp. 141-2.

No. 73.—CROPS UNDER CULTIVATION IN 1893-94 (p. 141).

Administration—Bengal.

ACRES.

Rice.	Wheat.	Other Food Grains (including Pulses).	Other Food Crops.	Sugar Cane.	Coffee.
38,200,300	1,620,200	11,636,000	3,130,900	1,083,400	—

ACRES—*continued.*

Tea.	Cotton.	Jute.	Other Fibres.	Oil Seeds.	Indigo.
110,800	201,280	2,228,200	207,100	3,253,000	614,200

ACRES—*continued.*

Tobacco.	Cinchona.	Miscellaneous.	Total Area under Crops.	Deduct Area Cropped more than once.	Actual Area on which Crops were Grown.
730,500	2,900	424,900	64,444,200	10,456,900	53,987,300

10. Then, at page 142, there is also given total area under crops—of area under irrigation—64,444,200 acres. Certainly, if they can know the total area, they can ascertain the average of some of the principal crops. Then, as to the crops per acre of some of the principal produce, they can have no difficulty in ascertaining, and the prices are all regularly published of principal articles of food. There can be no difficulty in obtaining the prices of all principal produce. The whole matter is too important to be so lightly treated. The extreme importance of this information can be seen from the fact that Parliament has demanded it by an Act, and that Sir Henry Fowler himself made a special and earnest challenge about the condition of the people. He said in his speech on 15th August 1894, when he promised the Select Committee:

"The question I wish to consider is whether that Government, with all its machinery as now existing in India, has, or has not promoted the general prosperity of the people in its charge; and whether India is

better or worse off by being a province of the British Crown."

And this is the question to which an answer has to be given by this Commission—whether the present administration and management of the military and civil expenditure incurred in both countries, "has or has not," as one of its results, "promoted the general prosperity of the people" of British India. Or is, or is not, the result of this administration and management of expenditure "scanty subsistence" for the mass of the people as admitted by Lord Lawrence, and "extreme poverty" as stated by Lord Cromer, Sir Auckland Colvin, and Sir David Barbour among the latest finance ministers. A poverty compared with which even the most oppressed and misgoverned Russia is prosperity itself, the income of which is given by Mulhall as above 9*l.* per head per annum, when Lord Cromer gives the income of British India as "not more than Rs. 27 per head per annum," and I calculate it as not more than Rs. 20 per head per annum. Even this wretched income, insufficient as it is, is not all enjoyed by the people, but a portion never returns to them, thereby continuously though gradually diminishing their individual capacity for production. Surely there cannot be a more important issue before the Commission as to the results of the administration and management of expenditure, as much or even more for the sake of Britain itself than for that of India.

11. Before proceeding further on the subject of these statistics it is important to consider the matter of the few wants of the Indian in an important aspect. Is the few wants a reason that the people should not prosper, should not have better human wants and better human enjoyments? Is that a reason that they ought not to produce as much wealth as the British are producing here? Once the Britons were wandering in the forests of this country, and their wants were few; had they remained so for ever what would Britain have been to-day? Has not British wealth grown a hundred times, as Macaulay has said? And is it not a great condemnation of the present British administration of Indian expenditure, that the people of India cannot make any wealth; worse than that, they must die off by millions, and be underfed by scores of millions, produce a wretched produce, and of that even somebody else must deprive them of a portion.

12. The British first take away their means, incapacitate them from producing more, compel them to reduce their wants to the wretched means that are left to them, and then turn round upon them, and, adding insult to injury, tell them, "See, you have "few wants; you must remain poor and of few "wants. Have your pound of rice, or, more gene- "rously, we would allow you two pounds of rice— "scanty clothing and shelter. It is we who must "have and would have great human wants and "human enjoyments, and you must drudge for "us." Is it that the mass of the Indians have no right or business to have any advancement in civilisation, in life and life's enjoyments, physical, moral, mental and social? Must they always live to the brute's level—must have no social expenses—is that all extravagance, stupidity, want of intelligence, and what not? I do hope, as I do believe, that both the conscience and the aspiration of the British people, their mission and charge, which it is often said Providence has placed in their hands, are to *raise* the Indians to their own level of civilisation and prosperity, and not to degrade themselves to the lowness of Oriental despotism and the Indians to mere helots.

13. I may here again point out some defects in these statistics so as to make them as accurate as they can possibly be made, in supplying the Commission with the necessary information. It is surprising that Indian highly-paid civilians should not understand the simple arithmetic of averages; and that they should not correct the mistake even after the Secretary of State for India forwarded my letter pointing out the mistake.

14. The mistake is this. Supposing the price of rice in one district is R. 1 per maund, and in another district Rs. 3 per maund, then the average is taken by simply adding 3 and 1 and dividing by 2, making it to be Rs. 2 per maund, forgetting altogether to take into account the quantities sold at Rs. 3 and R. 1 respectively. Supposing the quantity sold at R. 1 per maund is 1,000,000 maunds and that sold at Rs. 3 is only 50,000 maunds, then the correct average will be:

	Maunds.	Rs.	Rs.
	1,000,000	× 1 =	1,000,000
	50,000	× 3 =	150,000
Total	1,050,000		1,150,000

which will give Rs. 1 1 an. 6 pies per maund, instead of the incorrect Rs. 2 per maund, as is made out by simply adding 1 and 3 and dividing by 2.

15. In my "Poverty of India" I have given an actual illustration (p. 3). The average price of rice in the Administration Report of the Central Provinces for 1867-68 was made out to be, by the wrong method, Rs. 2. 12 an. 7 pies. while the correct price was only Rs. 1. 8 an. Also the correct average of produce was actually 759 lbs. per acre, when it was incorrectly made out to be 579 lbs. per acre. Certainly there is no excuse for such arithmetical mistakes, for information required by Parliament for the most important purpose of ascertaining the result of the British Administration of the expenditure of a vast country.

16. In the same way averages are taken of wages without considering how many earn the different wages of 1½, 2, 3 or more annas per day, and for how many days in the year.

17. In the Irish Commission you yourself and the Chairman have noticed this fallacy.

Witness: Dr. T. W. GRIMSHAW.

Q. 2925. (*Lord Welby.*) Do you take a mean price?—I take a mean price between highest and lowest.

Q. 2926. (*Chairman.*) An arithmetical mean price without reference to the quantities?—Yes.

Q. 2927. (*Lord Welby*) For instance, supposing for nine months there bad been a low price, and the remaining three a high price, the mean would hardly represent a real mean, would it?—You are correct in a certain sense. . . .

18. *Trade.*—Totals are taken of both imports and exports together, and any increase in these totals is pointed out as proof of a flourishing trade and increasing benefit, when in reality it is no such thing, but quite the reverse altogether. I shall explain what I mean.

19. Suppose a merchant sends out goods to a foreign country, which has cost him 1,000*l.* He naturally expects to get back the 1,000*l.* and some profit, say 15 per cent., *i.e.*, he expects to receive back 1,150*l.* This will be all right; and suppose he sends out more, say 2,000*l.* worth the next year and gets backs his 2,300*l.*, then it is really an increasing and profitable trade. But suppose a merchant sent out goods worth 1,000*l.* and gets back 800*l.* instead of 1,150*l.* or anything above 1,000*l.*; and again the second year he sent 2,000*l.* worth and got back 1,600*l.* To say that such a trade is a flourishing or profitable trade is simply absurd. To say that because the total of the exports and imports of the first year was 1,800*l.*, and the total of the exports and imports in the second year was 3,600*l.*, that therefore it was a cause for rejoicing, when in reality it is simply a straight way to bankruptcy with a loss of 200*l.* the first year, and 400*l.* the second year (leaving alone profits), and so on. Such is the condition of British India. Instead of getting back its exports with some profit, it does not get back even equal to the exports themselves, but a great less every year. Why then, it may be asked, does India not go into bankruptcy as any merchant would inevitably go? And the reason is very simple. The ordinary merchant has no power to put his hand in other person's pockets, and make up his losses. But the absolute Government of India, on the one hand, goes on inflicting on India unceasing losses and drain by its unnatural administration and management of expenditure, and, on the other hand, has the power of putting its hands unhindered into the pockets of the poor taxpayer and make its account square.

20. While the real and principal cause of the sufferings and poverty of India is the deprivation and drain of its resources by foreigners by the present system of expenditure, the Anglo-Indians generally, instead of manfully looking this evil in the face, ignore it and endeavour to find all sorts of other excuses. It is very necessary that the Commission should have the opportunity of fairly considering those excuses. Now,
